SIR: Agreeably to the request of the minister of Austria-Hungary, herewith transmitted, I have the honor to lay before you, with a view to its presentation to the Senate, a translation of a note containing the protest of the Government of Austria-Hungary against the proposed treatment of bountied sugars in the tariff bill at present under consideration in the Senate.

Respectfully, yours,

JOHN SHERMAN.

Hon. GARRET A. HOBART,
Vice-President of the United States.

Inclosures: From the minister of Austria-Hungary, April 13, 1897. From the same, May 28, 1897.

Mr. HALE. I did not understand that it had been submitted by the Secretary of State. I thought it was attempted to be brought here direct, which would not have been in accordance with any precedent.

Mr. VEST. Unless it is a lengthy communication, I should like to hear it read.

The VICE-PRESIDENT. It is short. The Senator from Missouri requests that the accompanying papers be read. There being no objection, they will be read.

The Secretary read as follows:

IMPERIAL AND ROYAL AUSTRO-HUNGARIAN LEGATION,
Washington, May 28, 1897.

Mr. SECRETARY OF STATE: I have had the honor to receive your note of the 17th ultimo, No. 159.

The provision relative to the discriminating duty on sugar contained in the tariff bill which has been passed by the House of Representatives is still found in that bill as amended by the Senate committee (section 3). I was instructed to protest against this provision on the ground of the right of the most favored nation, which is guaranteed to us by treaty, and should consequently be very grateful to you if you would have the kindness, Mr. Secretary of State, to send my note of April 13, 1897 (whereby I obeyed said instructions), to the Vice-President of the United States, that it may be communicated to the United States Senate.

I avail myself of this occasion to renew to you, sir, the assurance of my most distinguished consideration.

RENGELMÜLLER.

His Excellency JOHN SHERMAN,
Secretary of State, etc.

IMPERIAL AND ROYAL AUSTRO-HUNGARIAN LEGATION,
Washington, April 13, 1897.

Mr. SECRETARY OF STATE: Pursuant to instructions, I have the honor, Mr. Secretary of State, to invite your attention to the provisions of the tariff bill now before the Senate of the United States which relate to the duty on sugar, and conflict, on the one hand, with our right of the most-favored-nation treatment, and on the other threatens to heavily damage Austro-Hungarian exports.

The above-mentioned bill provides, namely, in Schedule E, No. 206, that sugar exported from such countries which grant a direct or indirect bounty shall pay, apart from the actual duty upon entrance set forth in No. 206, an additional duty to the amount of the bounty granted, so far as this bounty shall be in excess of any internal tax collected upon such sugars or upon the raw materials (beet or cane) used in their manufacture.

The question of the discriminating tariff treatment against our sugar has already been the subject of negotiation between the Imperial and Royal Government and the Government of the United States. The Imperial and Royal Government had looked upon the additional duty of one-tenth per pound upon sugar coming from Austria-Hungary, provided for in the tariff act of August 28, 1894, as a violation of the right of the most-favored nation granted to her by Article V of the treaty of 1829, and instructed me on that occasion to protest against it.

This instruction I had the honor to carry out in a note of January 3, 1895, to Secretary Gresham, and I therefore consider it unnecessary to repeat here the views advanced therein, which my Government entertains to-day in their entirety. On the other hand, I beg to call attention to the fact that the Government of the United States has recognized our right to protest against any additional duty upon our sugar which is based upon our export bounty, as it will appear from the report of Secretary Gresham to the President of October 12, 1894, and that the President in his annual message of December, 1894, recommended to Congress the repeal of the additional duty in question.

The bill now pending in Congress has in view a much greater increase of the discriminating additional duty on sugar, and threatens, therefore, our trade with the United States with new injury. In view thereof, the Imperial and Royal Government has instructed me to call the attention of the Federal Government to the disposition of these proposed provisions to infringe upon treaty obligations, and, in connection therewith, to express the hope that it will lend its assistance in order to enlighten Congress upon the existing treaty obligations between our countries, and to prevent that the proposed increase of the additional duty upon our sugar, against which the Imperial and Royal Government must further protest, should become a law.

Accept, etc.,

HENGELMÜLLER.

The VICE-PRESIDENT. The communication and accompanying papers will lie on the table and be printed.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented a petition of the legislature of Wisconsin, praying for the enactment of legislation to strengthen the national credit; which was read, and referred to the Committee on Finance, as follows:

Memorial to Congress for the passage of an act to strengthen the national credit.

To the honorable the Senate and the House of Representatives of the United States in Congress assembled:

The memorial of the legislature of the State of Wisconsin respectfully represents:

Whereas the people of the United States in recent years have been disastrously affected by uncertainties respecting the future value of the money by which existing contracts may be discharged and business transactions be conducted, and it was the intent and purpose of the verdict rendered at the last national election to effectually remove such uncertainty; and

Whereas much time will necessarily elapse before such intent and purpose can be crystallized into legislative enactments, and it is of the highest importance that a return of prosperity be not delayed by the thought that the legislative branch of the Government may not fully respond to the popular verdict rendered as aforesaid;

Now, therefore, to the end that all uncertainties in that regard be effectually removed, your memorialists respectfully ask that a Congressional declaration be passed, to be approved by the President of the United States, so as to have the force of law in the form and in the spirit of the declaration of March 18, 1869, which was similarly made to meet a similar emergency, after a similar popular decision, pledging the faith, credit, and honor of the United States to the payment on demand of all its obligations issued to circulate as money, and all of its other obligations as they mature, in gold or silver coin of the present legal weight and fineness, at the option of the respective holders of such obligations, and to the preservation of all legal-tender money equal in value to that of the United States gold coin of the present weight and fineness:

Resolved, That the Senators and Members of Congress from this State be, and they are hereby, requested to use all honorable means to secure the Congressional declaration herein indicated, and that a duly authenticated copy of this memorial and of these resolutions be transmitted to the President of the United States, to the Secretary of the Treasury, to the President of the Senate and the Speaker of the House of Representatives, and to each of our Senators and Representatives in Congress.

EMIL BAENSCH,
President of the Senate.
G. A. BUCKSTAFF,
Speaker of the Assembly.

Given under my hand and official seal at the capitol, in the city of Madison, this 2d day of June, A. D. 1897.

[SEAL.] HENRY CASSON, *Secretary of State.*

Mr. McLAURIN presented a petition of sundry citizens of Spartanburg County, S. C., praying for the enactment of legislation for a more rigid restriction of immigration; which was ordered to lie on the table.

Mr. SEWELL presented memorials of Frank Meyer and 1,548 other citizens of Hudson County, of Thomas E. Elleford and 285 other citizens of Essex and Hudson counties, of Siegfried Cronhein and 19 other citizens of Jersey City, Jacob Hepp and 75 other citizens of Newark, P. N. Jandruy and 25 other citizens of Perth Amboy and Newark, George E. Tilford and 20 other citizens of Newark, and of Charles A. Hunly and 26 other citizens of Newark, all in the State of New Jersey, remonstrating against an increase of the duty on beer; which were referred to the Committee on Finance.

He also presented the petition of Mrs. M. L. Johnson and 30 other citizens of Newark, N. J., and the petition of R. J. Hill and 37 other citizens of East Orange, N. J., praying for the enactment of legislation restricting immigration; which were ordered to lie on the table.

Mr. PERKINS presented a memorial of sundry citizens of Stockton, Cal., and a memorial of sundry citizens of Alameda County, Cal., remonstrating against the abrogation of the Hawaiian treaty; which were referred to the Committee on Foreign Relations.

Mr. TILLMAN presented a petition of sundry citizens of Spartanburg, S. C., praying for the enactment of legislation for a more rigid restriction of immigration; which was ordered to lie on the table.

Mr. SPOONER presented the petition of A. H. Skeel and sundry other citizens of Stevens Point, Wis., praying for the enactment

of legislation for a more rigid restriction of immigration; which was ordered to lie on the table.

Mr. DAVIS presented a petition of sundry citizens of St. Paul, Minn., praying for the enactment of legislation for a more rigid restriction of immigration; which was ordered to lie on the table.

BILLS INTRODUCED.

Mr. FRYE introduced a bill (S. 2075) granting a pension to William Cole; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Pensions.

Mr. SPOONER introduced a bill (S. 2076) granting a pension to Johanna Krueger; which was read twice by its title, and referred to the Committee on Pensions.

Mr. BATE introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Claims:

A bill (S. 2077) for the relief of the estate of Elizabeth Zurke, deceased, late of Memphis, Tenn.;

A bill (S. 2078) for the relief of the estate of John Morrison, deceased, late of Memphis, Tenn., as found due by the Court of Claims under the act of March 3, 1883;

A bill (S. 2079) for the relief of Jacob Glenn, of Memphis, Shelby County, Tenn.;

A bill (S. 2080) for the relief of M. Robison, administrator of T. E. Robison, deceased, late of Henderson County, Tenn.;

A bill (S. 2081) for the relief of J. J. Bailey, of Shelby County, Tenn.;

A bill (S. 2082) for the relief of the estate of Augustus B. Pharr, deceased, late of McNairy County, Tenn.; and

A bill (S. 2083) for the relief of the estate of Mathew Brown, deceased, late of Shelby County, Tenn.

Mr. MURPHY introduced a bill (S. 2084) granting a pension to Catherine C. Tracey; which was read twice by its title, and referred to the Committee on Pensions.

Mr. WALTHALL introduced a bill (S. 2085) to remove a suspension upon the disbursement of an appropriation; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Appropriations.

Mr. BURROWS introduced a bill (S. 2086) for the relief of Susana Marion; which was read twice by its title, and referred to the Committee on Pensions.

Mr. DAVIS introduced a bill (S. 2087) granting a pension to Phebe L. Peyton; which was read twice by its title, and referred to the Committee on Pensions.

Mr. WELLINGTON introduced a bill (S. 2088) for the relief of the crew of the United States steamship *Wyoming;* which was read twice by its title, and referred to the Committee on Naval Affairs.

He also introduced a bill (S. 2089) to increase the pay of post quartermaster-sergeants of the Army; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. PERKINS introduced a bill (S. 2090) to grant a pension to Mrs. Alice A. Hines; which was read twice by its title, and referred to the Committee on Pensions.

Mr. QUAY introduced a bill (S. 2091) giving William K. Mayo the rank and pay of a rear-admiral on the retired list of the Navy; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Naval Affairs.

Mr. MASON introduced a bill (S. 2092) providing for the hearing, trial, and adjudication by the United States Court of Claims of the claim of Albert Wood, and removing the same from the operations of the United States statute of limitations; which was read twice by its title, and referred to the Committee on the Judiciary.

Mr. GALLINGER introduced a joint resolution (S. R. 48) granting permission for the erection of a monument in Washington, D. C., for the ornamentation of the national capital and in honor of Samuel Hahnemann; which was read twice by its title, and referred to the Committee on the Library.

AMENDMENT TO THE TARIFF BILL.

Mr. McBRIDE submitted an amendment intended to be proposed by him to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States; which was ordered to lie on the table and to be printed.

AMENDMENTS TO DEFICIENCY APPROPRIATION BILL.

Mr. WELLINGTON submitted an amendment intended to be proposed by him to the general deficiency appropriation bill; which was referred to the Committee on Claims, and ordered to be printed.

Mr. QUAY submitted an amendment intended to be proposed by him to the general deficiency appropriation bill; which, with the accompanying papers, was referred to the Committee on Commerce, and ordered to be printed.

THE TARIFF BILL.

Mr. ALLISON. I move that the Senate proceed to the consideration of House bill 379.

The VICE-PRESIDENT. The morning business being concluded, House bill 379 is the order.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

The VICE-PRESIDENT. The pending amendment of the Committee on Finance will be stated.

The SECRETARY. Paragraph 192, page 60, line 12, after the word "timber," insert the words "hewn, sided, or squared, and round timber."

Mr. HALE. That was agreed to yesterday.

The VICE-PRESIDENT. This amendment was agreed to yesterday.

The next amendments of the Committee on Finance were, in paragraph 193, page 60, line 21, after the word "finished," to strike out "fifty" and insert "thirty-five;" in line 23, after the word "grooved," to strike out "one dollar" and insert "seventy cents;" in line 25, before the word "cents," strike out "fifty" and insert "five;" and on page 61, line 3, after the word "grooving," to strike out the remainder of the paragraph, in the following words:

Provided, That in case any foreign country or dependency shall, either directly or indirectly, impose upon pine, spruce, elm, or other saw logs, or round unmanufactured timber, pulp wood, stave bolts, shingle bolts, or heading bolts, an export duty, discriminating crown dues, ground rents, customs regulations, or other duty or tax, when such articles or any of them are exported or intended for export to the United States from such country or dependency, then a duty of 25 per cent ad valorem upon the lumber mentioned in this paragraph shall be levied, collected, and paid, in addition to the duty herein imposed, when the same is imported from such country or dependency.

And in lieu thereof to insert the following proviso:

Provided, That if any country or dependency shall impose an export duty upon saw logs, round unmanufactured timber, stave bolts, shingle bolts, or heading bolts, the amount of such export duty shall be added, as an additional duty, to the duties imposed upon the articles mentioned in this paragraph when imported from such country or dependency.

So as to make the paragraph read:

193. Sawed boards, planks, deals, and other lumber of whitewood, sycamore, and basswood, $1 per thousand feet board measure; sawed lumber, not specially provided for in this act, $2 per thousand feet board measure; but when lumber of any sort is planed or finished, in addition to the rates herein provided, there shall be levied and paid for each side so planed or finished 35 cents per thousand feet board measure; and if planed on one side and tongued and grooved, 70 cents per thousand feet board measure; and if planed on two sides and tongued and grooved, $1.05 per thousand feet board measure; and in estimating board measure under this schedule no deduction shall be made on board measure on account of planing, tongueing, and grooving: *Provided*, That if any country or dependency shall impose an export duty upon saw logs, round unmanufactured timber, stave bolts, shingle bolts, or heading bolts, the amount of such export duty shall be added, as an additional duty, to the duties imposed upon the articles mentioned in this paragraph when imported from such country or dependency.

Mr. VEST. I give notice that at the proper time I shall move to put all these articles upon the free list. Was there any vote taken upon paragraph 192?

Mr. HALE. That was adopted last night.

Mr. VEST. I give the same notice in regard to that paragraph.

Mr. FRYE. The Senator gave the notice last night.

Mr. VEST. No; I did not. I do not know who else may have done so.

Mr. FRYE. Some Senator did.

Mr. HALE. We might go over these provisions and act on the committee amendments, and the Senator make his motion later, or he can make it now if he prefers.

Mr. VEST. I wish to call the attention of the Senate to the provision, commencing at line 15, in regard to an export duty. This, it seems to me, is an extraordinary provision in the shape of retaliation. It provides that if any country or dependency shall impose an export duty upon saw logs, round, unmanufactured, etc., the amount of such export duty shall be added as an additional duty. I should not be surprised if the provision were that if an export bounty should be imposed by any foreign country or dependency, then this duty should be imposed; but here it seems we retaliate for an export duty by a foreign country, that duty, of course, being added to the cost of the article when brought in and sold to our people, by putting an additional duty, an internal duty in the United States of the same amount, which increase is paid by the consumer also.

In other words, we retaliate upon the foreigner by increasing the price of the imported article to our own people. It is the first time within my recollection, after some limited experience in tariff matters, that this has been done. After the article has come here with the export duty of the foreign article upon it added to the cost, I do not understand how it can affect the foreigner when we add the same duty in retaliation.

Mr. HOAR. It seems to me that the answer to the Senator from Missouri is that in such cases the export duty in all probability will be taken off.

Mr. VEST. I do not know anything about that.

The VICE-PRESIDENT. The amendments will be stated singly.

The SECRETARY. In paragraph 193, page 60, line 21, after the word "finished," strike out "fifty" and insert "thirty-five;" so as to read:

But when lumber of any sort is planed or finished, in addition to the rates herein provided, there shall be levied and paid for each side so planed or finished 35 cents per thousand feet, board measure.

The VICE-PRESIDENT. Without objection, the amendment will be agreed to.

The SECRETARY. In the same paragraph, page 60, line 23, after the word "grooved," strike out "one dollar" and insert "seventy cents;" so as to read:

And if planed on one side and tongued and grooved, 70 cents per thousand feet board measure.

The VICE-PRESIDENT. Without objection, the amendment will be agreed to.

The SECRETARY. In the same paragraph, page 60, line 25, after the word "and" where it occurs the second time, strike out "fifty" and insert "five;" so as to read:

And if planed on two sides and tongued and grooved, $1.05 per thousand feet board measure.

The VICE-PRESIDENT. Without objection, the amendment will be agreed to.

The SECRETARY. In the same paragraph, page 61, line 3, after the word "grooving," strike out the proviso in the following words:

Provided, That in case any foreign country or dependency shall, either directly or indirectly, impose upon pine, spruce, elm, or other saw logs, or round unmanufactured timber, pulp wood, stave bolts, shingle bolts, or heading bolts, an export duty, discriminating crown dues, ground rents, customs regulations, or other duty or tax, when such articles, or any of them are exported or intended for export to the United States from such country or dependency, then a duty of 25 per cent ad valorem upon the lumber mentioned in this paragraph shall be levied, collected, and paid in addition to the duty herein imposed when the same is imported from such country or dependency.

And insert:

Provided, That if any country or dependency shall impose an export duty upon saw logs, round unmanufactured timber, stave bolts, shingle bolts, or heading bolts, the amount of such export duty shall be added, as an additional duty, to the duties imposed upon the articles mentioned in this paragraph when imported from such country or dependency.

The VICE-PRESIDENT. Without objection, the amendment will be agreed to.

Mr. VEST. I object.

Mr. HALE. Then let us have a vote.

The VICE-PRESIDENT. Does the Senator desire a vote or simply make a note of his objection?

Mr. HALE. Let the question be put to a vote.

The VICE-PRESIDENT. The question is on agreeing to the amendment of the committee to strike out and insert a new proviso.

The amendment was agreed to.

Mr. ALLISON. I move to amend the proviso in line 16 by inserting after the word "logs" the words "boom sticks and chains used in towing logs."

The amendment was agreed to.

Mr. JONES of Arkansas. One of the material effects of this proposition is to take a quantity of timber which is now on the free list off the free list and make it taxable at the rate of $2 a thousand. There is a change, however, in the paragraph from what the law has been heretofore which is more significant than appears on the face of it. Sawed lumber not specially provided for in this act is to bear a rate of $2 per thousand feet board measure. This includes white pine, and puts a rate of tariff on that article that has not been in existence for a long while. There seems to have been a very determined effort on the part of the lumbermen in some sections of the Union to have this change made, and a systematic effort has been made to bring it about.

I hold in my hand a letter which explains a good deal of what has been done in this matter. It is from the National Lumber Convention, office of the executive committee, 1421 G street NW., Washington, D. C., April 9, 1897. This has been addressed to the lumbermen all through the country, and in response to the request of this letter a great many petitions have been sent to the Senate, and a great many have been sent to me which have been presented and sent to the proper committee. It says:

NATIONAL LUMBER CONVENTION,
OFFICE OF THE EXECUTIVE COMMITTEE,
1421 G Street NW., Washington, D. C., April 9, 1897.

DEAR SIR: After consultation with some of the Senators, it is found to be very important that the Finance Committee of the Senate be convinced, as soon as possible, that there is a decided sentiment among the laborers engaged in the lumber industry favorable to the lumber-tariff schedule as passed by the House of Representatives. There seems to be a feeling among the members of the Finance Committee that the active interest in behalf of this lumber-tariff schedule exists only among the wealthy owners of mills and timber lands. It therefore becomes of great importance that we at once secure signatures of operatives and laborers engaged in the industry to petitions asking that the Senate pass the lumber schedule as enacted by the House of Representatives.

I therefore earnestly urge you to take immediate steps to secure the signatures of all operatives in your employ.

It is important that petitions state that the signers are wage earners, that they and their families are dependent upon the lumber industry for their support, and they earnestly urge the Senate to pass the lumber schedule as enacted by the House.

It will be well also to set forth in the petition the depressed condition of the business, low wages, and lack of employment.

I would gladly prepare the petition for you, but think it will be much better if each person will prepare his petition separately, so that it will not appear that they were all prepared by the same individual.

The petition should, of course, be addressed to the United States Senate, and when you have signatures of all employees will you please forward same to the National Lumber Convention at the address indicated on the head of this letter.

Earnest and effective efforts are required at once. If you will spend a few hours, or days, if necessary, we feel that we shall secure a favorable tariff bill.

Do not confine yourself to your own operatives, but get all the signatures you can from lumber operatives anywhere in your vicinity.

Yours, truly,

C. W. GOODYEAR.

The fact of there being hundreds of petitions sent here signed numerously by people alleging that they are laborers and deeply interested in this sort of business makes an impression on a good many people of course; but when the explanation is given of the source from which all of it originates, that after all it is a mere expression of the mill men or the owners, the men who are to get the benefit of all this, having no effect whatever on the wages of the laboring men, having no sort of interest to them; in point of fact, when you understand the truth of it, those things will have, I imagine, less effect with the Senate. I have a number of letters, all, I have no doubt, printed and signed in the same way. The name is written at the top. My name is written after "Hon.," and then it is addressed as printed, "Washington, D. C." I have no doubt that these letters were sent out and signed by thousands of individuals all over the country, and returned at the request of the lumber headquarters at 1421 G street NW., in this city, where the keenest sort of interest is felt in a high tax upon this class of lumber.

Mr. President, other members of the Senate are more familiar than I am with the facts connected with the lumber industry. It has been for quite a while on the free list. The people of the Northwest and of the prairie States and many of the central parts of the Union have a hard enough time in providing homes and shelter for their families if they may be allowed to buy lumber as cheaply as it can be had, without any additional tax imposed upon them for that purpose. I for one believe it is unwise that there should be an increase in the tax on this article, and especially the enormous increase that is to be found in this bill.

Mr. VEST. I wish to say deliberately that in my judgment there is not a single item in this entire bill so utterly indefensible as that which increases the duty upon white pine from the free list to $2 a thousand. In the tariff act of 1890 there was a duty of $1 a thousand upon white pine and $2 upon spruce. To those who never analyzed and investigated the reason of this distinction it will be interesting to note that spruce is the production of Maine, that State producing no white pine now amounting to anything worthy of consideration. Therefore the duty upon spruce has always in the tariff bills for twenty-odd years been retained at $2, but upon white pine it was reduced in 1890 in the McKinley Act to $1 a thousand, and in 1894 all these different sorts of lumber were put upon the free list, as is well known.

White pine has been justly called the king of the coniferous woods. It is superior to any other. It is just as superior to spruce or to the pitch yellow pine of the South as mahogany is superior to the softest wood that can be used for any purpose whatever. White pine is, then, the salient point in this discussion. At last the lumbermen have been successful, and put white pine upon a par with spruce at $2 a thousand. That duty is absolutely prohibitory, and it is intended to be such. The evidence before the Ways and Means Committee, which I have here, shows the intent to be to make the duty absolutely prohibitory. On page 554 of the Ways and Means testimony this colloquy occurred between Mr. EVANS, a member of the committee, and Mr. Winchester, a prominent lumberman who was urging the imposition of the two-dollar duty upon white pine:

Mr. EVANS. What do you think the duty ought to be?
Mr. WINCHESTER. It ought to be prohibitive.
Mr. EVANS. Would $2 do that?
Mr. WINCHESTER. Yes; just about.

There is the frank testimony, and it runs all through the testimony, that the object is to absolutely prohibit this white pine, the king of the coniferous woods, from coming into the United States at all.

Mr. President, a strange and anomalous thing has happened in regard to this lumber interest. Heretofore the West and South have stood together in opposition to this prohibitory duty upon white pine; but, with the ingenuity that comes from greed, the lumbermen of the Northwest, in Michigan and Minnesota, have succeeded in forming an alliance, offensive and defensive, with

the lumbermen of the South. I make personal mention of it because I am absolutely certain of the fact, and other Senators know it to be true. In the last campaign, in the lumber region of Missouri, in what we call the Ozark country where the lumber mills are owned by people not living in the State—by large capitalists—I was confronted with the statement that I had voted for free lumber and was therefore opposed to the lumber interests of Missouri. I spoke in every one of the lumber camps, and I asked everywhere, "What wood do you saw here that comes in competition with white pine? You are engaged here in sawing the hard wood. What little white pine we had in Missouri was long since exhausted. The mills are sawing hard wood; and the soft yellow pitch pine will not be used to any considerable extent in the construction of houses." Their answer to me invariably was, "Oh, yes; we have no white pine, but if we can exclude the white pine from the United States our people will be compelled to buy the hard woods that we saw and the soft yellow pine of the South." That is the whole of it.

No Senator will stand here and say that the South produces a white pine, a coniferous wood, that comes in direct competition or approximates in value to the white pine of the Northwest and of Canada, but they hope by shutting out white pine, as this gentleman says here in his testimony, to force the people of this country to use the soft yellow pitch pine of the South, far inferior to the white pine or the hard woods that are sawed in my own State and in Arkansas and Mississippi.

I have been deluged by petitions from my own State and from all over the South to put this duty of $2 upon white pine, which amounts to absolute exclusion, and they boldly make the argument that they want to force the people of the United States to come to the use of the soft yellow pines and hard woods.

Mr. President, I referred to the fact that Maine has always retained this duty upon spruce pine; and it is a compliment to her delegation in Congress, the ablest that any State has. I will do her the justice to say that. I ask the Secretary to read the testimony of Mr. Goodyear, a most intelligent witness, who was examined before the Committee on Ways and Means of the House. He is a large lumberman, the president, I believe, of a lumber association; at any rate, of a large company.

Mr. JONES of Arkansas. He wrote the letter which I read.

Mr. VEST. Yes; he is the gentleman who wrote the letter that my colleague on the committee read. Mr. Goodyear explains the difference between the tax heretofore upon white pine and upon spruce.

The Secretary read as follows:

Mr. GOODYEAR. In a great many instances Southern pine has taken the place of finishing in the place where white pine used to enter into the finishing and be regarded as absolutely essential, and that is true of hemlock also. The clearer grades of hemlock are to-day occupying the place, in some instances, that white pine formerly occupied, so that this question of taxation can not be confined, it strikes me, to the fact of the scarcity of any particular item, for the reason there are many varieties of other woods to take the place of that which may become scarce.

Now, gentlemen, that being so, we can only divine one good reason for this, and I say to you I believe that the lumbermen themselves are chargeable with the condition of the tariff bill. The State of Maine, be it said to its everlasting credit, has always, so long as I can remember, been represented by the most eminent statesmen that the country has produced. It had its James G. Blaine, than whom there was no more devoted servant to the interests of his State, and to-day it has within the Halls of Congress representatives who stand in the foremost rank of our nation's great men. It has its REED, and if I were allowed to whisper it, I would say it has its DINGLEY also; it has its BOUTELLE, and it has men who have come here year after year looking after the interests of their constituents, and you will notice in all these tariff agitations, during all the various changes through which these tariff schedules have gone, spruce has at all times and forever remained in the two-dollar list.

From 1874, with the change of 1873, and again with the change of 1890 under the McKinley bill, I never failed to find the great product of the State of Maine protected to the extent of the $2. White pine and hemlock and basswood and sycamore and all the rest got only $1, but through the vigilance, I may say, and the justice of Maine's representatives spruce has always been granted a tax of $2.

The CHAIRMAN. You forget we are the Pine Tree State.

Mr. GOODYEAR. Without any pine, but with a whole lot of spruce, and spruce that you can raise another crop of every thirty years. It is unlike white pine and hemlock, which disappear practically when the first crop is removed, but it grows rapidly to saw-log proportion in about thirty years.

Mr. VEST. When General Hancock was a candidate for the Presidency he was very much ridiculed because he dared to say that the tariff is a local question. The American people, the intelligent portion of them, are fast coming to the conclusion that Hancock was right. He could repeat that assertion now without being ridiculed, even in so august a body as the Senate of the United States. Here Mr. Goodyear gives a reason, a local reason, why this distinction is made between spruce and pine. I will not whisper what I think about the Maine delegation. I think Maine acts more wisely than any other State in the Union in picking her most distinguished and ablest men and keeping them in public life. The result is seen in a great many returns to that State. Without making invidious remarks, if you take the list of public buildings, you will find that Maine has more in proportion to population than any other State in the Union; and when you come to lumber, which is the subject before us, you will find that spruce, which is the peculiar product of Maine, has always had a duty of $2 a thousand practically, while white pine, a far superior wood, much more valuable, but not produced to any extent in Maine, had the duty diminished to $1 in 1890, when that hegira of protection came upon the country.

Mr. BACON. Will the Senator please state, as I have not the information myself, what he regards as the average commercial value of white pine? I ask the question with a view to ascertaining what is the ad valorem duty which $2 per thousand will impose.

Mr. VEST. If the Senator will turn to the comparative statement, he will find the unit of value given. I do not remember it.

Mr. BACON. I have it not before me. If the Senator has it, will he state it?

Mr. VEST. I have not the comparative statement here. I could refer to it if I had time in my copy of the bill, where I have marked the units of value. White pine, I will say, is more valuable than any other of the coniferous woods, and whatever the exact amount may be, it is safe to assume that its commercial value is larger than that of any other of the pines or coniferous woods.

Mr. President, I take it no one will assert that this increase of duty is for the purpose of protecting labor in the United States engaged in the lumber business or in the cutting and sawing of white pine. We have a report from Professor Fernow, an official report from a disinterested officer of the Government. It was read yesterday by the Senator from Louisiana [Mr. CAFFERY], and any Senator can obtain it by sending to the document room. This report shows that the cost of cutting the white pine in the woods, logging it or bringing it to the mill, cutting it and putting it into market, is higher in Canada than in the United States. Whilst our labor here, according to Professor Fernow, is 50 cents a day more than it is in Canada, they have natural obstacles and impediments, which do not exist in the United States, on account of the nature of their country, their roads, and the difficulty of transportation.

I submit that in view of this statement, made by a disinterested party, it is useless to talk about the increase to $2 a thousand upon white pine from the free list being in the interest of the lumbermen of the United States. Professor Fernow gives the amount of white pine and of other woods that are brought into the United States or that were cut last year. Of white pine, the amount was 12,000,000,000 feet; of spruce and fir, 5,000,000,000 feet; of hemlock, 4,000,000,000 feet; of long-leaf pine, 4,000,000,000 feet; of short-leaf pine and loblolly, 3,000,000,000 feet; of cypress, 500,000,000 feet; of redwood, 500,000,000 feet, and of all other conifers, 1,000,000,000 feet; making 30,000,000,000 feet.

Of this amount, there came from Canada of all sorts 750,000,000 feet, or about 2½ per cent, and yet we are told that this almost infinitesimal amount is ruining the lumber interests of the United States, even in the South and in the West, where we do not produce any lumber that comes in competition with the white pine of Canada.

Mr. President, I assert here as a notorious fact that this whole movement to increase the price of this absolute necessary of life to the poor people of the West is in the interest of the lumber barons, who have accumulated millions upon millions of dollars at the expense of the consumers of this country. Here is a communication from a responsible gentleman, whose name I am authorized to give, Mr. I. M. Weston—and I will ask the Secretary to read it—giving a list of these multimillionaires who are now pressing upon us in every direction for this increase of duty.

The Secretary read as follows:

MICHIGAN PINE KINGS—SOME INTERESTING FACTS ABOUT THEIR HOLDINGS—THE INFANTS THAT ASK PROTECTION FOR LUMBER.

Aside from David Ward, the heaviest pine land owners in the Lower Peninsula are John Canfield and E. G. Filer, of Manistee, and D. A. Blodgett, of Grand Rapids. Their holdings aggregate $20,000,000. Among the heavy holders of timber lands in the Upper Peninsula are Theodore M. Davis, of Newport, R. I., who has the old Portage Lake Canal grant, 400,000 acres, valued at $15,000,000, bought twenty years ago for a few hundred thousand dollars. J. M. Longyear, of Marquette, is credited with 200,000 acres worth $5,000,000. One section, which contains the Norrie iron mine, paid $500,000 a year in royalties during good times. The Michigan Land and Iron Company, Limited, bought the Marquette and Ontonagon Railroad grant, 464,000 acres, for $7,500,000 in 1881, and the property is now valued at $10,000,000. Lord Brassy, the present governor-general of Victoria, Australia, is the principal stockholder in this company.

The Dr. J. C. Ayer estate, of Lowell, Mass., bought the military wagon road land grant of 200,000 acres, now worth $3,500,000. The Chicago and Northwestern Railway has about $1,000,000 worth of land grants. The Samuel J. Tilden estate is also a heavy holder of Upper Peninsular timber lands. Senator MCMILLAN and the Newberry estate have a large slice of the old Detroit, Mackinac and Marquette Railroad grant. The Grand Rapids and Indiana Railway yet holds about 269,000 acres of choice timber lands in the Lower Peninsula. The above are some of the hollow-eyed infants for whose benefit the party of protection proposes to levy a tariff tax on lumber, to be paid by the home builders in the vast treeless sections of the Northwest. In fact, the above-mentioned tracts include a large proportion of the pine timber left in Michigan.

David Ward's logging railroad has 40 miles of main track from Frederic on the Michigan Central, crossing the Grand Rapids and Indiana Railroad and then running west to East Jordan and Lake Michigan near Charlevoix. He also has 60 miles of lateral track which connects all parts of his big tract

with the main line. In this group Mr. Ward has 40,000 acres of choice cork pine and 80,000 acres of hard-wood timber. The estimates are 400,000,000 feet of cork pine and 600,000,000 of hard wood. Last winter Mr. Ward cut his first 10,000,000 feet of pine logs, which are being railroaded to West Bay City to be sawed.

Mr. VEST. Mr. President, I have had that communication read after inquiry in regard to the character of the author and after ascertaining that he is an entirely responsible person. I did not have it read in order to attack the gentlemen who are fortunate enough to own this very valuable property. They had a perfect right to acquire it legitimately, and to hold it, and to be protected in it. I am making no invidious distinction against them on that account, but I am confounded with astonishment when you propose to put upon 75,000,000 people in this country this additional tax upon a necessary of life; and when that necessary comes peculiarly near to the people among whom I have lived for nearly fifty years, and whose conditions I thoroughly understand, I should be a coward not to protest against it.

I speak with some feeling upon this question, for I went to Missouri when it was the frontier. I hauled lumber to build my first cabin—the first home I ever had—60 miles from the Missouri River, and paid enormous prices, for lumber then was gold—equivalent to gold. The prices were, of course, immensely above what they are to-day. How will this sort of legislation be met by the men of the West who live in sod houses out in the Dakotas and in Nebraska, and upon the prairies of Missouri and of Illinois?

Remember, if you please, sir, that this class of people do not build houses of brick or stone, for they are too expensive. Go to the ordinances of your cities and you will see that cheap frame houses are excluded within the fire limits, ostensibly because of the danger of fire, but really to improve the worth and character of the structures.

What would be the amount of duty you would receive if you would make this increase? Upon all these schedules, $340,000 a year. And what is the penalty that is to be paid by the consumers of the United States for that pittance, compared to the revenues of the whole country? The poor settler, struggling with an inclement climate, with all the vicissitudes and absolute horrors of frontier life around him, and a growing family calling upon him for support, is to have these additional taxes put upon him at a time when every cent becomes a dollar and every dollar is almost equal to a drop of blood.

I know something of these things, for I have passed through them. This is the most indefensible item in this bill. There is no sort of justification or even palliation for this being done. In 1890, when our Republican friends went to the full extreme in regard to protection, they put a duty of but $1 upon white pine. Now it is to be put up to $2, and that, too, in the face of a statement of a disinterested official, Professor Fernow, in an official document from the Agricultural Department, that in seven years, if we pursue the same course that we have pursued in the last ten years in regard to our coniferous timber, the entire supply of white pine will be exhausted in the United States.

Do our friends in the South intend to impose their yellow pine upon the people of this country instead of white pine? They may reach the people in the Dakotas and in the treeless States, living in sod houses, but they will never be able to reap the fortunes which these circulars attempt to show that they will reap if they can exclude white pine from the use of the people of this country.

Mr. JONES of Arkansas. Mr. President, the yellow pine of the South is not such wood as white pine. It is practically a hard wood. It is used for flooring, used for finishing, used for a different class of purposes from white pine, which is a soft, smooth wood, easily worked, light, and not strong, whereas the yellow pine is strong.

There must be some reason for proposing to change the tariff on an article of this sort 100 per cent above the rate in the McKinley law. Propositions to increase taxes above those of the McKinley law, as a rule, have been apologized for on the other side of the Chamber, and members of the Senate are not willing to vote for such taxes, as a rule, without an explanation and without an apology.

Some of the reasons why this tax is proposed, I think, very clearly appear in a copy of a letter which I have. The original was written to a member of this body, a copy was sent to another member of the Senate, and I have a copy of the letter in the possession of the Senator to whom it was written. It was written by an ex-member of Congress, Hon. H. G. Burleigh, of Whitehall, N. Y., and as it is full of facts from an intelligent and practical man, I ask the attention of the Senate to what these statements are. The writer says:

The Dingley bill should certainly be modified as regards lumber. Lumber should be on the free list, as it enters into and is one of the bases of nearly all manufactures—boxes and a thousand other things. In any event, the duty should not exceed $1 per thousand feet. Mr. Dingley's idea is to protect Maine by making spruce $2, and it is not right. The average value of spruce lumber in Canada is $7 per thousand feet, and 40 per cent of spruce is culls. The average value of pine lumber in Canada is about $12 per thousand, and the average value of hemlock in Canada is about $6 per thousand. So you see the duty on spruce and hemlock would be about 30 per cent, while on pine only about 16 per cent. It seems that a move has been made to have pine $1 and hemlock $2, to gratify Mr. Dingley and the Maine people. You can see that on account of the greater value of pine, if there is any change, it should be to make hemlock and spruce $1 and pine $2.

The supply of spruce in the State is very limited, and more so now than ever on account of the withdrawal, practically, of the Adirondack forests from the market. This leaves a small belt of spruce in Vermont and a small belt in Maine, and upon the theory that it is a wise policy to protect the American forests, why is it not wise to let the Canadians cut off theirs first and get the benefit of it?

The Germans and Scandinavians in New York and Brooklyn and in the district that is comprised within the Greater New York use spruce for the floors of their houses, so they need not use carpets, and the spruce floors scrub handsomely. They scrub them with scrubbing brushes as they do in the old country. You remember in the canvass of 1892 the German speakers brought up this question of placing a tax upon the lumber of the poor people of New York and Kings County.

The trade relations between New York City and Canada are more intimate than between New York City and the State of Vermont, or even the State of Massachusetts. About 500 American boats carry coal and clay and other American products into Canada, and bring out lumber and other Canadian products. If I remember rightly, we sold Canada in 1896 almost double what we bought of her. This shows there should be reciprocity between the States and Canada. Two-thirds of our exports to Canada were from New York City and Boston.

It is a very singular thing that there should be inserted in a tariff bill, in a different place from the wood schedule, where it would not attract attention, the following (H. R. 379):

"SEC. 14. That the produce of the forests of the State of Maine upon the St. John River and its tributaries, owned by American citizens, and sawed or hewed in the Province of New Brunswick by American citizens, the same being unmanufactured in whole or in part, which is now admitted into the ports of the United States free of duty, shall continue to be so admitted, under such regulations as the Secretary of the Treasury shall from time to time prescribe.

"SEC. 15. That the produce of the forests of the State of Maine upon the St. Croix River and its tributaries, owned by American citizens, and sawed or hewed in the Province of New Brunswick by American citizens, the same being unmanufactured in whole or in part, shall be admitted into the ports of the United States free of duty, under such regulations as the Secretary of the Treasury shall from time to time prescribe."

Under these two sections all the lumber in New Brunswick can come into the United States through the State of Maine free of duty. Why, then, not have the lumber on the St. Maurice River and on the St. Marguerite River, that empty into the St. Lawrence, come in free, as nearly all of this territory is owned by American citizens (to the extent of 3,000,000 acres), which was purchased mainly for the pulp wood and lumber, to protect the American mills in the future? Your esteemed friend, Secretary Alger, will confirm this statement, and can give you more information than I can.

We have been in the Canada lumber business since 1852 and are familiar with all its branches. If there is any further information you would like, I shall be happy to supply it as far as possible. The fact is, lumber is used so largely by every class of people, and the supply in this country being limited, it should be allowed to come in free.

That Senator ALLISON and other gentlemen of the committee may know what sections 14 and 15 in the House bill mean, I will state that these mills are at St. John and Calais, and the logs go down the St. John and St. Croix rivers from both New Brunswick and Maine. Mr. Procter, of Ogdensburg, of the firm of Skillings, Whitneys & Barnes, said that enough logs had gone down these rivers from New Brunswick in the last thirty years to cover the State of Maine with logs 20 feet deep. Who is to tell whether the logs come from New Brunswick or Maine? The log owners certainly will not, and the mill owners' interests are identical with the log owners'. These two sections "ought not to have been in the bill unless the Government send up there and investigate this matter thoroughly, and if they do that they will be surprised at what they see and find. It is not fair to the Americans who own large tracts of land on the rivers entering into the St. Lawrence, especially the St. Lawrence River, where the paper-mill owners and lumbermen of northern New York alone own 3,000,000 acres of land.

You will notice these two sections are not put in where they properly belong—in the wood schedule—but placed where they will attract no particular attention.

Should the committee desire, we can send men up there and give them a particular report of what has been going on in the sections covered by these two paragraphs.

It does seem as though, with the intimate relation that New York has with Canada, trade should be about as free as it is with Vermont.

Very sincerely, yours,

H. G. BURLEIGH.

This gentleman, as I said a while ago, is an ex-member of Congress, as I am informed.

I have another letter from Rouse Point, N. Y., from a lumberman, in which he says:

ROUSE POINT, N. Y., *April 10, 1897.*

DEAR SIR: Our mill, covering an acre, with 53 acres of piling ground, is situated at this place, directly on the Canadian line, right next to our Government reservation and Fort Montgomery. For this very reason we, if anyone, are most particularly interested in the action that your committee will take respecting the duty on lumber. We are fully convinced from a personal experience of over forty years in the lumber business, and representing a firm, and successors of a firm, which has been in the business ever since the year 1800 (the grandfather of the writer), that the duty on lumber should be fully as much as the bill that has been passed by the House of Representatives. We know a favorable report from your committee is of vital importance to us and all the lumber manufacturers and dealers on the border. It is not that we think there is going to be such an advance in prices, but we believe that we will be able to purchase lumber in Canada for at least $2 per thousand less; so, in fact, the Canadians will be the parties who will have to reduce their prices.

Mr. President, the argument made here all the time, the plea made to members of this body for the imposition of this tax, is that it is going to protect the mill owners, and that the people of the South will get a higher price for their lumber, and here you have an argument made by one of these protectionists, in which he states that the effect will be to bring in lumber cheaper from

Canada, and that it will not affect the price of lumber in the United States. The letter continues:

For instance, the very cheapest lumber that we have been purchasing from them for the last ten to twenty years, when the two-dollar duty was on—

That duty has not been on for the last ten or twenty years—

we purchased for $6 per thousand, and now, when the duty is off, they ask us $8 per thousand. The duty of $2 per thousand on lumber, in many instances, will not be more than 5 to 10 per cent ad valorem. I am sure this would not be unreasonable. It is our honest conviction that if only $1 per thousand duty is put on we can move our mill into Canada and manufacture lumber at a greater profit than we can in the States.

These are facts that can not be disputed, because we are the ones who have had the actual experience. The gravity of the situation is our apology for asking you to consider the matter favorable, to our interest, and we hope that you will stand by us on the lumber schedule as passed by the House, regardless as to what they may do on the general bill.

Respectfully, yours,

MILLARD LUMBER CO.,
WM. B. MILLARD, *President.*

Hon. JAMES K. JONES, *Washington, D. C.*

Mr. President, I have been somewhat interested in some clippings taken from the New York Evening Post, which I shall present to the Senate later as bearing upon the question of the pine-lumber trade, but I will not present them now. My colleague on the committee has just handed me another letter, with a clipping inclosed, which is as follows:

BUFFALO, N. Y., *June 4, 1897.*

"ONE POINT OF VIEW ON LUMBER.

"TORONTO, ONTARIO, *June 2.*—The proposed American duty on lumber is still the chief topic among lumbermen here. D. L. White, Canadian manager of a big Saginaw, Mich., firm, says the proposed duty would cause American firms operating in Canada to float their logs to Michigan for manufacture, while the proposed Canadian export duty on logs that would surely follow would completely paralyze the trade for a time and result in giving Southern pine a stronger hold on Northern markets."

During the last twenty-five to thirty years Northern timber has been protected and a great industry built up in many States by a tariff on Canadian lumber. The time seems now to have come for a similar development of Southern timber. Is it not reasonable to ask an adequate tariff protection for it, viz, $2 per thousand?

Very truly, yours,

NEW YORK LUMBER CO. OF LOUISIANA.

This is addressed to a Southern Senator. One letter is written here from one of these lumbermen in this very same locality demonstrating that the effect of this duty will be simply to reduce the price of Canadian lumber; and when a Southern man is written to the argument used is that it will increase the price of Southern lumber and increase the price of all lumber; so that there is absolutely no consistency in what they claim nor in the arguments they make.

There are many other considerations, Mr. President, in connection with this matter; but I shall not detain the Senate longer. I hope the Senate will not lose sight of the fact alluded to by one of the writers here, that we have quite a large trade built up with Canada in the last two years and that a very large part of the Canadian imports are imports from the United States. Whenever we enter upon a system of levying high taxes, which some of these gentlemen say will be prohibitory as against this great industry in Canada, of course we may expect that to affect our trade unfavorably, and if we are to have any regard for reciprocal obligations in these matters, we are likely to hurt ourselves more than we shall help ourselves by the proposed tax.

Mr. McLAURIN. Mr. President, I agree with the Senator who has just spoken in one respect at least, that the schedule of this bill on wood and wooden manufactures was not designed to benefit any Southern industry, and I assert that the benefits which come are more by accident than design.

Being somewhat familiar with these schedules from my experience as a member of the Ways and Means Committee of the House, I trust I will be pardoned so early in my term of service taking part in the discussion now pending. I know somewhat of the manner in which the present rates were framed, and the committee of the Senate has increased the sectional features of the House bill not only in this, but in every other schedule. I am not a protectionist in any sense of the term, nor do I believe in a sectional application of a revenue tariff.

I do not know how I can emphasize the point any better than by reference to paragraph 194. You will find in that paragraph that the committee which is responsible for this measure in the Senate have created a monopoly in cedar and other Northern woods, which are used for railroad ties or telegraph poles, while in the first and second paragraphs of the schedule they attempt to do the same thing in sycamore, whitewood, and basswood, which are used for general building purposes. In fact, the entire schedule seems to be framed for the sole purpose of protecting the woods which are grown in the northern parts of the United States, and giving just as little as possible to the timber of the South. I want fair play for the products and the industries of my own section, and I enter my formal protest against a monopoly in favor of Northern forest owners.

I am not an expert in the railroad-tie industry, but I had some experience in the other end of the Capitol while this schedule was being arranged, and I have here a letter from a gentleman——

Mr. ALLISON. May I interrupt the Senator long enough to say that the Committee on Finance propose to recede from the amendment on lines 22 and 23 of paragraph 194, striking out the words "or other woods"? I understood the Senator to make some criticism of that provision.

Mr. McLAURIN. Yes; and I am delighted to hear the Senator's statement.

Mr. ALLISON. The committee propose to recede from that amendment.

Mr. McLAURIN. Then I will not continue my remarks on that line, but will ask the Secretary to read a letter from a gentleman engaged in the tie industry in South Carolina.

The Secretary read as follows:

GEORGETOWN, S. C., *May 31, 1897.*

DEAR SIR: We are informed that that section of the tariff bill relative to 20 per cent duty on ties has been changed so as to admit ties free, and we would like you to use your utmost endeavors to have a duty of at least 10 per cent imposed on ties imported into the United States from Canada or elsewhere. You, no doubt, are well posted as to the condition of the tie business in this section and the class of people who manufacture the ties, and we will only call your attention to a few points of interest regarding the matter.

In the first place, the ties are cut from trees that are too small for lumber or timber, and are cut from such lands which have already been cut over for sawmill timber, and are practically worthless for any other purpose.

In the second place, this timber is owned in most instances by very poor people, who make a living from year to year by cutting ties, and in a good many instances it is their sole dependence.

In the third place, they are all cut by hand and are the direct production of American labor, just as much so as anything manufactured in the United States.

These ties are manufactured with saws and axes which are both fully protected, and we see no reason in the world why ties should be admitted free, when everything that goes to the manufacturing of the tie is highly protected.

We trust that you will give this matter your immediate attention and do what you can to have it remedied.

We believe that duty in the Dingley bill was 20 per cent. This duty we think is about right, but rather than to have no duty at all we would suggest a compromise of 10 per cent, which we think might meet the approval of some of those who possibly opposed the bill on the 20 per cent tariff.

Yours, very truly,

H. KAMINSKI & CO.

Hon. J. L. McLAURIN, *Senator,*
Washington, D. C.

Mr. VEST. In line 19, paragraph 193, after the word "measure," I move to insert "except white pine;" and upon that I ask for the yeas and nays.

The VICE-PRESIDENT. The amendment proposed by the Senator from Missouri [Mr. VEST] will be stated.

The SECRETARY. In paragraph 193, page 60, line 19, after the word "measure," it is proposed to insert "except white pine;" so as to read:

193. Sawed boards, planks, deals, and other lumber of whitewood, sycamore, and basswood, $1 per thousand feet board measure; sawed lumber, not specially provided for in this act, $2 per thousand feet board measure, except white pine, etc.

Mr. BACON. The Senator from Missouri [Mr. VEST] says that he regards this as the most indefensible schedule in the present bill. Such a statement as that, coming from a Senator of his prominence in this body and his familiarity with this general subject, and a member of the Finance Committee, uttered with the earnestness with which he uttered it, is apt to carry conviction to the minds of those who might not stop to consider whether that was an extreme statement.

In the discussion of this bill the Senator has himself frequently criticised the rates of duty here exceeding 100 per cent on various articles of prime necessity. This schedule is one in which the average ad valorem duty is not 20 per cent. The very highest duty on any class of lumber, according to the document read by his colleague on the committee, is 30 per cent, and some of it is as low as 10 per cent, but the general average of it is certainly below 20 per cent, and yet the Senator, in the face of the fact——

Mr. JONES of Arkansas. The rate is prohibitory.

Mr. BACON. You say so, but I am discussing the question whether it is or not, and it is for every member of the Senate to decide for himself whether it is a prohibitory duty or whether less than 20 per cent on any article is a prohibitory duty. We are to judge of that for ourselves.

I was proceeding to say that the general average is less than 20 per cent, probably about 15. Does that statement bear out the extreme expression of the Senator from Missouri, that this is the most indefensible schedule in this bill?

Mr. BURROWS. The Senator will allow me to say that the average rate of the entire schedule is less than 17 per cent.

Mr. BACON. The wood schedule?

Mr. BURROWS. Yes, sir.

Mr. BACON. I am speaking generally of the schedule and not of the particular paragraph now under consideration, and I understood the Senator from Missouri to speak generally of the schedule when he made that assertion.

Mr. VEST. I have no objection to the Senator's putting that construction on it, though what I did say, as the RECORD will show, is that the increase to $2 a thousand upon white pine was the most indefensible item in the bill, and the Reporter's notes will show it.

Mr. BACON. I accept the Senator's statement——

Mr. VEST. Oh, no; I make no apology.

Mr. BACON. I did not say apology. I said statement. The Senator does not disclaim the statement?

Mr. VEST. I said this item, but still I will accept the Senator's statement. I think the whole tax on lumber of every sort is the most indefensible part of the bill.

Mr. BACON. I think it is one of the most reasonable in the whole bill, and a very proper one.

The Senator from Missouri says that, entertaining the views he does, if he did not express them with the earnestness which usually characterizes him, he would be a coward. So, entertaining the opposite views, if I did not express them and sustain them with my vote, I should be equally a coward, and I am prepared to say here and elsewhere that I regard this schedule as a proper one, irrespective of the question as to which party it comes from.

I am not a protectionist. I do not believe in the protectionist system. Of course we recognize that any tariff, in the fact that it influences prices, to some extent is an advantage to the particular article upon which the duty is levied, but I am not speaking of it in that sense. I am speaking of protection as it is generally understood, which is designed to be an arrangement by law on account of which and through which parties are enabled to sell their products at an abnormal price, higher than they otherwise could, and where the design of the law is that such should be the effect, and where the prime design is not the raising of revenue.

In that sense I do not believe in protection at all. I do not believe in the imposition of protective duties on any article; certainly not as a general rule. It would have to be a very extreme case where I would ever admit its propriety. At the same time I do not believe as a general rule in a free list. I think tariffs ought to be levied as far as possible so as to operate uniformly, so that whatever burdens there may be may rest with comparative uniformity, and that whatever benefits there may be may also be enjoyed impartially.

Some things exist that no man can shut his eyes to. In the first place, whether a man believes in protection or not, he is obliged to be in favor of a tariff. The necessities of this Government make a tariff necessary, regardless of whether a man believes in protection or whether he believes in a tariff for revenue only. It is a stern fact that the great necessities of this Government require not only a tariff, but a high tariff, and there is no party, I care not what its doctrines may be, but when it comes into power and to the test, finds it necessary to impose a high tariff.

Mr. MORGAN. Will the Senator from Georgia allow me to ask him whether a low tariff on the free list, which now consists of more than one-half of the imported articles, both in number and value, would not be a revenue producer that would satisfy him?

Mr. BACON. Yes, sir. A revenue tariff would satisfy me not only on those, but on all articles, and that is the only kind of a tariff I want; but when I find a low tariff imposed upon a particular article, and I find by admeasurement and by comparison with other tariffs that it is a tariff for revenue, and upon the scale of a tariff for revenue, I am not to be deterred from supporting it because of the cry of "protection," when such charge is not supported by the fact.

I was proceeding to say that there are two things which have to be recognized. One is the absolute necessity for a tariff, and a very considerable one. The other one is that whatever may be the design of the tariff, whether it be imposed by those who design it as protection to industries or whether it be imposed by those who design it simply as a tariff for revenue only, the necessary, unavoidable effect of it is to affect prices. Whether it is intended to protect or not, the products similar to those upon which duties are imposed are necessarily raised in price by the imposition of those duties.

The great defect of the protective system is the absolute impossibility of making it uniform and impartial. If it could be made so that it would benefit every man in the country in exactly the same way, if it could be made so that it would put the same burden upon every man equally, then the great argument against it would be gone; but as that is an impossibility, I submit that the next best thing to it in the administration of the Government through means of this system of taxation is to approximate this uniformity and this impartiality as nearly as may be. If you do not do it, what is the result?

The result necessarily is that the parties engaged in the production of articles upon which the tariff is levied—and I am speaking now only of a revenue tariff and not of a protective tariff—sell their goods at a higher price than they otherwise would be sold for, and the parties engaged in the production of articles upon which there is no tariff do not have their goods raised in the same proportion, and the consequence is that they must sell cheap while they buy dear.

Mr. President, I repeat, and I can not emphasize it too strongly, that I am not speaking in defense of a protective tariff; on the contrary, I am opposed to a protective tariff; but I say when we come to levying a tariff for revenue, we should, as nearly as possible, approximate uniformity, so that all classes should, as far as possible, enjoy its benefits, whatever benefits there may be growing out of such tariff, and that all parties should have imposed upon them, as far as practicable, uniformity of burden.

I am supporting this schedule not because it is protective—if Senators can satisfy me that it is a protective duty, I will vote against it—but I am supporting it because I do not consider it a protective duty; because I consider it within the legitimate scope of a revenue duty. What are the general ranges, not to speak of the extreme schedules, of rates of tariff? Under the Wilson Act it is over 40 per cent. The Senator from Missouri speaks of the fact that this rate of duty exceeds that in the McKinley Act. That is not the question. It might have been free in the McKinley Act. The question is, Is this rate above that which is recognized as a revenue rate? That is the question. If it is, I am against it; if it is not, I am for it.

Mr. President, I said that as far as practicable I am in favor of uniformity in the imposition of a tariff, and that leads me to the proposition that while I am generally opposed to a free list, I am particularly opposed to a free list of raw materials. I can not go into a discussion of that question; it would take too much time, and I know Senators are impatient to proceed with the consideration of the bill. I probably have occupied more time than I ought to have consumed. I am now coming to the specific question as to whether or not this is a tariff duty which ought to be sustained by the Senate.

The Senators who have spoken have confined their discussions exclusively—I will not say exclusively, but in the main—to the question of effect on the particular woods grown on the Northern border. Senators are very much mistaken if they suppose that it has no effect upon woods grown in the South. If parties interested in Southern pine were here asking me to support a protective tariff on their production, I would refuse to do it. They come to me and say, "This is very much less than the ordinary revenue duty. We are engaged in the production of lumber, and in its production we have to buy articles not one of which has so low a rate of duty imposed upon it as this. We have to buy our tools, our machines, our vehicles, the clothes that our laborers wear, everything upon a scale of prices far above that which would prevail if those things were upon the free list, and yet we are asked to sell our products upon the basis of the free list; and we say it is unjust." I am prepared to say here and elsewhere that it is unjust. And while I would not support a protective tariff, I am ready at all times to say that parties engaged in legitimate industries, where there is a necessity, an absolute necessity, for the imposition of the tariff, should have duties, not protective, but revenue duties, in proportion to the revenue duties imposed upon other articles.

Mr. President, we hear a good deal in this Chamber about lumber barons. I know nothing of them. I am not familiar with that matter, but I know that one-third of my State, if not more, is a timber-producing area. I know that there is a very large proportion of the State where it is the leading industry—the industry of felling timber and carrying it to the mills and having it put into the shape of merchantable lumber. I know that not only the men who are actually engaged in that business, but the people all through that country, in whatever occupation they may be engaged, are dependent upon the success of that industry. I know that even the railroads are to a large extent dependent upon the continuance of the industry.

A very large proportion of the Southern timber manufactured into lumber is shipped to the northwestern boundary, and an immense amount of it goes to the city of Chicago. Almost all the freight cars that are manufactured in this country are made out of it. It is largely used in building houses. In a great many uses it comes in direct competition with the lumber that is brought across the border. These men know what their interest is. I yesterday received a telegram from two very prominent men in my State, engaged in this business—business men who know their interests—saying that every man, woman, and child—using those words—in the lumber region is looking to the successful passage of the lumber schedule.

If they had telegraphed to me—I repeat it, because I do not wish to be misunderstood on this subject—asking me upon that ground to support a protective duty, I should have refused. But this is not a protective duty, and no man can say that less than 20 per cent on any article can possibly constitute a protective duty, whatever the article may be.

Mr. President, in front of the house where I live runs a railroad, and I do not think I exaggerate when I say that two-thirds

of the trains which pass along that road are freighted with lumber going to the Northwest, and I do not hesitate to say that not only that railroad, but other railroads in the State, if this industry should be stricken down, would have to stop their business within a very short time.

None of these arguments would be sufficient if the question were whether or not we should protect the industry of these people; whether we should take, as those of us who do not believe in the protective system say, the money out of one man's pocket to improve the business of another man. I do not believe in any such doctrine; I do not support any such doctrine; but I do stand on the ground I have announced, that where there is a legitimate revenue tariff, the very worst form of protection, the most offensive form of protection, is that which gives the tariff to the man who manufactures the finished product and denies it to the man who furnishes him the raw material from which he makes that article.

You are in that case not only protecting the man at the expense of the Government, but you are protecting him at the expense of the man who furnishes him the raw material. A man can have a margin between the price at which he sells and the price which it costs him to make the article, either by raising the price of the finished product or by a reduction to him of the cost of the material out of which he makes his product. By no possible system of reasoning can the proposition be defended that, in order that a man who makes the finished product shall enjoy the full benefit, the man who furnishes him the raw material shall be compelled to furnish it at a price less than he would if the law put them both on the same plane.

That is all we ask for the raw material. We ask not for protection for raw material. I am opposed to protection for the raw material or for the finished product, but I do ask for equality in the imposition of duties both upon the finished product and upon the raw material.

The learned and distinguished and eloquent Senator from Missouri grows unusually eloquent in depicting the great injury that will result to those who live upon the plains if the price of their lumber is raised, not by putting on a protective tariff, but by giving the producer of the raw material the same advantages that you give the finished product by the imposition of a purely revenue tariff duty. How these men, he says, will sweat with drops of blood! I want to know in what particular the man upon the plain is more dependent upon getting lumber cheap than on getting clothing cheap, or furniture cheap. Yet the great outcry is that if these producers of raw material, who are the least able to protect themselves, these men who can not band themselves together and have the influence upon legislation that other industries have, are simply given equality before the law—and in fact not equality, because this rate of taxation does not give them half what it gives the other industries—the great crime, the great outrage is that the men of the Western plains will have to pay a little more for their lumber.

Do they not have to pay more, necessarily, for all articles out of which revenue is raised; and if this is a revenue duty, by what right can they or any other claim that they have the right to have cheaper material at the expense of the men who produce it?

Mr. VEST. I understand the web and woof of the Senator's argument in favor of this rate is that it is a revenue duty and not a protective duty.

Mr. BACON. If the Senator calls it the web and woof because he means to include the entire garment, then he is correct.

Mr. VEST. I will not put the question, if it is disagreeable to the Senator.

Mr. BACON. No; I beg the Senator's pardon.

Mr. VEST. I will say the gist of the argument. What does he do with the statements made by the men at the head of the great lumber companies to the effect that $2 upon white pine is absolutely prohibitive, and they intend to have it that way, not for revenue, but to keep it out of the country? Here are their sworn statements.

Mr. BACON. I simply say I know nothing about who they are or anything else, or what particular motive they may have had in making the statement. I do say—and every Senator, I think, will bear me out in the statement—that it is absolutely incredible that it should have any such effect.

Mr. VEST. Here is the evidence.

Mr. BACON. The evidence that they said so; but I say it is contrary to the experience of this Government, contrary to the experience of all business, contrary to the experience of all matters connected with imports, that a duty of less than 20 per cent upon anything should be a prohibitory duty.

Mr. VEST. I am astonished at the Senator's statement. As a matter of course, it is not the amount of the duty which of itself makes it prohibitory. It is the condition of the trade. There may be such competition that a 5 per cent duty will keep an article out of the country.

Mr. BACON. That is true, but——

Mr. VEST. You can not put down any rule of 20 or 30 per cent. Here is Mr. Winchester, a gentleman very well known in the lumber interest, advocating $2 on white pine, and he states before the committee that that would absolutely keep it out of the country.

Mr. BACON. And yet the Senator's colleague on the committee read as an authority here a statement from somebody else that it would have no effect whatever and that it would be exactly the same. Therefore we are called upon to exercise our own judgment in the matter, because you have brought two witnesses, one of whom says it will be prohibitory and the other one says it will not raise the price at all. Between the two, I will reject both and appeal to the common sense of the Senate as to whether or not less than 20 per cent would be a prohibitory tariff under such circumstances.

Mr. VEST. Let me ask the Senator a question. Does he believe that the imposition of a tariff duty has no effect upon the price to the consumer? Does he not know that it adds to the price?

Mr. BACON. Most undoubtedly.

Mr. VEST. Very good. Then it is absolutely impossible——

Mr. BACON. If the Senator will pardon me, I think the statement made by the correspondent of the Senator from Arkansas is utterly incredible, and I think the statement by the correspondent quoted by the Senator from Missouri is equally incredible.

Mr. VEST. He is no correspondent. It is the testimony of Mr. Winchester.

Mr. BACON. Testimony, if you please. In my own mind I am perfectly satisfied that 20 per cent would not act as a prohibitive tariff.

In the first place, these Canadian lumbermen, so far as any competition with the Southern pines is concerned, have an immense protection in the large amount of railroad freight—I say protection; it is an immense advantage in the way of market price—necessary to carry the lumber a thousand miles. But I will not pursue that line of argument further.

Mr. President, I am unable to appreciate the strength of the arguments which are made in favor of free raw material. I can not go into the question now, but I do say that unless other things can be free there is no reason why raw material should be free, and I have never seen or heard the argument which is convincing to my mind that there can be any stability in a position of that kind.

I owe an apology to the Senate, and especially to those in charge of the bill, for having trespassed this long upon their time; but I have ventured to do so in view of the fact that I am called upon to antagonize gentlemen on this side of the Chamber, and it is necessary that I should make clear the point that I am not in any manner abandoning the position I hold, that the correct duty is a revenue duty, and that I support this particular schedule because it is a revenue duty, and a very moderate revenue duty, and only about half or less than half of the average duty which the Senator himself, three years ago, when in charge of the bill, assisted in putting through this Chamber, where the average, if I am not incorrectly informed, was 40 per cent.

Mr. VEST. Lumber was on the free list.

Mr. BACON. I know the Senator put lumber on the free list. I am bringing it up to test the question as to whether or not the present rate exceeds a revenue rate, and I said that my party, of which the Senator from Missouri is a most distinguished and honored and valued member, found it necessary, when it came to put through a revenue bill—under the name of a revenue bill—to have tariff duties which exceeded 40 per cent in the average. I was taking that as a test as to what is a revenue duty. This duty is less than 20 per cent and can not be said to be a protective duty, and therefore I am for it.

Mr. VEST. Mr. President, I enter my protest against the act of 1894 being considered as a precedent for the Democratic party, or that those of us who voted for it, entertaining the opinions that I do, should be held responsible for the duties in that act. I have stated repeatedly that that bill was passed, so far as my vote was concerned, under political duress, because the President of the United States, the head of my party, and the Secretary of the Treasury said it was absolutely necessary to pass a tariff bill, and we had to make concessions, even against our judgment, in regard to the duties that were imposed.

Mr. BACON. Will the Senator permit me to ask him a question?

Mr. VEST. Certainly.

Mr. BACON. Leaving that bill out of the question, if the Senator were called upon to frame a tariff bill and to state what should be the general average of the revenue duties or the tariff duties imposed, so as to raise the requisite revenue, so as to confine it strictly to a revenue basis, what would the Senator say would be the lowest limit of the average duties which the measure should contain?

Mr. VEST. That would depend entirely upon the necessities of the Government.

Mr. BACON. Well, the present necessities. Does the Senator think it would be so low as 25 per cent on all?

Mr. VEST. If we would do our duty and cut down the expenses of the Government——

Mr. BACON. Ah!

Mr. VEST. That is the first thing to be considered. Then 25 per cent would be ample, and would make a surplus.

Mr. BACON. Does the Senator think it could be reduced below 25 per cent?

Mr. VEST. I think it could go below it.

Mr. BACON. Below 20 per cent?

Mr. VEST. It is impossible to answer the question without going into a discussion as to the necessary expenses of the Government. I can not, by any possibility, say, as a matter of conjecture, what the per cent ought to be. I content myself with saying that I would lay no duty for protection. If there come incidental protection, as it is called, it must come of itself. It should not come from any vote of mine.

When we passed the bill of 1894, I stated at the time, and I repeat, that it had three things in it which mollified its objectionable features, and those three things, the only three, according to those who believe like I do, were free salt, free lumber, and free wool; and I am sorry that a member of my party—he has a perfect right to do it, and I have no right to criticise him—is now willing to strike out free lumber and to put this duty upon it which the advocates of the duty themselves say is a prohibitory duty. A Senator can not say that one per cent or the other is proper in any case and is a revenue duty. You must consider each article for itself in framing a tariff bill.

Take the article of lead and put the duty upon it at 2 cents a pound, which is an insignificant one, not amounting possibly to 15 per cent, and yet it is an enormous duty when you consider the condition of the interest. You can exclude an article from this country with a 5 per cent tax. It depends upon the amount that is produced abroad. It depends upon the competition. It depends upon the condition of the interest at home.

I do not care to enter into a general discussion as to raw materials, but I will say incidentally that I never had any doubt that the true policy of this and every other civilized country is to admit raw materials, free in order to enable the domestic manufacturer to produce as cheaply as possible, which necessarily gives the perfected or produced article as cheaply as possible to the consumer. You must follow the relative conditions of the country when you consider the imposition of tariff taxes. France is the wisest country in the world to-day as to manufactures, as I said the other day, and why? Because French statesmen admit raw materials free, increase their value in French factories, send them abroad, and sell them for an increased price and at a profit; and it is not to be wondered at that France has paid off its enormous billion-dollar debt, the result of the disastrous war with Germany, and to-day its credit is equal to that of any other country in the world, not excepting Great Britain. France is inferior to Great Britain only because it has no carrying trade.

Every time you put a duty upon the raw material you handicap the manufacturer. Every time you handicap the manufacturer you give him an excuse to put up the price to the consumer, and because I believe as conscientiously and honestly as I believe anything in the world that our great object in all taxation should be to relieve the body of the people, the great masses of the consumers who are not skilled workmen and who are not capitalists and who compose the web and woof, to use that expression again, of the population of this country, I believe in free raw materials, and I would make them all free if I could.

Mr. CLAY. Mr. President——

Mr. BACON. I hope my colleague will pardon me a moment.

Mr. CLAY. Certainly.

Mr. BACON. The Senator from Missouri need not worry himself in regretting that members of his party should take this position.

Mr. VEST. I do regret the division in the party.

Mr. BACON. Very well; if the Senator expresses it that way, I have nothing to say as to a division in the party. I simply say the Senator can not show anything now or at any other time that free raw material is a principle of the Democratic party.

The Democratic party has never said so in a platform. When the great issue was made for free raw material, there were some very curious whisperings as to the particular influences which were behind that doctrine—very powerful influences, which might result in very great pecuniary benefit to some individuals who were thought to stand very near to those powerful influences.

I say the Senator can not say that is Democratic doctrine. He can not say it is a tenet ever expressed by the Democratic party, and he can not square it with that great fundamental principle of the Democratic party that there should be equality of burdens and equality of benefits. That is the great fundamental principle of the Democratic party, and the thing that steps aside from it, the thing that seeks to put a burden upon one man which is not borne equally by his fellows, is not Democratic.

The thing which seeks to put a benefit in the possession of one man and deny it to another is not Democratic. Standing upon that as the fundamental principle of the Democratic party, I say that it is an impossibility that anyone should be out of sympathy with the great fundamental principles in general who stands upon that particular platform.

Mr. President, I can not go further in this discussion. We are probably trespassing upon more important matters. But the Senator is unfortunate in some of his allusions. France is not a raw-material producing country, and she has not paid her debt to Germany. She owes it to-day in the shape of a bonded debt, the largest bonded debt that any nation has.

Mr. VEST. She has paid Germany.

Mr. BACON. And, aside from that, the Senator says that the great purpose is to aid the general public by aiding the manufacturer. Mr. President, when you come to the ultimate cost of any article, that cost is not represented by the work of the manufacturer alone. The ultimate cost of an article represents not only the finishing touch of the manufacturer, but it goes back to the original work upon it, and in that ultimate cost the labor and the compensation of all those people is represented.

I should like to know by what right it is sought, in order that there may be a general public benefit, to put all the profit and all the benefit in the possession of the man who puts the finishing touch upon it, and to say the others shall have none, instead of having it properly distributed between them all.

The fact that the manufacturers come here, and that they are enabled to get higher rates of duty, and to say, "If you give the free raw material man the equality which he demands, the manufacturer must have a compensatory duty," the fact that they have the power to come here and to say it, does not make it right. The proper thing to do, in order that there may be equality, is to so distribute these tariff duties that whatever benefit there may be arising from them may be enjoyed not only by the man who puts the finishing touch upon the article, but by every other man who has contributed his labor or money to produce it, so that whatever burden there is shall be equally borne by all of them.

Mr. CLAY. Mr. President, in rising for the purpose of addressing the Senate on the pending measure I am fully aware that I labor under many disadvantages. It could not be expected that a new member of the Senate could thoroughly master all the details of so complicated a measure in the short time intervening since the Finance Committee made its report; hence I shall confine my remarks to some of the leading features of the bill. I may violate the unwritten law of the Senate in presuming to discuss so important a matter at the beginning of my Senatorial term, but the subject under consideration is not only one of importance, but of great interest to the people I have the honor in part to represent upon the floor of this Chamber, hence I feel it a duty I owe to them to record my reasons for voting against this measure. Mr. President, the advocates of this bill do not attempt to disguise the fact that its purpose is twofold: First, to provide revenue to support the Government, and, secondly, to encourage the industries of the United States. It has never been questioned that the Constitution gives to us the power to levy and collect taxes, duties, imports, and excises to pay the honest and legitimate expenses of the Government. We must have sufficient revenue to meet the needs of the Government, honestly and economically administered. This revenue can be raised either by direct taxation or by customs duties on imports. That the latter is preferable to the former I am willing to admit; but I do not hesitate to state that in my opinion if the revenue now raised to pay the expenses of the Government were collected by direct taxes, so that the great masses of the people could see and fully understand the burdens they bear, our annual expenses would not exceed three-fourths the present amount. The American people under such a system would never submit to the payment of $140,000,000 annually to pensions. We should exercise the same rigid economy in public expenditures, whether our system of raising revenue is by direct or indirect taxation. The Democratic party has time and again declared in favor of a tariff for revenue only, and unalterably opposed to a tariff for protection. The school of politics in which I have been educated taught me that we owe it to the people to collect no more money by taxation than the Government needs to pay its current demands. As has often been said, "An overflowing Treasury encourages extravagance and the appropriation of public funds to objects of doubtful propriety."

A tariff duty should always be levied in such a way and so adjusted as to operate equally throughout the entire country, and there should be no discrimination between class or section. Mark you, Mr. President, the word "discrimination" should ever be kept in view by the legislator. Sir, when you discriminate it means

to enrich and build up some one at the expense of some one else. Again, taxation should always be limited to the needs of the Government when honestly and economically administered. Thus far should Congress go and no farther.

The Government should treat all of its citizens alike. Under a government so administered the people will be happy, prosperous, and contented, and patriotism will find a lodgment in the breast of every good citizen. Taxation is a necessary, but a very dangerous power. It was Chief Justice Marshall who declared that the power to tax is the power to destroy. This has been fully illustrated when Congress levied a tax of 10 per cent on the circulation of all other bank notes except national-bank issues. Everyone knows it had the effect to drive out of circulation at once all State-bank issues. "When the Government uses the taxing power and takes the labor and property of one citizen to aid private enterprises and build up private fortunes, or to enrich one class or section at the expense of another, the Government ceases to do justice to all of its citizens."

It is legitimate to raise revenue to meet the honest demands of the Government, but it is absolutely unjust and indefensible to take from one class to enrich another. It must be admitted that a revenue tariff itself gives to our manufacturers an advantage over foreign competition. This I am willing to concede them; but I ask that every section of our common country share alike in its benefits, and I insist that reason and justice demand that all should be satisfied with a Government that pursues such a policy. No man's private business, simply because it has proven unprofitable, should be kept up at the expense of our Government. The proposition can not be successfully disputed, when one citizen's business is aided and protected by legislation, it must be done at the expense of some one else. It must necessarily follow where taxes and restrictions confer wealth and property upon individuals or sections, an equal amount must be taken from another. I insist that when it comes to legislation, we must act from a patriotic and unselfish standpoint, and see to it that one section of our country shall not be made rich at the expense of another. What the producers need in this country is intercourse with the markets of the civilized world. Class legislation centralizes wealth, builds up classes, and encourages monopolies. It encourages designing men to accumulate unjustly large and dangerous fortunes. It creates the spirit of unrest and dissatisfaction, and justly so among the masses, who, finally suffering great injustice at the hands of their Government, cease to respect, honor, and obey its laws, which can but result in the ruin and destruction of the Government. Our farmers, if they get justice, must have the right to sell their surplus products in the markets where they can obtain the highest possible prices, and purchase articles for consumption they can not produce themselves in the cheapest markets. What they want is to create a demand for their surplus products. The manufacturer's business has been protected from competition at the expense of the consumer.

Protection has stifled competition, which has enabled protected parties to form trusts and combines and regulate the prices of the necessaries of life, and, in my honest judgment, the great inequality of wealth now existing can be largely attributed to the protective system. When it was born its defenders declared that its purpose was to encourage our infant industries, to enable them to advance in that strength and equality that would give them ability to compete with the markets of the old country, and the father of the system declared himself that three years would be sufficient time for them to obtain the necessary strength to accomplish this purpose. But now the Government is more than a hundred years old, and the older, more powerful, and stronger these favored industries grow under the protection of the Government the more determined they become to increase their demands. It is the doctrine of the Democratic party that all shall stand equal before the law, and the Government in making, enforcing, and construing the law shall not discriminate between citizens. It was Andrew Jackson who said:

> When the laws undertake to add to those natural and just advantages artificial distinctions and exclusive privileges to make the rich richer and the potent more powerful, the humble members of society who have neither time nor the means to secure like favors for themselves have a right to complain against their Government.

Now, let us examine this bill, or a few items of importance in the same, and let us see whether or not, measured by the rules of Democracy and measured by the rules of justice and equality, it deserves the support of the American people. Let us compare it with the Wilson bill, which was simply a step in the right direction and is far preferable to the pending measure.

Why the necessity of tariff agitation at this extra session of Congress? Why the necessity to change our entire tariff laws? If there be a deficit, why should we change the entire present law? Under the present statute markets have been secured by our manufacturing industries, commerce has adjusted itself to the rates as fixed by the Wilson bill, and now to change the whole law will upset the entire business of the country. Why the necessity of raising a hundred millions additional revenue? Does the Government need this large, enormous sum to meet its current demands? It is not the purpose of the friends of this measure to raise revenue to meet current expenses, but to protect favorite industries. It is simply class legislation. Is it not true that the deficit for 1896 was only twenty-five millions? And this was made necessary by the decision of the Supreme Court declaring against the constitutionality of the income tax incorporated in the Wilson bill. Is it not true that the monthly receipts of the Government now exceed the monthly expenditures? And is it not true that, if the present law is let alone and tariff agitation cease, our revenues will gradually increase and the business interests of the country will settle down and know what to expect? It was predicted by Mr. Carlisle that the longer the Wilson bill remained on the statute books the more revenue it would produce. And however much we may differ with him about other questions, no public man in this nation is better authority on tariff legislation than Mr. Carlisle. He has already predicted that if the Wilson bill is let alone, instead of there being a deficiency in the revenue, the receipts would exceed the expenditures by more than seven million dollars. This constant agitation and change of tariff laws has done the country incalculable injury.

Is it not true that there is available in the Treasury a hundred and thirty million dollars surplus outside the hundred millions constituting the gold reserve? Is it not true that this large, enormous sum would more than readily meet any deficiency in expenditures over receipts for the next three years? Give the present law a trial, cut down the appropriations, economically administer the Government, and make an honest and faithful effort to see if the present receipts will not meet the honest and legitimate demands of the Government. But the friends of this measure declare that it is not revenue alone they are after; their prime purpose is protection for home industries. Is this justice to all of our citizens?

I desire to call attention to some of the items taken from the free list under the Wilson bill and placed on the dutiable list under the Senate bill. Bags for fertilizers will be called upon to pay a duty equal to 31 per cent ad valorem. On bagging for cotton the duty is fixed at one-half per cent per square yard and 15 per cent ad valorem. There was imported in 1896, 1,694,758 square yards of bagging, valued at $70,191.23. Should the same amount be imported under the Senate bill, the revenue paid by our farmers in the South who produce cotton will be $19,002.48.

Cotton ties, used by the same class of farmers, are to pay a duty of seven-tenths of a cent a pound. There was imported in 1896, 7,804,420 pounds, valued at $102,327. This would cause our same farmers to have to pay extra for their ties used, for preparing their cotton for the market, $54,630.94. Under the Wilson bill they had the right to go into the markets of the world and purchase their bagging and ties where they could obtain them the cheapest, but the Senate bill denies them this right. In fact, if this class of our agriculturists are to receive any benefits under the Senate bill I have been unable to discover them. Under the Wilson bill salt was placed on the free list. This is one of the necessities of life. But the Senate bill expects to raise a revenue of more than $500,000 from this article alone. There was imported into this country in 1896, 533,264,708 pounds of salt. Being on the free list, the quantity in bulk or packages is not specified. The Senate bill fixes the duty on salt in bulk at 8 cents per hundred pounds; in bags, sacks, or barrels, at 12 cents per hundred pounds. From the best information I can obtain about 42 per cent of the amount imported came in packages and 58 per cent in bulk. This would make the tax placed on salt equal to $516,199.13. The total value of salt imported into this country in 1896 was estimated at $738,787.36, which, compared with the proposed duty on salt, is equal to a tax of 70 per cent ad valorem.

How can the friends of this measure justify before the people the increase of the duties upon wool and woolen goods? The Wilson bill placed raw wool on the free list, so the manufacturers could go into the markets of the world and purchase it where they could obtain it cheapest. Its purpose was to enable them to buy cheap raw material, that they might furnish to the consumer cheap woolen goods. Should the importations of raw wool and woolen manufactures remain the same as they were under the Wilson bill, raw wool will be called upon to pay a tax of more than $14,000,000, and goods manufactured of wool will be called upon to pay a tax of fully $45,000,000. The tariff on wool and manufactured woolen goods will amount to fully $60,000,000, nearly three times the amount paid under the Wilson bill—in round numbers, an increase of nearly $37,000,000. Now, who pays this vast, enormous sum? Every man, woman, and child who uses woolen goods will be called upon to assist in bearing this burden. Now, who receives the benefit of it? Simply those who are engaged in manufacturing woolen goods. While the sheep grower receives a duty of 46 per cent ad valorem on his raw wool, he pays to the manufacturer more than 70 per cent for the cloth consumed, manufactured of the same wool on which he received a duty of 46 per cent.

The class whose business is thus protected and aided by the Government at the expense of their neighbors, who receive no similar advantages, but who in reality give part of their substance to carry out the favors of the Government granted in the form of law, must necessarily grow rich and prosperous in business, while their less fortunate neighbors, who bear the burdens of taxation and receive no aid or encouragement at the hands of the Government, struggle for existence and are unable to even provide the necessaries of life for their homes.

I desire to call special attention to the increased duties and protection given to sugar. This additional tax applies both to the producer and the refiner. If I have any sympathy with either it is with the producer rather than the refiner, but the comparison I wish now to make is in behalf of the great mass of consumers, for we all know we have seventy millions of consumers of this article of necessity, and while we should give both to the producer and the refiner an opportunity to make reasonable profits on their investments, let us not forget that the entire people are deeply and vitally interested in seeing to it that the cost of sugar is not increased as proposed by the Senate bill. We all know that a large percentage of the sugar consumed in this country comes from foreign countries. We all know the higher the duties on imported sugars the greater will be the cost to the consumer. The Wilson bill placed a duty on raw sugar of 40 per cent ad valorem and one-eighth of 1 cent per pound additional on refined sugar. The cost of refined or granulated sugar without a duty is $2.30 per hundred pounds. Under the Wilson bill, which gave 40 per cent ad valorem and one-eighth cent per pound additional on refined sugar and one-tenth of 1 cent per pound countervailing duty, the cost of sugar was increased about $1.15 per 100 pounds.

Cost of sugar without a duty per 100 pounds	$2.30
Duty under the Wilson bill:	
40 per cent ad valorem, equal to	.92
⅛ cent specific tax, equal to	.12
Countervailing duty, equal to	.10
Total cost per 100 pounds under the Wilson bill	3.44

Now, let us see what effect the Senate bill must necessarily have to increase the cost of sugar to the great mass of consumers.

How much higher, other things being equal, will 100 pounds of sugar necessarily be under the Senate bill as compared with the Wilson bill, the former a Democratic and the latter a Republican measure.

The duty on sugar under the Senate bill gives to the refiner $1.16 per 100 pounds and 35 per cent ad valorem additional, and the countervailing duty is equal to 38 per cent. Now, what will be the price of sugar under these circumstances? The duty on raw sugar is seventy-nine one hundredths cent per pound plus 35 per cent ad valorem and two-tenths additional for every degree testing above 88.

We know it takes 107¼ pounds raw sugar testing 96 degrees to make 100 pounds of refined sugar. Granulated sugar will cost as follows under the Senate bill:

Without a duty per 100 pounds	$2.30
Duty added by the Senate bill:	
Specific duty	1.16
Ad valorem duty, 35 per cent, equals	.80
Countervailing duty equals	.38
which would make the cost of sugar under the Senate bill, per 100 pounds, equal to	4.64

The common mind can easily grasp the situation, and see that there is a difference of $1.20 per hundred pounds in favor of the refiner and against the consumer.

Now, what is the real protection on refined sugar as against raw sugar?

That depends entirely upon the quality or price of the article. Take raw sugar testing 93 degrees. The duty on 107¼ pounds of this class of raw sugar, which would produce 100 pounds of refined sugar, would, under the Senate bill, be $1.81. The duties on refined sugar would be $1.16 specific, 80 cents ad valorem, 38 cents countervailing, a total of $2.34 per hundred. Deducting the duty on raw sugar, $1.81, would leave a difference of 53 cents per hundred pounds in favor of the refiner. This is the real protection he would enjoy under the Senate bill; and of course in lower-grade sugars his protection would be much greater.

If the calculation is made without taking into consideration the countervailing duty, then the difference would be about 15 cents per hundred pounds; but it is just and proper to include the countervailing duty, for the reason that most of the raw sugar imported by the refiners comes from countries which do not pay bounties, while refined sugar comes from bounty-paying countries.

If the Senate bill shall become a law it means that the Republican party by this one change regulating the duties on imported sugar has increased the price more than 1 cent a pound to the great mass of consumers.

Now, what reason or argument can we give to the people that will justify the lawmaking power in adding an additional cost of $1.20 for every 100 pounds of granulated sugars used by the consumers. The census of 1890 shows that there was invested in this country $24,000,000 in sugar refineries, now owned, controlled, and operated by what is known as the sugar trust. This trust paid in dividends to its stockholders last year 10 per cent on $75,000,000. It is estimated that $50,000,000 of this was watered stock, the real capital invested only being about one-third of the amount.

So, in reality, the sugar trust, which has become the scandal of the nation, must have paid 30 per cent dividends on the actual capital invested. Now, does this infant industry, under the control of the Havemeyers, deserve at the hands of this Senate this additional protection? Is it just and right to the entire people that the lawmaking power shall take from the masses by increasing the cost of living and adding additional millions of profits to the pockets of the American Sugar Refining Company, which now practically controls the entire sugar refineries of this country and which is commonly designated as the sugar trust? The lawmaking power of our country is responsible for the organization of this trust. The bounties and favors given by the Government to the sugar interests, thus stifling competition, have brought about a condition of affairs whereby the different refiners have organized their properties into a trust, crushing out all small enterprises, destroying local competition, and have attained a position and standing in both the political and financial world condemned by both justice and common honesty. No political party can stand before the people and justify a law which increases the cost of sugar $1.20 per 100 pounds to the consumer and adds additional profits and dividends to a trust that saved under the present law more than 30 per cent dividends to its stockholders on the capital actually invested. Let every consumer take notice that the Senate bill, if enacted into a law, the Republican party by one act of legislation has added a duty of $1.20 to every 100 pounds of sugar consumed and legislated millions of dollars into the pockets of the refiners. Have we met here for no other purpose except to increase taxation? Is the financial issue, so thoroughly discussed among the people, to be entirely ignored? Are our friends on the other side determined to do nothing to bring about bimetallism by international agreement or otherwise?

Do they mean for this entire extra session of Congress to be devoted to the rearrangement of the entire tariff laws, which simply increases the burdens of taxation? Do they believe this is all the people expect of Congress? Suppose the people had been told during the campaign that our friends would simply come together to change the tariff laws and increase the duties on the necessaries of life. Do you suppose now that they would have charge of all three branches of the Government? Another item in this bill to which I desire to call attention. The Senate bill places a duty of 10 cents a pound on tea. For six months previous to December 31, 1896 (I take this statement from the Monthly Summary of Finance and Commerce issued May 1), there had been imported into this country 61,597,497 pounds of tea. From the best information I can obtain there will be on hand held by the tea importers of this country July 1, the time this law is to take effect, about 45,000,000 pounds of tea imported without a duty. Now, any man with common sense knows, with a duty of 10 cents a pound on tea, we have legislated into the pockets of the tea men $4,500,000 by this item alone. Do the friends of this measure expect the importations to be as large as they were under the Wilson bill? If so, what do they expect to do with the revenue raised? Do they expect to give relief to the people by increasing the tax on wool and woolen goods $37,000,000, and by increasing the tax on sugar $32,000,000, and by placing a tax of $9,000,000 on tea, $500,000 on salt, $50,000 on ties, and $20,000 on bagging? Is this the kind of relief our friends at this the extra session of Congress expect to give to the people? On three articles alone—wool and woolen goods, sugar, and tea—the Senate bill proposes to collect $78,000,000 over and above the amount collected under the Wilson bill; and add to this $14,000,000 extra on beer, we have in round numbers an increase of $92,000,000 proposed in four items by the Senate bill. Will it give relief to the people to thus increase the cost of clothing, sugar, and tea, three prime necessities of life? If the people can be made to understand this measure, drawn to deceive, it means the doom of the political party responsible for its passage. Why increase the duties on sugar, tea, and wool, and decrease them on rice and refuse a duty on the importation of long-staple cotton, beauxite, and manganese, productions and enterprises of the South? When amendments on these articles are reached, will our friends on the other side accord to our section the same justice that they ask for their own? Let us not, by all means, make this bill sectional. I hope to be heard on those amendments when they are reached.

What protection do we give the millions of men, women, and children who toil all day in the burning sun in the cultivation of

the soil in the cotton fields of the South? Why should the wool manufacturers and the sugar trust be the recipients of favors at the hands of the Government, at the expense of the cotton planters of the South and the grain growers of the West?

Why, especially, should this be the case when there is no necessity for more revenue to run the Government economically administered? Why should one section of our country, or one class of business forever receive aid and assistance from the Government at the expense of the masses? Is there never to be an end to this injustice? Why should the Congress of this Government take from one class or section to enrich another? Or why should all be taxed to benefit a part?

The Democratic party stands for the freedom and equality of all our citizens. What is the real object and purpose of this bill? It is to enable that section of the country engaged almost exclusively and entirely in manufacturing to obtain a higher price for manufactured goods, and it necessarily follows that the purchasers of clothing and other necessaries must pay the increased price. No wonder certain sections and classes have advanced in wealth and power while other sections less favored by the Government and bearing the burdens of unjust taxation have felt the pangs of poverty and want. I know, Mr. President, I have no prejudice against any section of my country. I stand upon this floor and proclaim that I am ever ready to grant equality and justice to every section and to every class, but if the people whom I have the honor to represent have suffered injustice and almost unbearable wrongs they have a right to complain.

Let us examine and see what progress our farmers are making. Why is it that our young men are unwilling to remain on our farms and cultivate the soil? It is because farming has ceased to be profitable. It has always been said the condition of the agricultural classes mark the civilization, progress, and power of any country. Happy, thrifty, and contented farmers are absolutely essential to the perpetuity of any nation. It was Thomas Jefferson who declared:

> The cultivators of the earth are the most valuable citizens. They are the most vigorous, the most independent, the most virtuous, and they are tied to their country and wedded to its liberty and interests by the most lasting bonds.

If we expect our Government to endure and to retain the respect, confidence, and love of the American people we must adopt and sustain a policy that reaches out to and among the masses who toil for a living, and give to them the blessings of a wise, just, and good government.

The products of the farm have declined in prices until they have fallen below the cost of production. I desire to attach and have printed as a part of my remarks five tables showing the average prices of corn, wheat, oats, rye, and cotton each year from 1873 to 1895, and also a table showing the expenditures of our Government each year from 1856 to 1893. In 1873 the farmer averaged 23 bushels of corn per acre, which brought in the market $11.40. In 1874 the yield decreased slightly and he received for his corn crop $13.40 per acre. In 1879 the yield was about 29 bushels per acre and he realized in cash about $11 per acre. In 1895 the average yield was 26 bushels of corn per acre and he only received $6.91 per acre. While the yield increased only about 3 bushels per acre the price went down nearly half.

Let us take wheat for the same period. In 1873 the average yield was 12 bushels per acre and the average price was $14.59 per acre. In 1879 the average yield of wheat per acre was approximately 13 bushels and the farmer realized from the wheat produced on each acre $15.27. In 1894 the average yield of wheat per acre was the same as it was in 1879 and the farmer realized $6.48 per acre on the land cultivated in wheat. While the yield per acre remained about the same, the price of wheat went down form $1.15 to 49 cents per bushel.

In 1873 the average yield per acre of oats was 27 bushels and the farmer realized $10.38 per acre on the land cultivated in oats. In 1879 the average yield was 28 bushels per acre and the amount realized was $9.50 per acre. In 1895 the average yield per acre was 29 bushels—an increase of 2 bushels per acre over 1873—but the farmer only realized $5.87 per acre cultivated in oats. Oats had declined in price from 52 cents to 19 cents per bushel.

I am indebted to Mr. Alfred D. Shepperson, of New York, for a table given me, showing the average price of cotton for the same period of time. The highest price paid for cotton in 1873 was 21¼ cents per pound. A bale of cotton, then, weighing 450 pounds, brought to the farmer $96.18. In 1892 the highest price paid for cotton was 10 cents per pound. The same bale of cotton would bring in the market $45. In 1894 the highest price paid for cotton was 8⅛ cents per pound, and the lowest price paid was 5⅛ cents per pound. A bale of cotton at the lowest price, then, would bring to the farmer less than $26. Farmers who had purchased property and contracted debts when farm products were selling for reasonable prices soon realized when cotton went to 6 cents per pound and wheat to 49 cents per bushel that there was no hope for them, nothing to expect but bankruptcy and financial ruin; but it may be truthfully said that while the yield per acre in corn, cotton, oats, wheat, and rye during the last twenty-two years has remained practically the same, nevertheless the general productions of these articles have more than doubled. The total number of bushels of wheat produced in 1873 was 281,254,700. In 1895 the total crop produced was 467,102,947 bushels. The crop of 1895 was not quite double the wheat crop of 1873, and while the number of bushels in 1895 had nearly doubled, the entire crop brought nearly a hundred million dollars less than the crop of 1873. The crop of 1873 brought $323,594,805 and the crop of 1895 $237,938,998.

The same could be said of the oat and rye crops. But how about cotton? The very existence of the people of my State and section depends upon the successful cultivation of this plant. In 1873 we produced about four and a half million bales. In 1895 the crop had about doubled. The highest price paid in 1873 was 21¼ cents; the highest price paid in 1895 was about 9¼ cents, and the lowest price paid was about 5⅜ cents. The price of cotton had gone down from 21 cents to 5⅜ cents per pound. This would hardly be just had we remained at a standstill in population. If you will examine the census you will find that the United States has almost doubled in population during the same period of time. In 1873 we had a population of about forty million people, and in 1895 our population was estimated at about seventy million. Then, with this increase of population keeping pace with the production of this staple, why has the price fallen far below the cost of production? With this state of facts looking us in the face, how can we, as Senators representing great and sovereign States, legislate high duties on wool, clothing, blankets, and carpets? The Democratic party, representing now, as it has ever done in the past, the great masses of the people in its popular sympathies, is struggling to defend them from this great, unjust, and discriminating tax.

We learn from the Commissioner of Labor, Hon. Carroll D. Wright, that in 1894 the average annual wages paid in the manufacturing industries in the United States was $347 per capita. The average daily wages, estimated, paid cabinetmakers was $2.41 per day; carpenters, $2.75; molders, $2.65; machinists, $2.71; painters, $2.82, and plumbers, $3.48. Mr. DINGLEY, the author of the House bill, estimated himself, in his speech delivered in the House of Representatives April 29, 1894, that the average yearly wages paid laborers in manufacturing enterprises in this country in 1880 was as follows:

Woolen manufacturers	$300
Cotton manufacturers	246
Iron manufacturers	390
Machine manufacturers	450
Paper making	360
Boot and shoe manufacturers	370

I thought I would examine and ascertain what were the earnings of our farmers and the men who follow agricultural pursuits for a living. Being unable to get any definite and satisfactory information on this line, and finding in the tariff discussions hitherto had no light on this subject, I addressed a letter to the present distinguished Secretary of Agriculture, and I ascertained from him, through a letter which I now have in my possession (and he made his calculations from the last census), that 5,391,573 farmers, planters, gardeners, vine growers, and other persons engaged in agricultural pursuits, deducting from their earnings the interest on the capital invested, averaged $6.33 per month, which was not quite $76 per year. I had him to estimate the average wages paid farm laborers, and the lowest amount paid was found to be $7.43 per month, including board.

With the low price of the products of the soil and with the financial distress pervading the country, is it just and right to add an additional burden of taxation of $100,000,000? Would it not be well to look to the expenditures of our Government and to endeavor by the most rigid economy in every department of the Government to reduce expenses and save the people from another change in our tariff laws? We should remember that the total expenditures of our Government in 1861 were only about $66,000,000, whereas these expenditures now nearly equal a half billion. The annual cost of pensions since 1866 has increased from $15,000,000 to $140,000,000.

Pass this bill and place it upon our statute books and its advocates and those who reap its benefits will come back with renewed energy and demand more protection. This bill will not give relief to the people. I deny that it was the real issue in the last campaign. During the last Presidential election the money question was the paramount issue before the people.

The platform of the Democratic party declared for the free and unlimited coinage of both gold and silver at the present ratio without waiting for the aid or consent of any other nation. That platform demanded that the silver dollar should be a full legal tender equally with gold for all debts, public and private. That platform declared that Congress alone had the power to coin and issue money, and that this power could not be delegated to corporations or individuals. The Republican party declared against

the free and unlimited coinage by independent action, but in favor of the coinage of both metals by international agreement. And during that heated and exciting campaign the tariff issue was scarcely ever mentioned. We are to judge by their platform that our Republican friends believed that free and unlimited coinage would be advantageous to the country, provided it could be obtained by international agreement. This was at least their position previous to the election, but since Congress has convened in this extra session they seem to have abandoned the money question and have given their entire time to legislation to increase the burden of taxation. The House of Representatives have practically adjourned so far as legislation is concerned since the new tariff bill passed that honorable body; and mark my prediction, free coinage by international agreement will prove a failure.

At the end of this Administration I predict we will be no nearer bimetallism by international agreement than we were twenty years ago. If you can accomplish free coinage by international agreement and restore prosperity you will have redeemed your pledges to the people, but if you fail to accomplish this desired result through international agreement let us have the courage to grapple with this paramount issue and demonstrate to the world that this the greatest Government among the family of nations, representing seventy millions of people and seventy billions of wealth, is capable of adopting a financial system that will give justice and equality to all our citizens in every condition and station in life. The party that pursues such a policy and demonstrates its devotion to the common people will become invincible and its name will be revered while history endures. I do not expect to see prosperity until there shall be placed upon our statute books a law providing for the free and unlimited coinage of both metals without any discrimination against either, accompanied, as it must be, by a tariff for revenue sufficient to support this Government honestly and economically administered. And in order to meet the growing expenditures of the Government, now amounting to half billion of dollars annually, let us place on the statute books, even should it require a constitutional amendment to permit it, an income tax, that wealth may bear its just proportion of the expenses of this Government. Let us not stop here.

In this age no question is of more importance to the masses of the people than the question of transportation. The consolidation of our leading railroad systems and the aggregation of capital have made it absolutely necessary that the great arteries of commerce shall be so controlled and regulated by the Federal Government as to give just and reasonable freight rates and to prevent unjust discriminations. We have upon our statute books a law creating the Interstate Commerce Commission. I confess that I have been greatly disappointed with the results from the labors of this body. As yet I have not seen the good they have accomplished for the country. If the law does not empower them to enforce their decrees, enlarge their powers that they may give justice both to the people as well as the corporations. Let us not stop here. Let us examine every expenditure of our Government, and see to it that not one dollar of the public funds is appropriated except as it may be absolutely necessary to carry on the Government in an economical and business-like way. Let every useless expenditure and useless office be dispensed with; then it may not be necessary to increase the burdens of taxation; then it will not be necessary to increase the cost of living by additional customs duties on what we eat and wear. These are the principles which I have been taught constitute the Democratic creed, and are principles which are founded upon justice and right, and when enforced, "will give to us the best and freest Government the sun of heaven ever shone upon."

APPENDIX.

Cereal crops: Estimated production and value of the United States, from 1873 to 1895.

[From reports of the Department of Agriculture.]

TABLE 1.—CORN.

Calendar year.	Total.			Average.		
	Production.	Area of crop.	Value of crop.	Value per bushel.	Yield per acre.	Value of yield per acre.
	Bushels.	*Acres.*		*Cents.*	*Bushels.*	
1873	292,274,000	39,197,148	$447,186,020	48	23.8	$11.41
1874	850,148,500	41,036,918	530,043,086	64.7	20.7	13.40
1875	1,321,009,000	44,841,271	555,445,930	42	29.5	12.39
1876	1,283,827,500	49,033,364	475,491,210	37	26.2	9.70
1877	1,342,558,000	50,360,113	480,643,400	35.8	26.6	9.54
1878	1,388,218,750	51,595,000	443,152,405	31.9	26.9	8.55
1879	1,547,901,700	53,085,450	589,486,217	37.5	29.2	10.93
1880	1,717,434,543	62,317,843	679,714,499	39.6	27.6	10.91
1881	1,194,916,080	64,202,025	758,482,170	63.6	18.6	11.82
1882	1,617,025,109	65,659,545	726,867,173	44.5	24.6	11.04
1883	1,551,036,805	68,301,889	658,051,495	42.4	22.7	9.63
1884	1,795,528,000	69,663,780	640,735,560	35.7	25.8	9.19
1885	1,936,176,000	73,130,150	635,674,630	32.8	26.5	8.69
1886	1,665,441,000	75,694,208	610,311,000	36.6	22	8.06

Cereal crops: Estimated production and value, etc.—Continued.

*Expenditures in excess of revenue.

†Excess supplied from cash in the Treasury.

TREASURY DEPARTMENT, DIVISION OF BOOKKEEPING AND WARRANTS.

The PRESIDING OFFICER (Mr. THURSTON in the chair). The question is on agreeing to the amendment proposed by the Senator from Missouri [Mr. VEST], which will be stated.

The SECRETARY. In paragraph 193, page 60, line 19, after the word "measure," it is proposed to insert "except white pine."

Mr. PETTIGREW. Mr. President, paragraph 193 provides for a duty on "sawed lumber not specially provided for in this act, $2 per thousand feet board measure." This, of course, includes white pine. The Senator from Missouri [Mr. VEST] has moved to add "except lumber made from white pine." I think the amendment offered by the Senator from Missouri should be adopted, but I do not wish to dispose of that question to-day and hope it will go over. I therefore desire that paragraph 193 shall be passed over, and that we proceed to dispose of the rest of the wood schedule, if there is no objection.

Mr. HALE. I shall object to that, Mr. President.

The PRESIDING OFFICER. The Senator from South Dakota [Mr. PETTIGREW] asks unanimous consent that paragraph 193 be passed over until the remainder of the wood schedule has been considered. To that, the Chair understands, objection is made by the Senator from Maine [Mr. HALE].

Mr. PETTIGREW. If the Senator from Maine insists upon his objection, we shall make less progress with this bill than we should if he did not object.

Mr. HALE. I am not to be frightened from a legitimate position by a threat. The main subject-matter of the lumber schedule is found in paragraph 193. Every statute puts that foremost, the committee has put that foremost in this bill, and it ought to be considered foremost, before we proceed to the other and minor details. My objection is based upon logic, and I certainly shall not be driven from it by the Senator threatening that he will consume time.

Mr. PETTIGREW. I believe I have the floor, Mr. President.

The PRESIDING OFFICER. The Senator from South Dakota is entitled to the floor.

Mr. PETTIGREW. I see the Senator from Nebraska [Mr. ALLEN] is in his seat. I do not feel myself like discussing this question this afternoon. The Senator from Nebraska desires to discuss it. He requested that the paragraph should go over and that it should be taken up next week. He has just arrived in the city, and he is now here and can speak for himself. However, if we have to go on with this schedule, we shall go on with it now and go on with it next week also.

Mr. ALLEN. Will the Senator permit me?

The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from Nebraska?

Mr. PETTIGREW. I yield to the Senator from Nebraska.

Mr. ALLEN. I just returned at 12 o'clock to-day from the most delightful country in the world, and am not as familiar with the stage of the discussion upon this paragraph as I should like to be. I desire to submit some remarks upon the advisability of taxing lumber, but I do not feel that I am prepared to do so this afternoon. I certainly heartily join with the Senator from South Dakota in asking that the paragraph go over, and I believe with him that progress can be made in letting it pass over until next week. I shall then endeavor to get myself in shape to discuss it very concisely and without any particular elaboration.

Mr. BACON. Before the Senator from South Dakota [Mr. PETTIGREW] begins his remarks, I hope I may be allowed to say that in my general approval of the wood schedule, as to which I made no reservation, I had no reference whatever to the two paragraphs alluded to by the Senator from Arkansas [Mr. JONES], which excepted certain forests outside of this country, in New Brunswick.

Mr. JONES of Arkansas. No; they are forests in Maine, where the wood is cut and carried to New Brunswick and manufactured, and then brought back free.

Mr. BACON. I did not mean to commit myself to the approval of those particular paragraphs, because I do not regard them as part of the wood schedule. As that, however, has been brought into the debate, I might possibly be misunderstood if I did not make this disclaimer. In my approval of the schedule I had reference simply to those paragraphs now under consideration.

Mr. PETTIGREW. Mr. President, the principle of protection as advocated by the Republican party during all its history is that by building up industries in this country through a tariff for protection those industries will compete with each other, and thus lower the price of the article to the American consumer. That is the fundamental principle of the doctrine of protection, and it has been taught on every stump since the Republican party came into existence. We have been furnished time and again with example after example of this doctrine and the effect and force of its operation. We have been told on every stump in the country that if we placed a duty of 2 cents a pound on nails that were 6 cents a pound when imported from abroad, by the application of American genius, nails would be reduced through competition

resulting from the creation of factories in this country, and sold for a cent a pound. So always and everywhere we have been taught the doctrine of competition, the fundamental principle of our civilization.

It was well that the Republican party took that position. Has it abandoned that position, or does it stand upon it to-day? If it stands upon that doctrine to-day, then it has no application whatever to the proposition to place a duty of $2 a thousand upon white-pine lumber.

The white pine of this country is a peculiar tree, and it requires two centuries for it to grow and become fit for lumber. It extended from Maine to the western part of Minnesota, following the St. Lawrence River and the Great Lakes. It does not reproduce itself when the forest is cut off.

This map, which I propose to use in illustration of the distribution of the white-pine forests of this country, shows where these forests were once located, beginning in Maine and running down through Pennsylvania into West Virginia. The portion of the map colored yellow shows the areas which they occupied. Very little remains in West Virginia, and but few trees remain in Pennsylvania; the rest has been cut off, and very little still remains in Maine. A little white pine is still growing in northern Michigan. This spot [indicating] represents the area—a little in Wisconsin, a little in Minnesota, and the rest of it has been cut off and destroyed. Two hundred billion feet have been taken from this area in the last twenty-five years, and in the last ten years about 77,000,000 feet, and all that is left, according to the report of the Agricultural Department, made by Professor Fernow, is 17,000,000,000 feet in Minnesota, 10,000,000,000 feet in Wisconsin, and 5,000,000,000 feet in Michigan. There is a supply, then, to last about six years at the present rate of cutting, and then it will be gone.

The lumber supply for the great States of North and South Dakota, Iowa, and western Minnesota was taken from these two areas [indicating] in Minnesota and Wisconsin. One company owns of those two areas of pine 10,000,000,000 feet, and there are 27,000,000,000 feet in all. A very few companies own the rest.

The proposition, then, is to place a duty of $2 a thousand upon this timber for what purpose? Mr. President, if a duty of $2 a thousand is placed upon this timber, it will be sent down the lakes into the New England market and into New York and Massachusetts. They are supplied with white-pine timber now from Canada, and it comes across the lakes and the St. Lawrence River into Ohio, New York, and New England. Put a duty of $2 a thousand on this timber, and then these States will draw upon our own sources of supply in Michigan, Wisconsin, and Minnesota, already two small.

The surplus in these States, all that the owners can cut, will be cut and sent down the lakes into the Eastern market, and the Canadian timber will not come into this country at all, but will be shipped abroad, for white pine is scarce throughout the world. The demand for it is everywhere, and instead of our getting it it will disappear from this country, and we shall be compelled to pay for what is cut in this country $3 additional a thousand for every foot we use. I wonder where the American Forestry Association is when this effort is being made to deplete and destroy these forests in the interest of a few millionaires who own them, which has been going on now for weeks and weeks. There has been no protest from them in this direction to preserve the forests, and instead of this being an effort to protect an American industry, it is an effort to absolutely destroy it in the interest of a few men who have cornered the entire product. Neither can it be restored again.

Our theory of protection is that one factory after another will be built up and thus industries be increased, but this proposition is to destroy this industry, for these trees do not regrow, as everyone familiar with this matter knows, for over this vast region where the white pine has been cut other timber has grown up, and the white pine is gone forever. Therefore we see there is no good argument for this proposition. Are Republicans going to vote for this? Are the Senators from Minnesota going to vote for it? Are they going to compel the people who live on the prairies, their constituents, to pay to the men who have cornered the pine of Minnesota and Wisconsin $3 a thousand more than they now pay? There are more consumers of pine in Minnesota and Wisconsin than there are producers; more men who have to buy lumber than men who produce it. What argument can be made why the people of the Dakotas shall be compelled to pay tribute to the men who have cornered the pine in these two States? It may be argued that it would make a market for Southern pine. We already buy Southern pine.

I bought 2,000,000 feet of Southern pine in one season. That pine comes up from this region, Mississippi and Louisiana. We use that in connection with white pine. It will not materially increase the market for hard pine to put a duty on white pine. You simply put us in a position to be robbed by the men who have cornered our timber supply. Take 400,000,000 feet of white pine from this region, in Minnesota and Wisconsin, down the lakes to an Eastern market. What effect must it have upon our market? No Canadian pine will come into our country—not a tree; but this pine, the already short supply, will be drawn off to supply the markets of the East, and the effect of the taking of that 400,000,000 feet, which is about the amount of white pine used in the East, will be to add the $2 per thousand to all the board our people buy.

Politically, selfishly—for I do not expect to seek reelection from the Republican party—I ought to be silent and allow you to pass the bill with this provision. I should like to see you do it and carry the State of South Dakota next year or North Dakota, either. Politically, I ought to be silent and let you go on with your work. Where we had only 183 majority last year we will have 8,000 next year. There is no possible ground on which to justify this sort of a thing. But I propose to have it thoroughly understood just what you are doing, and then if you want to do it, very well. I propose to plead the cause of the brave people who have gone out on the frontier and who have built homes on the prairies, many of them still living in sod houses because of the agricultural depression which has made it impossible for them to purchase the white pine at present prices.

Mr. ALLEN. I should like to ask the Senator how many individuals or firms own the white pine in this country?

Mr. PETTIGREW. I can not answer the question, but I should like to have the Senator from Nebraska do so if he can. I understand that the fire warden who has charge of the forests of Minnesota says that there are 200 firms engaged in the cutting of all kinds of timber in the State of Minnesota.

Mr. ALLEN. I have been informed that less than a dozen men—or a dozen firms possibly, I should put it—own the entire white pine supply in the United States.

Mr. PETTIGREW. I think that is true of these three States. Enormous fortunes have been made. I understand the stock of one corporation, the Mississippi Boom Company, I believe it is, used to be $100 a share, and it is now $6,000 a share, and yet it is proposed to add to the price of that which is left for the benefit of these rich corporations. It hardly seems possible to me that we can indorse anything of the sort.

It is urged in the interest of protection that you want to equalize the cost of producing pine lumber in this country and the cost of producing in Canada. Then, in response to a resolution from this body, Carroll D. Wright has shown that it costs more to produce 1,000 feet of pine lumber in Canada than in the United States. Therefore the plea for labor is destroyed.

Mr. ALLEN. I understand, if the Senator will permit me, that the theory of protection contemplates the increase of an industry rather than its decrease.

Mr. PETTIGREW. Certainly. I have enlarged upon that point somewhat.

Mr. ALLEN. The Senator has shown that the forests are rapidly disappearing, and that in the course of a few years they must become extinct entirely. Therefore the theory of protection certainly can not apply to an industry of that kind.

Mr. PETTIGREW. Certainly not. I think I stated that within twenty-five years we cut 200,000,000,000 feet of white pine and used it up. There is left in this country and in Canada about 75,000,000,000 feet, not over 85,000,000,000 at the outside.

There is not ten years' supply of white pine in both countries, and yet the proposition is to drive the white pine across the sea and to seek markets off from this continent and turn the whole attention of those who are destroying what is left to the small tracts remaining in these three States. Why is it? Who urges it? Is it the men who use timber on the prairies? Who wants this done? Simply the men who have cornered the pine in these three localities and are already many times millionaires. They are in haste to realize upon their investment. They have to pay taxes. They are in haste to close this market, so that they can take advantage of the cheap freights down the lakes and dispose of the entire timber and realize at once, and then perhaps do as some of our millionaires, move to Europe and enjoy the rest of their days.

I do not know that they will go to Europe. I do not blame them at all for getting rich; I do not blame them at all for advocating this tariff, but I do blame the representatives of those States if they will allow them to do it. Who must be opposed, then, to this increase in the value of the small areas of remaining pine? The people who live throughout this country, on the prairies of Minnesota, Iowa, and the two Dakotas. How long are they going to bear the burden uncomplainingly? Not more than one more election, and I doubt if they do that.

There was presented yesterday (I think it was printed in the RECORD) a statement showing the amount of pine, from a report of the Agricultural Department, and also a statement from Carroll D. Wright as to the difference in the cost of production in Canada and the United States.

Mr. JONES of Arkansas. Would it disturb the Senator for me to ask him a question?

Mr. PETTIGREW. Not at all.

Mr. JONES of Arkansas. Will the Senator explain the map a little? I do not understand just what is meant by the different colors on the map. For instance, what does the green indicate?

Mr. PETTIGREW. This green area is Canadian white pine, about 40,000,000,000 feet board measure. That is the country which it occupies. This yellow area [indicating] is the region in the United States that once had white pine, and these [indicating], the green spots, show the region where there is still white pine.

Mr. JONES of Arkansas. I see.

Mr. PETTIGREW. These three green tracts here [indicating] represent the area covered by white pine, but do not represent the exact locality of the white pine in those States. For instance, it is scattered more.

Mr. JONES of Arkansas. It gives the proportion?

Mr. PETTIGREW. It, however, gives the proportion of area which is now occupied by white pine and that which was occupied by white pine. I presume in Minnesota, for instance, some of the very best white pine still remains in this locality [indicating], near Red Lake.

Mr. JONES of Arkansas. What is the coloring below; the yellow pine in the Southern States?

Mr. PETTIGREW. The yellow pine, the long-leaf pine. There are three varieties of pine in the Southern States, long-leaf or hard pine, short-leaf, and loblolly pine or soft pine; this [indicating] represents the area of that pine. For instance, in North Carolina——

Mr. JONES of Arkansas. What does the coloring on the Pacific side represent?

Mr. PETTIGREW. It represents the forests of the Pacific.

Mr. CULLOM. What kind of wood is it?

Mr. PETTIGREW. Not white pine. There is not a tree of white pine on the Pacific Coast. It is the redwood. There is some redwood in this locality [indicating].

Mr. WHITE. If the Senator will permit me, I will state that the redwood on the Pacific Coast runs from the point indicated on the diagram in California clear up nearly to the northern line, but toward the coast. The redwood is on the coast, right in there [indicating], in Mendocino and Humboldt counties.

Mr. PETTIGREW. That is where I supposed it was.

Mr. JONES of Arkansas. The other embraces the coniferous trees?

Mr. PETTIGREW. Cedar, Douglass fir, spruce, and hemlock. The great body of timber in all this region, with which I am more familiar than the other, is the Douglass fir. It is a hard fir, of great strength, and very valuable, but it is not white pine; neither would it be affected by a provision putting white pine on the free list, for all the timber of British America, west of the Rocky Mountains, is of the same character—entirely so. I understand that there is a very little white pine on the mountains of Idaho, not exactly like the white pine of this lower region near the Great Lakes [indicating], but it is very near akin to it. That is all the white pine remaining in this country.

Mr. President, I now intend to answer some of the arguments which have been made in favor of putting a duty on white pine. It was stated yesterday, I think, in debate, that the stumpage in Canada is only 50 cents a thousand. That is not the fact. The Canadians first estimate their timber. They advertise for bids and sell it subject to a stumpage of $1.25 a thousand. For instance, it is advertised in time so that men who wish to purchase can go in and explore the forests themselves. They go in and explore the forests and estimate the timber. The price is about $2.50 a thousand, subject to a stumpage of $1 to $1.25, which is to be paid when the timber is taken. Then a purchaser makes an investment in standing trees of $2.50 a thousand, subject, when he cuts it, to an additional payment of $1.25 a thousand.

It has also been stated that the Canadian logging streams are improved by the Government. That is not correct. I do not care to go into the subject further than to make the statement that it is not correct and to cite my authority. The matter of protection from fire in Canada has also been urged as one of the advantages of lumbering, but the owners are required to pay one-half. They have to pay $2.50 a thousand, while the Canadian Government is interested in the $1.25, which is not paid until the lumber is taken off.

I have in my hand a statement made by a large number of American citizens answering every objection raised against placing white pine on the free list, and among the number I find ex-Governor Rich, of Michigan; Albert Pack, F. W. Gilchrist, of Michigan; W. L. Procter, of New York. It is also signed by a large number of lumber firms in Michigan. In it they proceed to answer the arguments in favor of placing a duty of $2 a thousand on white pine. I ask the Secretary to read the document. It is short, and it will get into the RECORD in that way, and I wish to present the facts to the Senate.

The VICE-PRESIDENT. The Secretary will read as indicated.

The Secretary read as follows:

THE LUMBER TARIFF.

To the members of the Ways and Means Committee of the Fifty-fourth Congress.

GENTLEMEN: On December 31 last a hearing was had by your committee on "Schedule D" of the new tariff bill in preparation, covering wood and manufactures of wood.

The undersigned were not present at this hearing, for the reason that we looked upon the former action of your committee, in framing and recommending and passing through the House of Representatives what was known as the Dingley tariff bill, as a deliberate expression of judgment as to the relatively proper tariff to be placed upon white-pine lumber.

From the entire list of imports, free and dutiable, only the wool schedule and the lumber schedule were singled out for individual consideration.

We had noted that wool and woolen goods were made dutiable at the rate, generally, of 60 per cent of the duty imposed in the McKinley bill of 1890, and that lumber was likewise made dutiable at the rate of 60 per cent of the duty under the 1890 law, or at the rate of 60 cents per thousand on undressed white-pine lumber.

And when this bill was reported to the House it was shown that it would add to our national revenues about $40,000,000 annually; that it would measurably restore the woolgrowing industry; that it would put the nation on a debt-paying basis, and so bring in an era of business confidence and prosperity.

Thus it was that we naturally relied upon your committee to take such moderate, just, and considerate action on the wood schedule as was had when the McKinley law was framed, and as had been foreshadowed in your so recent action along the lines of the McKinley bill in its treatment of lumber, and we therefore did not appear at the appointed hearing.

It was not foreseen that a committee appointed at a meeting originating with the Southern Lumber Manufacturers' Association, a body of gentlemen who produce no white-pine lumber, and who have a large natural home market for their products, with an extensive and growing export trade, would come before you, and with representations as to facts, often knowingly and willfully incorrect, create such a prejudice against Canadian lumber producers as to lead you to double the rate of the McKinley tariff on unplaned white-pine lumber, making it $2 per thousand instead of $1, thus in effect prohibiting its importation.

To be specific, we refer to the printed report of the tariff hearings upon which your action was based.

It was stated by the chairman of the lumbermen's committee, as appears on pages 489 and 490, that the Canadian Government "demands only 50 cents per thousand for their lumber (stumpage) instead of $3, as our Government demands;" that this 50 cents per thousand is not paid until the lumber is ready to ship; and he asks if this is fair to compel American lumbermen to compete with foreign producers on such a basis.

Another member of the lumbermen's committee adds the misinformation that in Canada the timber can be bought from the Government "at all times" for 50 cents per thousand.

We here state in contradiction of these gentlemen the fact, well known to at least some members of their committee present, that Canada pine timber can not be bought "at all times" from the Canadian Government for 50 cents per thousand, nor at any time.

At intervals, averaging, perhaps, three years, the Canadian Government sells the right to cut certain territory definitely subdivided into what are called "timber limits," which are sold at auction to the higher bidder, substantially for cash. The money thus paid is called the "bonus," and amounts in Ontario, where most of the lumber is produced which comes to this country, to from two to four dollars per thousand feet on the timber standing on the limit, with an average of about $2.50 per thousand.

Once bought, these limits are sold or lumbered by the purchasers just as pine lands are in this country, and when cut, the Government requires the payment of a final stumpage charge, ranging from $1 to $1.25 per thousand feet.

It can be safely stated that the average cost to the lumbermen of the white-pine stumpage cut in Ontario during the past three years, including this final payment, is nearly, if not quite, $4 per thousand feet for the merchantable timber.

Again, the chairman of the lumbermen's committee states (page 496), in reply to a question by Mr. Johnson, that the labor cost of lumbering is higher in this country than in Canada, while it is well known among lumbermen that such is not the case.

Since American lumbermen have entered so largely into the operation of Canadian timber, it is a rule that wages have advanced there fully to the American standard. Further, and by reason of the broken and mountainous surface and the long, rocky, and difficult streams to be driven, the labor cost of lumbering is not less than $1 per thousand more than in Michigan, Wisconsin, and Minnesota.

On page 502 it is stated in the memorial individually signed by the ways and means committee of the lumbermen, including gentlemen who knew to the contrary, that "the Canadian Government carries the timber until it is cut without interest or hazard to the manufacturer, besides improving the streams and supporting a corps of forest rangers."

We have already pointed out the payment of a bonus for the right to cut of an average of not less than $2.50 per thousand feet, which is surely at the hazard of the purchaser.

The Canadian logging streams are not improved by the Government for the lumbermen, but are improved, instead, when necessary, by companies and individuals, as in this country.

The claim that the Canadian Government carries the fire risk is the nearest approach to a correct statement of Canadian conditions made before your committee, since it may be said to be one-third true. The limit holder carries, say, $2.50 of risk and the Government $1.25 of risk in each thousand feet, but the advantage of the Government carrying this risk is really considered and paid for when the right to cut is purchased.

As to the fire-ranging expenses, the limit holders are charged with the payment of one-half.

We have gone over this matter categorically in order to bring before your committee plainly the fact that it has been imposed upon in these formal statements made to it regarding the stumpage cost, labor cost, and the nature of timber holdings in the Canadian pineries.

These statements were made to create the impression that Canadian lumber competition was unequal and ruinous and to furnish a foundation upon which to stand and ask for protection against it.

But it is not for protection nor for revenue as politico-economical principles that this lumbermen's committee has established itself in this city, "to sit as long as Congress sits," with its president and its two vice-presidents and its three stenographers of which it boasts.

Their business here is to prohibit Canada pine lumber, which is nearly all used in New England and New York, and to compel people to buy their Southern lumber, whether they want it or not.

On page 554 of the record is the following from one of the lumbermen's executive committee:

"Q. Mr. EVANS. What do you think the duty ought to be?

"A. Mr. WINCHESTER. It ought to be prohibitive.

"Q. Mr. EVANS. Would $2 do that?

"A. Mr. WINCHESTER. Yes; just about."

We submit, gentlemen, that the day has long since gone when our forestry conditions warrant a prohibition of Canadian white pine, and that the day is not now, and never will come, when the people who use it will meekly submit to see it shut out in order that they may be forced by a special interest to use an inferior and unwanted lumber which that interest has for sale.

Not only would the imposition of this $2 prohibitive duty work injustice upon our own people, but also upon Canada, toward which country we must hereafter largely look for a considerable portion of our supply of white-pine logs and lumber. Such a duty would make the trade relations between the two countries, which should be amicable and mutually profitable, strained and mutually damaging, a condition which legislation should seek to avoid rather than provoke.

The prostrate condition of the lumber industry is pointed out as a reason for this prohibitive legislation. But it is shown on page 535, in response to questions by Mr. JOHNSON and Mr. PAYNE, addressed to one of the executive committee, that lumber did not begin to decline in price until 1893, or three years after the reduction of the duty on rough white-pine lumber from $2 to $1 per thousand under the McKinley bill; that it was in fact higher in 1892 and 1893 by $1 per thousand than in 1890, when the tariff change was made; and that the fall in price later was only in sympathy and correspondence with the general fall in the price of commodities during a period of great business depression.

To attribute the fall in the price of American lumber to the effect of the Canadian importation is either puerile or to mislead.

The distress in the lumber business is universal, and spreads from the Atlantic to the Pacific and from the lakes to the great Gulf. As pointed out, Canadian lumber enters in quantity only New England and New York.

The claim of the chairman of the lumbermen's committee that it seriously comes in competition at Chicago is unfounded, as the trade well knows and as the table of imports distinctly proves.

And here are the figures of the "total annual cut, including all material requiring bolt or log size," as shown by Prof. B. E. Fernow, Chief of Division of Forestry, in his circular dated February 10, 1896, as to coniferous woods:

	Feet B. M.
White pine	12,000,000,000
Spruce and fir	5,000,000,000
Hemlock	4,000,000,000
Long-leaf pine	4,000,000,000
Short-leaf pine and loblolly	3,000,000,000
Cypress	500,000,000
Redwood	300,000,000
All other conifers	1,000,000,000
Total conifers	30,000,000,000

The total importation of lumber from Canada during the year 1896 is under 750,000,000 feet, or less than 2½ per cent of the above amount; yet the lumbermen of Mississippi, the lumbermen of Minnesota, with mills situated in the edge of the Western prairies, who send lumber to Canada as a part of their market, are claiming that it is this insignificant Canadian import into the remote Eastern States that has broken down the price of lumber through the entire land.

It is a fact to be noted that it is white pine (the home supply of which will be exhausted at the present rate of cutting within ten years), a timber which does not reproduce, and the most valuable wood known to men, that it is proposed to shut out and so hasten the complete destruction of our own white-pine forests.

And this lumbermen's committee threatens us in numerous letters and in the public press that if we do not unite with them and insist upon the two-dollar duty on Canadian white-pine lumber, they will put an import duty on logs coming to our Michigan mills from Canada, as though they were the Congress of the United States.

To coerce us to their standpoint they would prohibit logs, the raw material, which, under the highest tariff bill, have always come in duty free.

In conclusion, we call your attention to the condition of the white-pine lumber industry in Michigan, the State which for nearly half a century has led in its production.

Along the eastern shore, from Mackinaw to Detroit, including the great Saginaw Valley, there has been produced during the last ten years an average annually of 1,100,000,000 feet of pine lumber. The amount has gradually shrunk since 1888 because of the passing away of the forests which sustain the sawmills.

To-day the only natural log supply for the sawmills lies just across Lake Huron in Ontario, from which 300,000,000 feet of logs have been rafted to the mills in a year, and this amount will easily swell in prosperous times to 600,000,000 feet, and along with our hard wood and hemlock, etc., will keep the sawmills running and support the chain of towns which have been built up by the lumber industry until other and permanent enterprises shall have been firmly established.

Michigan forests now produce less than one-half the pine they furnished ten years ago, and are well-nigh exhausted.

During the last ten years that State has furnished one-half of the white-pine lumber cut of the Northwest, so that should there come, as there will come, a renewal of the prosperity of 1892, there will be such a demand for white pine, "the king of woods," as can not be supplied.

Therefore, not only from a State but from a national standpoint, the sawmills along the eastern shore should be kept in commission, and this can only be by stocking them with Canadian saw logs.

Under a two-dollar duty on Canadian lumber this would be impossible, as the Canadians would naturally retaliate with an export duty or some form of countercharge on logs.

But with not over a one-dollar duty on unplaned Canadian white-pine lumber we believe relations of comity will be established which will give us logs free of any extraneous charge by Canada.

The undersigned, besides representing other large lumber interests, represent Michigan lumbermen with a capacity for an annual production of over 750,000,000 feet of lumber, or more than the annual importation from Canada.

Millions of dollars of American money have been invested in Canadian pine timber on the natural understanding that the reduction in duty in the McKinley bill from $2 to $1 per thousand would never be disturbed unless to lower it. This reduction was looked upon as a recognition of the passing away of our white-pine forests and the necessity of drawing upon Canada for a portion of our supply.

We therefore ask that the wood schedule of the proposed tariff bill shall not exceed the rates in the McKinley bill; and we earnestly protest against a two-dollar duty on rough white-pine lumber as prohibitive, as unwarranted by our forestry conditions, and as not justifiable before the people, who must see a good plain reason for a tax upon the roof tree.

W. L. CHURCHILL,
W. L. PROCTER,
JOHN T. RICH,
ALBERT PACK,
F. W. GILCHRIST,
C. E. MOULD,
Committee.

[Representing Saginaw Salt and Lumber Company, Saginaw, Mich.; Loveland, Royce & White, Saginaw, Mich.; Saginaw Bay Towing Company, Bay City, Mich.; Michigan Log Towing Company, Bay City, Mich.; Turner & Fisher, Bay City, Mich.; Pitts & Co., Bay City, Mich.; South End Salt and Lumber Company, Bay City, Mich.; McEwen Bros. & Co., Bay City, Mich.; W. L. & H. D. Churchill, Alpena, Mich.; Comstock Bros., Alpena, Mich.; F. W. Gilchrist, Alpena, Mich.; Geo. N. Y.; Skillings, Whitneys & Barnes Lumber Company, Boston, Mass.]

Mr. PETTIGREW. The paper is signed by a very large number of firms engaged in the manufacture of lumber in Michigan and other States. One of the largest firms engaged in lumbering in New England also signs the statement.

Mr. WILSON. May I interrupt the Senator from South Dakota to ask him a question for information only?

Mr. PETTIGREW. I should be very glad to have the Senator interrupt me.

Mr. WILSON. Is it not a fact, also, that these gentlemen who signed the paper are large owners of Canadian stumpage, and they desire to manufacture upon that side and ship it into this side free of duty?

Mr. PETTIGREW. I should not be surprised if many of them are owners of Canadian stumpage. I think that is very likely the fact. It does not detract one particle from my argument, however. I have simply had read from respectable gentlemen a refutation of many of the arguments made on the other side. So far as my argument is concerned, it is not affected one particle by the fact that those men own timber in Canada. Not a single stick of Canadian timber will come into the country where I live, and you can shut out the Canadian timber which these men wish to cut and put into the New England market, and then take the timber which supplies the country I represent and supply the New England market, and thus all the sooner exhaust the supply and make us pay $2 a thousand additional. My amendment does not affect the Pacific Coast. You have no white pine coming into that country—not a tree, not a stick, not a board. Every particle of lumber which will come in competition on the Pacific Coast is the Canadian lumber on the Pacific Coast, which is not white pine.

Mr. WILSON. It is commonly called Portland pine.

Mr. PETTIGREW. It is Douglass fir and cedar and spruce.

Mr. WILSON. Douglass fir and cedar and spruce.

Mr. PETTIGREW. But what is more, Mr. President, in 1893 in Puget Sound there were fifty ships at one time loading with lumber to go to Australia, to go to China, to go to South and Central America. Every one of those ships had to pass by the forests of Canada and into Puget Sound to get their loads. How did it come, if a duty will do the people of Puget Sound any good, that those people did not stop and get their free lumber? If lumber was cheaper in Canada, why did they not load in Canada instead of coming through the Straits of Juan de Fuca and down into Puget Sound? Why did they not load in Canada?

Mr. WILSON. They did.

Mr. PETTIGREW. Fifty of them were loading at different points in Puget Sound when I was there in 1893, and they were loading for the foreign trade. So they did not load in Canada.

However, Mr. President, the pine of North Carolina can be manufactured for $6.50 a thousand. The white pine, owing to the high price of stumpage, can not be manufactured for less than $10.50 a thousand. Your Southern pine comes in to be used in connection with white pine. I get my figures with regard to the cost and the production of pine lumber in North Carolina from Bulletin No. 5 of the North Carolina Geological Survey, J. A. Holmes, State geologist, in which he says:

The rafting of timber to the mills is done by farm laborers during the dull seasons of the year. The price paid at the mills for this timber is from $3.75 to $5 a thousand feet board measure for loblolly pine, and from $3 to $6 for cypress and ash, according to the quality of the timber and situation of the mill. Long-leaf pine brings the same prices as loblolly pine.

The cost, which is stated at $3.75 to $5 a thousand, would make the average cost $4.38 a thousand. Then, if we add the cost of sawing, which will not exceed $2 a thousand, six dollars and a half will manufacture a thousand feet of pine lumber in North Carolina.

It is well known that to-day, along the coast anywhere, white pine brings from $2 to $4 per thousand feet, even for coarse lumber, more than Southern pine. The Southern pine is worth more

for some purposes, but for others it is not worth so much. For instance, for exterior work white pine takes paint, while pitch pine will absorb more or less moisture, it will not absorb paint. Consequently, in our Northern latitude, the moisture gets in under the paint and drives the paint off. Therefore for outside work in our Northern regions it is not good, but for inside work it is excellent, and we finish our houses with it, more or less. We use it where great structures and heavy timbers are required, etc.

Further than that, an absolutely clear board of white pine is worth $50 a thousand in New England to-day. An absolutely clear board of Southern pine will bring about $25 a thousand. They can not compete, with that great difference in price. They are used for different purposes. Therefore the proposition here presented in insisting upon a duty on white pine is simply that the owners of the forests in Wisconsin, Minnesota, and Michigan shall be allowed to levy a tax of $2 a thousand upon the people who live upon those prairies; and that is all there is to it.

Now, let us see about the supply. It has been said by a Senator that I do not tell the truth about it; I will let Senators quarrel with somebody else besides myself upon the subject. I have in my hands an "extract from a statement prepared by the Chief of the Forestry Division, transmitted by the Secretary of Agriculture to the United States Senate in response to the resolution of Senator WILLIAM E. CHANDLER of New Hampshire, passed April 14, 1897; referred to the Committee on Finance and ordered printed, April 19."

Under the head of "Supplies," I read as follows:

For Minnesota the chief fire warden of the State has attempted a canvass (see Appendix 2), the result of which would indicate nearly 18,000,000,000 feet as standing in the State, including Norway pine, the estimate having been made for 1895. This has been criticised by competent judges as much too high; nevertheless, adding the estimates of all other kinds of coniferous woods, some of which as yet remains unused, it is thought that a statement in round numbers of 20,000,000,000 feet of coniferous wood in Minnesota fit for lumbering, though large, would be reasonably enough near the truth for our purposes in forecasting the probabilities.

Now, of that, between three and four billion feet is Norway pine, and not white pine.

I have in my hand the report of the chief fire warden of the State of Minnesota. In this report he undertakes to give an estimate of all pine timber in the State by counties, and of all other timber in the State by counties, and then he sums up and makes this statement:

	Feet.
Total white pine	14,424,000,000
Norway (or red) pine	3,412,475,000
Gray (or jack) pine	640,000,000

So there is the authority for the supply in the State of Minnesota.

Now, about Wisconsin. The data with regard to Wisconsin is not as accurate as I should like, and yet it shows considerable investigation upon this subject:

For Wisconsin, official data are entirely lacking. An estimate of ten billion as the maximum stand of white pine and Norway pine has been made by a competent lumberman.

Then he cites:

(See Appendix 3.) As there is considerable hemlock and other coniferous wood in the State, and as it is preferable to overstate, we may treble this amount and take 30,000,000,000 feet, a probable overstatement of 50 per cent, as the maximum amount of coniferous timber fit for lumbering standing in the State.

Now, from that I make the statement that there are 10,000,000,000 feet of white pine; of other kinds of pine, of Norway pine, spruce, and hemlock, 5,000,000,000 feet.

For Michigan a canvass from township to township has been made by the commissioner of labor of the State for 1890 (see Appendix 4) which develops an area two and one-quarter million acres in pine and hemlock—

Which will cut 5,000,000,000 feet of lumber.

The reason why I make the statement that 10,000,000,000 feet of white pine is all there is in Wisconsin is because of the statement made here with regard to the matter by the Agricultural Department, and because of the fact, established by authority, by careful investigation, that it corresponds somewhere near with the work of destruction which has been going on in Michigan and Minnesota, where we have authoritative data upon the subject. We know well enough that the pine forests of north Wisconsin have furnished the lumber for southern Minnesota, Iowa, Nebraska, and South Dakota very largely, our people having drawn almost their entire supply from the forests of north Wisconsin during the last few years.

If this is correct, these white-pine forests are bound to disappear entirely in the next eight or ten years, and no possible excuse can be urged why we should hurry its destruction.

Of course the price of pine timber has declined, but it was not because Canadian pine could come in free. The price of white pine declined because there was, in the first place, previous to 1893, an enormous demand which stimulated the cutting of the trees; but owing to the depression which came with a decline in prices resulting from the complete demonetization of silver in this country by the repeal of the Sherman law in 1893, with the misery and distress which came to the farming community all over the land, our towns ceased to grow and our people ceased to prosper, and they were unable to purchase. But the lumbermen had continued the cut, and the dull season found a large amount of pine on hand, and competition among the lumbermen lowered the price; and that is all there is to it.

Now, there is another thing, Mr. President. These same men who can combine and open an office here in the city for the purpose of securing a duty of $3 per thousand on pine can easily combine, after they have secured a duty, to maintain the price at the full limit of the tariff.

Sometimes I have thought that the condemnation of trusts was left out of the Republican platform at St. Louis on purpose to get an excessive tariff upon a great number of items that consumers use in this country, and then combine without violating their party pledges in putting the duty up to the limit of the tariff. The two conventions before the last denounced trusts, but when the trusts got together in convention at St. Louis they concluded not to abuse each other, and left it out entirely. And so we have these excessive raises all through the pending bill.

In 1890 the consumption of white pine produced from the mills of Wisconsin, Minnesota, and Michigan was 8,352,000,000 feet; the price per thousand was $11; the duty, $2 per thousand. In 1891, with the duty reduced to $1, the consumption was 8,333,000,000 feet; the price was $12 a thousand. In 1892 the consumption was 9,123,000,000 feet; the price was $12.50 a thousand and the duty $1 a thousand. In 1893, the year of the general panic, we consumed 7,073,000,000 feet; the price was $12, the duty $1.

Now what happened? The lumbermen produced as much that year as the year before, but the consumption had fallen off 2,000,000,000 feet. The consequence was a stock on hand, so that in 1894 this lumber fell to $9.50 a thousand. In 1895 it rose to $10, and in 1896 it fell to $9.50, and the consumption fell off to 6,082,000,000 feet.

Now, I contend that these men are anxious to realize; they want to shut the Canadian pine out of New England and the Eastern States and make a market for their pine, and thus destroy completely those forests from which we draw our supply, and make us pay $2 a thousand more than we are now paying for their product. The question is whether the Republican party is going to help them do it. That is all there is to it. It does not affect any other interest. The lumber producers not only in this region, but in other regions of the country, have combined for the purpose of carrying this out. Of course you may help them do it, but I am bound that you shall do it knowing the facts.

Now, a few words upon the subject of revenue, Mr. President. I do not know that my friend from Georgia said that he is in favor of this duty, but he said he is in favor of no duty unless it is a revenue duty—that no protective tariff whatever would receive approval at his hands. There is not very much revenue in this. For instance, white pine is used for boxes. They do not want pitch pine to ship meat products, because it makes them taste or smell. They do not want pitch pine to ship a high class of goods, for instance, such as clothing, dress goods, etc., because it gives a taste or smell, or the pitch melts out and destroys and injures the goods. White pine makes the best boxes because it does not warp, it stays in shape; and they use it to ship dressed meats, they use it to ship petroleum, they use it as cases for bottles, and so on; and the quantity used is enormous.

The bill provides that there shall be a rebate of the duty if it is exported. It is within thirty days that the Standard Oil Company let a contract for $30,000 worth of boxes, and they specified (perhaps here is the reason why we want a duty on white pine) that the boxes should be made out of Canadian pine. Why? Because they would get the rebate of $2 a thousand. When they were asked why they insisted on Canadian pine they said, "There is going to be a duty of $2 a thousand on pine, and we will get the rebate." Armour ships large quantities of boxes to Europe, and he will be placed in the same situation. So the Government really would be imposing the duty for the purpose of putting it into the pockets of these people. Here is another trust to be taken care of. Two hundred million feet it is estimated are exported in this way.

Mr. CAFFERY. Will it interrupt the Senator if I ask him a question?

Mr. PETTIGREW. It will not interrupt me at all.

Mr. CAFFERY. What is the amount of the rebate allowed?

Mr. PETTIGREW. The same as the duty, $2 a thousand.

Mr. CAFFERY. Then it is practically free?

Mr. PETTIGREW. Yes; it is free to those people. We are getting to the point where we do not care how much the producer of wealth pays, so we let the fellow who gets away from him what he produces go free. We imported from Canada in 1895, 750,000,000 feet. This country consumed, I suppose, twelve or fourteen billion feet of lumber. So this amounts to about 2½ per cent. Of the 750,000,000 feet imported from Canada, about 200,000,000 was spruce, so that in reality we imported 550,000,000

feet of white pine. Then we reexport in boxes, say, 250,000,000 feet, leaving 300,000,000 feet on which to pay duty. That is the revenue feature of the case. There is very little revenue in that except for the men who export the boxes made out of the pine.

I do not know, Mr. President, that I care to say anything further at this time. At some future time I shall probably enter into this subject again, for I apprehend it will not be disposed of this afternoon.

Mr. ALLEN. Mr. President, I desire to submit some remarks, very brief ones, upon this paragraph, but I am not disposed to do so this evening, and I trust the Senator in charge of the bill will permit it to be passed over until Monday.

Mr. ALLISON. If the Senator will allow me to offer some amendments on behalf of the committee to other paragraphs of the bill and have them disposed of, I think I will consent to an adjournment. It is the general expression that we ought to adjourn at an earlier hour than usual to-day. The amendments to paragraph 193 have, I believe, been agreed to——

Mr. VEST. No.

Mr. ALLISON. Except the amendment offered by the Senator from Missouri.

Mr. VEST. I have an amendment pending.

Mr. ALLISON. That is the pending amendment. That can be passed over informally.

The PRESIDING OFFICER (Mr. FAIRBANKS in the chair). That amendment will stand over for the present.

Mr. ALLISON. I ask that the next paragraph may be read.

The next amendment of the Committee on Finance was, in paragraph 194, line 22, after the word "cedar," to strike out "or other woods;" so as to make the paragraph read:

194. Paving posts, railroad ties, and telephone, trolley, electric-light, and telegraph poles of cedar, 20 per cent ad valorem.

Mr. ALLISON. I ask that that amendment may be disagreed to.

The amendment was rejected.

Mr. CAFFERY. Will the Senator state the reason for striking out "or other woods"?

Mr. ALLISON. The committee originally proposed to strike out "or other woods," but they have abandoned that amendment.

The PRESIDING OFFICER. Paragraph 195 will be read.

Mr. VEST. Let paragraph 194 be read the way it is proposed to be amended by the Senator from Iowa.

The Secretary read paragraph 194, as follows:

194. Paving posts, railroad ties, and telephone, trolley, electric-light, and telegraph poles of cedar or other woods, 20 per cent ad valorem.

Mr. VEST. That is the paragraph as it came from the House?

Mr. ALLISON. It leaves the paragraph as it came from the House.

The PRESIDING OFFICER. The next amendment will be reported.

The next amendment of the Committee on Finance was to strike out paragraph 195, in the following words:

195. Kindling wood in bundles not exceeding one-quarter of a cubic foot each, three-tenths of 1 cent per bundle; if in larger bundles, three-tenths of 1 cent for each additional quarter of a cubic foot or fractional part thereof.

Mr. JONES of Arkansas. I understood the Senator from Iowa to state that he proposed to offer his amendments that they might be pending. I did not understand that he wanted them acted on now.

Mr. ALLISON. They may be acted upon now. They are not specially important. However, if any Senator desires to have them go over, that course can be taken.

Mr. JONES of Arkansas. The articles in paragraph 194 are free under the present law, and while I do not want to keep the Senate in session, I am not just ready to agree that 20 per cent shall be put on those things without a vote against it.

Mr. ALLISON. I am perfectly willing to take a vote on it, if the Senator desires a special vote upon that question.

Mr. JONES of Arkansas. Then we will take a vote.

Mr. ALLISON. Does the Senator move to strike out the paragraph?

Mr. JONES of Arkansas. I do not object to the committee withdrawing its amendment, because, while I do not agree to it, I shall make no resistance to that action; but I will move to strike out paragraph 194 and take a vote on it, with the intention of putting the articles named on the free list.

Mr. ALLISON. Very well.

Mr. HALE and others. Question!

The PRESIDING OFFICER. The question is on the motion of the Senator from Arkansas to strike out paragraph 194.

Mr. JONES of Arkansas. On that I ask for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CULLOM (when his name was called). I am paired with the senior Senator from Delaware [Mr. GRAY]. He is not present, and I withhold my vote.

Mr. HANSBROUGH (when his name was called). I am paired with the Senator from Virginia [Mr. DANIEL].

Mr. HARRIS of Kansas (when his name was called). I have a general pair with the junior Senator from Wyoming [Mr. CLARK], and therefore withhold my vote.

Mr. McMILLAN (when his name was called). I have a general pair with the Senator from Kentucky [Mr. LINDSAY], which I have transferred to the Senator from Rhode Island [Mr. ALDRICH], and I am therefore at liberty to vote. I make this announcement as to the remainder of the votes for to-day. I vote "nay."

Mr. MALLORY (when his name was called). I am paired with the Senator from Vermont [Mr. PROCTOR], otherwise I should vote "yea."

Mr. MITCHELL. I am paired with the Senator from New Jersey [Mr. SEWELL].

Mr. VEST (when his name was called). I am paired with the Senator from Minnesota [Mr. NELSON]. I should vote "yea" if he were present.

Mr. WELLINGTON (when his name was called). I have a general pair with the Senator from North Carolina [Mr. BUTLER], and in his absence I withhold my vote. If he were present, I should vote "nay."

Mr. WILSON (when his name was called). I have a general pair with the Senator from Florida [Mr. PASCO]. If he were present, he would vote "yea" and I should vote "nay."

The roll call having been concluded, the result was announced—yeas 17, nays 33; as follows:

YEAS—17.

Allen,	Cockrell,	Pettigrew,	Walthall,
Bate,	Jones, Ark.	Pettus,	White.
Berry,	Kyle,	Roach,	
Caffery,	Mills,	Smith,	
Chilton,	Morgan,	Turpie,	

NAYS—33.

Allison,	Foraker,	McBride,	Shoup,
Bacon,	Frye,	McEnery,	Spooner,
Baker,	Gallinger,	McLaurin,	Stewart,
Burrows,	Gear,	McMillan,	Thurston,
Carter,	Hale,	Mason,	Tillman,
Clay,	Hawley,	Perkins,	Wetmore.
Davis,	Hoar,	Platt, Conn.	
Elkins,	Jones, Nev.	Pritchard,	
Fairbanks,	Lodge,	Quay,	

NOT VOTING—30.

Aldrich,	Gorman,	Mantle,	Rawlins,
Butler,	Gray,	Martin,	Sewell,
Cannon,	Hanna,	Mitchell,	Teller,
Chandler,	Hansbrough,	Morrill,	Turner,
Clark,	Harris, Kans.	Murphy.	Vest,
Cullom,	Harris, Tenn.	Nelson,	Warren,
Daniel,	Heitfeld,	Pasco,	Wellington,
Deboe,	Kenney,	Penrose,	Wilson.
Faulkner,	Lindsay,	Platt, N. Y.	Wolcott.
George,	Mallory,	Proctor,	

So the amendment of Mr. JONES of Arkansas was rejected.

The reading of the bill was resumed. The next amendment of the Committee on Finance was to strike out paragraph 195, in the following words:

195. Kindling wood in bundles not exceeding one-quarter of a cubic foot each, three-tenths of 1 cent per bundle; if in larger bundles, three-tenths of 1 cent for each additional quarter of a cubic foot or fractional part thereof.

Mr. ALLISON. A majority of the committee recommend that the amendment striking out this paragraph be disagreed to.

The PRESIDING OFFICER. If there be no objection, the amendment will be disagreed to.

Mr. QUAY. What was done with the amendment of the committee in lines 22 and 23 in paragraph 194? I was absent at the time.

Mr. ALLISON. That amendment was disagreed to.

Mr. QUAY. Then the rate of duty stands as it was in the bill as it came from the House upon all railroad ties?

Mr. ALLISON. Yes, sir.

Mr. WHITE. Do I understand that the committee propose to put kindling wood on the free list?

Mr. ALLISON. They did propose that originally.

Mr. WHITE. But they have changed their opinion as to the dutiable character of the kindling wood?

Mr. JONES of Arkansas. Will the Senator from Iowa be good enough to explain why the committee has changed its opinion upon this question?

Mr. ALLISON. I will explain with very great pleasure. After examining this question more at large, we have discovered that the kindling-wood industry is a very large industry and rather an important one; and, of course, finding it to be an industry of importance requiring the protecting hand of the Government, we extended it.

Mr. WHITE. Does not the Senator think he is whittling down the free list a good deal by leaving off kindling wood? [Laughter.]

Mr. ALLISON. That may be so.

Mr. JONES of Arkansas. I notice in this bill that sometimes we have put taxes on articles because we had abundant natural supplies, and at other times we put on taxes because our natural supplies were getting extremely limited. I should like to know

whether we are putting a tax on kindling wood on the ground that we have a great deal of kindling wood or no kindling wood at all?

Mr. ALLISON. We have a very large industry in kindling wood in the United States, but Canada is competing with us.

Mr. JONES of Arkansas. It is not an infant industry, I suppose?

Mr. ALLISON. No, sir; but we want to get revenue and at the same time protect our own people.

Mr. JONES of Arkansas. If the committee withdraws its proposition, I will renew the amendment of the committee to strike out paragraph 195, and ask a vote upon it.

Mr. ALLISON. If that is what the Senator from Arkansas desires, all he has to do is to ask for the yeas and nays on the motion to disagree to the amendment of the committee. I have asked that the Senate disagree to the amendment striking out the paragraph.

Mr. JONES of Arkansas. That will be the same thing. My idea is to put kindling wood on the free list.

Mr. ALLEN. I understood the Senator from Iowa to say that he was willing that this schedule should be passed over until Monday.

Mr. ALLISON. No; the paragraph which was under consideration, on which the Senator, I understood, desired to make some observations.

Mr. ALLEN. I understood the Senator to say that after offering a certain amendment, which was agreed to, he would consent to an adjournment.

Mr. ALLISON. I stated that after the amendments to the remaining paragraphs of this schedule were disposed of I would consent to an adjournment.

Mr. ALLEN. I had hoped that the entire schedule would be passed over until Monday. I desire to move as a substitute a portion of the Wilson law for this entire schedule.

Mr. ALLISON. Very well; there can be no objection to that. That will be still open to the Senator after the schedule is perfected.

Mr. JONES of Arkansas. What is the agreement? I understood the schedule was to go over.

Mr. ALLISON. No; but the Senator from Nebraska desires to move the provisions of the Wilson law as a substitute for all these paragraphs. That, of course, will be in order after paragraph 193 goes over.

Mr. BERRY. What is the question?

The PRESIDING OFFICER. The Senator from Arkansas [Mr. JONES] moves to disagree to the amendment reported by the Committee on Finance to strike out paragraph 195.

Mr. JONES of Arkansas. The vote may be taken on the committee's motion to strike out the paragraph.

Mr. BERRY. If I understand the matter, the committee moves to strike out that paragraph. That is the report of the Committee on Finance.

Mr. ALLISON. That was the first report of the committee.

Mr. BERRY. The Senator in charge of the bill now asks the Senate not to agree to the report of the committee striking out the paragraph, and the question is, Will the Senate agree to the report made by the committee in striking out the paragraph? Is that the question?

Mr. ALLISON. That is a very reasonable statement made by the Senator from Arkansas; but I also stated that, upon reconsideration, the committee had instructed me to make the motion to disagree. It was not my own motion.

Mr. BERRY. I want to get the question properly stated, so as to know how to vote upon it.

Mr. ALLISON. The question is on disagreeing to the amendment of the committee to strike out the paragraph.

Mr. BERRY. Then the parliamentary motion is the committee recommend as an amendment to strike out this paragraph.

Mr. ALLISON. That is right.

Mr. BERRY. Then the question would be upon agreeing to the amendment proposed by the committee, and those who want the paragraph stricken out will vote "yea."

Several SENATORS. That is right.

The PRESIDING OFFICER. The motion will be upon agreeing to the committee amendment striking out the paragraph.

Mr. JONES of Arkansas. On that I call for the yeas and nays.

The yeas and nays were ordered.

Mr. WHITE. Mr. President, if there be no objection, I should like to ask the Senator from Iowa whether this item of kindling wood was dutiable under the McKinley law?

Mr. ALLISON. It was not.

Mr. WHITE. We had free kindling wood even under the McKinley law.

The Secretary proceeded to call the roll.

Mr. CULLOM (when his name was called). I am paired with the senior Senator from Delaware [Mr. GRAY]. If he were present, I should vote "nay."

Mr. MALLORY (when his name was called). I again announce my pair with the Senator from Vermont [Mr. PROCTOR]. If he were present, I should vote "yea."

Mr. VEST. I am paired with the Senator from Minnesota [Mr. NELSON].

Mr. WELLINGTON. I again announce my pair with the Senator from North Carolina [Mr. BUTLER]. If he were present, I should vote "nay."

The roll call was concluded.

Mr. CULLOM. I understand the junior Senator from New York [Mr. PLATT] is not paired. I will transfer my pair with the Senator from Delaware [Mr. GRAY] to the Senator from New York, so that I may cast my vote in order to make a quorum. I vote "nay."

The result was announced—yeas 18, nays 27; as follows:

YEAS—18.

Allen,	Chilton,	McLaurin,	Tillman,
Bacon,	Clay,	Mills,	Turpie,
Bate,	Cockrell,	Morgan,	Walthall.
Berry,	Gorman,	Pettus,	
Caffery,	Jones, Ark.	Roach,	

NAYS—27.

Allison,	Foraker,	Jones, Nev.	Platt, Conn.
Baker,	Frye,	Lodge,	Quay,
Burrows,	Gallinger,	McBride,	Shoup,
Carter,	Gear,	McEnery,	Spooner,
Cullom,	Hale,	McMillan,	Thurston,
Davis,	Hawley,	Mason,	Wetmore.
Fairbanks,	Hoar,	Perkins,	

NOT VOTING—44.

Aldrich,	Hanna,	Mitchell,	Sewell,
Butler,	Hansbrough,	Morrill,	Smith,
Cannon,	Harris, Kans.	Murphy,	Stewart,
Chandler,	Harris, Tenn.	Nelson,	Teller,
Clark,	Heitfeld,	Pasco,	Turner,
Daniel,	Kenney,	Penrose.	Vest,
Deboe,	Kyle,	Pettigrew,	Warren,
Elkins,	Lindsay,	Platt, N. Y.	Wellington,
Faulkner,	Mallory,	Pritchard,	White,
George,	Mantle,	Proctor,	Wilson,
Gray,	Martin,	Rawlins,	Wolcott.

So the amendment of the committee to strike out paragraph 195 was disagreed to.

The reading of the bill was resumed, and paragraphs 196 and 197 were read in the following words:

196. Sawed boards, planks, deals, and all forms of sawed cedar, lignum-vitæ, lancewood, ebony, box, granadilla, mahogany, rosewood, satinwood, and all other cabinet woods not further manufactured than sawed, 15 per cent ad valorem; veneers of wood, and wood, unmanufactured, not specially provided for in this act, 20 per cent ad valorem.

197. Clapboards, $1.50 per thousand.

Mr. VEST. I call the attention of my friend from Iowa to the fact that this is a part of the white-pine question in paragraphs 197 and 198, and if we pass over paragraph 193 we must pass over these paragraphs, or else bring up the whole question. Here is an increase upon pine clapboards and pine shingles.

Mr. ALLISON. The committee offer no amendment to paragraph 196. It is open to amendment, of course.

Mr. VEST. I am talking about paragraphs 197 and 198, which are part of the white-pine business. You increase the duty there on white-pine clapboards, and in the next paragraph you increase it upon white-pine shingles. That, of course, is a corollary from the increase to $2 a thousand on white pine in paragraph 193. When you start in you will have to go through it all.

Mr. ALLISON. Paragraph 198 has no reference to the question of white pine.

Mr. FRYE. That refers to hard woods.

Mr. ALLISON. That is in the act of 1894.

Mr. VEST. "Paragraph 201, shingles," is the one I meant. On pine shingles you make an increase.

Mr. ALLISON. Very well, we can pass that over. The Secretary, however, has not yet reached it in the reading of the bill.

Mr. VEST. Paragraph 197 must be passed over.

The PRESIDING OFFICER. Paragraph 197 will be passed over, without objection.

Mr. PETTIGREW. I do not think paragraph 197 is connected with the question of white pine.

Mr. VEST. It makes an increase on pine clapboards.

Mr. PETTIGREW. I know; but the amendment with regard to white pine will probably only embrace that which has not been dressed or improved, simply the rough lumber, and this is an improved product.

Mr. VEST. In the McKinley law pine clapboards were $1 and spruce $1.50, and in this bill the rate is $1.50 upon all. That is what I mean. If the Senator will look at the comparative statement, he will find that in the McKinley law there was only $1 upon these pine clapboards and $1.50 upon spruce, which was right, under the duties imposed by that law. Now, in accordance with the increase upon white pine in paragraph 193, of course the committee logically have increased the duties upon the products of pine.

Mr. ALLISON. I will say to the Senator that if his amendment shall be adopted, I shall cheerfully consent to go back to clapboards and to make an amendment accordingly, so as to make the rate correspond with the McKinley law.

Mr. FRYE. And shingles, too.

Mr. ALLISON. And shingles as well, when we reach that paragraph.

Before paragraph 198 is read, on behalf of the committee, I propose a modification of the amendment by inserting the words "except fence posts" after the word "posts," in line 12, and leaving heading bolts and stave bolts as they are in the bill as it came to us from the House of Representatives; so that the paragraph will read:

198. Hubs for wheels, posts, except fence posts, heading bolts, stave bolts, last blocks, wagon blocks, etc.

The SECRETARY. In paragraph 198, page 62, line 12, after the word "posts," it is proposed to insert "except fence posts," and to strike out "heading bolts, stave bolts" and insert "except fence posts."

Mr. ALLISON. No. Let the original amendment striking out "heading bolts, stave bolts" be disagreed to; that is to say, the only amendment I propose is to insert "except fence posts," in line 12, after the word "posts."

Mr. HALE. Leaving the rest as the House of Representatives passed it.

Mr. ALLISON. I propose to modify the amendment so as to read as I have stated it.

Mr. FRYE. The one amendment is agreed to and the other is disagreed to.

Mr. VEST. What do you propose to do with fence posts—put them on the free list or in the basket clause?

Mr. ALLISON. We shall dispose of them later on by putting them on the free list or somewhere else, but we do not propose to put them in here.

Mr. VEST. I should like, as this is Saturday afternoon, to be able to spend the Sabbath in a calm frame of mind; and if you are going to put them on the free list, it will be some consolation.

The PRESIDING OFFICER. The paragraph as proposed to be amended will be stated.

The SECRETARY. It is proposed to amend the paragraph so as to read:

198. Hubs for wheels, posts, except fence posts, heading bolts, stave bolts, last blocks, wagon blocks, oar blocks, heading blocks, and all like blocks or sticks, rough hewn, etc.

The amendment was agreed to.

The next amendment of the Committee on Finance was, in the same paragraph, line 14, after the words "rough hewn," to strike out "or;" and in line 15, before the word "twenty," to strike out "only" and insert "or bored;" so as to read:

And all like blocks or sticks, rough-hewn, sawed, or bored, 20 per cent ad valorem.

The amendment was agreed to.

Mr. JONES of Arkansas. I had intended to move to strike out, in order to save time, all the paragraphs from 197 to 201, with the intention of putting all the articles referred to in those paragraphs on the free list; but I presume the whole question will be raised by the motion made by the Senator from Nebraska [Mr. ALLEN], and so I shall not make the motion now.

Mr. HALE. That will put it all in one motion.

Mr. JONES of Arkansas. Yes.

The reading of the bill was resumed, and paragraph 199 was read in the following words:

199. Laths, 15 cents per 1,000 pieces.

Mr. ALLISON. The committee recommend the insertion of "25 cents" instead of "15 cents" in that paragraph.

Mr. WHITE. I ask the Senator from Iowa whether 15 cents was not the McKinley rate?

Mr. ALLISON. It was the McKinley rate.

Mr. JONES of Arkansas. I want the yeas and nays on that amendment.

The yeas and nays were ordered.

Mr. VEST. This is an increase of 10 cents over the McKinley rate.

Mr. ALLISON. Per thousand.

The PRESIDING OFFICER. The amendment proposed by the Senator from Iowa [Mr. ALLISON] will be stated.

The SECRETARY. In paragraph 199, page 62, line 16, before the word "cents," it is proposed to strike out "fifteen" and insert "twenty-five;" so as to make the paragraph read:

199. Laths, 25 cents per 1,000 pieces.

Mr. BACON. I ask the Senator from Iowa what is the ad valorem, approximately?

Mr. ALLISON. Twenty-five per cent.

Mr. HALE. I will state to the Senator that if the rate was 30 cents it would about agree with $2 upon pine. It is made to conform to that.

Mr. BACON. If it was 30 cents?

Mr. HALE. If it was 30 cents, but it is only asked to make the rate 25 cents.

Mr. ALLISON. I should say it would be about 20 or 25 per cent ad valorem.

Mr. BACON. Hardly that much. It can not be 20 or 25 per cent ad valorem. That is impossible. A thousand laths certainly cost more than 60 cents.

Mr. ALLISON. Perhaps it is not more than 15 per cent, but it is a very low rate of duty.

Mr. BACON. I doubt that very much. For instance, I know that laths in my section of the country cost in the neighborhood of $1.75 to $2 per thousand.

Mr. JONES of Arkansas. The comparative statement says they would be worth $1.14.

The PRESIDING OFFICER. The Secretary will call the roll on the amendment proposed by the Senator from Iowa [Mr. ALLISON].

The Secretary proceeded to call the roll.

Mr. CULLOM (when his name was called). I am paired with the senior Senator from Delaware [Mr. GRAY].

Mr. MALLORY (when his name was called). I again announce my pair with the Senator from Vermont [Mr. PROCTOR].

Mr. PENROSE (when his name was called). I am paired with the junior Senator from Delaware [Mr. KENNEY], and therefore withhold my vote.

Mr. VEST (when his name was called). I am paired with the Senator from Minnesota [Mr. NELSON].

Mr. WARREN (when his name was called). I am paired with the junior Senator from Washington [Mr. TURNER], who is absent, and therefore I withhold my vote.

Mr. WILSON (when his name was called). I again announce my pair with the Senator from Florida [Mr. PASCO]. If he were present, he would vote "nay" and I should vote "yea."

The roll call was concluded.

Mr. TILLMAN. I inquire if the Senator from Nebraska [Mr. THURSTON] has voted?

The PRESIDING OFFICER. He has not voted.

Mr. TILLMAN. Then I withhold my vote, as I am paired with that Senator.

Mr. BATE. I desire to announce that my colleague [Mr. HARRIS] is absent sick, and is paired with the Senator from Vermont [Mr. MORRILL], who is likewise absent. I make this announcement to apply for the day.

Mr. CULLOM. I have announced my pair with the Senator from Delaware [Mr. GRAY], but I transfer that pair to the junior Senator from New York [Mr. PLATT], and I vote "yea."

The result was announced—yeas 29, nays 17; as follows:

YEAS—29.

Allison,	Fairbanks,	Jones, Nev.	Pritchard,
Baker,	Foraker,	Lodge,	Quay,
Burrows,	Frye,	McBride,	Shoup,
Carter,	Gallinger,	McEnery,	Spooner,
Cullom,	Gear,	McMillan,	Wetmore.
Davis,	Hale,	Mason,	
Deboe,	Hawley,	Perkins,	
Elkins,	Hoar,	Platt, Conn.	

NAYS—17.

Allen,	Chilton,	Mills,	Walthall,
Bacon,	Clay,	Morgan,	White.
Bate,	Cockrell,	Pettus,	
Berry,	Jones, Ark.	Roach,	
Caffery,	McLaurin,	Turpie,	

NOT VOTING—43.

Aldrich,	Hansbrough,	Morrill,	Stewart,
Butler,	Harris, Kans.	Murphy,	Teller,
Cannon,	Harris, Tenn.	Nelson,	Thurston,
Chandler,	Heitfeld,	Pasco,	Tillman,
Clark,	Kenney,	Penrose,	Turner,
Daniel,	Kyle,	Pettigrew,	Vest,
Faulkner,	Lindsay,	Platt, N. Y.	Warren,
George,	Mallory,	Proctor,	Wellington,
Gorman,	Mantle,	Rawlins,	Wilson,
Gray,	Martin,	Sewell,	Wolcott.
Hanna,	Mitchell,	Smith,	

So the amendment of Mr. ALLISON was agreed to.

Mr. ALLISON. Does the Senator from Missouri ask that paragraph 201 be passed over?

Mr. VEST. Yes, sir.

Mr. ALLISON. Let paragraph 201 be passed over.

The PRESIDING OFFICER. Paragraph 201 will be passed over.

The reading of the bill was resumed. The next amendment of the Committee on Finance was, in paragraph 202, page 62, line 23, before the words "per centum," to strike out "thirty" and insert "twenty-five;" so as to make the paragraph read:

202. Casks and barrels (empty), sugar-box shooks, and packing boxes and packing-box shooks, of wood, not specially provided for in this act, 25 per cent ad valorem.

The amendment was agreed to.

The next amendment was, in paragraph 203, page 63, line 2, before the words "per centum," to strike out "fifty" and insert "forty;" so as to make the paragraph read:

203. Chair cane or reeds, wrought or manufactured from rattans or reeds, 10 per cent ad valorem; osier or willow prepared for basket makers' use, 20 per cent ad valorem; manufactures of osier or willow, 40 per cent ad valorem.

Mr. VEST. That is an increase of 10 per cent over the McKinley law.

Mr. CAFFERY. Osier or willow is to be placed back at the McKinley rate of 40 per cent ad valorem.

Mr. ALLISON. I believe so.

Mr. VEST. It is an increase over the McKinley rate.

Mr. WHITE. I wish the Senator from Iowa would consent that paragraph 203 may be passed over.

Mr. ALLISON. Let it be passed over.

The reading of the bill was resumed. The next amendment of the Committee on Finance was, in paragraph 204, page 63, line 5, before the words "per one thousand," to strike out "2 cents" and insert "1 cent;" so as to read:

204. Toothpicks of wood or other vegetable substance, 1 cent per 1,000 and 15 per cent ad valorem.

Mr. WHITE. I should like to inquire of the Senator from Iowa what was the McKinley duty on butchers' and packers' skewers, which come later in this paragraph. Was there any duty at all in the McKinley Act?

Mr. ALLISON. I understand not.

Mr. WHITE. This is an addition?

Mr. ALLISON. This is an addition.

Mr. WHITE. I inquire whether there appears to be any undue importation of skewers at present?

Mr. ALLISON. I have no information as to the importations. I propose to modify the amendment of the committee by striking out what the committee have already proposed, 1 cent and 15 per cent ad valorem, leaving 2 cents stand; so that the paragraph will stand:

Toothpicks of wood or other vegetable substance, 2 cents per 1,000.

Mr. WHITE. Can the Senator state the ad valorem on that rate?

Mr. ALLISON. It is impossible to state the ad valorem on the Japanese toothpicks, but I think it is about 15 or 20 per cent on the other toothpicks, which sell at 8 or 10 cents a thousand, foreign value.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the Committee on Finance as modified.

The amendment as modified was agreed to.

The reading of the bill was resumed. The next amendment of the Committee on Finance was, in paragraph 204, line 6, after the word "skewers," to strike out "40 cents per thousand" and insert "20 per cent ad valorem;" so as to read:

Butchers' and packers' skewers, 20 per cent ad valorem.

The amendment was agreed to.

Mr. ALLISON. I ask that the paragraph may now be read as amended.

The Secretary read as follows:

204. Toothpicks of wood or other vegetable substance, 2 cents per 1,000; butchers' and packers' skewers, 20 per cent ad valorem.

The reading of the bill was resumed and continued to the end of paragraph 205.

Mr. ALLISON. I have one or two amendments in addition, but they may give rise to some little discussion. I do not know that they will. I will now move an executive session, with the understanding that we go back to paragraph 193 on Monday.

Mr. PETTIGREW. I wish the attention of the Senator from Iowa for a moment. I am going to be absent from the city Monday and Tuesday. I shall be here again Wednesday, and I desire that paragraph 193 shall not be disposed of until I return.

Mr. HALE. Several Senators have remained here in order to pass upon paragraph 193, hoping that it would be acted upon today. Under the circumstances, I do not think we ought to agree to let it go over.

The PRESIDING OFFICER. Is there objection to considering paragraph 193 as passed over?

Mr. HALE. I must object.

EXECUTIVE SESSION.

Mr. ALLISON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After ten minutes spent in executive session the doors were reopened, and (at 4 o'clock and 30 minutes p. m.) the Senate adjourned until Monday, June 7, 1897, at 12 o'clock meridian.

NOMINATIONS.

Executive nominations received by the Senate June 5, 1897.

CONSULS-GENERAL.

Andrew D. Barlow, of Missouri, to be consul-general of the United States at the City of Mexico, Mexico, vice Thomas T. Crittenden, resigned.

Carl Bailey Hurst, of the District of Columbia, now consul at Prague, Bohemia, to be consul-general of the United States at Vienna, Austria, vice Max Judd, resigned.

CONSULS.

Harold S. Van Buren, of New Jersey, to be consul of the United States at Nice, France, vice Wilburn B. Hall, resigned.

Henry H. Morgan, of Louisiana, to be consul of the United States at Horgen, Switzerland, vice Ethelbert Watts, resigned.

William W. Canada, of Indiana, to be consul of the United States at Vera Cruz, Mexico, vice Charles Schaefer, resigned.

ASSISTANT ATTORNEY-GENERAL.

Louis A. Pradt, of Wisconsin, to be Assistant Attorney-General, vice Joshua E. Dodge, resigned.

REGISTER OF LAND OFFICE.

Stephen J. Weekes, of Nebraska, to be register of the land office at O'Neill, Nebr., vice John A. Harmon, removed.

PROMOTIONS IN THE ARMY.

Cavalry arm.

Lieut. Col. Henry Erastus Noyes, Second Cavalry, to be colonel, June 1, 1897, vice Mizner, Tenth Cavalry, who vacates on accepting commission as brigadier-general.

Lieut. Col. Guy Vernon Henry, Third Cavalry, to be colonel, June 2, 1897, vice Wade, Fifth Cavalry, who vacates on accepting commission as brigadier-general.

Maj. Adna Romanza Chaffee, Ninth Cavalry, to be lieutenant-colonel, June 1, 1897, vice Noyes, Second Cavalry, promoted.

Maj. Michael Cooney, Fourth Cavalry, to be lieutenant-colonel, June 2, 1897, vice Henry, Third Cavalry, promoted.

Capt. William Curtis Forbush, Fifth Cavalry, to be major, June 1, 1897, vice Chaffee, Ninth Cavalry, promoted.

Capt. Jacob Arnold Augur, Fifth Cavalry, to be major, June 2, 1897, vice Cooney, Fourth Cavalry, promoted.

First Lieut. Henry Joseph Goldman, Fifth Cavalry, to be captain, June 1, 1897, vice Forbush, promoted.

First Lieut. Augustus Canfield Macomb, Fifth Cavalry, to be captain, June 2, 1897, vice Augur, promoted.

Second Lieut. Lawrence Julian Fleming, Tenth Cavalry, to be first lieutenant, June 1, 1897, vice Goldman, Fifth Cavalry, promoted.

Second Lieut. James Joseph Hornbrook, Second Cavalry, to be first lieutenant, June 2, 1897, vice Macomb, Fifth Cavalry, promoted.

Artillery arm.

Lieut. Col. John Isaac Rodgers, Second Artillery, to be colonel, June 1, 1897, vice Graham, Fifth Artillery, who vacates on accepting commission as brigadier-general.

Maj. William Lawrence Haskin, First Artillery, to be lieutenant-colonel, June 1, 1897, vice Rodgers, Second Artillery, promoted.

Capt. James Monroe Ingalls, First Artillery, to be major, June 1, 1897, vice Haskin, First Artillery, promoted.

First Lieut. Clermont Livingston Best, First Artillery, to be captain, June 1, 1897, vice Ingalls, First Artillery, promoted.

Second Lieut. Edward Fenton McGlachlin, jr., Fifth Artillery, to be first lieutenant, June 1, 1897, vice Best, First Artillery, promoted.

Infantry arm.

First Lieut. Hunter Liggett, Fifth Infantry, to be captain, June 1, 1897, vice Romeyn, Fifth Infantry, retired from active service.

Second Lieut. Charles Carr Clarke, Ninth Infantry, to be first lieutenant, June 1, 1897, vice Liggett, Fifth Infantry, promoted.

Candidate Sergt. Fred L. Munson, Company A, Sixth Infantry, to be second lieutenant, June 3, 1897, vice Clarke, Ninth Infantry, promoted.

POSTMASTERS.

Benjamin M. Foreman, to be postmaster at Texarkana, in the county of Miller and State of Arkansas, in the place of William R. Kelley, resigned.

Eugene H. Merriman, to be postmaster at East Hartford, in the county of Hartford and State of Connecticut, the appointment of a postmaster for the said office having, by law, become vested in the President on and after July 1, 1896. William A. Lowry, appointed by the President, and by him nominated to the Senate, not having been confirmed.

John H. Daugherty, to be postmaster at Frankton, in the county of Madison and State of Indiana, in the place of William T. Wright, resigned.

Oliver C. Gordon, to be postmaster at Union City, in the county of Randolph and State of Indiana, in the place of Amandus B. Schuyler, removed.

Ira Kidwell, to be postmaster at Elwood, in the county of Madison and State of Indiana, in the place of Francis M. Harbit, removed.

Morris B. Pote, to be postmaster at New Harmony, in the county of Posey and State of Indiana, in the place of William Richards, removed.

Benjamin L. Robertson, to be postmaster at Purcell, in the Chickasaw Nation and Indian Territory, in the place of William Clardy, removed.

E. D. Powell, to be postmaster at Exira, in the county of Audubon and State of Iowa, in the place of J. B. Connrardy, resigned.

W. W. Colfax, to be postmaster at Wyandotte, in the county of Wayne and State of Michigan, in the place of Henry Roehrig, resigned.

Eugene S. Upson, to be postmaster at Durand, in the county of Shiawassee and State of Michigan, the appointment of a postmaster for the said office having, by law, become vested in the President on and after July 1, 1896, John P. Gerardy, appointed by the President and by him nominated to the Senate, not having been confirmed.

Frank Sigel Jones, to be postmaster at Sarcoxie, in the county of Jasper and State of Missouri, in the place of Diocletian A. Smith, removed.

James R. Barr, to be postmaster at Cambridge, in the county of Guernsey and State of Ohio, in the place of W. H. H. McIlyar, removed.

George W. Farmer, to be postmaster at Martin, in the county of Weakley and State of Tennessee, in the place of W. P. Gibbs, resigned.

John E. Shields, to be postmaster at Alderson, in the county of Monroe and State of West Virginia, in the place of John M. Alderson, resigned.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 5, 1897.

GOVERNOR OF NEW MEXICO.

Miguel A. Otero, of New Mexico, to be governor of New Mexico.

TERRITORIAL SECRETARIES.

George H. Wallace, of New Mexico, to be secretary of New Mexico.

William M. Jenkins, of Oklahoma, to be secretary of the Territory of Oklahoma.

Charles H. Akers, of Prescott, Ariz., to be secretary of Arizona Territory.

REGISTER OF THE LAND OFFICE.

Thornton S. Howard, of Des Moines, Iowa, to be register of the land office at Des Moines, Iowa.

POSTMASTERS.

Robert N. Foster, to be postmaster at Gilman, in the county of Iroquois and State of Illinois.

Nathaniel Barnes, to be postmaster at Kansas City, in the county of Wyandotte and State of Kansas.

SENATE.

MONDAY, *June 7, 1897.*

Prayer by Rev. HUGH JOHNSTON, D. D., of the city of Washington.

The Journal of the proceedings of Saturday last was read and approved.

WICHITA INDIAN LANDS.

The VICE-PRESIDENT laid before the Senate a communication from the Secretary of the Interior, stating, in response to a resolution of the 1st instant, that, by direction of the President of the United States, the work of allotting lands to the Wichita Indians was on the 5th instant suspended; which was referred to the Committee on Indian Affairs, and ordered to be printed.

MISSISSIPPI RIVER COMMISSION CONTRACTS.

The VICE-PRESIDENT laid before the Senate a communication from the Secretary of War, transmitting, in response to a resolution of March 24, 1897, statements prepared by the secretary of the Mississippi River Commission, together with a copy of several indorsements, including the report of Colonel Gillespie to the Chief of Engineers, etc.; which, with the accompanying papers, was referred to the Committee on Commerce, and ordered to be printed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. H. L. OVERSTREET, one of its clerks, announced that the House had passed the following bills and joint resolution:

A bill (S. 956) to amend an act entitled "An act to authorize the construction of a steel bridge over the St. Louis River between the States of Wisconsin and Minnesota," approved April 24, 1894, as amended by an act approved August 4, 1894, entitled "An act to amend an act to authorize the construction of a steel bridge over the St. Louis River between the States of Minnesota and Wisconsin;"

A bill (S. 1979) to authorize the construction of a bridge across Pearl River, in the State of Mississippi: and

A joint resolution (S. R. 40) authorizing the Secretary of War to receive for instruction at the Military Academy at West Point Cárlos Gutierrez, of Salvador.

The message also returned to the Senate, in compliance with its request, the bill (S. 426) to authorize the construction of bridges across the Missouri River between its mouth and the mouth of the Dakota or James River, and across the Mississippi River between the mouth of the Minnesota River, in the State of Minnesota, and Donaldsonville in the State of Louisiana, and across the Illinois and Des Plaines rivers between the mouth of the Illinois and the city of Joliet, in the State of Illinois; and to prescribe the character, location, and dimensions of the same.

ENROLLED BILLS SIGNED.

The message further announced that the Speaker of the House had signed the following enrolled bills and joint resolution; and they were thereupon signed by the Vice-President:

A bill (S. 1886) to adopt regulations for preventing collisions upon certain harbors, rivers, and inland waters of the United States;

A bill (S. 1944) to authorize the construction of a bridge across the Clinch River, Kingston, Tenn.; and

A joint resolution (S. R. 45) reappropriating the sum of $10,000 not expended for the relief of sufferers by the floods of the Mississippi River.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented a memorial of sundry citizens of Jersey City, N. J., and a memorial of sundry citizens of New York City, remonstrating against an increase of the duty on beer; which were ordered to lie on the table.

Mr. MITCHELL. I present a petition of the legislature of Wisconsin, praying for a declaration in reference to strengthening the public credit. As a copy of this petition has already been presented and read by the Secretary, I do not ask to have it again read. I move that the petition be referred to the Committee on Finance.

The motion was agreed to.

Mr. MCMILLAN presented the petition of F. M. Thompson and 74 other citizens of Detroit, Mich., praying for the passage at the earliest possible date of such tariff legislation as will adequately secure American industrial products against the competition of foreign labor; which was ordered to lie on the table.

He also presented the petition of Leander A. White and sundry other citizens of Ogemaw County, Mich., praying for the passage of the pending tariff bill substantially as it was passed by the House of Representatives; which was ordered to lie on the table.

Mr. MURPHY presented a petition of sundry manufacturers of Troy, N. Y., and a petition of 10 citizens of Cohoes, N. Y., praying for the speedy passage of the pending tariff bill; which were ordered to lie on the table.

He also presented a memorial of 75 citizens of New York City, remonstrating against an increase of the duty on beer; which was referred to the Committee on Finance.

He also presented petitions of 63 citizens of Ilion, of 24 citizens of Chautauqua, of 60 citizens of Lockport, and of sundry citizens of Brooklyn, all in the State of New York, praying for the enactment of legislation for a more rigid restriction of immigration; which were ordered to lie on the table.

Mr. PLATT of New York presented a petition of sundry tobacco growers and farmers of Savona, N. Y., praying for a retention of the duty on tobacco as proposed in the so-called Dingley tariff bill; which was ordered to lie on the table.

He also presented sundry petitions of citizens of New York City, Poughkeepsie, and Buffalo, all in the State of New York, praying for the enactment of protective tariff legislation such as will adequately secure American industrial products against the competition of foreign labor; which were ordered to lie on the table.

He also presented sundry memorials of citizens of Brooklyn, New York City, Long Island City, Farmingdale, Rochester, Greenpoint, and Richmond, all in the State of New York, remonstrating against the proposed increase of the duty on beer; which were ordered to lie on the table.

Mr. FAULKNER. I present the petitions of C. W. T. Rider and

101 other citizens of Morgan County, of E. F. Johnson and 52 other citizens of Monongalia County, of G. W. Simon and 50 other citizens of Alton, of N. W. Robinson and 17 other citizens of Burton, and of H. B. McDowell and 115 other citizens of Rock Cave, all in the State of West Virginia, praying for the enactment of legislation restricting immigration. As the bill to restrict immigration has already been reported from the committee, I move that the petitions lie on the table.

The motion was agreed to.

Mr. TURPIE presented a memorial of the Winter Wheat Millers' League, of Indianapolis, Ind., remonstrating against the proposed duty on burlaps and burlap bags; which was ordered to lie on the table.

He also presented a memorial of John Glenn & Co., of New York City, relative to the duty on paper; which was ordered to lie on the table.

He also presented a statement prepared by J. Schoenhof, concerning the wool situation of the world; which was ordered to lie on the table.

Mr. DANIEL. I present a memorial of the Strother Tobacco Gloss Company, of Lynchburg, Va., together with indorsements of sundry tobacco manufacturers of the United States, remonstrating against the proposed increase in the duty on tobacco.

I would state, Mr. President, that this is a very important communication, expressing the views of many tobacco manufacturers as to the effect of the policy of the proposed change in the tobacco tax, and I ask leave that it may be printed as a public document, because it contains information which is valuable to the Senate.

The VICE-PRESIDENT. Is there any objection to the request of the Senator from Virginia to have the memorial printed as a public document? The Chair hears none, and that is the order. The memorial will lie on the table.

Mr. DANIEL presented petitions of R. A. Tyree and sundry other citizens of Richmond; of J. L. Munn and sundry other citizens of Manchester, C. E. Hunt and sundry other citizens of Norfolk, and of J. H. Swope and sundry other citizens of Loudoun County, all in the State of Virginia, praying for the enactment of legislation for a more rigid restriction of immigration; which were ordered to lie on the table.

He also presented a petition of the board of managers of the Trades League of Philadelphia, Pa., praying Congress to take such action as may be necessary to increase the capacity of our coastwise system of canals for defense and commerce, and to relieve that section of the country from discriminating tolls now authorized by Congress; which was referred to the Committee on Commerce.

He also presented a memorial of the Snead & Woodson Tobacco Company and sundry other tobacco manufacturers of Lynchburg, Va., remonstrating against an increase of the duty on tobacco; which was ordered to lie on the table.

REPORT OF A COMMITTEE.

Mr. VEST, from the Committee on Commerce, to whom was referred the bill (S. 1905) to amend an act entitled "An act to authorize the Oregon and Washington Bridge Company to construct and maintain a bridge across the Columbia River, between the State of Oregon and the State of Washington, and to establish it as a post-road," reported it without amendment.

BILLS INTRODUCED.

Mr. HALE introduced a bill (S. 2093) providing for a library for the Government Printing Office; which was read twice by its title, and referred to the Committee on Printing.

Mr. ALLEN introduced a bill (S. 2094) setting apart Fort Omaha, in the county of Douglas and State of Nebraska, to be used as a school for the education of Indian youth, and for other purposes; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 2095) granting a pension to Howard C. Friend, of Douglas, Nebr.; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 2096) granting an increase of pension to Almon Stuart, of Minden, Nebr.; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Pensions.

Mr. GRAY introduced a bill (S. 2097) to grant to the city of Wilmington, Del., the use of certain real estate in said city on which is situated the building recently occupied for Federal purposes; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. TILLMAN introduced a bill (S. 2098) for the relief of J. E. Davis; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. ALLEN introduced a joint resolution (S. R. 49) providing for a joint Congressional committee to examine and report on unpaid claims against the United States, and for other purposes; which was read twice by its title, and referred to the Committee on Claims.

AMENDMENTS TO THE TARIFF BILL.

Mr. QUAY. I present four amendments to the pending tariff bill. The effect of the amendments is to substitute for the proposed duty on tea and the internal-revenue features of the bill a duty of 10 per cent ad valorem upon the entire free list. The amendment is in the form of striking out what has not yet been adopted, being committee amendments. The proposition is merely tentative, and I have put it in its present form.

Mr. MORGAN. Let the amendments be read at the desk. I should like to hear them.

The Secretary read as follows:

Amendment intended to be proposed by Mr. QUAY to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States:

Strike out lines 14, 15, 16, and 17, on page 181, and insert in lieu thereof the following:

"SEC. 2. On and after the 1st day of July, 1897, and until the 1st day of July, 1901, there shall be levied, collected, and paid upon the following articles imported from foreign countries a duty of 10 per cent ad valorem; after the 1st day of July, 1901, they shall be exempt from duty."

Amendment intended to be proposed by Mr. QUAY to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States:

Strike out paragraph 286½, providing for a duty on tea.

Amendment intended to be proposed by Mr. QUAY to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States:

Strike out sections 4, 5, 6, and 7.

Amendment intended to be proposed by Mr. QUAY to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States:

At the end of paragraph 118 add the following:

"*And provided further*, That all iron ore produced in foreign countries from mines owned by citizens of the United States or by corporations or partnerships in which citizens of the United States have the controlling interest, and imported for their own use and not for sale, shall be exempt from duty."

Mr. QUAY. That duty on tea, of course, is not at present in the bill. It appears in the printed bill as a proposed amendment of the Committee on Finance.

The VICE-PRESIDENT. The amendments will be printed and lie on the table.

AMENDMENT TO THE TARIFF BILL.

Mr. KYLE submitted an amendment intended to be proposed by him to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States; which was ordered to lie on the table and to be printed.

AMENDMENT TO DEFICIENCY APPROPRIATION BILL.

Mr. WARREN submitted an amendment intended to be proposed by him to the general deficiency appropriation bill; which was referred to the Committee on Appropriations, and ordered to be printed.

THE TARIFF BILL.

Mr. ALLISON. I move that the Senate proceed to the consideration of the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

The VICE-PRESIDENT. Is there objection to the motion of the Senator from Iowa.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill.

The VICE-PRESIDENT. The Secretary will proceed.

The Secretary read as follows:

Schedule E.—Sugar, molasses, and manufactures of.

Mr. ALLEN. What has become of the wood schedule?

The VICE-PRESIDENT. The Chair understands that paragraphs in that schedule were passed over Saturday afternoon, to be called up as Senators desire.

Mr. ALLISON. It was understood that this morning we would take up the remaining paragraphs relating to lumber. I had one paragraph passed over until to-day at the request of the Senator from Nebraska [Mr. ALLEN]. It is paragraph 193.

Mr. ALLEN. I desire, if in order at this time, to offer a substitute for the entire schedule.

The VICE-PRESIDENT. The Chair understands that there is an amendment pending to paragraph 193, the amendment offered by the Senator from Missouri [Mr. VEST], proposing to except white pine from the payment of the rate of $2 per thousand.

Mr. HALE. The Senator from Nebraska can offer an amendment, of course, to the whole schedule, which would be voted on after the minor amendments are passed upon.

Mr. ALLEN. Yes, sir; let my amendment be pending.

Mr. HALE. What is the Senator's amendment?

Mr. ALLEN. I offer Schedule D of the Wilson Act of 1894 as a substitute for the entire wood schedule of this proposed act. I propose to offer it at the proper time. I do not know but that I will offer it now, so that it may be pending.

Mr. ALLISON. I do not hear what the Senator says.

Mr. HALE. He offers the provisions of the Wilson Act.

Mr. ALLEN. I shall offer now, and let it be pending. Schedule D of the act of August 27, 1894, as a substitute for the schedule in the bill.

Mr. HALE. For the entire schedule?

Mr. ALLEN. For the entire wood schedule I move to substitute paragraphs 672 to 684, inclusive, of the act of August 27, 1894, transferring all those articles to the free list. I will put it in form, however, before the matter comes up formally.

Mr. President, upon the paragraph that is pending and soon to be voted upon I desire to offer some brief remarks in opposition.

I was thoroughly convinced from the speech of the Senator from South Dakota [Mr. PETTIGREW] on Saturday and from the map he presented on that occasion that we ought not to levy a tax of any kind upon white pine. It would seem from his argument, and I believe his argument to be sound, that we have left in this country but 33,000,000,000 feet of white pine, and according to the rate of the annual disappearance of white pine we shall be without that kind of lumber in the United States within the next six or seven years.

Of course the theory of protection proceeds upon the thought that it increases an industry rather than decreases it. Every man who is convinced of the benefits of a protective tariff (and I am not now saying that protection in some respects is not proper) bases his argument upon the theory that it increases the home market, increases the industry itself, increases wages, and increases the opportunity of wage earners to earn a livelihood for themselves and their families. That kind of protection, however, which is destructive of an industry, it occurs to me, can not be sustained by those who are thoroughly convinced of the soundness of the doctrine of protection.

What is the result of the adoption of paragraph 193, inposing a duty of $2 a thousand upon white pine? It was shown before the Ways and Means Committee of the House of Representatives that a tax of that kind would be prohibitive; that it would turn over the domestic market entirely to the domestic manufacturer, and prohibit the introduction of white pine from Canada or from any other source. I quote from page 554 of the Tariff Hearings before the Ways and Means Committee:

Question by Mr. EVANS:
What do you think the duty ought to be?

Speaking with reference to white pine.

Mr. WINCHESTER. It ought to be prohibitive.
Mr. EVANS. Would $2 do that?
Mr. WINCHESTER. Yes; just about.

Mr. BURROWS. Will the Senator allow me to interrupt him for a moment there?

Mr. ALLEN. Certainly.

Mr. BURROWS. Is the Senator quite clear that that answer refers to white pine?

Mr. ALLEN. I think it refers to white pine. I think that is the subject which was under discussion.

Mr. BURROWS. I know; but I had a talk with Mr. Winchester this morning, and he says that he had no reference to white pine in it, as we would observe by looking at the context.

Mr. ALLEN. I ask the Senator from Michigan, who is thoroughly familiar——

Mr. BURROWS. I simply want to call attention to this and have it read in connection. The subject was a duty on lumber. To Mr. EVANS this witness says:

We are tanning hides for South America in West Virginia; we are tanning hides for Texas. The trees are cut down and peeled for the bark. If you take a trip up the valleys, you can see it.
Mr. EVANS. How much chestnut-oak and hemlock bark do you produce in West Virginia?
Mr. WINCHESTER. The bark is mostly wasted now, because the lumber interest pays nothing. The largest tannery in the United States is in Chattanooga, and the second largest is at Davis, which we supply.
Mr. EVANS. What do those engaged in the production of this kind of bark say about its being put on the free list?
Mr. WINCHESTER. They do not like it.

After omitting something.

Mr. EVANS. What do you think the duty ought to be?
Mr. WINCHESTER. It ought to be prohibitive.
Mr. EVANS. Would $2 do that?
Mr. WINCHESTER. Yes; just about.

Now, Mr. Winchester tells me he had no reference to white pine, but it related simply to the bark industry.

Mr. ALLEN. That signifies nothing one way or the other. The subject was a tax upon lumber.

Now, we know that the supply of spruce, yellow pine, redwood, and fir of different kinds is greater than the supply of white pine, and if a tax of $2 a thousand feet upon lumber manufactured from those kinds of wood would be prohibitive of the importation of that kind of lumber from Canada or anywhere else, would it not be doubly so as respects white pine, which is practically exhausted in this country? So, whether Mr. Winchester has reference to one particular kind of lumber or another, the argument still stands that a tariff of $2 a thousand feet upon white pine, which is disappearing in this country like a snowball in the hot sun, would be prohibitive of the importation of a like grade of lumber from Canada or from any other source.

If I am correctly informed, the white pine of this country is in a trust, a syndicate, and the entire stumpage of the United States is controlled by less than a dozen men or a dozen firms. I should like to ask my good friend from Michigan, who interrupted me a moment ago, what reason he or any gentleman upon the other side of the Chamber can assign for placing a tax of $2 a thousand upon white pine? I am perfectly willing to yield at this point for an explanation of that kind.

Mr. BURROWS. If the Senator from Nebraska will allow me, I will respond to the statement just made by him in which he asserts that a two-dollar duty would be prohibitive, as I understood him.

Mr. ALLEN. Yes, sir.

Mr. BURROWS. I call his attention to the statistics. When the two-dollar duty was in operation the amount imported from 1887 to 1888 was 608,000,000 feet; from 1888 to 1889, 747,000,000 feet, and from 1889 to 1890, 659,000,000 feet, yielding the first year a revenue from 1887 to 1888 of $608,000; from 1888 to 1889, $747,000, and from 1889 to 1890, $659,000. Now, if a two-dollar duty is prohibitive, how did the lumber come in and yield such a revenue?

Mr. ALLEN. That does not answer the question at all. That is, if my friend will permit me to say, very skillful fencing. The question is, Will this duty be practically prohibitive of the introduction of white pine into the country?

Mr. VEST. Mr. President, will the Senator from Nebraska permit me to ask my friend from Michigan a question?

Mr. ALLEN. Certainly.

Mr. VEST. Of course I do not want to do Mr. Winchester any injustice. I quoted his testimony, taken by the Ways and Means Committee. I know that at the time they were discussing the question of bark, though they had been discussing the whole question of white-pine lumber and other kinds. Mr. EVANS, a member of the committee, asked Mr. Winchester:

What do you think the duty ought to be?

He refers, as a matter of course, I take it, to all that had preceded. They had been discussing white-pine lumber and yellow-pine lumber, and then had come down to bark—all a part of the lumber schedule. Mr. Winchester said:

It ought to be prohibitive.

Mr. EVANS asked:

Would $2 do that?

Mr. Winchester answered:

Yes; just about.

I should like to ask the Senator from Michigan, if Mr. Winchester referred to bark, what he meant by $2? Two dollars on how much? Two dollars on a thousand feet of bark?

Mr. BURROWS. He said to me this morning, $2 a cord.

Mr. VEST. That is a most remarkable statement.

Mr. ALLEN. That would be more than the bark is worth.

Mr. VEST. Two dollars on a cord of bark!

Mr. BURROWS. Of course it is a heavy percentage.

Mr. VEST. Nothing had been said about cords. They had been talking about a tax of $2 a thousand feet on the lumber, and then got off into an incidental talk about bark for tanning purposes, then Mr. Winchester said, "About $2." I submit to the Senator from Michigan in all fairness that anyone would conclude that he meant $2 a thousand, which is the rate proposed in the Senate bill and in the House bill.

Mr. BURROWS. I thought I ought to make the statement in justice to Mr. Winchester, after what he said to me this morning.

Mr. VEST. I do not want to do him any injustice.

Mr. BURROWS. On page 553, the Senator will observe, Mr. DOLLIVER inquired of him, "Why do you want the duty on sycamore wood advanced to $2?" I think that the Senator will find that there was no discussion about the duty on white pine, and he made the statement in connection with bark and cross-ties. In looking it over I had some doubt about it, and so I called on him and asked him about it, and he said he never intended to have it apply to white pine, and he was not so understood at the time.

Mr. VEST. In the immediate context of his reply it seems that they were discussing cross-ties. Mr. EVANS asked:

What do those engaged in the production of this kind of bark say about its being put on the free list?

Mr. WINCHESTER. They do not like it.

Now he goes on:

Something has been said about cross-ties. There are no "gentlemen" interested in cross-ties. These are gotten out by the one-gallused, poor, barefooted men in the mountains. Their living depends on cross-ties. When you talk about protection, they need a dollar as much as any of you need a dime.

Then Mr. EVANS asked:

What do you think the duty ought to be?

I would take it that he was talking about cross-ties, if he was not talking about the whole lumber schedule. Then Mr. Winchester said:

It ought to be prohibitive.
Mr. EVANS. Would $2 do that?

Now, $2 on how many cross-ties? Certainly he does not mean on a thousand feet of cross-ties. That is absurd on the face of it.

He certainly does not mean on a thousand feet of bark, because that is more than absurd.

Mr. ALLEN. Bark is not measured by the thousand feet.

Mr. VEST. No, of course not; it is measured by the cord.

Mr. ALLEN. Two dollars a thousand feet on bark would be three or four times the original cost.

Mr. VEST. As a matter of course, and $2 on a thousand feet of cross-ties would be nearly as bad.

Mr. ALLEN. Mr. President, I do not think it signifies the slightest whether this witness was talking about white pine or yellow pine or any other kind of lumber. The simple fact, and the fact that I desire to make patent, is that the owners and controllers of white pine in the United States are endeavoring through the instrumentality of this schedule to prohibit the importation of white pine from Canada or from any other source. That is the pivotal thought of this paragraph as applied to white pine. I have not yet heard the Senator from Michigan explain why there is any necessity for it or what necessity there may be to levy a tax upon white pine. It can not be for the purpose of increasing the industry, for white-pine trees do not reproduce themselves, if I am correctly informed. When a tree is once cut down, it is destroyed for all time, and is not replaced in the course of years by another white-pine tree, but another species of timber grows in its place.

Mr. President, a tax upon white pine that would make importation prohibitive and which would result in raising the price of that article to the consumers of this country would not benefit to exceed a dozen men or a dozen institutions. Why should a tax of $2 a thousand be levied upon every farmer and every home builder in this country who may be compelled or who may desire to use white pine in the construction of his home? The natural effect of it would be that the owners of white pine in Minnesota, Michigan, and Wisconsin would ship their pine to the Eastern markets, and the people in Nebraska and the treeless States will be compelled to go to the same cormorants who own the majority of the pines of the South and purchase their lumber there, and by that means the entire pine output of the United States will be placed in the keeping of this syndicate or these few men. The great millions of people who are struggling to establish homes upon the prairies, who want to build schoolhouses and churches and other institutions for their benefit and for the accommodation of their children and themselves, will have a tax of $2 a thousand or more levied upon them to pay tribute to this syndicate or these few men.

Mr. President, when the white pine disappears in this country, if this paragraph shall become a law, do not our friends upon the other side know that these same men will control the white pine forests of Canada, and will not the people of this country be at the absolute mercy of the owner or owners of Canadian pine? Then the cry will go up through the length and breadth of our country that white pine is gone and the tariff must come off of it, and the Canadian and the Yankee in secret partnership across the line, owning and controlling the white pine of Canada, will raise the price of it to the American consumer, and he will be at their absolute mercy. Mr. President, there is no escape from this proposition.

I notice one peculiar thing in the tariff hearings, or rather the absence of one thing. In examining these hearings upon wood, and the manufactures of, there is a singular absence of any witness representing the agricultural interests of this country. Among all of the competent men in the United States, and there are some very competent men representing the agricultural interests, the master of the grange, the presidents of the different alliances, not one of them was invited by the Committee on Ways and Means to give his testimony upon this schedule. Why, sir, it was a race of jackals before that committee. Every man who appeared before it was interested in the lumber trade or in the timber trade in some form or another.

The men who wanted protection, the men who owned the forests and who wanted to grow rich out of the people who are compelled to use their product, were there in great numbers. The men who were handling the lumber as an occupation, or thought of making an occupation of it, were there. Not a home builder in the United States, not a representative of the humble classes who are building up the cities and the villages of the great West and South, was there. These hearings were not open to him. Neither the doors of Congress nor the doors of the committee room were open to the representatives of that class of people. They were open only to those who fatten and grow rich out of tariff taxation.

Mr. President, the adoption of this paragraph will place every farmer in the Missouri and Mississippi basin and the great West and Southwest at the absolute mercy of the men who control the pine interests of this country. What does it signify to a farmer to-day? To pay the tariff tax on a thousand feet of lumber means 20 bushels of corn to the farmer according to current prices. It means between 16 and 17 bushels of oats. It means about 4, or between 4 and 5, bushels of his wheat. If he builds a home requiring 10,000 feet of lumber, which will be a humble home indeed, it takes 200 bushels of his corn at current prices to pay the tariff tax. What reason is there in permitting less than a dozen men or a dozen institutions of this country to levy upon every corn field and every oat field and every wheat field of the United States a tribute of this kind? Why should not these men be put upon an equality in the market? Why should not the men who are dealing in white pine to-day be compelled to walk out into a competitive market and take their chances in that market as other people are required to do?

Mr. President, it will not do to say that the American wage earner in the pine woods of the United States is paid more and better wages than the Kanuck is paid. The truth is, the wages across the line as a whole are higher than they are in the United States for like services. There is nothing in that argument. The claptrap so frequently used in these discussions, that the interest of the wage earner is advanced and the poor man's condition in this country is improved over the condition of a like laborer in another country, can not be urged in this case. No, Mr. President, it is simply an attempt, in my judgment, to pay back to this great syndicate or these great syndicates of lumber owners a compensation which possibly they advanced less than a year ago.

Mr. President, larceny is larceny; it makes no difference what name you may give it. You may call it a breach of trust, you may call it a breach of good faith, you may call it embezzlement, you may give it any soft-sounding name you see fit, but a law that permits one class of people to take from another without compensation their just and honest earnings is, in the eyes of the law, of the higher law, and in the eyes of honest men, nothing short of absolute larceny, legalized larceny.

We have thirteen and a half million of homes in the United States. Many of our people are undergoing the privation of pioneer life. Life at best in the great West and in the undeveloped portion of this country is a constant struggle. Why should not those who are marking out the pathway of civilization and endeavoring to build up homes be encouraged to some extent at least? Why should not the material that enters into the construction of their humble abodes be free from taxation, especially when there is no necessity of levying a tax for revenue upon lumber?

Mr. President, there can be no excuse for this. The people are disorganized; they are not organized like the syndicates controlling almost one-half of the white pine of this country. They are too poor to come to Congress and hang around these lobbies and galleries to influence the action of Congressmen. They can not do that. Many of them would be unable to get here and return from the profits of their farms. They must depend upon the sense of right and the patriotism of their representatives here to protect them from such an enormous evil as the imposition of a tariff upon lumber would be.

Every prairie in the land, every interior section of the United States, under just legislation upon this and upon other questions would have a schoolhouse and a church and colleges as gorgeous and commodious as the most populous city. Is there any reason why they should not have these accommodations? Are they not American citizens? Do they not bear their burdens of taxation and the other burdens of Government when called upon, and do it patiently and uncomplainingly? Why should any man in a populous city have a greater opportunity to enjoy the blessings of life in this country than should be enjoyed by the farmers and the industrial classes under a just and humane system of legislation?

At the proper time I shall urge the passage of the amendments I have offered.

Mr. BERRY. Mr. President, the question pending before the Senate, if I am correctly advised, is the motion of the Senator from Missouri [Mr. VEST] to strike white pine from the list of lumber proposed by the House bill to be taxed at $2 per thousand feet. I think from the argument used here on Saturday it is admitted that the great body of white pine in the United States has been consumed, and that which remains is owned by a comparatively few syndicates of very wealthy men in the States of Michigan, Minnesota, and Wisconsin. This proposition is to place a tax of $2 on the thousand upon Canadian lumber, which will thereby increase the value of the white pine owned by these syndicates $2 on the thousand.

It is also argued, Mr. President, and was, I think, by the Senator from Georgia [Mr. BACON] on Saturday last, that if the price of white pine is increased in those Northern States, it will have a tendency also to broaden the market for the yellow pine of the South, and will also, if not to the same extent at least to a large extent, increase the price of the yellow pine which is grown throughout the Southern States.

It is argued, however, upon the other hand by a great many persons, that the tax on white pine will not affect the yellow pine of the South either one way or the other, that it is used for different purposes in a large measure, and that no tax levied upon white pine can increase the price of the yellow pine.

Let that be as it may, if it does not increase it, then there is no reason why Southern Senators, as I believe, should vote to cause the people of the Dakotas and Nebraska and Kansas to pay the

owners, this syndicate, in certain Northern States $2 a thousand upon all the lumber that they buy to build their houses.

Mr. ALLEN. Will the Senator from Arkansas permit me to interrupt him at that point?

Mr. BERRY. Certainly.

Mr. ALLEN. I want to state for the benefit of the Senator and for the benefit of the Senate that the yellow pine of the South is rapidly displacing the white pine of the North in the treeless States. Whereas twenty years ago we built our houses with white pine largely, 90 per cent of the construction of our houses to-day is of the yellow pine of the South.

Mr. BERRY. I was going to state, if it does not affect it, then, unless a man believes in protection for the sake of protection, I can not see why he would vote to increase the price of white pine that is located in the States of Michigan, Wisconsin, and Minnesota.

If, upon the other hand, it does increase the price of the yellow pine of the South, then, unless a Senator be in favor of protection for the sake of protection, I can not see why, as to those engaged in other pursuits—in raising cotton, wheat, corn, fruit, or any other pursuit—he would vote to impose this additional tax upon them in order to increase the price of the lumber throughout that section.

Unless it be in the State of Mississippi, the State of Arkansas has probably the largest amount of yellow pine of any of the Southern States. The southern part of Arkansas and all parts of it has more or less yellow pine. Throughout the eastern and the northeastern part of the State there is a large interest in cypress, while in the north and in the northwest there is hard wood of various kinds.

I have been urged again and again, by letter, by telegram, and by petition from the mill owners in my own State, to vote to place this tax upon lumber. If I could justly and conscientiously aid those people, Mr. President, without working an injury to any other human being, if I could do them a benefit without doing a wrong to the agriculturists of my own State or of other States, then I should have every disposition on earth to help them; but to ask me, in order to enable them to get more for their lumber, to vote to impose an additional tax upon the man who is raising cotton, out of the proceeds of which he may build his house, seems to me such rank injustice that I can not in conscience cast such a vote.

The manufacturers of lumber tell me that they can not sustain themselves unless they get an additional price for lumber. On the other hand, the men who are engaged in raising cotton, wheat, and corn say, "With the present prices, if you force us to pay an additional amount for lumber to build the houses that shelter our families, we can not buy the lumber with the prices that we receive for our wheat and our corn and our cotton."

Mr. President, in a Government like ours, which professes to do equal and exact justice to all, under a Government which professes to confer no special privileges, how can we justify a vote which takes from a man engaged in raising cotton and gives to the man who is running a mill in the same State? That is not my idea of justice; and much as it would gratify me to be able to do that which these citizens of my State ask me to do, I believe that it is wrong in conscience, that it is contrary to principle, that it is contrary to every profession that I have ever made, and that it is contrary to the Democratic faith and the Democratic doctrine as I understand it. Therefore, notwithstanding the wishes of these large interests, I shall be compelled to vote to strike off the tax of $2 a thousand feet upon white-pine lumber, which is placed in this bill for the benefit of large syndicates in the Northern States. I can not believe that it is just or fair that I should force the people in Nebraska, in the Dakotas, or in Kansas to contribute to the wealth already held by these enormous syndicates by placing a tax upon the lumber which the people are compelled to purchase.

The Senator from Georgia [Mr. BACON], however, says that this tax is purely a revenue tax. He said he was not a protectionist, and he repeated more than once that if he believed this tax was placed here for the purpose of protection he would not vote for it. But, Mr. President, what is a protectionist? What does the Senator understand protectionist to mean? I understand it to mean the man who believes that it is right to impose a tax upon imported goods in order to increase the price of the same character of goods or of goods used for the same purpose which are produced in our own country. I understand protection to mean a tax upon foreign goods for the purpose of increasing the price in this country of the domestic goods of the same character. I care not whether it is done directly or indirectly, if that is the purpose, if that is the idea, if that is the object, it is protection.

Mr. President, the Senator from Georgia said—and I give him credit for stating that which he honestly believes—that his sole object in voting for this tax was in order to obtain revenue. I do not dispute his word. I have no doubt that he honestly believes what he stated; yet I can not resist the conclusion that if there was no yellow pine in Georgia, if there was no sawmill within the limits of that State, if the people of Georgia were compelled to get their lumber from some other State in this Union, the Senator would not have been so anxious for revenue from this particular article, but would have found some other article upon which a tax could have been levied.

Mr. BACON. Will the Senator permit me?

Mr. BERRY. I yield to the Senator from Georgia.

Mr. BACON. Mr. President, I have no disposition to interrupt the thread of the Senator's address. If I shall have any reply to make to what he says, I prefer to make it at another time; but I can not allow his misstatement of my position to go unchallenged. The Senator is entirely mistaken in attributing to me any such expression as that which he has just stated. He can not find it, and the RECORD will not show it.

Mr. BERRY. Which expression, please?

Mr. BACON. The Senator stated with very great emphasis that I had said that my sole purpose in favoring this wood schedule was to raise revenue for the Government, and then he proceeded very effectually to demolish that position. I never made any such statement, and the Senator can not find it in the printed RECORD.

Mr. BERRY. I was not undertaking to quote the exact language used by the Senator from Georgia, but I stated that he said not only once, but reiterated it again and again, that he was not a protectionist, and that if this tax was levied for the purpose of protection, he would not support it.

Mr. BACON. That is not what I said. I said if it amounted to a protective rate, I would not support it.

Mr. BERRY. Well, Mr. President, they are fine distinctions which the Senator draws, and if they are satisfactory to him, they are satisfactory to me; but I stated that the Senator had said that he was not a protectionist, and he said that more than once.

Mr. BACON. Oh, yes; that is correct.

Mr. BERRY. Mr. President, if the object of the tax is not to increase the price of lumber, then it must be for revenue only, and if the object be to increase the price of lumber, then it is protection. Whether the tax is large or whether it is small, whether it comes incidentally or directly, wherever and whenever the purpose behind it is to give one man more for his product than he would otherwise receive without the enactment of such a law, then it is what I call protection.

I do not believe in protection. I believe that protection is a great curse to this country. If I had been inclined to believe in it, when I had seen, as I have seen this winter, men gathered around this Capitol, gathered around the members of the Finance Committee, and urging in every possible way that the taxes be increased upon this article and upon that article, protesting that they could not make a living unless Congress stepped in and passed a law which would aid them in getting more from their neighbors than they could get without the law; when I have seen a bill framed, as this was framed, in the interest of every trust and combine in this country; when I have seen Senators who here three years ago opposed the sugar tax, and denounced it as a capitation tax, bring in a schedule which gives the trust far more than it was receiving under the bill which they opposed so strenuously three years ago; when I have seen that every increase of rate has been where there was great wealth and combinations of capital behind it—I say, if I had been inclined to favor protection before, these things would be sufficient to show that a bill framed upon protection lines ought never to pass the Congress of the United States.

I know full well, Mr. President, that in my own State those who are engaged in the sawmill business, and many merchants, too, who are dependent upon that interest, are earnestly urging the delegation from that State to vote for this tax. It has been said by certain Southern members, though not by the Senator from Georgia, that notwithstanding it is all wrong, yet, while these benefits are being divided out, "Why should not the South come in and get her part?"

Mr. President, I can not subscribe to such a doctrine as that. If it be wrong in principle, if Congress has no right to do it, if, as the Democratic convention in 1892 declared, every dollar levied for any purpose except for revenue was a robbery, then no man can justify himself in participating in that robbery by insisting that as others will reap the benefit anyhow, he should have his part. That may be sufficient for others, but it is not sufficient for me. I can not call it a robbery to put a tax upon an article consumed by the people of my State and at the same time say it is a virtue to put a tax on an article that we have to sell.

Then, as I say, Mr. President, notwithstanding these interests in my own State, notwithstanding the petitions which have come from them, I know full well that while the large body of people who are engaged in agricultural pursuits and engaged in every other vocation of life have not been heard from, yet I know they will not and can not approve of a proposition that we should legislate here to make their burdens heavier in order to put more money into the pockets of those engaged in the lumber business throughout the United States.

Mr. HOAR. May I ask the Senator a question before he sits down?

Mr. BERRY. Certainly.

Mr. HOAR. I ask the Senator if, in his judgment, there should be any revenue duty upon white pine?

Mr. BERRY. In my opinion, knowing the present condition, white pine ought to be on the free list, so that every farmer throughout the land can buy it for the lowest price possible.

Mr. HOAR. Why should there not be a revenue duty on that as much as on anything else?

Mr. BERRY. I do not propose to be cross-examined by the Senator from Massachusetts in regard to the various tariff schedules of this bill. I am arguing as to the white-pine schedule; and I tell him the duty which is proposed has been shown to be prohibitive; and, that being true, the only purpose can be to give the men who own the white pine in the Northern States this additional amount of money.

I repeat to the Senator, as I have said before, when he asks why there should not be a duty upon white pine, that there are many other articles upon which a revenue duty could be placed which would bear less hard upon the agricultural classes than a tax on lumber.

Mr. CAFFERY. Mr. President, in 1896 there was imported $1,947,280 worth of woods, and manufactures thereof, into the United States. The exportations from the United States were $31,947,108 worth of woods, and manufactures thereof. In the same year there was imported of woods, and manufactures thereof, about $30,587,000 worth. It is known of all men that the forests of the South are covered with a growth of pine and other timber sufficient not only for all our domestic purposes, but they constitute a large amount, if not the most considerable amount, of the exports of wood from the United States.

It was perfectly apparent from the exposition made of the white-pine industry by the Senator from South Dakota [Mr. PETTIGREW] that the only purpose and object of placing a tariff on white pine was to enable the syndicates and owners of the mills in the United States engaged in the white-pine industry to levy just the amount of the tariff on the home consumer. It was stated by that Senator that there were only some 50,000,000 feet of white-pine lumber left standing in the United States, and it was in order to monopolize the remainder of this white-pine lumber that this tariff was asked in behalf of the white-pine sawmill men in the States of Michigan and Wisconsin.

Mr. WILSON. May I interrupt the Senator on that point? I can give him some information, I think. I shall occupy but a moment.

Mr. CAFFERY. I yield to the Senator.

Mr. WILSON. We had exhibited here on Saturday a map relating to the white-pine regions, and the statement has gone out to the country that the only white pine was in Michigan and Wisconsin. These very able statisticians seem to overlook the fact that there is to-day standing in the State of Idaho more white pine than was originally standing in the States of Pennsylvania, West Virginia, and Maine, and the State of Idaho selected those white-pine lands under the grant by Congress to that State when it was a Territory.

Mr. GRAY. May I ask the Senator a question right there?

Mr. WILSON. Certainly.

Mr. GRAY. The Senator says that there is more white pine standing in the State of Idaho than there was in what States?

Mr. WILSON. That there is more white pine in Idaho than in the States of Pennsylvania, West Virginia, and Maine originally.

Mr. GRAY. And yet they call upon the Government to give them something in addition to that bounty of nature.

Mr. WILSON. We call upon the Government to do the same that is done upon the other side of the line. We do not have rebates on this side of the line as they have on the other side.

Mr. GRAY. With such a bounty as nature has given you, I do not commend the attitude of the Senator in seeking to obtain an additional advantage by the imposition of a duty to be paid by the poor people of the United States.

Mr. WILSON. Mr. President, I do not desire the commendation of the Senator from Delaware upon that.

Mr. MANTLE. May I interrupt the Senator from Louisiana a moment?

Mr. CAFFERY. I yield to the Senator.

Mr. MANTLE. I merely want to ask, in connection with the statement just made by the Senator from Washington [Mr. WILSON], whether it is true or it is not true that this great body of white pine in the State of Idaho to which he has just referred has not been set apart in the late forestry reservation order, and if it is not, therefore, or if it will not be in a few months, withdrawn from public use?

Mr. WILSON. Mr. President, in answer to the Senator——

Mr. CAFFERY. I believe I have the floor.

Mr. WILSON. I beg the Senator's pardon.

Mr. CAFFERY. I desire to state to the Senator from Washington that the report from the Agricultural Department, I am informed, states that the white pine of which he speaks will be exhausted in about seven years. So that the supply of white pine is very limited, and the argument made by the Senator from South Dakota is in no manner impaired or weakened by the statement of the Senator from Washington.

Mr. SHOUP. Will the Senator from Louisiana allow me to say a word?

Mr. CAFFERY. Certainly.

Mr. SHOUP. I wish to call the Senator's attention to the fact that just before the expiration of the term of President Cleveland something over 4,000,000 acres of timber lands were set apart as forest reserves in the State of Idaho. These reserves, however, do not embrace all the white pine in Idaho, for we have some white pine in other parts of the State not set aside for reservations, along the Salmon River, in the Bitter Root reserve, extending something like 200 miles along the Salmon River and extending back to the Bitter Root Mountains.

In the extreme northern part of the State and on the borders of the State of Washington there is another great forest reservation. It is a fact, however, that only a portion of this timber is white pine; but of the 9,000,000 acres of timber land in the State of Idaho nearly one-half of the timber is of white pine.

Mr. CAFFERY. Mr. President, I do not desire to branch off into the discussion suggested by the argument of the Senator from Idaho [Mr. SHOUP] as to the propriety or impropriety of these forest reservations. It may be that there is a large amount of timber land included within those forestry reservations. My own opinion is very decided in that regard, that the Presidential order exempting those lands from depredations and reserving those lands was a wise one and a proper one. I think it is evident that the denudation of forests——

Mr. RAWLINS. Will the Senator permit a question?

Mr. CAFFERY. Certainly.

Mr. RAWLINS. I wish to ask, Does the Senator think that the forestry-reservation order was a wise one in the interest of the timber monopoly in Michigan and Wisconsin that has been spoken of?

Mr. CAFFERY. I have no reference to the timber monopoly. I believe that the denudation of the forests of the United States is a fruitful cause of excessive droughts and excessive floods. I do not believe, further, that these timber reservations ought to be open to the indiscriminate spoliation by which they have been devastated in the past. But that question is wholly aside from the one I am discussing.

Mr. ALLEN. Will the Senator permit me a suggestion there?

Mr. CAFFERY. I do not care, however, to be drawn into any argument in regard to the policy or the impolicy of the forest-reservation order.

Mr. ALLEN. I simply wanted to inform the Senator of a fact of which he appears to be in ignorance.

Mr. CAFFERY. I am ignorant of a great many facts, I have no doubt.

Mr. ALLEN. One-half of these forest reservations do not grow five trees to the acre. What they do grow are little, scrubby trees, not to exceed 10, 15, 20, or 25 feet in height. They are scarcely fit for firewood. Does the Senator think that settlers should be deprived of the privilege of settling on that land by having immense reservations of that kind set apart?

Mr. CAFFERY. Land that will only grow scrub trees will not grow much of anything else. The agricultural properties of that soil are very well defined by the Senator from Nebraska when he says that the land will not grow forest trees.

Mr. ALLEN. I say, take it along the base of the Rocky Mountains—if the Senator knows anything about that country—the land does not produce good trees; it is good grazing land and produces good grass, but the little knotty trees, 10, 15, or 20 feet in height, would barely make firewood. Thousands of acres of that kind of land have been set apart in forest reservations by the very intelligent order of the recent President of the United States.

Mr. CAFFERY. I know the Senator's animus toward the recent President of the United States.

Mr. ALLEN. No; I have a very high respect for the great ability of the recent President of the United States, but I think he should have traveled over this country and seen it before he made any order affecting forest reservations.

Mr. CAFFERY. I have no doubt if he had traveled over the country his views and those of the Senator from Nebraska would be much wider apart than they are now, for more extended knowledge perhaps on his part would make the divergence very great indeed.

Mr. ALLEN. The late President of the United States has not traveled over this country.

Mr. CAFFERY. I do not think it is necessary to travel over this country at all to arrive at an intelligent conclusion as to the policy or impolicy of making forest reservations; but I do not care to enter into that question.

Mr. ALLEN. I say the late President of the United States, Mr. Cleveland, practically knows nothing about any section of the country west of the Alleghany Mountains.

Mr. CAFFERY. I will state that the forestry-reservation order of the President of the United States was founded upon the report of the forestry commission. That commission was composed of men entirely familiar with the subject, both as a practical matter and as a scientific matter. It is impossible for the President of the United States at any time to travel all over the United States and to look into these details. President Cleveland had, therefore, to take the conclusions of the forestry commission and base his order upon those conclusions. I do not care, however, about being drawn into such a discussion.

Mr. ALLEN. Will the Senator permit me in that connection?

Mr. CAFFERY. I decline to yield further on that ground.

Mr. ALLEN. Very well, then; I will take another ground. Will the Senator yield to me on that?

Mr. CAFFERY. Very well; go ahead.

Mr. ALLEN. I wish simply to say that the commission of which the Senator speaks was composed of a lot of Eastern theorists who knew nothing whatever practically about forests. It was composed of a few men calling themselves the American Forestry Association, who live upon the Atlantic Seaboard, and they have practically set apart a great scope of country from actual settlement and actual use for the purpose of a forest reservation.

Mr. JONES of Arkansas. Mr. President——

The VICE-PRESIDENT. The Senator from Louisiana [Mr. CAFFERY] has the floor.

Mr. CAFFERY. I yield to the Senator from Arkansas.

Mr. JONES of Arkansas. I voted to revoke the order of the late President on the assurance given in the Senate that there were vast tracts of this land that were practically treeless, and that there were thousands of settlers in the midst of them, and post-offices and villages scattered all through them. I confess that I am astonished now to find that the bulk of them are solid white-pine forests from side to side, containing nothing but white-pine trees.

Mr. ALLEN. Where did the Senator get that information?

Mr. JONES of Arkansas. From Senators on the other side.

Mr. CAFFERY. These gentlemen seem to corroborate the forestry commission. But the question concerns the denudation of these forests. It is a very great question, and it is a wide question. Whether the trees are little or whether they are big, they shade the ground, they prevent the too rapid precipitation of the water falling from the skies into the rivers, and they therefore hold back floods and are an immense benefit to the people living in the valleys of rivers which overflow their banks.

The Senator from Missouri [Mr. VEST] has kindly handed me an extract from a statement prepared by the Chief of the Forestry Division, and I will read it. It is as follows:

> In all these estimates of standing timber the writer has leaned toward extravagance rather than understatement, and thus the total is found to add up 10,000,000,000 feet of coniferous growth in the Northern States, of which less than half is pine, to satisfy a cut of at least eighteen to twenty billion feet per annum.
>
> The writer does not say that in less than six years every stick of pine, spruce, and hemlock will be cut, for such figures as these do not admit of mathematical deductions, but the gravity of the question of supply is certainly apparent. Even doubling the estimates it is found that, with the present rate and method of cutting, ten years must have exhausted our virgin timber of these classes. We should add that much more intimate knowledge exists now regarding these supplies than was possible in 1880, when much of the country was still unopened and unknown.
>
> To be sure, there is some new growth and reproduction going on. The probability as to the former is that decay and destruction by fire offsets the accretion on the old timber of coniferous growth, and no one familiar with our forest conditions and present methods will indulge in a hope that the reproductions and young growth can materially change the results. Long before any new reproduction can have attained log size we will have got rid of the virgin supplies.

There is a statement, I suppose, from one of those impractical theorists who do not know anything about trees as they exist; but as we have to take our statements from these sources, we are bound to accept this finding of the forestry commissioner that in less than ten years the forests of coniferous growth will be exhausted and not reproduced.

But, Mr. President, this question assumes a wider scope than the mere question of the monopoly of white-pine interests in the States of Michigan and Wisconsin. The Senator from Nebraska has argued the question of free lumber upon purely Democratic lines. He has assailed to some extent, as has the Senator from Arkansas, the principle laid down by the Senator from Georgia [Mr. BACON]. The Senator from Georgia says that he advocates a tariff on lumber purely upon a revenue basis.

I venture to say that with the enormous forests of the South, with their almost inexhaustible supply of yellow pine, with the constantly growing export trade of the lumber from those forests, and its manufactures, no revenue of any kind can come by the imposition of a protective tariff upon the yellow pine of the South. How will it work? Before you can put on a protective tariff you have to have imports, and an examination of the statistical table here shows that there is no import of yellow pine into the United States.

Mr. BACON. Will the Senator permit me?

Mr. CAFFERY. Certainly.

Mr. BACON. A protective tariff might not yield revenue, and a revenue tariff might. The Senator begs the question when he says there will be no revenue from a tariff levied upon yellow pine. There can be a revenue from a tariff, such as is proposed here, levied upon the importations of lumber; and without trespassing upon the Senator's time I desire to call his attention to the fact that the comparative statement, which I presume he has among the voluminous documents I see upon his desk, shows that last year there was nearly $17,000,000 worth of lumber imported into this country, and a rate of 20 per cent, which does not exceed a revenue rate, would produce between three and four million dollars of revenue for the Government.

Mr. JONES of Arkansas. Where does the Senator think the lumber comes from?

Mr. BACON. I presume it comes from Canada. I do not know where else.

Mr. JONES of Arkansas. The importation of lumber from Canada was seven and a half millions.

Mr. BACON. If the Senator will examine the document, he will see—I got it from the Senator from Texas, who showed it to me in a document on his desk—that it amounted to between sixteen and seventeen million dollars.

Mr. JONES of Arkansas. I think the Senator will find that the importations from Canada are about seven and a half million dollars and the domestic production about four and a half or five hundred million dollars. So it is about 2 per cent.

Mr. BACON. I do not say the importation is from Canada. I do not know where it is from. It does not state that it does come from Canada. It states the amount.

Mr. JONES of Arkansas. We are discussing the importations of Canadian lumber, and it is pertinent to know the amount of lumber that comes from Canada.

Mr. BACON. We are not discussing that. We are discussing the importations. The Senator from Arkansas asked me where the lumber came from. I said I presumed it came from Canada. I do not know where else it comes from, Mexico not being a lumber-producing country, and none of it, I presume, coming across the sea.

Mr. JONES of Arkansas. South America.

Mr. BACON. We export lumber to those countries and do not import it. Certain woods come from South America, but they are not woods that come into competition in the ordinary construction of houses. Woods out of which furniture and things of that kind are made come from South America.

Mr. CAFFERY. I understand the proposition of the Senator from Georgia to be that a revenue tariff might not yield revenue on all lumber, and that a revenue tariff upon pine lumber may not yield protection. That is what I understand the Senator to say.

Mr. BACON. I confess that, while the Senator is usually very lucid, I do not understand his statement.

Mr. CAFFERY. My statement is that a revenue tariff, a tariff of 20 per cent, as he says, may yield revenue on all lumber, but it would not yield a revenue and therefore no protection on yellow-pine lumber. Is that straight enough?

Mr. BACON. I say that the levying of a revenue duty necessarily affects the prices of all articles with which the article thus taxed would come into competition, and that when you have a general tariff upon the importation of all kinds of lumber, whether there is any yellow pine imported or not, if the lumber upon which the duty is imposed comes into competition with yellow pine, it will affect the price of yellow pine.

Mr. CAFFERY. As a matter of fact, white pine does not come into competition with yellow pine. They are used for different purposes.

Mr. BACON. That is a matter of fact upon which the Senator from Louisiana is entirely mistaken.

Mr. CAFFERY. Very well.

Mr. BACON. There are a great many uses of white pine in which yellow pine is not used, but white pine is used in a great many things, in the building of houses, boarding, siding, and things of that kind, where it does come directly into competition with yellow pine. It is not used for making boxes, and white pine is.

Mr. CAFFERY. Therefore the proposition is that if white pine is used for purposes for which yellow pine is used and white pine has a revenue tariff upon it, it affects the price of yellow pine.

Mr. BACON. Undoubtedly.

Mr. CAFFERY. So that the duty as to yellow pine, from the admission of the Senator from Georgia, is purely for protection, because none of it is imported.

Mr. BACON. Not at all; not in the least. The revenue is derived from that which comes into competition with it.

Mr. CAFFERY. Yes, sir; but none from yellow pine. You put a tariff upon an article to protect it, or to produce revenue. In my simple Democratic faith I would consent to have a tariff put upon an article only to produce revenue, with no sort of idea of protection. It does not enter into my calculation.

But I dispute the proposition of fact. The tariff upon lumber can only affect that lumber which is imported into the United States to a great extent. The yellow-pine lumber of the South can not legitimately be raised in price by a tariff in favor of the white-pine lumber of the North. We export large quantities of yellow pine. Ships from my country go every week to Mexico. Immense quantities are shipped from Mobile, and nearly every Southern port is a port of export for sawed pine lumber or split lumber.

Mr. President, in my opinion a tariff of $2 a thousand upon white pine is absolutely prohibitive. You can not get it in. The tariff is too high. So the feature of revenue spoken of by the Senator from Georgia cuts no figure at all in this matter. If this tariff, as it is alleged to be and as it is shown to be, is prohibitive of the introduction of white-pine lumber, you can not get revenue, by reflex action, upon the yellow pine of Georgia, for the white pine will not come in. It will prohibit it. Therefore it is that the competition among the home producers of yellow pine fixes the price at home, and the price of the exported article of yellow pine has a tendency to fix the domestic price.

A tariff on lumber, while useless for revenue and for legitimate protection, would only provide a means for the easier formation of lumber trusts.

I can find no point upon which the tariff on lumber can rest, either for revenue or protection. It is designed simply to allow a few mill owners and white-pine forest owners on the border between the United States and Canada to charge an unconscionable price for their lumber. It will not affect the Southern industry. That industry is broadening and extending to a wonderful degree. It is seeking foreign markets in every direction. We have an inexhaustible supply, and I speak knowingly when I say that the cypress-lumber industry of my State, notwithstanding the fact that a representative of it came before the Committee on Ways and Means and asked for the imposition of this tax of $2 a thousand, appears to be in as flourishing a condition as any other industry in the State.

The cypress is finding its way all over the United States. It is being used for a number of purposes for which cedar was used. It is very valuable in making water tanks to keep a supply of water. The shingles are of extraordinary durability, lasting as long as the best shingles ever made, and they are finding their way to the markets of the United States. While I am glad to see any industry in my State flourish as I know now that the cypress industry is flourishing, I should be very sorry to see any imposition laid upon the consumers of lumber in the United States merely to afford the mill owners of Louisiana an opportunity to add more to the price of the lumber than the lumber ought legitimately to sell for.

Why is this tariff sought to be placed upon lumber? With these inexhaustible forests of lumber in the South, with the absolute impossibility of any competition with our mill owners, with the fact staring us in the face that we are exporting large quantities of the product of our forests in the South, I can not find it in my conscience to place a tariff upon lumber. Providence has so ordained things in the United States that we have prairie land and timber land in juxtaposition.

The lumber of the South exchanges for the corn and the hogs and the other products of Kansas and other States. There has sprung up between us a most profitable trade in the interchange of products—our Southern products for the products of the prairie States—and I submit it would be a very heavy blow to our industry to shatter or to embarrass the purchasing power of the dwellers in the prairies by placing upon them an additional price to be paid for the lumber necessarily used by them. It will have a tendency to cripple the home industry. It will not add one single cent to your revenue, for none of it comes in. You can not put a tariff where there is no importation, or if you do, it is useless. I can not find any one single point upon which the tariff on lumber can rest so far as the Southern lumbermen are concerned.

I am curious to know how an advocate of the tariff-for-revenue-only principle can support a tariff on lumber. The absolute prerequisite is wanting. A tariff upon white-pine lumber is prohibitive, and in consequence you do not get any of that lumber imported from Canada. A tariff in favor of yellow-pine lumber is inoperative, because none is imported. Where, therefore, is your revenue? Either this tariff must be justified upon the ground of protection, pure and simple, or it can not be justified at all. Not only are we making all the lumber we want, with capacity to extend its manufacture to indefinite proportions, but we are exporting it. It can not be imported, and I should like to know where the Senator from Georgia finds a basis to place the tariff-for-revenue-only principle on lumber.

Mr. BACON. I recognize the fact that the Senator from Louisiana may not concede the orthodoxy of this document, but the platform on which I stand does not use the language he now uses. The platform of the Democratic party in its last convention on this subject was in these words:

> We hold that the tariff duties should be levied for purposes of revenue—

And I call the attention of the Senator particularly to what follows, because it is upon that that I base my position in this matter—

> such duties to be so adjusted as to operate equally throughout the country and not discriminate between class or section.

That is my platform, and the one, I say, on which I base the position I take as to the wood schedule; that it is that which insures equality to all sections in imposing equal rates of tariff, or approximately equal rates of tariff, upon the raw material as well as upon the finished product, and that the other plan, favoring the finished product and not the raw material, is to discriminate between class and section, that which the Democratic party condemns, and which I also condemn, because I thoroughly agree with it.

Mr. CAFFERY. There appears to be a little difference between the platform adopted at Chicago and the platform adopted at Indianapolis. It may suit the ideas of some Senators to say there is but one Democratic platform, and that is the platform of Chicago; but take that platform and let us see how it squares with the doctrine enunciated by the Senator from Georgia.

"We believe in a tariff for revenue," leaving out "only." Very well. "We believe in adjusting the tariff so that all classes will be equally operated upon." Those, substantially, are the words of the platform which the Senator quoted. Now, how does that square with the facts in this case? A tariff on lumber only benefits the white-pine producers of the United States lying on the Canadian border.

Mr. BACON. There is where the Senator and I differ as to the facts.

Mr. CAFFERY. Very well; that is my argument. A tariff upon lumber can not affect the yellow-pine interest of the South. You can not have a tariff for revenue—leave out the "only," if you please—unless you get the article imported. Your tariff upon lumber of $2 a thousand will prohibit the introduction of lumber from Canada. Where is your revenue without the imports? It is begging the question to say that, with no imports of yellow pine into the United States from abroad, a tariff on lumber generally, which is prohibitive of the introduction of all lumber, will by reflex action benefit the yellow-pine lumber of the South.

Perhaps I am obtuse; perhaps I can not see the exceedingly fine-spun point of the Senator from Georgia, but in my humble way of looking at things it is catching before killing; it is importing an article before you can put a tax upon it. When you place a tax which is proved to be prohibitive of the only lumber that comes into the United States, I should like to know where the reflex action is that would beneficially affect lumber in other localities. We are bound to import into the United States lumber that we do not and can not raise in the United States. We are bound to import dyewoods and other hard woods which we do not produce, and upon them a tariff is purely for revenue; but they are introduced to such a small extent and are so necessary in the manufacture of articles that a tariff upon them is unwise and injudicious, inasmuch as it cripples other manufactures.

Nor do I agree with the Senator from Georgia in the matter of his uniform tariff upon raw material and the finished product. He challenges any precise statement in any Democratic platform of a tariff upon raw materials. I concede that so far as my observation goes there is no express Democratic declaration on that point, but, sir, it flows from the very nature of Democratic principles. It is a part of the essence of Democracy. If you impose a tariff upon the raw materal, you must necessarily impose a tariff upon the finished product to compensate for that duty. You thereby impose a tariff for protection, pure and simple, to the manufacturer, and the argument therefore leads to the conclusion that as the Democratic principles in their essence deny the imposition of a tariff for protection, therefore you can not place a tariff upon the raw material, which necessarily introduces protection.

It may be that manufacturers are unduly protected. It may be that it is in violation of Democratic principle, and it is that they should be unduly protected, but I submit to the Senate whether or not, one wrong being conceded, you want to multiply wrongs and go deeper into error by placing a tariff upon the raw material because the manufacturer is protected. In other words, if the protected hand slaps you on one cheek, turn around and slap yourself on the other. If there is error, multiply it. If it is wrong to put a tariff upon the manufactured article, place one upon the raw material. Is that the logic of Democracy?

Mr. BACON. The language of Democracy is that tariff should be levied for revenue, and if it is levied for revenue on the manufactured article, it should also be levied for revenue on the raw material.

Mr. CAFFERY. But when you place it on the raw material you do not secure revenue. You have to compensate the manufacturer, and the tariff he pays upon the raw material is added to the selling price of the article. It comes out of the consumer. It does not go into the Treasury. It is a tax, pure and simple, upon consumption. It does not come within the grasp of Democratic principles in my construction of what Democratic principles are. As a matter of course, gentlemen differ with me in this opinion. That is their privilege. I am now only attempting to show, in my humble way, that it is un-Democratic to place a tariff on the raw material because there is a tariff upon the manufactured article of which the raw material is one of the ingredients or component parts.

Mr. BACON. I shall not interrupt the Senator to the extent of discussing the question whether, where there is a tariff upon the finished article, it should all be in favor of the manufacturer who puts the finishing touch, as I said Saturday, on some particular article, or whether it should be distributed so as to include the manufacturer of the raw material out of which the finished product is made. As I say, I shall not stop to discuss that now. It would take too much of the Senator's time, and, in addition, I expressed my views on that point upon Saturday. But as I called the attention of the Senate to the question of the amount of imports of wood, and there seemed to be some doubt expressed by Senators as to whether I was correct, I will give the source of my authority.

In the document entitled Imports of Merchandise for Consumption, 1893, on page 76, there is a statement of importations of woods not elsewhere specified, and manufactures of. In that statement it is shown that of the class of woods which we naturally expect to find imported from South America, such as box, cedar, ebony, lancewood, lignum-vitæ, mahogany, rose, sandal, and all other woods of that class, the total imports amounted to one million eight hundred and forty-six thousand and some odd dollars. Of the woods other than those, and of the kind which are being dealt with in this particular schedule, the imports free were $16,806,589.

Of manufactured woods of the material not embraced in the South American woods there were $3,505,973. So, exclusive of the South American woods, the imports into this country free last year were $16,806,589, upon which, it strikes me, a very considerable revenue could be gotten for the Treasury of the United States by the imposition of a duty not protective, but strictly within the revenue limits.

Mr. CAFFERY. The Senator must remember that the wood which he speaks of as being imported was imported under free trade.

Mr. BACON. Oh, yes; and so I stated.

Mr. CAFFERY. It does not follow (in fact, just the contrary follows) that if the tariff is reimposed you will have revenue from it. I doubt not that a very large portion of our imported woods are from Canada. Canada is a new country, and it is full of wood. The wood industry is necessary to the people living upon the border, and the beneficial effects of an exchange between the Canadian and the American with regard to timber does not extend beyond that narrow frontier. It is confined there. The Senator from Georgia never saw any timber imported from Europe. He will find no lumber imported from the old countries, because they have none.

You can not have wood from those countries which largely compete with us in manufactures. You must have your wood from countries like Canada, or from the Tropics—from new countries. It is absolutely impossible for any importation from the old countries to affect us seriously. There may be a certain growth of timber in old countries that I am not aware of that is imported to some extent, but it could only be very small. The figures cited by the Senator from Georgia prove but very little, for if he will look further into the tables from which he has quoted he will find that the importations jumped up under free trade, and that the high specific tariff which is now being imposed upon a decreased price of lumber will have the undoubted effect of prohibiting the importation altogether.

The PRESIDING OFFICER (Mr. BURROWS in the chair). The question is on the amendment proposed by the Senator from Missouri [Mr. VEST] to paragraph 193.

Mr. JONES of Arkansas. Mr. President——

Mr. HOAR. I was going to propose, before the Senator from Arkansas proceeds, what I think might be satisfactory to the Senator from Georgia and the Senator from Louisiana, and would save an immense deal of the time of the Senate in debate. It is that the Senator from Georgia should agree to apply to sugar the protective principle which he thinks ought to be applied to lumber, and the Senator from Louisiana should agree to apply to lumber the protective principle which he thinks ought to be applied to sugar. That would save a great deal of time. [Laughter.]

Mr. BACON. If the Senator from Massachusetts will simply strike out the word "protective" and put "revenue duties" in place of it, I will accept the proposition.

Mr. HOAR. By any other name it would taste as sweet. By any other name it would give high protection.

Mr. CAFFERY. By any other name the statement of the Senator from Massachusetts would be just as erroneous. He can not make me out a protectionist by any side questions like that. There is not any protection in me. If I knew where it was, I would forthwith cut it out. I do not want protection on sugar. I have never asked for protection on sugar. I have had the hardihood to ask for a tariff for revenue on sugar.

Mr. HOAR. Why is the Senator pleading so piteously for a tax on that necessary of life which the poor people in Louisiana have to consume, unless he wants the tax to protect them in raising it?

Mr. CAFFERY. The Senator from Massachusetts is so infused, so inoculated, with the virus of protection that he can never see the strength of any argument for a tariff for revenue purposes. I propose a tariff on sugar because that tariff will go into the Treasury. You want a tariff upon manufactured articles, the proceeds of which will go into the pockets of the manufacturer. There is the distinction. I want a tariff upon articles that yield a revenue to go into the coffers of the Government, and I point to sugar as one of these articles. As I have said to the Senator from Georgia, you could not get the revenue from lumber, and therefore it does not come under the tariff-for-revenue doctrine. There is the difference between us.

Mr. BACON. The trouble about the Senator's argument is that he bases it upon a bald assertion that such a thing can not be or that such a thing will be, and there is no evidence upon which the Senate can act which would bring us to the conclusion that he is correct. He says because one man—and that was disputed this morning in the statement made by the Senator from Michigan—said it would be prohibitory, therefore it must be prohibitory. He takes that as an accepted, conclusive, indisputable fact, and therefore he says his conclusion deduced therefrom must be correct.

Mr. CAFFERY. The statement that all lumber in the United States ought to be protected is a statement which can not be borne out. If we made all the sugar that we wanted and exported a vast amount of sugar, could I have the hardihood to come before the Senate of the United States and ask for a tariff upon it on the line of a tariff for revenue? I could not. We have lumber in that category. We have inexhaustible fields of lumber. Our forests are our wealth. We are disseminating the blessings of that wealth all over the world. We are exporting lumber. We have more than enough. We are giving to those who have no lumber out of our abundance. I want to know whether that article comes within the category of a tariff for revenue.

Every market of Central America, a great many markets of Europe, Canada itself, are recipients of our exports. It can not be a tariff for revenue, or, if so, to a very small degree. The imports show an insignificant amount. In 1889, or the year before the McKinley Act went into operation, the amount of revenue from sugar was $58,000,000, three times the amount of the gross import of lumber into the United States. So, sir, I stand on clear ground, on defensible ground, on Democratic ground, when I plant myself upon sugar as a revenue-producing article.

Mr. TILLMAN. But you do not object to the incidental protection that you get on sugar?

Mr. CAFFERY. I have no regard for incidental protection. I never look backward; I look forward to the principle. Place the tariff on a revenue-producing article and let it operate as it will.

Mr. BACON. If the Senator will pardon me, I simply desire to state that his disclaimer reminds me of the fact that Macaulay, in his History of England, in speaking of the Puritans, said that they objected to bear fighting, or bear baiting, as I believe he termed it, not because it gave pain to the bears, but because it gave pleasure to the spectators. I suppose, on the same line, the Senator from Louisiana objects to every imposition of the tariff, not because it will cause an expense to the people, but because there may be some indirect or incidental benefit derived therefrom.

Mr. CAFFERY. The historical allusions of the Senator from Georgia are as pointless as his argument upon a tariff for lumber.

Mr. BACON. Does the Senator doubt the correctness of it?

Mr. CAFFERY. The correctness or the incorrectness of it is of no sort of moment. Whether Macaulay or Socrates or Plato or anybody else said it, it has no application to the point we are now discussing. I want the pleasure for the people. The bears can take care of themselves.

Whom is the tariff on lumber to benefit? It will give an infinite amount of satisfaction to the lumber syndicates upon the Canadian border. It will give pain and suffering to every poor man who wants to erect a shelter to cover his head. That is what it will do, sir. You want to place a tariff upon this indispensable article, an article that shelters the poor from the pitiless storm, and you cite to me, as a reason to show the fallacy of my argument, the ideas of the old Puritans in regard to bear baiting.

No, sir; I speak here not so much from any sentimental standpoint, from the standpoint of helping the poor, and in advocacy of the correctness of the Democratic principle of tariff for revenue

only. I say that the tariff on lumber can be brought within neither of the principles. What is the principle of protection? Protect until you stimulate the whole enterprise in order to bring the price cheaper to the consumer. That is their theory. The fact has never jumped with the theory. If you want to stimulate the production of lumber, you denude the forests, you kill your industry by protection. Under the situations that exist in the United States, it is absolutely impossible to protect everybody engaged in the lumber business, and you can only protect the lumber industries along the Canadian border.

Mr. HOAR. Mr. President, I do not question the sincerity of the declaration of the Senator from Louisiana. Of course I have no doubt whatever that he is one of those instances of gentlemen which often occur—very honest and worthy people who deceive themselves. But the fact is this: He represents a State which is largely engaged in raising sugar, and which can not make a profit unless there is a revenue duty on sugar, or a bounty, which is out of the question this year. Putting that revenue duty on sugar raises the price of sugar to everybody in this country, and raising the price of sugar to everybody in this country raises the price of a necessary of life of which the poor men consume as much per capita as the rich. Whenever there is a question as to other revenue duties the Senator is not found rising in his place and insisting that there shall be an increased excise tax on beer because it is sure to go into the Treasury, or that there shall be an increased excise tax or duty on a dozen other things which are situated in the same way, which will go into the Treasury; but his whole cry is, "Sugar, Mr. Speaker; sugar, sugar, sugar, sugar!" When the Wilson bill passed, the honorable Senator was so doubtful whether sugar had been taken care of sufficiently that if I am not mistaken he voted "nay," against the bill, when his name was first called, and "yea" on the final vote, and his vote turned the scale. Now, he is as sincere a man as ever lived—I do not say this for the sake of imputing any want of absolute sincerity to the Senator—but he has his theory, and the result of his theory is that the one thing which on free-trade principles is to be protected is the sugar of Louisiana and nothing else.

The honorable Senator from Georgia, who is also a sincere man, a man of the greatest personal worth and intelligence, as we all know, has a theory, under which the lumber of his State is to be protected.

Mr. BACON. The Senator will allow me to correct him. My view of the subject is not limited to lumber. I am in favor, as a general rule, of a tariff on all raw materials, whether they are produced in my State or not.

Mr. HOAR. On all raw materials that compete with the products of Georgia?

Mr. BACON. No, sir; whether they do or not.

Mr. HOAR. Then there are a lot of other Senators who see the point of this and who are laughing about it, who have an idea that a duty of something like 80 or 90 per cent on rice is all right; that it is a revenue duty. Rice is a necessary of life; the duty raises the price of rice to every poor man; it is the poor man's food; but after all the good old Democratic doctrine of free trade is exemplified by putting a duty of 80 or 90 per cent on the rice that our people raise.

Mr. BACON. Will the Senator permit me to ask him a question?

Mr. HOAR. Mr. President, if you commit the making of a tariff to the gentlemen who are conducting this debate against the pending bill on the Democratic side of the Chamber, and tell them if they will write out a tariff we will all shut our eyes and open our mouths and vote for it, they will make a tariff which they will call free trade, but which will amply and thoroughly protect every important industry of their own States. That is what they did when they had a chance to make one before, and that is what they would do if they had a chance to make one now. There is a great deal——

Mr. BACON. I hope the Senator will allow me to ask him a question.

Mr. HOAR. No; let me finish the sentence and then I will yield. Mr. President, there is a great deal of human nature in Democrats. [Laughter.]

Mr. BACON. I desire to ask the Senator from Massachusetts, if the opportunity were given to us to draw a tariff bill, and we should put into it a tax on hides, would he support the bill, or would he insist upon free hides in the interest of the leather and shoe manufacturers of Massachusetts?

Mr. HOAR. If the bill seemed to me to be a sound measure, as I think the present one is likely to be, one which will protect the industries of the country generally, I should certainly defer to the opinion of the majority of my colleagues in regard to one single item like that, and I would vote for the bill.

Mr. BACON. But the Senator is speaking about what individual Senators favor as it may affect their own particular localities, and I desire to know of the Senator from Massachusetts whether he would favor a tax on hides, or whether he would prefer to favor a tax on the manufactures of leather?

Mr. HOAR. That is not the question the Senator asked me before.

Mr. BACON. Well, I ask it now.

Mr. HOAR. The Senator asked me whether, if there was a duty on hides in a tariff bill, I would vote for it, and I said, if it was a proper bill in other respects, I should.

Mr. BACON. I will change the question to the latter form, if the Senator will permit me.

Mr. HOAR. The Senator puts that question. I do not want to prolong the debate, but I will say just this: The hide is not a thing which is produced by itself alone. It is a part of an animal which must be killed to make it. Now, if there is a duty upon hides alone of a cent a pound, the hides averaging 60 pounds in weight, so that it would be a tariff of 60 cents on an animal, which would be, on an average, worth $60, it would be a tariff of 1 per cent only on the product. I think that a tariff of only 1 per cent on any product is an absurdity as a matter of protection. It never would have any effect at all. You can not put a protective tariff upon the horns of an ox of 3 or 4 cents only and have it a stimulant or an aid or an assistance in raising the ox. So I think a tariff on hides of that sort, not a tariff on the whole product, but upon a little piece of it, is utterly absurd. But if I do not succeed in convincing the judgment of other gentlemen that that is true, I shall think that I am probably mistaken, and if the tariff in other respects is sound, I shall support it. That is my attitude exactly.

Mr. CAFFERY. Mr. President——

Mr. STEWART. Will the Senator from Louisiana allow me to make a remark?

Mr. CAFFERY. Yes, sir.

Mr. STEWART. Mr. President, I concur with the Senator from Massachusetts that a tariff of 1 cent a pound on hides is entirely inadequate. But I am unable to distinguish between the principle of the tariff on hides and a tariff on any other products of the United States, whether of the loom, the factory, or the farm. Farmers are more generally interested in a tariff on hides than any other article that can be named. There are more farmers who raise some cattle than persons engaged in any other one pursuit. Everything depends on the farmers. The farmers have to sell abroad in a free-trade market and buy at home in a protected market. They pay your imports, the interest on your foreign obligations, and maintain the credit of the country. Our exports mostly come from the farmers, and we should relieve them as much as possible.

I do not have in mind now just how much we pay for foreign hides, but it is a very large amount. Perhaps some gentleman can answer as to that. I do not understand why we should not protect hides in order to benefit the farmer and enable him to make something in raising stock. We should give him the market for hides when we put a tariff on the finished material, on boots and shoes. When we build up that industry, a manufacturing industry which is confined to a very few people, and compel the farmer to buy his boots and shoes in a protected market, we should not deny him the protection that we give to others.

I deny that the raising of beef cattle is a profitable business in this country. It hardly pays at present prices. Farmers can hardly afford to do it. But if you put a tariff on hides, so as to make the hides of some value and distribute the protective principle among them more generally, you will make it much more satisfactory.

I tell you there is nothing in any argument that may be made for a tariff upon anything that does not apply to hides more emphatically than to any other one article, because they are more generally produced by a larger number of people, and produced by those people who have to buy boots and shoes. The idea that any class of people in this country should be indulged with the purchase of what is needed to furnish them in a free-trade market, and should always be allowed to sell in a protected market, is unfair. There are very few things that you can protect for the farmer. He is forced to buy in a protected market and sell his surplus, which pays for what you buy abroad, in a free-trade market. That is unfair.

It has been suggested that 1 cent a pound upon hides is not a sufficient duty. I will say that I think it is not. The duty ought to be 10 cents a pound at least; it ought to be protected. We have hides enough in this country to supply the home demand. Thousands and thousands of hides are left where the beeves are slaughtered and not used at all; they will not bear the cost of transportation. If we had such protection as would enable them to get the hides to market, we could produce enough in this country probably to supply the demand entirely. I have never been able to see an argument on the part of anybody that could make a distinction between a duty on hides and a duty on boots and shoes.

Mr. WHITE. I understand it is claimed by the other side, however, that hides are raw material.

Mr. GRAY. Rawhides? [Laughter.]

Mr. STEWART. Everything is raw material, and it is so declared in all the letters that come in here. Every man regards

everything that he uses in his business and that he has to buy as raw material. Every letter that comes here goes on to speak of everything else as raw material, no matter how many processes it has gone through. No matter how much labor has been bestowed upon it, if he wants it for manufacturing purposes he calls it raw material. There is nothing in such a claim. Raw material is that material upon which no labor has been expended, and you can not draw any other line. If you say that any material upon which labor has been expended is raw material, then everything is raw material. That is the only line that can be drawn.

Why, I ask, should not the laborer in raising cattle or sheep or in producing coal from the mines be protected from competition with the cheap labor of the Old World as well as those who stay in the cities, the employees you import into cities and who work in factories? Is not the labor of the farmer, the pioneer who goes out and develops the resources of nature and produces wool and hides and minerals and all that goes into manufacturing, as meritorious as the labor in the factories, which is mostly imported? That labor has not developed anything; it has not breathed free air; it is not always the labor of American people; it has been herded in confined cities; it has not gone out and developed the country. I ask why the pioneer labor of the farmer that develops the country is not as much entitled to protection as any other labor. The laborers who produce this kind of raw material are mostly American citizens, native born for the greater part, and they are entitled to some recognition. Why should they not be protected equally? I do not understand that.

The object is to protect American labor. I want to know why American labor in the fields, why American labor that develops the resources of nature, is not as much entitled to protection as the American labor that dwells in the cities. Are not these valuable citizens? Do we not want them as a foundation for the Republic?

As suggested to me, the raw material of one man is the finished product of another. That is the way it goes. The rule should be that anything which is produced by labor should be protected. If anything is to be protected, if the protective principle is to be applied, it should be applied so as to protect labor.

See what the competition is in this business. Look at Mexico, South America, and other countries where the cattle run free and wild, and hides are gathered by the lowest kind of labor. We come into competition with them. So it is with wool. In that industry we come in conflict with the cooly labor, the inferior labor of India. So it is in all this question of raw material.

Why, I ask, are not the American citizens, upon whom this fabric of liberty rests, who develop the resources of nature which make this Government great, entitled to protection? This would not have been a great Government if there had not been great natural opportunities and resources and if those resources had not been developed by the building of homes in the prairies and in the mountains and bringing forth the treasures of nature. Those things have made this country great and prosperous. Why should not the labor of these people be protected as much as that of any other people?

If you are to have a protective tariff, you should protect labor, I say, in the field as well as in the factory. Any other protective tariff will fail to give satisfaction on account of its injustice, and will continue the agitation here. The time will come when no class of men in this country will be allowed to buy in a free-trade market and sell in a protected market while the great mass of the people are compelled to buy in a protected market and sell in a free-trade market enough to maintain the credit of the Government.

Mr. CAFFERY. Mr. President, in the course of the remarks of the Senator from Massachusetts [Mr. HOAR] he referred to my vote on the sugar schedule of the Wilson Act, and he opened his remarks with the statement that I had succeeded in deceiving myself with regard to the Democratic theory of tariff for revenue only. I have this consolation, Mr. President, in that respect, that while I may be deceiving myself, the evil stops with me. I may be the victim of my own infatuation, but ever since the Senator from Massachusetts has been in this body he has been a potent factor in deceiving the whole or a large portion of the people of the United States in regard to the pernicious workings of his tariff for protection. I may deceive myself, but I have not been the instrument of deceiving others.

Mr. President, I have no apologies to make for the vote I gave upon that sugar schedule, nor would I have adverted to it but for the manner and style, more than for the matter, in which the Senator from Massachusetts adverted to it. Upon the final passage of that bill I did get up in my seat in the Senate and vote "nay," and afterwards changed it to "aye." That nay vote had no reference to the principle of tariff for revenue or tariff for protection.

As I stated on that occasion, I cast that vote because, as I thought, of the injustice or the want of faith displayed by my own side in the matter of that sugar schedule. It was agreed on that the bill should be reported with a 40 per cent plus 8 plus 10 duty, to go into effect on the succeeding 1st of January. That promise was violated, and it was for no other reason, without regard to the tariff-for-revenue principle or the tariff-for-protection principle, that I cast that vote. I had a right to cast it, and I have no apologies to make for casting it. When the Senator from Massachusetts attempts by introducing that vote before this body to show that I had vacillated in the application of my principles, he has sadly failed of his purpose.

Sir, he says a tariff upon hides is an absurdity, because it is only 1 per cent of the value of the animal, and we have it from that high authority, the Senator from Massachusetts, that a tax is only to be levied, only to be placed, when it reaches up into very high percentages; that it is an absurdity because it is low and does not pile enough upon the backs of the American people. A tariff on hides of 1 cent a pound, in the beautiful light of the protective theory, is denounced by the Senator as an absurdity. Pile up more upon the backs of the people. You have not got enough tariff on hides. Nothing will satisfy your theory—the theory through which you have deceived the American people, or a large part of them—unless you pile such enormous tariff burdens upon their shoulders that they are bowed and bent to the earth itself.

I do not wish to go into an academic discussion of the principle of tariff for revenue or tariff for protection. It is a great principle which divides the two parties; it is a great principle that will ever divide mankind. Your principle is a principle of selfishness; it is a remnant of slavery. When men are debarred by the civilization of the age—and, thank God, they are debarred in the section in which I live—from owning human property, the next step is to own human industry.

By this protective tariff you are attempting to spoliate a man of his industry and apply it to particular classes. That, in my opinion, is the working of a tariff for protection. There is no slavery now in human flesh, but slavery in the proceeds of human toil. That is what you want. You illustrated the beauties of the theory when you denounced the tariff upon hides as too little. You want more of human labor, of human toil. You want specially protected industries in order that your theory may work in its beautiful order all along the line from the hide to the shoe.

Mr. HOAR. The Senator from Louisiana [Mr. CAFFERY] finds fault with my thinking that a tariff of 1 per cent on an animal does not operate for protection. He thinks that 30 per cent or 40 per cent on sugar is nothing but a revenue duty, and not protection at all. The Senator says he does not find fault, however, so much with the matter as with the manner of what I said. I wish to say, if the Senator is through, that I should like to withdraw the manner and let the matter stand by itself.

The Senator further says that he has not deceived anybody. I wish to say that I thoroughly agree with him that he has not deceived anybody, because his attitude answers itself.

Mr. ALLEN. Mr. President, I was not in the Chamber when the Senator from Massachusetts [Mr. HOAR] is reported to have said that the tariff on hides was simply a tariff of 1 per cent on the animal; but if that statement was made, it is entirely incorrect. An ordinary full-grown animal, unfed—that is, unfatted—to-day is worth about $32 or $33 in the average market. The hide of that animal is worth from $3 to $3.25, according to its condition. That would be a great deal more than 1 per cent of the value of the animal.

But, aside from that, I think I ought to call attention, Mr. President, to one peculiarity in this bill that escaped my attention when I occupied the floor a few moments ago. I find sections 9 and 10, on page 207, entirely disjointed from the subject-matter of lumber or from those other sections that pertain to lumber and timber, which read as follows:

SEC. 9. That the produce of the forests of the State of Maine upon the St. John River and its tributaries, owned by American citizens, and sawed or hewed in the Province of New Brunswick by American citizens, the same being unmanufactured in whole or in part, which is now admitted into the ports of the United States free of duty, shall continue to be so admitted, under such regulations as the Secretary of the Treasury shall from time to time prescribe.

SEC. 10. That the produce of the forests of the State of Maine upon the St. Croix River and its tributaries, owned by American citizens, and sawed or hewed in the Province of New Brunswick by American citizens, the same being unmanufactured in whole or in part, shall be admitted into the ports of the United States free of duty, under such regulations as the Secretary of the Treasury shall from time to time to prescribe.

Mr. President, I should like to know, as one Senator who will be compelled, I suppose, to vote upon this bill one way or the other, just why those sections are placed in the bill, and I know of no person who is more familiar, or who should be more familiar, with those than the senior Senator from Maine [Mr. HALE]. If I can get his attention, I should like to have those sections explained.

I call the attention of the senior Senator from Maine to the fact of the existence of sections 9 and 10, on page 207 of this bill, with reference to lumber taken from the pine forests of Maine to New Brunswick to be manufactured and brought into our markets. I should like to have the Senator from Maine, who, of course, is

familiar with the facts, state what necessity there is for these provisions.

Mr. HALE. Mr. President, I do not wish to delay the consideration of that part of the bill that the Senate is actually engaged in, and I did propose later, when the sections referred to by the Senator are reached, to make a brief explanation of what is entirely and easily explainable. The two provisions—it will take me only a minute to make a statement in answer to the Senator—which are found later in the bill, on page 207, sections 9 and 10, are known as the St. Croix and St. John river acts. They have been entirely misinterpreted and their meaning perverted. The letter that was introduced on Saturday, signed by Mr. Burleigh, of New York, clearly misunderstands the case.

The origin of the case is this: By the fundamental treaty with Great Britain permission is given to float down in the British waters of the St. John River lumber cut on the upper branches and the affluents of that river in the State of Maine, and the two acts which are incorporated in this bill, and which have been in every tariff bill but one for forty years, simply provide that where United States lumber cut in the United States territory, which has but one way only of getting out, and that is through the British waters of the St. John, as allowed by treaty, may be floated down and manufactured and brought in free, because they are the product of our forests.

The argument has been made that if this is true it ought to apply to any American-owned lumber on British or provincial territory. But that is an entirely different case. This lumber, covering some hundreds of townships, unless taken down the St. John River, could never be removed from the place where it grows. The waters all run that way; the streams run into the St. John; and the ax of the woodsman would never be heard in those townships, and the product would lie absolutely useless if it did not come down the St. John waters. Acting upon that knowledge, those two acts, the St. John River Act and the St. Croix River Act, were passed.

It has been said that you can not tell what is the product of these forests in Maine. The answer to that is that it is like everything in lumbering that is found upon a drive in a river. To the unsophisticated you could hardly make it appear that it would be possible for a hundred lumbermen in one stream, putting all their products upon the banks of the same river, to be able to distinguish their product one from another, but such is the fact; the marking is such, and everything is agreed upon, so that the logs that are cut in Maine and floated down in that way through British waters under the provisions of the law and treaty are all marked, and the Government has agents to inspect them. While I do not say that there may not at times have been some slight abuses, yet, as a matter of fact, the product of the Maine forests is followed and identified, and that only is subject to these provisions.

Mr. ALLEN. Mr. President, it occurs to me that it is entirely proper to discuss the whole wood schedule together; that is, every section of this bill which applies to the question of lumber or timber. I must say that it seems to me a little peculiar that these two sections are taken entirely from the wood schedule and placed over in the back part of this bill by themselves.

I want to say also that I do not take the slightest stock in any man's profession that he discusses the tariff question free from any local influence that naturally would affect his opinion. It is preeminently a selfish question, and every man more or less, if he be a member of Congress, is guided by the interests of his State or his district.

Certainly it is very peculiar that Maine, of all the States of the Union, should have a right to take her logs on British territory, manufacture them into lumber, buy her supplies upon British territory, hire her labor upon British territory, pay for it there, and bring the manufactured product into the ports of the United States free of duty.

I do not say anything about the abuse of a law of that kind. I have no doubt, from what has been told me and from what slight investigation I have been able to give the matter, that annually there are millions and millions of feet of lumber that are cut from the forests of New Brunswick and manufactured into lumber by British mills, which come as American lumber into the United States of America without paying a cent of duty.

The testimony before the Ways and Means Committee of the House of Representatives shows, I think, conclusively that the men who manufacture the great bulk of lumber in New Brunswick are not American citizens, and can not be said to come within the class of persons who are entitled to protection; and I ask the Senator from Maine who has just spoken if it be not true that 90 per cent of all the men who fell the forests in Maine and carry the product to New Brunswick are people of British birth, and many of them not citizens of the United States?

Mr. HALE. What is the Senator's question? There is so much noise in the Chamber that I could not hear it.

Mr. ALLEN. I ask the Senator to state if it be not true that 90 per cent, practically speaking, of the men who fell your forests and who convert the logs into lumber are foreigners?

Mr. HALE. Oh, no; nothing of the kind.

Mr. ALLEN. Mr. President——

Mr. GRAY. Will the Senator from Nebraska permit me right there?

Mr. ALLEN. Yes.

Mr. GRAY. I find in the RECORD of Friday last that the Senator from New Hampshire [Mr. GALLINGER] said in a colloquy with the Senator from Louisiana [Mr. CAFFERY]:

> I should like to ask the Senator how it happens—
>
> Said Mr. GALLINGER—
>
> that almost every tree that is felled in the woods in New England is felled by a French Canadian?

Mr. ALLEN. Certainly.

Mr. HALE. I noticed that at the time, and I had the same feeling then as I have now about it, that the Senator had entirely misapprehended the conditions. I live myself in a lumbering community, on a lumbering river, where a great part of the industries of the people is made up of that business, and I do not suppose of the hundreds and perhaps thousands of men who are employed in lumbering that 3 per cent are of foreign birth and residence. There are some portions upon the line where the percentage is larger; but it is not the fact that the great amount of labor is performed by foreigners. Neither is it, I may say, the fact that any great portion of the lumber that comes into our lumber market is furnished under those sections which have been referred to.

The amount is comparatively small. The proportion of the New Brunswick product that comes from the Maine lands that is shipped down the waters of the St. John is small. American citizens own the lands, put in the crews, float the logs down, own the mills, saw the lumber, and bring it in; but it is a limited business; it is not very large; it does not cut much feature in connection with the whole lumber business; and it is not enough to arouse the opposition or the indignation of the Senator from Nebraska. It is a small feature relatively in the whole great question; and its needs come from just what I have stated. This lumber never would come out in any other way, but the amount of it is not large.

Mr. ALLEN. Mr. President, the Senator from Nebraska is not indignant at all. The people whom I represent in part in this Chamber are victims of the lumber interests of this country, the lumber trusts, and the syndicates. I speak for my people; and I say, Mr. President, notwithstanding the statement of my friend from Maine, for whom I have great respect personally, that the great bulk of the men engaged in felling the trees and sawing lumber in this country are men of foreign birth. I say that 80 per cent of them from Maine to Minnesota are men of foreign birth, and a great portion of them are not citizens of the United States.

You can not secrete the fact from a person who takes a trip through these great pine forests, who watches the industry, and looks at the men engaged in the labor, that they are men who do not naturally belong to this country. They come here, as many another man comes, for the purpose of making a few dollars; and when those few dollars are made they return to their foreign homes. They do not get any particular protection or increase of wages in consequence of a protective tariff. Show me an industry in the United States—one of them alone—the wages of whose operatives have been increased by tariff taxation, and I will show you an isolated instance in the history of this country. I say, sir, there is not an industry in all the ramifications of the industrial pursuits of this country where the wages of the man who performs the labor have been materially increased by the imposition of tariff taxation—not one.

I know Senators will rise in their places and discourse upon the beauties and sing the song of protection; and yet, look at our country and see who profits by the imposition of a tariff of that kind. Where is the millionaire who has earned a livelihood or a fortune by his hand or his craft? There is not one. But, Mr. President, the Atlantic Seaboard has its thousands and thousands of millionaires who have made their millions within the last thirty years under the pernicious influences of high protection.

Mr. CHANDLER. Will the Senator kindly tell us how many thousand millionaires there are on the Atlantic Coast?

Mr. ALLEN. I think about 4,000. I do not know that the Senator from New Hampshire is one of them. I hope not. I think it is generally conceded that there are about 4,000 of them. Mr. President, a third of a century ago there was not one. Before the imposition of the tariff of 1861 there was not a millionaire in this country who had made his fortune through tariff taxation. Yet, sir, they have increased until they amount to thousands, and where in all the nation can be found a man who is dependent upon his hands or upon his brain as an operative who has been able to

do more than to keep soul and body together and care for his little family in an humble way?

I know that this was called to my attention very forcibly a few years ago. I noticed a little factory. The man had grown rich. He had accumulated a fortune, and when I came to investigate, I found out that he and his neighbor a few years before were alike humble farmers, living upon adjoining farms, each industrious, each possessed of about the same amount of ability, each economical. One had grown to have a tremendous fortune as a manufacturer. The other had barely held his own during those thirty years, being able to hold on to his little homestead. Can any man convince you, sir, that a law which will produce results of that kind is just to those two men? A law the result of which will make one class rich and keep the other poor is unjust and inequitable; and when you come to apply a law of that kind to thousands and tens of thousands and hundreds of thousands who are carrying the torch of civilization upon the great prairies and in the mountains and valleys of the West, you are imposing upon civilization a burden which it ought not to be called upon to bear.

Sir, make our homes free—as free as they can be made consistently with the raising of sufficient revenue to conduct the affairs of the Government. Make the three great essentials to human life, shelter, clothing, and food, as free as the air and sunlight. The American people are entitled to have them as free as they can be made, consistent with the raising of revenue to conduct the Government.

Mr. President, while we are imposing a burden in the form of a tariff of $2 a thousand upon white pine (for I suppose the yoke will be put upon our necks after a time), why permit the constituents of my friend the Senator from Maine to go over upon British territory and cut logs by the millions of feet and use British labor in manufacturing them into lumber and come into the ports of the United States free, as they are doing every day now? Why should that be done?

Mr. HALE. It is not done.

Mr. ALLEN. I say to the Senator from Maine that I am prepared to prove that it is done. I am prepared to prove that the laws of the United States are violated by the manufacture of British logs into lumber and imposing them upon the people of the United States as American lumber.

Mr. THURSTON. Mr. President, it is not my purpose to indulge in the luxury of a speech on the tariff at the expense of the millions who are waiting, watching, hoping, and praying for the speedy enactment of a Republican tariff law; nor is it necessary that the argument for the protective theory of tariff should again be made. That argument has been made in the last four years by the silent spindles, the rotten water wheels, the smokeless chimneys, the rusty dinner pails, the Coxeys' armies, the ragged women, and the hungry children. But what I desire now, in just a moment or two, is to express my reasons for supporting a tariff of $2 a thousand upon white pine, as upon all other similar classes of manufactured lumber.

Under the tariff law logs are admitted free. The tax is upon the manufactured lumber. If the trees are grown across upon the Canadian side of the line and it is Canadian timber which the American people are to build their houses with and my people are to use upon the broad prairies where we grow no timber, the only result, in my judgment, will be to transfer the location of the sawmills and the lumber manufactories from the American side of the line to the Canadian side of the line. In my judgment it will not make a difference of one cent a thousand in the price of lumber to the consumers in the State of Nebraska. Logs will come into this country free. They will be manufactured on this side of the line under the present bill, and the price of lumber generally will be as it should be—that price which the general American competition in all kinds and classes of manufactured lumber and the cost of its manufacture produce and fix upon it.

Mr. ALLEN. I should like to ask my colleague a question before he takes his seat, if he will submit to it. I understand the principle of protection to be to make a scarce market. It is prohibitive, either entirely or partially, in its theory and in its effect. The very theory of imposing $2 a thousand duty upon manufactured lumber is to give the American manufacturer of lumber control of the American market.

Mr. THURSTON. No, Mr. President. It is for the purpose of securing the benefit of the manufacture of American logs on American soil by American men and in American mills.

Mr. ALLEN. If my colleague will permit me, we will not have any American logs to manufacture in the course of four or five years more.

Mr. THURSTON. I did not refer to American logs.

Mr. ALLEN. I understand my colleague to say American logs.

Mr. THURSTON. It is to give the American people on this side of the line an opportunity to manufacture the Canadian white-pine logs.

Mr. ALLEN. They are doing that now.

Mr. THURSTON. Put manufactured white pine lumber on the free list, and does my colleague pretend to tell me that a log will ever come in as a log from the Canadian side to be manufactured on this side of the line?

Mr. ALLEN. Why not?

Mr. THURSTON. Why should it?

Mr. GRAY. Do they not come in now?

Mr. THURSTON. To a certain extent, where they can be floated in without being transported, as the lumber would be, on the railroads; but wherever the Canadian logs can not reach this country except upon the railroad lines, the lumber and not the logs comes here now.

Mr. GRAY. Will my friend the Senator from Nebraska [Mr. ALLEN] permit me for one moment? I wish to make a remark in line with what the Senator said. I am informed that the great fear in upper Michigan now among the manufacturers of lumber is that if this duty is put upon Canadian lumber it will interfere with the trade they are now doing in sawing the logs that come across from Canada. The American manufacturers are now doing the very business of which the Senator from Nebraska was speaking, and they fear that this tax on lumber will interfere with it.

Mr. THURSTON. If the Senator from Delaware, representing those American manufacturers in their objection to this tariff, can inform me in what way a tax on the manufactured product would prevent the continued free importation of the logs for manufacture on this side, I shall be pleased to hear the argument.

Mr. GRAY. I am not representing them particularly, except as I wish to stand up for all the great interests of this country, so far as I can understand them; but the point I wish to make is that the manufacturers of lumber in northern Michigan say that they are now manufacturing their lumber largely out of Canadian logs. And how, then, is the $2 a thousand tax on sawed lumber further to protect them in the particular industry of sawing Canadian lumber?

Mr. THURSTON. I understand that the most of the mills in that particular part of the country are now on the Canadian side, and, as I said before, wherever the Canadian timber, in order to reach this country, requires railroad transportation, not a log comes in, or will come in, for manufacture on this side, but it is always and at all times the manufactured product, because of the better facilities for railway transportation of the lumber as against the logs.

Mr. ALLEN. I simply wish to suggest that the sawmills in the United States have been so thoroughly established at such great expense that they are not going to remove from American soil without some great reason. I am informed that logs are coming over from Canada constantly and are being manufactured into lumber by our American mills, even under the present tariff, and I have every reason to believe that if the tariff is entirely removed from white pine, its removal will not be an obstruction to the logs coming over here and being manufactured into lumber.

But if there be anything more apparent than another in the logic of my colleague it is this: If lumber can be manufactured in Canada cheaper than it can be in the United States, then under a system of tariff taxation here, where we have higher priced labor, as it is said, than in Canada, we will naturally, under a system of protection, force the opening of mills on the Canadian shore, the development of railroads there, so that the low-priced manufactured lumber of Canada may be made to compete successfully with the highly protected article manufactured in the United States. So, divested of all the poetry and the glory with which my colleague has clothed the subject of protection, it occurs to me that the only safe course we can pursue, if we are looking after the interests of the American people, and the American wage earners and home builders, and especially if we are looking after the interests of the settlers upon the great prairies of the West and Northwest, is to make lumber as free to them as possible.

Mr. CAFFERY. I wish to suggest to the Senator from Nebraska that there was evidence produced in the Senate three or four days ago to show that the labor cost in the forests, in the mill, and in the yard, measured by the results of labor, is cheaper in the United States than in Canada. The comparison was made by an expert employed by Commissioner of Labor Carroll D. Wright, and it resulted in such a showing, which was published and also incorporated in the few remarks I made upon the subject. I suggest to the Senator that if logs are free and we can manufacture lumber cheaper in the United States than in Canada, as has been shown by this statement, then the manufactured product enjoys both the advantage of a tariff and cheaper labor.

Mr. ALLEN. I do not doubt the statement made by Mr. Wright. I was only arguing, however, upon the hypothesis usually assumed by protectionists, that in consequence of protective laws our labor is higher than it is in Canada or in any other country, and that, therefore, if labor is cheaper in Canada, as they contend, than in the United States, a high protective duty upon lumber in this country necessarily would eventually drive the manufacturer of lumber to the region of cheap labor.

Mr. JONES of Arkansas. Mr. President, it seems to me there are one or two facts in connection with the trade between this country and Canada which ought to be considered before we determine to change our course toward that Government in the material way we propose now to do.

The importations into Canada from the United States amounted last year to $58,574,024. The exports from Canada to the United States were $44,448,410, leaving a balance of trade in our favor of $14,125,614. There were admitted into Canada free American imports amounting to $29,472,378 out of $58,000,000. There were admitted free into the United States from Canada $17,167,000. We shipped into Canada free $29,000,000 and over, against $17,000,000 and over imported from Canada into the United States free.

Now, if we change the tariff as proposed in the pending bill and the importations are the same, there will be free importations from Canada into this country of $2,975,000 against $29,472,000 admitted free into Canada from this country. When we contend that we are undertaking to build up reciprocal trade relations, it seems to me we had better consider for a moment the fairness of a proposition of this sort.

The average rate of duty imposed in Canada upon all imports was 18.28 per cent. The average rate on dutiable imports was 30.06. The rate of duty on all American imports was 13.26 per cent. The rate of duty on British imports was 22.31, and on imports from all other countries 26.75. The rate of duty on dutiable imports from the United States was 26.35; on British goods 30.02, and all other imports 36.97 per cent.

That shows that the importations from the United States are received in Canada on more favorable terms than importations coming from the mother country into that colony, and yet we propose to shut out from this country importations of lumber which bear a significant relation to the lumber consumption of this country. The amount of lumber consumed here is estimated now at about $500,000,000. The census of 1890 showed it to be $450,000,000. There is now imported from Canada about $7,500,000 worth of lumber out of $500,000,000 produced and used here. Yet gentlemen who are insisting on having this tax imposed use very extraordinary expressions. One of the members of the lumber association which appeared here by a large representation before the Ways and Means Committee, in speaking of the matter of the importation of Canadian lumber, said:

> This timber produces the same character of lumber with which our markets have been flooded during the last four years by Canadian manufacturers.

Our markets have been flooded by the Canadian manufacturers! Seven million five hundred thousand dollars out of $500,000,000! Flooding our markets and running the price down to practically nothing! Yet this is the sort of argument presented to the Ways and Means Committee for putting white pine on the taxable list at a rate that was not even proposed in the McKinley Act. It is 100 per cent higher than the rate of duty in the McKinley Act.

There is one other argument which I will mention before I forget it. One of the arguments used before the Ways and Means Committee was the high price to be paid to the United States for stumpage on white pine; that $3 a thousand was paid by the lumbermen of the West for stumpage. We all remember that there was a sale at Crookston, Minn., a few years ago, of a lot of lumber bought from the Chippewa Indian Reservation. An agreement was made that the timber on land not allotted to the Indians should be sold. It was to be appraised and put on the market and sold, and large quantities of it were sold. After the sale had gone on, a suspicion arose that everything was not going just right, and an investigation was instituted. I hold in my hand Document No. 85, the report which Secretary Bliss has submitted on this question. I shall not detain the Senate by going into the matter to any considerable extent, but I do want to call attention to a few facts. I do want the Senate to understand about the high rate of stumpage that is paid by the people who are now asking to have a tax of $2 a thousand laid on this lumber to make their lumber holdings profitable.

On page 6 of this report a statement is made which I will summarize. Here are 40 acres of land, section 24, township 150, range 35, southwest of northwest, reported by the appraisers to contain 65,000 feet of lumber. It was found by a special examiner sent to look the matter over, with several able assistants selected by himself, who counted the trees on the 40 acres and measured their size and figured up what they would produce, to contain by one examiner (Ayres) 865,000 instead of 65,000. Mark you, the sales were made on the Government estimates. They had to pay $3 a thousand for what the Government estimate was that the land held. They had to pay on the 40 acres, for 65,000 feet, $3 a thousand—the poor Indians must have compensation for the lumber they had—whereas those people absolutely had 865,000 feet instead of 65,000 feet, which was the estimate. The poor, innocent lumber barons, who are looking after purchases of this sort, made no mistake in buying the particular properties they needed. Take the list and go through the page, and opposite those overestimated you will find marked "Not sold; not sold;" it runs clear down, while in those underestimated every one was sold.

Ayres estimated the lumber on that quarter to be 865,000 feet; McGuigan estimated 700,000 feet, "the difference being due to difference in opinion in regard to defective timber."

Subsequently—

Says the general examiner who was sent out—

> with two men I personally tallied the calipering and measuring of each tree on this tract, and found 1,611 trees, which it was computed would make 902,000 feet of lumber, as shown on list submitted herewith marked "A."

He gives all the particulars—40 acres of land, bought on the basis of having 65,000 feet of lumber, at $3 a thousand, whereas in point of fact it had 902,000. Yet, because the Government required those people to pay $3 a thousand stumpage, they say the rank and file of the American people ought to be compelled to pay an increased price on lumber of $2 a thousand to compensate them for the high prices they pay for the standing trees.

This thing runs clear through the report; there is instance after instance here, as any Senator who will take time to look into it will see. There is not a Senator here who believes those men did not understand what they were getting. They knew perfectly well what they were buying. Otherwise how did it happen that in the case of 40 acres where the lumber was overestimated, it was not sold, and where it was underestimated it was sold? "By their fruits ye shall know them," I think I have read somewhere, and you see the result of action of this sort. There is no mistaking it.

I call attention to another instance just below in the same report. The southwest quarter of the southeast quarter of section 32, township 150, range 33, reported at 11,000 feet, all Norway, was found by Ayres to contain 222,000 feet, and by McGuigan 225,000 feet, almost all white pine. It was reported to contain 11,000 feet of Norway; yet one of them found it contained 220,000 feet and the other 225,000 feet, all white pine. Of course the outrage to the Indians in selling the lumber for less than it is worth by just this sort of fraud is one part of the consideration; but when we are asked to put a high tax on white-pine lumber for the purpose of enabling those people to recoup the high rate they are compelled to pay the Indians for the timber, the facts may as well be understood by the Senate.

> All trees on this tract were subsequently measured with calipers, and tallied by myself, and found to contain 338 trees, which it was computed would make 295,000 feet of lumber.

Another one was the southeast quarter of the same section, reported at 135,000 feet. Ayres found 361,000 feet and McGuigan 383,000.

> Each tree on this tract was subsequently measured with calipers, tallied by Special Agent Parke, found to contain 513 trees, which it was computed would make 421,000 feet of lumber.

But what is the use of detaining the Senate longer to go through these statements?

Mr. ALLEN. Let me ask the Senator if there is any instance in the report where Ayres or McGuigan overestimated the amount of lumber?

Mr. JONES of Arkansas. No, sir; on the contrary, in each one of the cases the timber was subsequently measured by the man sent out by the Government, J. George Wright, United States Indian inspector. He counted the trees and measured them by calipers, and made the calculation accurately; and in every instance these two men, Ayres and McGuigan, were found to be below the facts. It was increased by actual measurement in each instance.

Mr. President, on the same page from which I read a while ago, in the statement made by the lumbermen's association before the Ways and Means Committee, I notice, with reference to this individual, the following:

> Bearing on this state of the case, it may be stated that Otis Staples, who was the chief officer having charge of the duty of estimating the timber on the Chippewa Indian Reservation in Minnesota, and who is probably as well informed a timber cruiser as there is in the State, expresses the opinion, in a letter to the State fire warden, that more pine has been destroyed by fire than has been cut.

They were showing the Ways and Means Committee about the great risks that were incurred by fire. They referred to this man, and as these marvelous estimates had been made, and this man, Otis Staples, was the man who made them, I felt a little curious to look through this report and see if I could find anything relating to Mr. Staples. I thought perhaps there would be some allusion made to him, as he is brought in by the lumbermen's association as being the authority which explains the muddy and ugly and foggy places and makes it all clear. In two or three lines in this official report, on page 58, I find the following, which is of some interest:

> It is also represented that a Mr. Staples, chief of former corps of examiners, purchased large tracts on the day of sale, and has continued to do so at intervals since, both in his own and other names.

Yet this man's statements are to be accepted as a sufficient reason for raising the tariff 100 per cent above the McKinley Act to protect these people by it and to pay high rates of stumpage.

Mr. President, I shall not detain the Senate by repeated instances of this sort. What I have already stated is sufficient. I can not persuade myself that under the circumstances the Senate will deem it wise or proper or just that the American people shall be called upon to pay a tariff tax twice as high as the McKinley rate for the purpose of increasing the profits of men who have resorted to methods of this kind to increase their fortunes.

Mr. SPOONER. Mr. President, I have no doubt that the report referred to by the Senator from Arkansas as to fraudulent underestimation of pine upon certain Indian reservations is correct. But that Senator can hardly be willing to arraign before the Senate and before the country the great body of lumbermen of the Northwest or of the country upon any such basis as that.

I lived for twenty years in that portion of Wisconsin which is largely devoted to the lumbering interest, and I can say as to the great body of those men, some of whom I think are millionaires, that they are men of great integrity and of great public spirit. The lumber industry of the United States is not to be dealt with, I take it, by the Senate upon the basis of that report or by any accepted impeachment, because of that report or the use which the Senator attempts to make of it, of the men who are engaged in this business.

I shall not take much of the time of the Senate, Mr. President, upon this subject or any other during the pendency of this bill, but I desire to call the attention of the Senate to the remarkable amendment which is now pending, and to some of the arguments which have been made in support of it. The lumbering industry in the United States is a very great one. I do not know that there is any larger. It is stated that $750,000,000 are invested in the lumbering industry throughout the country, and that about 600,000 men are employed at daily wages in the various departments of the industry. Nearly 3,000,000 people are dependent upon it for a comfortable living.

I can understand how Senators on the other side could bring themselves to vote to put lumber upon the free list, notwithstanding the magnitude of this industry, or to put upon lumber a low rate of duty for revenue only, because many Senators on the other side believe in a tariff for revenue only; but I can not for the life of me understand how any Senator can arrive at the conclusion that it is just or in any sense logical for the Senate to adopt the amendment proposed by the Senator from Missouri.

What is it? It is a proposition, Mr. President, to leave a two-dollar duty upon the spruce timber of Maine; to leave a two-dollar duty upon hemlock, which is called "the poor man's lumber;" to leave a two-dollar duty upon the pine of Arkansas and the pine generally throughout the South; to leave a two-dollar duty upon the California timber, upon the timber of Washington and Oregon, and to put white-pine lumber, a product mainly now of three States, Michigan, Wisconsin, and Minnesota, upon the free list.

Mr. VEST. Will the Senator permit me?

Mr. SPOONER. Certainly.

Mr. VEST. I endeavored to state as distinctly and emphatically as I could that I favor the putting of lumber, manufactured, and the raw material, logs and all, upon the free list, and that I proposed at the proper time to make the motion which has already been made by the Senator from Nebraska [Mr. ALLEN]. I made this motion to except white pine because it is the salient point in this whole discussion, and I wanted a test vote as to how the Senate stood upon that particular lumber.

Now, I will state, if the Senator will permit me a moment longer, that under the McKinley Act spruce was taxed $2 a thousand, a product of Maine, whilst there was $1 a thousand put upon white pine. In the act of 1894 all were put upon the free list, which is the position that I and a large number of my colleagues upon this side of the Chamber maintain now. But I disclaim responsibility into which my friend from Wisconsin places me now, that I am satisfied with excluding white pine. I simply wanted to test the view of the Senate in regard to this, the principal and salient point in the whole discussion, as to whether white pine should be excepted or not.

Mr. SPOONER. I am discussing the motion which the Senator made, and not the motion which the Senator intends to make. I say now what I said a moment ago, that if it were a proposition to put lumber upon the free list, from the Senator's standpoint, I can understand why he should make it and why he should support it.

Mr. VEST. I intend to support it and to follow it up by the further motion I stated.

Mr. SPOONER. But I can not understand why all other lumber should be left dutiable, as it would be by the adoption of this amendment at $2 a thousand, and the white-pine industry of Michigan, Minnesota, and Wisconsin be alone dealt this blow.

Mr. PRITCHARD. Will the Senator from Wisconsin permit me?

Mr. SPOONER. Certainly.

Mr. PRITCHARD. I desire to call attention to the fact that there is a considerable amount of white pine in my State, in Virginia, in Tennessee, and in Kentucky. With the Senator's permission, I ask the Secretary to read a telegram from our State geologist showing the amount that we have in our State.

The Secretary read as follows:

CHAPEL HILL, N. C., *June 5, 1897.*

Senator J. C. PRITCHARD,
1820 I street NW., Washington, D. C.:

Two hundred thousand acres dense white-pine forest, besides considerable quantity scattering timber.

J. A. HOLMES.

Mr. PRITCHARD. With the Senator's permission further, I desire to call the attention of the Senate to the following letter bearing on this question, from Mr. Winchester, a resident of the State of West Virginia, a gentleman who is engaged in the lumber business. I ask to have it read.

The Secretary read as follows:

NATIONAL LUMBER CONVENTION,
OFFICE OF THE EXECUTIVE COMMITTEE,
1421 G Street NW., Washington, D. C., June 5, 1897.

DEAR SIR: Being in the Senate gallery to-day, I was surprised upon looking at the map exhibited by Senator PETTIGREW to find that no white pine was indicated in the States of West Virginia, Tennessee, Kentucky, and North Carolina, with the mountain portions of which I am most thoroughly familiar, and know from personal observation that in each of these States stand large forests of the true white pine, altitude having made up for latitude, giving to this section the same forest growth that is found in corresponding temperatures farther north.

The St. Lawrence Boom and Lumber Company, with mills at Ronceverte, W. Va., on the Chesapeake and Ohio Railway, have taken from their forests in Pocahontas County, W. Va., an average of over 20,000,000 feet per annum for every year since the war, and still have standing sufficient timber to keep up this annual output for fifteen years to come, or a total of 300,000,000 feet. In the counties of Mercer and Monroe stand fully as much, while the greater part of the county of Raleigh is of unbroken white-pine forest, containing, at a conservative estimate, one thousand million or 1,000,000,000 feet. Thus we have in the State of West Virginia, of which I am a citizen, not less than 1,600,000,000 feet of white pine.

As an active lumberman, I know of standing white pine in the State of Kentucky to the extent of 250,000,000 feet, and in the State of Tennessee I was at one time interested in and now know of 500,000,000 feet. Across the line in North Carolina there is an equal amount.

So it is that within my own personal knowledge there stands within the mountain portion of the four States mentioned an aggregate of 2,850,000,000 or nearly 3,000,000,000 feet of white pine, while the natural deduction made from the map exhibited by Senator PETTIGREW in the Senate to-day would be that not a single foot of white pine exists in that territory.

Very truly,

A. H. WINCHESTER.

Hon. J. C. PRITCHARD,
United States Senate, City.

Mr. SPOONER. There is and for a great many years has been the manufacture of pine in Wisconsin, and it is a great industry. It is a great industry in the South. There has been a wonderful change in the influence of the Southern pine-lumber product upon the Western markets within the last few years. I am glad it is so. I wish to see that section and all sections built up and prosperous. The millionaires in Wisconsin, as they are called here—the men who have been engaged for a great many years in the manufacture of lumber—have spent millions of dollars in wages. They have spent millions of dollars for supplies which have gone into the woods during the winter. They have spent millions of dollars in payments to transportation companies.

If there is any industry in this bill which is entitled to be protected, it is that industry, and this rate is less than 20 per cent ad valorem. They need this protection. I am assured by the lumbermen of the South that now, as there have been constructed railroads from Canada leading to Superior, to Minneapolis, to St. Paul, and thence West and Southwest, bringing Canadian refuse or common lumber into the markets to meet Southern pine—they, too, need this protection. It is an unfair competition in many ways, because of the difference in conditions.

Now, upon what conceivable theory of justice is it, Mr. President, that all other lumber in the United States and the industry engaged in it should be protected by a duty and that the white-pine lumber industry of these three States should be stricken down, as it were?

Mr. GRAY. There is none.

Mr. SPOONER. There is none, and there is a peculiar reason, Mr. President, why that industry should be protected which does not apply to some of the others. It is because those States lie along the Canadian line. They are bordered by lakes and streams which afford cheap transportation for Canadian lumber, while the States of the South are remote from Canadian competition, although they feel it.

This must be a system or it must go to pieces. Its benefits must be fairly distributed. No man living can answer the argument made here the other day by the Senator from Georgia [Mr. BACON] upon the subject of equality between industries and sections in the imposition of tariff rates. If we are to have duties, whether you call them revenue duties or protective duties, if they operate to protect American industries, they should be equal in their operation. The tariff bill must be constructed upon fair principles. I

have sat here day after day voting for duties to build up and protect industries in different States.

I am ready to vote for a protective duty on rice, and one that is adequate, because I believe in protection. I am willing to vote to build up and maintain any industry in this country. I want the American market for the products of American labor. But this proposition to single out adversely the industry in the State of Wisconsin, or one branch of the lumber industry in the States of Wisconsin, Minnesota, and Michigan, seems to me utterly without warrant or foundation upon any principle of justice.

Mr. VEST. If it is at all satisfactory (I should think it would be) to the Senator from Wisconsin, I am willing to withdraw my amendment and to have the question taken by yeas and nays upon the amendment of the Senator from Nebraska [Mr. ALLEN].

Mr. SPOONER. That is a very different proposition.

Mr. VEST. All I want is a test vote as to free lumber.

Mr. SPOONER. To vote for free lumber is one thing; to vote for free pine lumber only is another.

Mr. VEST. That is a mere technicality.

Mr. SPOONER. That is the proposition which I have been contesting. If the Senator withdraws it——

Mr. VEST. No; I do not withdraw it after the Senator has made that statement. I will take the yeas and nays.

Mr. SPOONER. No, sir; I am not satisfied with it.

Mr. VEST. You can not conciliate anybody.

Mr. SPOONER. I will take but a moment longer. Under this bill Canadian lumber may come in free. The opposition—another phase of selfishness—to the duty on white-pine lumber comes mainly from men from some of the States who rely now for the support of their mills upon Canadian logs, which under this bill are free, or who manufacture in Canada. Those men had for many years, up to 1890, enjoyed the benefit of the two-dollar duty on white-pine lumber. They exhausted their supply of white-pine timber and transferred the industry, so far as they were concerned, to Canada.

Now they want white-pine lumber free. They care nothing for the hundreds of men who have invested millions in the States of Michigan, Minnesota, and Wisconsin, whose forests have not yet been exhausted. There is no justice in that. There is no fairness in it. Under the operation of the Wilson Act, which put this lumber on the free list, the lumbering industry of the Northwest has been greatly depressed. There have been more failures during the last three years, I think the statistics show, in the lumber industry in the United States than in any other industry.

There has been a reduction of wages all along the line, while in Canada wages in the lumber industry have either been increased or, with two or three exceptions, have been maintained. Canada is very much interested in this subject, but I am here to legislate for the United States and the whole United States and not for Canada.

I quote from pamphlet No. 10, issued during the Ontario general elections of 1894:

> The lumber trade is of Dominion concern, and perhaps ranks second in importance in Canada. All the provinces are more or less affected by the prices obtained and the markets available for sawed lumber, but to Ontario, Quebec, New Brunswick, and British Columbia (all large exporters of sawed lumber) the prosperity of the trade is of vital importance. The United States is practically our only market for sawed lumber and shingles—

Observe it—

> The United States is practically our only market for sawed lumber and shingles, and its value may be judged from the fact that Canada sent there last year 1,031,000,000 feet of sawed lumber, valued at $8,900,000, and 357,000,000 shingles, valued at $734,000, or a total value of $9,634,000. The rougher grades of lumber were now capable of being marketed there at a profit—

That is what hurts the Southern lumbermen—

> and it has been estimated by Colonel O'Brien, member of Parliament for Muskoka, and corroborated by reports from the Crown timber agents, that from 30 to 50 per cent more white pine is cut and marketed from the same area of licensed territory than was formerly the case. This means a large increase in the revenue of the provinces for material which had formerly gone to waste. It also means a large increase in the employment of labor and markets for produce.

Mr. President, something has been said about preserving our forests. It is pretty late to talk about preserving our forests by putting this product of the sawmills upon the free list. The Government has a perfect right, and it is a wise policy, to preserve its own forests, but it has opened its land to purchase—its timber lands, pine-timber land as well as hard-wood land and prairie land. Men were invited to buy. They invested their money in it. They have paid taxes upon it for a great many years. They have borne the loss by fire and trespass and theft, and now it is proposed that these men, some of whom have paid $3, $4, and $5 a thousand stumpage, men who have to pay large taxes every year upon every section and quarter section of the land, shall be prevented by an unjust discrimination in a tariff law from using their own property, in the interest of forest preservation.

If you want to preserve the white-pine timber of Wisconsin—about 12,000,000,000 feet of it—of Michigan, of Minnesota, buy it, and hold it free from taxation, as Government property is held free from taxation; but to put it upon the free list and say to the men who have invested their money in it, who have built large lumber plants, and who have built up towns and villages and cities by this industry, "We will so arrange our tariff law as to compel you to wait year after year, paying taxes and paying interest, standing the loss by fire, until Canada has exhausted her almost illimitable supply of white pine," is confiscation and nothing less.

The very argument upon this subject based upon forest preservation admits, or there is nothing in it, that to put this pine timber on the free list means to give an advantage to Canada, and to thereby preclude the use by the owners of this property for the markets of the United States, otherwise it would not tend even to preserve the forests.

Now, let us have fair play in this tariff law. I shall vote to take care of every interest in this country, North or South, East or West. I have voted for some duties concerning which I had misgivings, the facts in regard to which have been disputed between the different sides of the Chamber. I resolve the doubt every time in favor of American labor and an American industry.

Senators talk about this pine being in the hands of ten or fifteen men. That is not true. There are wealthy men, as I have said, who own vast tracts of pine timber, and who own interests in other tracts of pine timber, but there are at least 150 or 200 separate concerns, I am told, in Wisconsin alone, engaged in the manufacture of white-pine lumber. Some of them owe for the timber still. They expect to cut it off and use the proceeds to pay their debts.

Six concerns in Wisconsin and Minnesota paid in one year $570,000 wages alone to men dependent upon that for their daily bread, and within two years after white pine was put upon the free list those six concerns paid nearly $300,000 less in wages. Up in Wisconsin, at Superior—on the border of the St. Louis River, which divides Wisconsin from Minnesota, is a city called Superior. In that city, on the banks of that river, is a sawmill in the midst of a lumber yard. Over on the other side, in Minnesota, is a sawmill and lumber yard.

A year and a half ago, when those mills were both shut down, when those lumber yards were filled with sawed lumber waiting for a market, when the men were all thrown out of employment, a company undertook to build a bridge across that river under authority from Congress, and one end of that bridge was in the Wisconsin lumber yard, and the other end in the Minnesota lumber yard, and every stick of lumber, I am told, which went into that bridge came in from Canada free. If it had not been free, it would not have come in from Canada.

As I said when I began, I can see some logic and reason from the standpoint of the Senator from Missouri in a proposition to put lumber upon the free list, but I can see no justice, no logic, in a proposition to single out this one class of lumber and put it upon the free list, leaving the Maine lumber, the Southern lumber, and the Western lumber all protected by a two-dollar duty against Canadian competition.

It is true, and it is not to be successfully denied, that wages are lower in the lumber industry in Canada than they are in the United States; that the difference in conditions is otherwise very marked because of the system they pursue there in permitting a man to pay for his timber in the main only as he cuts it.

Mr. ALLEN. I wish to ask the Senator would not the putting of a tax of $2 a thousand upon white pine hasten the disappearance of white pine in this country?

Mr. SPOONER. I do not think it would hasten it much, for the reason that they are obliged to cut it to prevent its destruction by fire.

Mr. ALLEN. I inferred—and that is the logical conclusion of the Senator's argument—that it would hasten the disappearance of our white-pine forests, and by that means prevent white pine from Canada coming in. If the white pine from Canada could be permitted to come here under free trade, would not that conserve our forests for some time?

Mr. SPOONER. I am willing that you should conserve your forests. I do not want you to conserve mine.

Mr. ALLEN. But I am interested in your forests as much as you are, because I must build my home from your forests.

Mr. SPOONER. You did build your home from our forests, probably.

Mr. ALLEN. I think I did, but I did not build as good a home as I ought to have built for the money at the time, and would have built but for the tax.

Mr. SPOONER. That may be.

Mr. ALLEN. Aside from that, if we protect our white pine by a tax of $2 a thousand, and by that means hasten its disappearance, I infer that in six or seven years, from the manner in which it has been cut off, it will probably disappear. What, then, hinders Canada, when our forests are entirely gone, placing the price of white pine as high as a cat's back, if necessary, to the American consumer?

Mr. SPOONER. When the duty was reduced by the McKinley law to $1 on white pine, the price of Canadian pine lumber went

up $1, and that one dollar did not go into the pockets of my friend from Nebraska, who probably about that time was building his humble home, but it went into the pockets of those people over in Canada.

Mr. ALLEN. If the Senator will permit me, I was told by very competent authority—an authority I think I have a right to rely upon, no less than the grand master of the Knights of Labor, a very competent and very worthy gentleman whom I have known since we were boys, and I say in all sincerity he is a very competent man to judge—that when the McKinley Act was put in force and became a law he was called to the Canadian border to adjust matters between the Canadian workmen and the American workmen.

The American simply said to his laborers, "The Kanucks are going to get their lumber in here by reducing their wages on the Canadian side, and we must make a corresponding reduction of wages to our laborers to meet the reduction upon the Canadian side," and instead of benefiting the American laborer who was engaged in that industry it had the direct effect of lowering his wages. I say that is the statement based upon a thorough investigation of the matter by this gentleman.

Mr. SPOONER. I have the data here which show the wages paid in every department of the lumber industry in the United States and the wages paid by every department of the lumber industry in Canada. It not only appears that much lower wages are paid all through Canada in the lumbering industry, but it shows another thing, that since white-pine lumber was put upon the free list the wages of men engaged in the lumber industry in Canada have either been increased or have been maintained, while the wages which theretofore were paid to the men engaged in the lumber industry of the United States have been greatly decreased.

Of course I do not attribute all of this decrease to the tariff legislation as to lumber; a part of it is probably to be accounted for by the general depression throughout the country; but I have no doubt whatever that in part it is to be attributed to putting this product upon the free list.

Mr. President, I did not rise to make a speech on the tariff. I only desired to call the attention of the Senate to the remarkable discrimination made by the Senator in his amendment, under which the entire lumbering industry of the United States would be protected by this bill except the white-pine lumber industry of a few of the States, and those States lying along the border of Canada.

I spoke about "my forests" in a colloquy with the Senator from Nebraska. It might be inferred from that remark that I am interested in some pine forests of the United States. I desire to say that I am not. The only personal interest I have in any timber is beyond the jurisdiction of the United States. Some of my associates in that enterprise I think want lumber free.

Mr. GRAY. Mr. President, I do not know that any apology is necessary for anyone who rises to discuss this very important question of the imposition of a tax on one of the great necessaries of life which this schedule presents to us. It is one of those three things which the Senator from Nebraska [Mr. ALLEN] well said constitute the elementary necessaries of human well-being—food, clothing, and shelter. But, nevertheless, I will say that I am not disposed to trespass upon the patience of the Senate except in very brief fashion.

I know very little about the details of prices and the wages that concern this great subject, but I have thought a great deal of the underlying principle that governs a tax like this, and that must apply, if principle is to apply at all, to the imposition of a burden upon one of the necessaries of life. There ought to be something to justify it; and yet we have sat here for these two or three days and we have not heard a single word from those who propose the tax in defense of its imposition. We have heard no explanation of why this great staple, which concerns the trade, and business, and comfort of the masses of the American people, should be taken from the free list, where it now is, and placed upon the taxable list.

The Senator from Wisconsin [Mr. SPOONER] who has just taken his seat has made a very interesting speech in regard to the supposed discrimination which the amendment offered by the Senator from Missouri [Mr. VEST] would make in regard to white-pine lumber, in which he is specially interested as a product of his own State. I agree with him in that; but I occupy what he admits is the logical position of being opposed to a tax upon lumber at all. In regard to that I feel deeply; and in regard to that I believe that too many protests can not be made on behalf of the American people.

Mr. President, here we have heard time and time again one Senator after another arise, not to defend this tax, not to explain why this burden should be placed upon the backs of the American people, but arise and boastingly state that in their own States the bounty of nature had given them large tracts of valuable timber land, that Idaho had more timber than the States of West Virginia and Wisconsin and Michigan put together, that North Carolina has a great tract of valuable white-pine timber lands; and so we go on and hear from time to time of these great bounties of nature that God has given to this fruitful and blessed land of ours, and then that is supposed to make the groundwork and justification for putting barriers between the people and access to those bounties of nature.

Of what benefit are the hundreds of thousands of acres of white-pine timber lands in North Carolina to the struggling, hard working masses of this country if they are not to enjoy the natural advantage which commercial activity and enterprise will give them in order to avail themselves of that bounty, but are to climb over a tax that is to enhance the difficulty of getting at what they want. Why should we undertake here to tell these 75,000,000 American people that "You are to be held back from these great timber supplies necessary to build your homes in order that the fortunate owners of the lands upon which that timber grows may levy an additional tribute upon you in order to increase their own well-being and their own fortunes?" Upon what theory of public morals—I will not say political economy—can such a tax be justified?

Mr. President, in this time of unrest and social upheaval we hear a great deal in denunciation of the private ownership of land at all. If, sir, it is to be defended, it can not be defended upon the ground that there is any right in those who have that ownership to tax the great body and mass of the people before they shall enjoy the bounties that nature gives through that land. If they are fortunate in owning timber tracts, if valuable revenue or income shall accrue to them, all right, but why seek by legislation to make it harder, to make it more difficult for the toiling masses of this country to enjoy this bounty than it would be under natural conditions, untrammeled and uninterfered with by the hand of legislation?

The Senator from Wisconsin spoke a moment ago about the owners of this white-pine land in his own State, and said with a good deal of eloquent interrogatory, Why should they not be allowed to do with their own what they choose and not be interfered with by legislation? Why should not those who own the white-pine timber land of Wisconsin, who had bought it and paid for it and built up towns and cities and accumulated great wealth and paid taxes on it, he asked, be allowed to sell it and not have that sale deferred until the Canadian forests are exhausted?

Nobody wants to interfere with the owner of white-pine timber land, or the owner of any other timber land, in doing what he pleases with his own; but, I retort, Why should not the millions and millions of people who use white-pine timber be allowed to do with their own what God Almighty gave them the right to do under natural conditions, and that is, spend it where they can get the most for it? Why should they be restrained by the powerful hand of legislation from buying the timber across the Canadian border, or anywhere else where it has been allowed to grow, in order that they may pay tribute to the owners of the timber land in Wisconsin and Minnesota?

Now, who can answer that question? Who can undertake to say why I and the 75,000,000 other people in this country who have honestly earned the money in our pockets shall be restrained from spending it where it will avail us most because of the demand of those who are so fortunate as to own that portion of the earth's surface upon which timber grows? Nobody answers. Even the Senator from Michigan [Mr. BURROWS] sits silently in his seat and can not be provoked into an answer, because I know and he knows that votes are more powerful than speeches or explanations.

Mr. PRITCHARD. Will the Senator from Delaware permit me?

Mr. GRAY. Certainly.

Mr. PRITCHARD. If I understand the Senator, he desires to know why we ask the right to sell our white-pine lumber. I want to say to the Senator that in my judgment the American citizen who pays taxes to keep up American institutions should be permitted to go into the American market on an equal footing with individuals living on the outside.

Take, for instance, the lumber industry in North Carolina. Suppose you live in Newbern, N. C., and want to sell a load of lumber, where do you sell that lumber? You sell it in the distributing markets—in Boston, Philadelphia, and New York. Now, I ask the Senator to compute the freight from Newbern to Boston, Philadelphia, and those other markets. Then take the freight rate from Canada and compare the two, and you will see that the Canadian has a wonderful advantage over the North Carolinian. All we ask of the American Congress and all we ask of the American Senate is to put the North Carolina lumber dealer upon an equal footing with the Canadian lumber dealer.

I see no reason, and I can not for the life of me understand, why a Southern Democrat can stand up in this body and advocate free lumber, because on every page of this bill we find protection for cutlery, and we find protection for other industries that have been built up in the Northern and the New England States.

Mr. BERRY. It was not put in there by the votes of Southern Democrats.

Mr. PRITCHARD. Now we have an opportunity to develop an

industry in our own section, an industry that will enable the Southern people to make something out of the product of their soil, and we find Southern men standing up here and stubbornly saying, "No; we will not have it."

That policy, Mr. President, has done more to hinder the South and keep us in an unfortunate condition than any other one thing. The Southern politicians have in the past sullenly refused to accept the benefits growing out of the protective system, while our friends from the Northern States have displayed more wisdom. We find they are advocating protection for every single industry in their States. The result has been that the North has grown powerful and rich and they have had a development of all their interests. We should have had a similar development in the South had we pursued a different policy.

I for one, representing in part the State of North Carolina, propose to stand here while this bill is being framed, and to see to it, so far as I may be able to do so, whenever an industry is to be affected by my vote, I shall vote so as to put the North Carolina citizen on an equal footing with the citizen living in New England, and, if needs be, I shall vote to give him an advantage over the Canadian or any other foreigner; and any man who has any Americanism in his soul, it seems to me, ought to advocate that kind of policy.

Mr. GRAY. I was proceeding, Mr. President, a while ago to state that it seemed to me impossible to give any good reason why this legislative interposition between the millions of this country and the bounties of nature should be made. And now the Senator from North Carolina comes to the front and says, very patriotically and with a great deal of emphasis, that he intends and is more than willing, by legislation, to equalize the conditions of what he calls the North Carolina timber grower and those in Canada, and that he is going to so legislate, if I understood him correctly, or that he is willing to so legislate, that it may be just as hard for a man who lives up on the northern tier of States and in the northern part of that northern tier of States, along the Canadian border, to get Canadian lumber as it is now to get North Carolina lumber. That is the Senator's idea of justice and equality and the beneficence that the law should distribute to a free people.

Mr. President, I want to equalize the conditions of the people who consume lumber, and I want to deny your right to levy that tribute upon them. If God has given you a State or a country in which this bounty has been specially conspicuous, that does not furnish a reason why you should lay a tribute upon the people for whom that is a necessity, in order that you may be further enriched than nature has already enriched you. There can be no justification for it. It destroys the only defense you can make for the private ownership of land; it destroys the only defense you can make for the possession and control by individuals of those great natural monopolies and bounties of nature.

If you claim that you can by legislation enhance the value of it to the producer by raising the price to the consumer—for that is the only way in which you claim that you can equalize these conditions about which the Senator from North Carolina speaks—then you are doing just what would be accomplished if you made this timber supply scarcer, and thus neutralized to the consumer the benefit of abundant forests.

You may call this a free Government, you may call it what you please, but it is nothing less than the despotism of wealth if the men who live along the northern tier of counties of that northern tier of States can not reach out their hands across this line that divides us from Canada to take the bounty that nature has given them.

Timber grows there not by the contrivance of man, but by the bounty of the great Creator; and why should not that man living in that northern tier of counties of that northern tier of States avail himself of this great advantage that has come to him without the contrivance of the Senator from North Carolina or of any of his constituents? And why does the Senator reach out from that distant State, hundreds of miles away, and seek to stay him by the interfering hand of his Government, and say, "You must not make the most of the income of your toil, but you can only have these necessaries of life by paying tribute to me, who lives a thousand miles away?" Mr. President, it is because I believe——

Mr. WILSON. Will I interrupt the Senator while he is speaking of the northern tier of States by stating the conditions which prevail in one of them; for example, we in the State of Washington probably have more lumber than nine Southern States and Michigan, Wisconsin, Pennsylvania, New York, and Maine combined? I have before me an exceedingly interesting statement—the estimates for the State of Washington and the estimates for the other States I have mentioned.

While in Wisconsin or while in North Carolina they can take up any amount of timber land without any act of Congress, yet in the State of Washington the land is acquired under the timber-land act of June 3, 1878, and is all owned by small holders, farmers, who sell timber to the mill owners in order to clear this land of this immense deposit of timber. That makes it higher for the mill owner.

Another condition enters—I will detain the Senator but a moment with this matter—and that is the question of transportation. To get our lumber to the California market we must ship it under the laws governing the coastwise trade, as the Senator well knows, under the American flag. We can not ship it in any tramp vessel that comes along, as they can in British Columbia. Second, each farmer must pay a tax on his land. They pay no tax in British Columbia; they only pay stumpage under what is known as the timber law at 50 cents a thousand and get a rebate of 25 cents on all kinds of exported lumber. The third is the matter of the kind of labor. They may employ in British Columbia Japanese, Chinese, and all other kinds of labor, which can not be done on this side. The matter of transportation and ownership of land is not all that enters into this business which unfavorably affects the people on this side of the line.

I do not wish to detain the Senator longer.

Mr. GRAY. Not at all. The Senator did not detain me. I am always glad to hear anything he has to say.

There it is again, though, the same old argument. Here is this rich inheritance, into which the Senator and his constituents have come in his State, and he tells us that because they happen to be there and because they own the land upon which this great growth of timber exists, that they have the right to reach down to San Francisco and say to the mechanic and laboring man who seeks to build a home, "You shall not get cheaper lumber because forsooth——

Mr. WILSON rose.

Mr. GRAY. Oh, no; do not interrupt me, as the Senator from Maine [Mr. HALE] has suggested to you, it will just take up time.

Mr. WILSON. The Senator from Maine did not say anything of the kind.

Mr. HALE. What I was going to say to the Senator from Washington was that the Senator from Delaware is talking, as he always does, eloquently, of course, in favor of real free trade.

Mr. GRAY. Yes; real free trade.

Mr. HALE. The Senator from Delaware says if the Canadian can furnish lumber cheaper, we ought to let him do it.

Mr. GRAY. I say so.

Mr. WILSON. I do not desire to interrupt the Senator from Delaware, but there are some things which enter into the production of lumber on the west coast that I thought even in the Senate of the United States somebody ought to know something about its production, its shipment, and its transportation in competition with the rebate allowed by the British Columbian Goverment, and all that sort of thing. We are not seeking to exact toll; we are supplying the people as far east as the Senator's own State with cheaper shingles and cheaper lumber than they have ever received in the history of this country.

Mr. GRAY. But you can not supply them as cheaply as they can from Canada or you would not want this legislation. Is not that so?

Mr. WILSON. I think not.

Mr. GRAY. Then why do you want a tariff?

Mr. WILSON. The Senator was talking so eloquently just now about ships loading with lumber on the waters of Puget Sound that I wish to say to him that that was when we had a tariff, in 1893.

Mr. GRAY. Then, if you do not need that protection, and can furnish my State with lumber as cheaply as we can get it from Canada, why do you not do so?

Mr. WILSON. If it does not hurt the gentleman, why is he so vociferous in his opposition to it?

Mr. GRAY. Because I know full well that behind every protective tariff, not revenue tariff, there is the motive that you are to help a class by raising the prices of a product that they own, and you can not help them in any other way.

Mr. WILSON. No; I want to help the 100,000 people interested in the production of lumber in my State——

Mr. GRAY. Exactly.

Mr. WILSON. Who have almost gone into bankruptcy since the passage of the Wilson bill, that gave us free trade.

Mr. GRAY. That is the class of people the Senator wants to help. I am speaking of a far larger class, the 75,000,000 people whom he would rob in order that the class he represents may be protected; and I do not use that phrase in any other but its economic sense. Of course the Senator knows I do not use it in any offensive sense.

Mr. President, I am not to be scared from this argument by being told it is free trade. I have no prejudice against the words "free" or "freedom," and I do not know why the presumption of freedom should not obtain in regard to trade and the intercourse of men as well as it does in other respects in which a free, self-governed people can use that term. Freedom of trade ought to

be the rule, and protection and restriction ought to be the exception; and when they prevail they should be grounded upon reasons that will satisfy reasonable minds.

Mr. TILLMAN. Why does the Senator from Delaware draw the line at the free coinage of silver? [Laughter.]

Mr. GRAY. The free coinage of silver, which the Senator from South Carolina takes up in the absence of the Senator from Nevada, like the flowers of spring, has nothing to do with the case, any more than the free coinage of copper or the free coinage of any other metal.

Mr. TILLMAN. If free coinage is so dear to our hearts, why not let us have it?.

Mr. GRAY. Why not give the free coinage of copper or the free coinage of nickel?

But I am not to be drawn aside either by the newly fledged protectionist from South Carolina or by the gentleman who casts free trade in my face. I think protection and free silver ought to go together. They belong to the same class of economics. Both aim to raise prices by law. But I do say that having the concrete example given by the Senator from Washington, there can be no basis or justification in law or in morals or in political economy why he should seek to levy a tribute upon the artisan or the mechanic of San Francisco who seeks to buy lumber for his home, by making him, through legislation, pay more than he otherwise would, for the benefit of the class who own the lumber region.

Mr. President, it is just because the interests of the great mass of my countrymen should be predominant and the interest of classes should be subordinate that I am opposed to protective legislation. I believe there is no justification for a tariff except for revenue. I do not believe, sir, that you have a right to arm any class of men, however good and worthy they may be, with the taxing power of this great Government, in order that they may put their hands into the pockets of the people and take from them the dollar they have earned and put it into the pockets of those who have not earned it. That is the reason.

Mr. STEWART. I should like to ask the Senator from Delaware a question right here.

Mr. GRAY. I will be through in a minute, and then the Senator from Nevada can take the floor.

Mr. STEWART. I do not want to take the floor.

Mr. GRAY. Is it anything about free silver?

Mr. STEWART. No; I am not going to ask the Senator about any question he can not understand.

Mr. GRAY. That may be. I can not understand that, I confess.

Mr. STEWART. I should like to have the Senator state to me how a tariff for revenue can be levied upon articles similar to those produced in this country without operating as a protective tariff?

Mr. GRAY. You can not levy a revenue tariff on any article that comes into this country without raising the price to the consumer.

Mr. STEWART. Certainly.

Mr. GRAY. Of course that is true; but because it is, there is no reason why, for the sake of protection, you should levy a tariff that produces no revenue. If one justifies the other, I will hear the Senator some time when he gets off the free-silver question and can devote a little time to it. I do not believe in a tariff for revenue with incidental protection any more than I believe in virtue and incidental prostitution.

Mr. HOAR. Does the Senator believe in either of those things?

Mr. GRAY. No, sir; I do not. I can understand that a revenue tariff may result, as the tariff on sugar, the great revenue producer of the tariff list, results, in advantage to the sugar growers. There is no reason why we should discard that great revenue producer from the tariff list because of the incidental advantage. Suppose you were to put a great public building, an absolute public necessity, near the land of my friend the Senator from Massachusetts. There is no doubt he would derive an incidental advantage from the increase in the value of the land he holds by the erection of this great public improvement. The building would be put there for the sake of the public; it would not be put there for the sake of improving the land of the Senator from Massachusetts, but I will not refuse to put it there because it happens in that way to work to his advantage.

It is only by preferring the interest of a class to the interest of the whole people that you can defend the protective tariff, and I believe in those wise and pregnant words of Mr. Gladstone, which I read some years ago on the floor of the Senate, and are as true now as they were when they were uttered in his address to the voters of Midlothian. He said:

> Now is the time for every true friend of this country to remind the masses that they owe their present political elevation to no principles less broad and noble than these: Love of liberty for all, without distinction of class, creed, or country; and resolute preference for the interests of the whole people to any interests of narrower scope.

I try, so far as I am able to understand it, to place myself upon that broad and noble declaration, and when I can discover that the interests of a whole people are to be subordinated to the interests of a class, and think that I perceive it, then I must refuse to lend the sanction of my voice or vote to such a proposition.

Mr. President, the gifts of a bountiful Providence to the people of the world were not meant to be segregated or confined for the benefit of a few, and to be made difficult of access to the many by artificial means.

Mr. HOAR. I desire to ask the Senator from Delaware a question in regard to the quotation from Mr. Gladstone which he read, where, if I understood him, Mr. Gladstone said that the people ought to be governed by the interest of entire humanity, and not the interests of a few, or something of that kind. Is that in the same letter or speech in which he says, "England ought not to join in any proposition for the restoration of silver to its place of coinage, because England is a creditor nation, and if the burdens of the debtor nations of the world should constantly be increased, it would only be a benefit to us?"

Mr. GRAY. I will leave the Senator from Massachusetts and Mr. Gladstone to settle that between them. I admire the genius and the eloquence of my friend the Senator from Massachusetts, but he can not, by that rather impertinent intrusion into my speech, keep me from giving my meed of homage and praise to the noble sentiment uttered by that great English statesman. Whatever he may have said at other times and on other occasions and in regard to different lines of thought, the Senator from Massachusetts can in his own time and in his own way produce and comment upon it.

I say that, so far as I am concerned, I try to stand upon that proposition. I may fail to do it. I may fail to appreciate fully and widely and highly, perhaps, the situation in which we find ourselves now, but it is because I think I have found that there is in the proposition of protection throughout the pending bill, and especially in the schedule as to which we are now concerning ourselves, a subordination of the interests of the people to the interests of the few that I have interested myself as much as I have and have trespassed upon the patience of the Senate so long.

Mr. President, the commercial activities of a great and free people ought not to be trammeled without an excuse and without an explanation that can be given reasonably to a reasonable man. The great wealth-producing resources of the world ought to be open everywhere to the endeavor of man, and every legislative obstruction ought to be removed. Suppose the Canadian border had been brought down 150 or 200 miles, paralleling its present border. I suppose the advocates of protection would then think it just as suicidal, just as dangerous, to trade with the people who live in that belt as they now think it is to trade with the people of Canada, and yet we all know that a factor of enormous magnitude in the prosperity of this people is the perfect freedom of trade that reigns and has sway from ocean to ocean and from the lakes to the Gulf.

If it is wrong economically to trade with Canada, if we are to be injured by it, then it is wrong for the people of Maryland and Delaware and Virginia to trade with Massachusetts and New York and New Hampshire, for the same reason exactly applies; and knowing that the prosperity of this great country, which is the largest contiguous area over which free trade reigns in the whole world, is due to that free trade, I am willing to apply logically that doctrine to our trade with those who live across the wire fence that separates us from Canada.

Mr. LINDSAY. Will the Senator from Delaware permit a suggestion? I understand that the philosophy of protection to establish industries is to encourage American manufacturers and ultimately to reduce the prices of products.

Mr. GRAY. So I understand.

Mr. LINDSAY. I ask the Senator whether it is likely that the two-dollar tax will encourage the timber industry and ultimately reduce the price of lumber to the American consumer lower than it would be if we left it to Canada to supply it?

Mr. GRAY. I do not think anybody so contends. I do not think it would be a very grateful argument to the owners of the valuable timber land in North Carolina and Georgia, in Idaho and Washington, that this competition is going to reduce the value of the timber lands in that country.

Mr. WILSON. There is one thing, if the Senator from Delaware will permit me, of which he is probably aware better than I am. Two or three years ago, when we had a tariff on lumber and could buy it, a party came into power and said, "We will give you free trade in raw materials, and by the free trade in lumber and coal and lead we are going to have peace and plenty and prosperity, and the great aurora borealis is going to spread itself all over this country and give the people plenty of employment and happiness." Has it come? Is it visible to the naked eye? Is this free-trade doctrine, for which he is speaking so eloquently to-day, here?

Mr. GRAY. I am not going to answer questions which it is incumbent upon the Senator himself to answer. He is one of the advance agents of prosperity, and if he has got so far ahead of the procession, he can look back and tell us how far off it is.

Mr. WILSON. About as far off as the prosperity under the Wilson Act.

Mr. THURSTON. There is nothing in the way of it now but talk.

Mr. GRAY. Mr. President, I am through. Perhaps I should have concluded before, but I want to say there is no reason, it seems to me, why this schedule should remain, and why we should not have this free raw material and allow the people of this country access, untrammeled and unhindered by legislation, to that bounty which has with lavish hand been distributed all over this country and all over this continent by nature itself. We should be no better off if consuming fire had devastated every forest north of the Canada border, and yet that would produce the precise effect that you are seeking to produce by a protective tariff. The world's wealth would be that much decreased, and every man, woman, and child who depends upon lumber for shelter would suffer an appreciable loss, but of course the owners of the timber land would gain, because the price of timber would be increased, and that is what a protective tariff seeks to do. It seeks to do what fire and flood might do, to make a scarcity, as the Senator from Nebraska [Mr. ALLEN] so well said a while ago, and fill the pockets of those who are fortunate enough to possess the article to be sold.

Mr. RAWLINS. Mr. President, I have not long been a member of this body, and I have listened with some attention to the discussion as it has proceeded in regard to the tariff question. I started upon the same platform which has been so eloquently defended by the distinguished Senator from Delaware [Mr. GRAY]. Commercial and industrial freedom, together with all kinds of freedom spoken of by the Senator, ought to be, in my opinion, dear to every American heart.

In my feeble way during the late campaigns I advocated that cause before the people. When the convention of the Democratic party convened at Chicago and made its declaration of principles, we submitted the issues to the American people. I am compelled sincerely to sympathize with some of the gentlemen who find themselves in an unusual dilemma. We have had from the eloquent tongue of the Senator from Delaware [Mr. GRAY] and other Senators upon this side a vivid depiction of the evils of the protective system which is now proposed to us for consideration and adoption by Senators upon the other side. We have had portrayed to us and the American people the great burden which is to result to the immense body of American consumers by the increased cost to them of the necessaries of life, resulting from the application of that system in the administration of our Government.

But what does surprise me is that when that issue was presented to the American people voices which are now so eloquent were then silent. I wonder now whether they may not be somewhat conscience-stricken for having contributed to the success of the party which openly declared its purpose to inaugurate this system of which they now so bitterly complain? If we had heard then the voices we hear now, perhaps the result might have been different.

For myself, sitting here and listening to this discussion, I think it is but vain resistance to the inevitable. The measure has been prepared. It has been decreed. It will be passed as it has been framed. No eloquence now upon this side or opposition at this time will have the least possible effect in mitigating its evil consequences, if evil consequences are to come. The time when we should have spoken has passed. I regret that we did not have that measure of support from some people who ought to have been in sympathy with us then which seems so in evidence now.

Mr. GRAY. May I interrupt the Senator from Utah for a moment?

Mr. RAWLINS. In one moment.

Mr. GRAY. I wish to say only one word. If the Senator and others had paid as much attention to free trade as they did to free silver, or had paid more attention to free trade than to free silver, perhaps we would have had a different result.

Mr. RAWLINS. Perhaps we should have had a different result if the prophecies the Senator made in 1893, to restore prosperity if only his financial policy should be acted upon and adopted in this country, had been verified. You said to us the efflux of gold would cease. You said to us, "Repeal the Sherman law." You said, "Stop the coinage; stop this creation of dishonest money. We promise you that there will be immediate restoration of confidence. The evils that afflict the country will pass away." Unfortunately for you and those who made the prophecy at that time, your predictions have been falsified by experience. Unfortunately for you, as well as for others who cooperated with you last year in bringing about the very result which you now decry, the announcement of the vote in last November did not verify the truth of the assertions which you then made to the public. It was that we shall not open the mints, but we will open the mills.

Mr. President, I did not rise to discuss the financial question. When it is opportune and proper to talk about it, we may meet that issue. But I desire to say, in this connection, that it seems to me we ought to let the gentlemen now do at once, and quickly, the inevitable. Let them take the responsibility of it. When the time comes, we will again make the appeal, perhaps, to the American people. We shall then hear the voices of the distinguished Senator and other Senators, perhaps, when, in the light of experience, the result of the election may be different. I sincerely hope it will be.

One word more. Something has been said about free raw material, which implies that the improved or finished product, of which it becomes an ingredient, shall not be free. That means discriminating protection. As I view it, it means class favoritism. It means sectional inequality. It is an attempt to discriminate between the different degrees or stages of development and production, between the crude and the improved and the finished.

Its usual effect is a discrimination between the seller and the buyer, because what is one man's finished product is another man's raw material. What is one man's principal is another man's instrumentality.

It means usually nothing more than a discrimination between the rural and the urban, the crude and the artistic, between section and section, and in the end, if you analyze it, it comes down to a question of discrimination between the sweat of the brow and the friction of the machine, the blood flowing in the veins of the workingman and the falls of Niagara.

I wish now to enter my protest, because some votes which I shall cast in this body will be upon the principle which I now desire to state, and I do not care to be required to make explanation of it later. That is my only justification for detaining the Senate at this time.

Here is an economic policy, in my judgment a paradox, an Irish bull, the very statement of which involves a denial of its correlative: For the factory owners it is claimed that if their materials are taxed they can not enter into the markets of the world upon the same terms with their foreign competitor. The correlative is if their materials are untaxed they can enter the markets of the world upon equal terms with their foreign competitor. That is a confession that there is no necessity for protection for the sake of protection. That is eliminated.

Then the remaining question is, How shall we equitably and justly distribute the burdens of taxation among our own people? Then, again, we hear from the factory or mill classes of this country, "We can not afford to be taxed; our business is unprofitable; we are in distress, and must be exempt from taxation." But from the farm, from the mine, from every industry throughout the length and breadth of the country that same appeal for exemption, resulting from distress, may as well, in intensified degree, be made, be echoed and reechoed. If you exempt one on that account, you must exempt all the others. There is but one class of people who can not truthfully raise this cry. That class is safely secured and guarded from the inroads of taxation behind the bulwark of the Constitution of our country.

Then the question which confronts the people—those of us who plead that this Government ought to be economically administered, but that the people should bear their just share of taxation, which is necessary for its preservation and maintenance—is how to do it upon terms of equality. So the Democratic convention at Chicago set itself right upon this and other fallacies into which it temporarily fell, in deference to an accident, in adoration of a fetich, by declaring for the imposition of duties for the purposes of revenue, such duties to be so adjusted as to operate equally throughout the country and not to discriminate between class or section.

If you tax woolen goods, which shelter the people from the inclement weather, there is no reason why you should not tax the materials which enter into the composition of those goods. If you tax for one section, you must distribute the burden by taxing for other sections, if you can. It is impossible to form an equitable basis of taxation upon the protective theory, operating and falling alike heavily upon all our people. We must, in the nature of things, under existing circumstances, keep uniformity and equality as an ideal to which the nearest possible approach should be made.

I am opposed as much as is the Senator from Delaware to the imposition of duties in favoritism to manufacturers to conserve wealth, to create monopolies. It does not benefit labor either directly or by any process of filtration. I can by no wild flight of imagination conceive my fortune improved because some other man is elevated in the scale of magnificent wealth and luxury, when I occupy no relation to him by which to share the bounty or become heir-expectant to his fortune. It is equally absurd to say that the toiler in the mill is to reap any part of the fruit of advantage which you, by the pending tariff bill, give for the benefit of the proprietor. You but increase the power to enslave and oppress.

Mr. CAFFERY. Mr. President, the Senator from Utah, as has been done before, has injected a silver issue into this discussion. He seems to resent the fact that because some of us claiming to be Democrats would not uphold the Chicago platform upon the money issue, therefore we should now keep our mouths closed. The Senator from Utah and all his silver colleagues, not only at the time of the adoption of the Chicago platform, but ever since that period, have proclaimed, in and out of season, that the money question was and is the paramount question of the day. The great leader of the forces that marched under the banners erected at Chicago has stated that the campaign just passed was only the initial struggle; that it was only the first gun in a battle to be continued until silver triumphed or silver was defeated.

I have regretted the attitude of the Republican party on the tariff question. I thought and think now that a moderate revenue tariff, framed to meet what was alleged to be a deficit between the expenditures and receipts, ought to have been presented by the Republican majority, and not a bill framed upon lines of protection, pure and simple. Neither that party nor any other party can evade the issue that is pushed upon them by the adherents of the Chicago platform. I thought then, and think now, that the adoption of free silver at 16 to 1 is beyond all expression more dangerous to the prosperity and peace of the country than any tariff law.

Now, sir, while we who have been separated from our brethren on the money question, honestly divided, patriotically divided, choose to add our voice to the voice of a large constituency that we represent in deprecation of the theory of this bill, we are met by the censures of the Senator from Utah. I have formed my opinion upon the question of silver with as much deliberation, with as much honest study, as I am capable of giving to it, and I tell the Senator from Utah now that, whenever that question is raised, whenever the battle with silver is to be fought, I will be upon the side opposed to the free coinage of silver at 16 to 1. I thought that there was great danger to the country from the adoption of the principles of the Chicago platform. I thought my duty lay in the direction of supporting a ticket opposed to the principles enunciated in that platform. Subsequent reflection and subsequent light have only confirmed me in that opinion.

You want free silver. You want legislation to legislate value into a piece of metal. I am not astonished at the Senator from Utah when he couples a tariff upon the raw material with a demand for protection upon silver, or embraces silver within the same lines as enveloped the tariff upon products of the soil, or of the loom, or any other product. Free silver is a misnomer. It is an attempt to turn back the hand of civilization, the fiat of commerce which gives its value to one metal or the other, and substitute the artificial value to be imputed to these metals by legislation.

I believe neither in national nor international bimetallism. I believe that any effort on the part of legislation to give one centime of value to silver more than the commercial sense of mankind gives it, is nugatory and idle, and if you coin silver at 16 to 1 now or at any time when the market gives it the value that it has now, you will have silver monometallism. That thing that circulates all commodities, that thing upon which all transactions are based, must be stable and certain, not disturbed by legislation, and when the common measure of value is tampered with, threatened with annihilation by these constant assaults, then trade becomes demoralized, paralyzed, threatened, and it is less because of the tariff, but it is more because of this constant agitation of the silver question that trade does not manifest stability and health. That is my opinion.

I never have believed, and do not believe now, that you can make this people rich and prosperous by adding to the burden of tariff taxation or any other burdens. I never could see how a protective tariff could make people at large prosperous, for it is a diminishing of the amount of the consuming individual's property and placing it into the hands of a favored few. It can not augment the aggregate wealth. It only transfers from many pockets into a few pockets. I predict now that when this bill passes, as it will pass, the prices of the leading commodities, mostly the produce of the farm, will not advance one step. Highly protected manufactures probably will advance. You may add to the stability of commerce, you may put business upon a little safer foundation, because this tariff agitation certainly disturbs business to some extent, but you can not regulate all prices by a tariff any more than you can regulate the prices of a metal commodity by legislation.

I protest, Mr. President, against the constant injection into this debate of the silver question. It has no sort of connection with the tariff. The tariff is a broad proposition; so is this monetary proposition, but the two are not related in this debate.

I will attempt in my feeble way, sir, notwithstanding the eager haste to pass this bill, to show up what I consider to be its injustices and its enormities; nor will I be deterred in that line of conduct by any statement that the voices that are now loud in behalf of the principle of tariff for revenue were not raised in behalf of silver when its supporters were marching upon the Capitol, in my opinion, to the destruction of the prosperity of the country.

Mr. HALE and others. Question!

Mr. VEST. I ask for the yeas and nays.

The VICE-PRESIDENT. The pending question is upon the amendment of the Senator from Missouri [Mr. VEST], which will be read.

The SECRETARY. In paragraph 193, after the word "measure," line 19, page 60, insert the words "except white pine;" so as to read:

Sawed lumber, not specially provided for in this act, $2 per thousand feet board measure, except white pine.

Mr. HALE. On that let us have the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CLAY (when his name was called). I am paired with the junior Senator from Massachusetts [Mr. LODGE]. Were he present, I should vote "nay."

Mr. HALE. The Senator from Massachusetts, if present, would vote "nay."

Mr. CLAY. Then I will vote. I vote "nay."

Mr. HOAR. I desire to state that my colleague [Mr. LODGE] is unwell and is compelled to be absent.

Mr. QUAY (when his name was called). On this vote I am specially paired with the Senator from Massachusetts [Mr. LODGE].

Mr. WARREN (when his name was called). I am paired with the junior Senator from Washington [Mr. TURNER].

Mr. WELLINGTON (when his name was called). I have a pair with the junior Senator from North Carolina [Mr. BUTLER]. In his absence I will withhold my vote. If he were present, I should vote "nay."

Mr. WILSON (when his name was called). I am paired with the Senator from Florida [Mr. PASCO]. If present, he would vote "yea" and I should vote "nay."

The roll call was concluded.

Mr. VEST. I announce my pair with the Senator from Minnesota [Mr. NELSON]. If he were present, I should vote "yea."

Mr. LINDSAY (after having voted in the affirmative). I withdraw my vote and stand paired with the senior Senator from Rhode Island [Mr. ALDRICH].

The result was announced—yeas 20, nays 38; as follows:

YEAS—20.

Allen,	Carter,	Jones, Ark.	Morgan,
Bate,	Chilton,	Kyle,	Murphy,
Berry,	Cockrell,	Mantle,	Pettus,
Caffery,	Gray,	Mills,	Roach,
Cannon,	Harris, Kans.	Mitchell,	Walthall.

NAYS—38.

Allison,	Foraker,	McBride,	Rawlins,
Bacon,	Frye,	McEnery,	Sewell,
Burrows,	Gallinger,	McLaurin,	Shoup,
Chandler,	Gear,	McMillan,	Spooner,
Clark,	Hale,	Martin,	Thurston,
Clay,	Hanna,	Mason,	Tillman,
Cullom,	Hawley,	Perkins,	Wetmore,
Davis,	Heitfeld,	Platt, Conn.	White.
Elkins,	Hoar,	Platt, N. Y.	
Fairbanks,	Jones, Nev.	Pritchard,	

NOT VOTING—31.

Aldrich,	Hansbrough,	Pasco,	Turner,
Baker,	Harris, Tenn.	Penrose,	Turpie,
Butler,	Kenney,	Pettigrew,	Vest,
Daniel,	Lindsay,	Proctor,	Warren,
Deboe,	Lodge,	Quay,	Wellington,
Faulkner,	Mallory,	Smith,	Wilson,
George,	Morrill,	Stewart,	Wolcott.
Gorman,	Nelson,	Teller,	

So Mr. VEST's amendment was rejected.

Mr. ALLEN. Mr President——

Mr. ALLISON. Before the Senator from Nebraska asks a vote on his motion to amend, I desire now to perfect the remaining paragraphs that were passed over until this matter was disposed of. Paragraph 201, I believe, was passed over.

Mr. JONES of Arkansas. And paragraph 197, I think.

Mr. ALLISON. Paragraph 197 was also passed over.

Mr. JONES of Arkansas. I think it was; I am not positive.

Mr. HALE. Yes, paragraph 197 was passed over.

The VICE-PRESIDENT. Paragraph 197 will be read.

The Secretary read the paragraph, as follows:

197. Clapboards, $1.50 per thousand.

Mr. ALLISON. As the paragraph stands now there is no amendment proposed.

The VICE-PRESIDENT. Paragraph 197 is open to amendment.

Mr. JONES of Arkansas. Some one asked to have it passed over.

Mr. ALLISON. Line 19, page 62, paragraph 201, was passed over.

The SECRETARY. In line 19, paragraph 201, after the word "shingles," the Committee on Finance propose to strike out "thirty" and insert "twenty-five;" so as to read:

201. Shingles, 25 cents per thousand.

Mr. ALLISON. The committee recommend that that amendment be disagreed to.

The VICE-PRESIDENT. The question is on agreeing to the amendment.

The amendment was rejected.

Mr. ALLISON. After paragraph 202 the majority of the committee recommend the insertion of a new paragraph, 202½. It is a transposition from another part of the bill.

The SECRETARY. After line 23, page 62, insert as a new paragraph:

202½. Boxes, barrels, or other articles containing oranges, lemons, limes, grape fruits, shaddocks, or pomelos, 30 per cent ad valorem: *Provided*, That the thin wood, so called, comprising the sides, tops, and bottoms of orange and lemon boxes of the growth and manufacture of the United States, exported as orange and lemon box shooks may be reimported in completed form, filled with oranges and lemons, by the payment of duty at one-half the rate imposed on similar boxes of entirely foreign growth and manufacture.

The VICE-PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. ALLISON. On line 2, page 63, paragraph 203, I ask that the committee amendment may be now agreed to. It was passed over on Saturday.

The SECRETARY. On line 2, page 63, in paragraph 203, after the word "willow," the Committee on Finance propose to strike out "fifty" and insert "forty;" so as to make the paragraph read:

203. Chair cane or reeds, wrought or manufactured from rattans or reeds, 10 per cent ad valorem; osier or willow prepared for basket makers' use, 20 per cent ad valorem; manufactures of osier or willow, 40 per cent ad valorem.

The VICE-PRESIDENT. Without objection, the amendment will be agreed to.

Mr. ALLISON. The committee propose no further amendments. I suppose the amendment of the Senator from Nebraska [Mr. ALLEN] is now in order.

Mr. ALLEN. I now call up my amendment.

Mr. JONES of Arkansas. Was not paragraph 204 passed over?

Mr. ALLISON. Paragraph 204?

Mr. JONES of Arkansas. I think so.

Mr. ALLISON. Paragraph 204, relating to toothpicks and skewers, was agreed to.

Mr. HALE. Yes; that paragraph was agreed to.

Mr. ALLEN. I move to strike out the entire schedule—Schedule D—and to substitute what I send to the desk.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. Strike out all of Schedule D and insert in lieu thereof the following:

SCHEDULE D.—WOOD AND MANUFACTURES OF.

Osier or willow, prepared for basket-makers' use, 20 per cent ad valorem; manufactures of osier or willow, 35 per cent ad valorem; chair cane, or reeds, wrought or manufactured from rattans or reeds, 10 per cent ad valorem.

Casks and barrels, empty, sugar-box shooks, and packing boxes and packing-box shooks, of wood, not specially provided for in this act, 20 per cent ad valorem.

Toothpicks of vegetable substance, 35 per cent ad valorem.

House or cabinet furniture, of wood, wholly or partly finished, manufactures of wood, or of which wood is the component material of chief value, not specially provided for in this act, 25 per cent ad valorem.

Mr. VEST. On that I ask for the yeas and nays.

Mr. WHITE. If I understand the effect of the amendment of the Senator from Nebraska, it is to restore the Wilson Act provision. Am I correct?

Mr. ALLEN. I supposed I had the floor until I could explain the matter.

The VICE-PRESIDENT. The Senator from Nebraska has the floor.

Mr. ALLEN. My motion is to substitute Schedule D of the Wilson Act for the schedule in the pending bill.

Mr. JONES of Arkansas. To strike out this schedule and insert the schedule of the Wilson Act.

Mr. ALLEN. To strike out this schedule and insert Schedule D of the Wilson Act.

Mr. BATE. It is the schedule of the Wilson Act which has just been read, and which is intended as a substitute?

Mr. ALLEN. Yes. It is to be followed by proposing for adoption paragraphs 671 to 684 of the Wilson Act, transferring various forms of lumber and timber to the free list.

Mr. HALE. That is, if the Senator's amendment carries, then the free-list provision he refers to will have to be changed accordingly?

Mr. ALLEN. Yes, sir; I shall then ask the Senate to adopt the free-list provision of the Wilson Act.

Mr. JONES of Arkansas. We all understand it now.

Mr. ALLEN. In other words, I want the Wilson Act as it stands on the question of lumber adopted.

The VICE-PRESIDENT. The question is on agreeing to the amendment of the Senator from Nebraska [Mr. ALLEN].

Mr. HALE. Let us have the yeas and nays upon agreeing to the amendment.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. DANIEL (when his name was called). I am paired with the Senator from North Dakota [Mr. HANSBROUGH].

Mr. GRAY (when his name was called). I am paired on this vote with the junior Senator from Massachusetts [Mr. LODGE]. If he were present, I should vote "yea" and he would vote "nay."

Mr. BATE (when the name of Mr. HARRIS of Tennessee was called). I desire to state that my colleague [Mr. HARRIS of Tennessee] is out of his seat this evening and is paired with the Senator from Vermont [Mr. MORRILL].

Mr. VEST (when his name was called). I am paired with the Senator from Minnesota [Mr. NELSON] or I should vote "yea."

Mr. WARREN (when his name was called). I again announce my pair with the junior Senator from Washington [Mr. TURNER]. Were he here and voting, I should vote "nay."

The roll call was concluded.

Mr. WILSON. I again announce my pair with the Senator from Florida [Mr. PASCO]. If he were present, he would vote "yea" and I should vote "nay."

Mr. WELLINGTON. I again announce my pair with the junior Senator from North Carolina [Mr. BUTLER]. Were he present, I should vote "nay."

Mr. LINDSAY (after having voted in the affirmative). I again withdraw my vote, and will stand paired with the senior Senator from Rhode Island [Mr. ALDRICH]. If he were here, I should vote "yea."

The result was announced—yeas 21, nays 37; as follows:

YEAS—21.

Allen,	Cockrell,	Mills,	Turpie,
Bate,	Faulkner,	Mitchell,	Walthall,
Berry,	Harris, Kans.	Morgan,	White.
Caffery,	Heitfeld,	Murphy,	
Cannon,	Jones, Ark.	Pettus,	
Chilton,	Kyle,	Roach,

So Mr. ALLEN's amendment was rejected.

Mr. VEST. Mr. President, I have heard it intimated that the sugar schedule, which comes next in sequence in the bill, for some reason may not be considered to-morrow. That is one of the most important schedules we have in the bill, and we should like very much upon this side of the Chamber to know from the majority what is their intention in regard to it. To be entirely frank, I will first mention something that I have heard of some change of that schedule. I do not know it, and I am not authorized to state it, but I make that inquiry respectfully of the Senator from Iowa.

Mr. ALLISON. In response to the suggestion made by the Senator from Missouri, I will say that it is possible that some changes may be made in the Senate committee's amendment to the sugar schedule. I think it will be impossible, however, for us to go over that so as to be ready to take up the sugar schedule to-morrow. It is the purpose, as I understand, of this side of the Chamber to consider that schedule at as early a date as possible, taking into account the facilitating of its passage in some form. That I understand also to be the object of Senators on the other side.

Mr. WHITE. Mr. President——

Mr. ALLISON. Will the Senator please wait for one moment?

Mr. WHITE. Certainly.

Mr. ALLISON. Should any changes be made or proposed, they will be presented to the Senate at a very early day, so that the sugar schedule, if delayed to-morrow for that reason or any other—possibly we shall not want to take up the sugar schedule to-morrow even if the amendments are ready—the amendments will be offered and time will be given, if the other side desire it, to consider them before they are taken up in the Senate. If the sugar schedule should be passed over to-morrow, I hope we shall arrange to go on

with the tobacco schedule, although it is barely possible that we shall ask that that be postponed for a day. If that be true, then we shall be ready to take up the agricultural schedule. I hope that either the sugar schedule or the tobacco schedule will be taken up to-morrow, and that one will follow the other.

Mr. MORGAN. I will ask the Senator from Iowa whether he would not be willing to take a recess for, say, two days, in order to give the committee a chance to prepare a bill?

Mr. ALLISON. I do not quite understand the intimation of the Senator from Alabama.

Mr. MORGAN. I merely made a request.

Mr. ALLISON. Of course the Senator from Alabama is well aware of the fact that we have passed over many paragraphs and many schedules with a view to hearing people who are interested, and some, perhaps, who are disinterested, and the sugar schedule, for reasons that are perfectly known to the Senator from Alabama, we have not been able to consider at all in the committee for several days. As to the tobacco schedule, I will restate that we hope to be able to take that up to-morrow.

Mr. MORGAN. If I had heard of any Democrats who desired to be heard before the committee, I should be quite content if the committee would give a little delay so that those Democrats might express themselves. I believe, however, this side of the House has never been invited into a consultation at all.

Mr. ALLISON. I will say to the Senator from Alabama that very many Democrats have appeared before the committee with a view of changing paragraphs in the various schedules, and I have taken it for granted that they were interested—possibly they may not be; but I suppose people are interested one way or the other in this bill whether they are Democrats or Republicans, and we want to get it as nearly right as we can for the general interest without reference to party.

Mr. MORGAN. I am glad to hear that any Democrat has ever been permitted to go before the committee at all. I suppose they have ascertained now what their fate is to be. There is to be no modification of these schedules except according to the will of one side of this committee, and I think, inasmuch as the committee are evidently not prepared to go on with this bill now, the best thing we can do is not to ask consent to take it up by piecemeal or a schedule at a time, and skip some and go on with others, but that we had better just take a recess and give the committee time to prepare the bill. They are not ready now, it seems.

Mr. WHITE. Will the Senator from Iowa yield to me for a question?

Mr. ALLISON. Yes, sir.

Mr. WHITE. I desire to ask the Senator from Iowa whether I understood him as saying that it was probable that the sugar schedule would not come up to-morrow, but that still it might come up, and that it was possible that the tobacco schedule would come up to-morrow, but that still it might not come up? It seems to me that statement was a little uncertain; and, not wishing to annoy the Senator from Iowa by this reference to it, I think that those of us who find it necessary to examine these schedules day by day would like to know definitely some schedule that is to come up to-morrow unless unforeseen circumstances intervene; and I suggest to the Senator from Iowa to state, if possible, a schedule that is certain to come up to-morrow. If he will do so, it may perhaps lighten the labors of those who have to carry ponderous protests to this Chamber.

Mr. ALLISON. My suggestion was perhaps a little indefinite, and the Senator from California, acute as he is, has made it appear more indefinite than I intended it. We have been told two or three times by those in charge of the opposition to the bill on the other side that they wanted some notice if there was to be a postponement of any of these schedules. It has been well known that the Senator from Rhode Island [Mr. ALDRICH], who has been quite ill for a week or more, expects to be present when the sugar schedule is taken up; at least I hope he may be. He may be in the Chamber to-morrow, or he may not be. I hope he will be. It is also possible that there may be a modification of the sugar schedule, and I hope that will not be offensive.

If a modification is made, the Senators on the other side would possibly require it to be printed in order that they might be enabled to throw such light upon it as a night would give them an opportunity to do. In that event, the schedule would not be taken up to-morrow. That is one of the uncertainties. Now, if the uncertainty should solve itself in the way of a postponement of that schedule, we should take up the tobacco schedule, unless something intervened, as matters from time to time have intervened. It may be postponed, but I hope it will not be.

Mr. WHITE. That is quite clear.

Mr. JONES of Arkansas. Mr. President——

Mr. ALLISON. I wish to say one word more, and then I shall yield. In response to the intimation and suggestion of the Senator from Alabama [Mr. MORGAN] of the incapacity of those who have charge of this bill to conduct it without a recess, I can assure him and assure Senators on the other side, that if they do not wish to act according to the convenience of those who have this bill in charge, we shall be ready to-morrow to take up any schedule that will suit the convenience of Senators on the other side.

Mr. MORGAN. I protest that I made no sort of intimation against the capacity of the committee. I sympathize with them very deeply in their involvement in troubles which are unavoidable. I can conceive how the Senators are facing questions extremely difficult to handle; and I put in my suggestion in order to give them full breathing time, that they might come back to the Senate with their minds made up and their consciences all reconciled to what they were about to do. That is all.

Mr. QUAY. I move that the Senate proceed to the consideration of executive business.

Mr. JONES of Arkansas. With the permission of the Senator from Pennsylvania [Mr. QUAY], I should like to ask the Senator from Iowa [Mr. ALLISON], before he leaves the Senate Chamber, what we are to do to-morrow? It is absolutely necessary, in order that we may have some idea of what is to be done. For him to tell us that either the sugar schedule, the tobacco schedule, the agricultural schedule, or some other schedule will come up to-morrow seems to be too indefinite, and the Senator from Iowa is too fair a man to think it is just to us that we shall be asked to adjourn this evening and come back to-morrow morning knowing nothing on the face of the earth as to what will come up to-morrow.

Mr. ALLISON. It was in deference to what I suppose to be the wishes and desires of those opposed to this schedule that I endeavored to state with frankness the difficulties that might be in our pathway to-morrow. I will say to the Senator that I think it is doubtful whether the sugar schedule will be taken up to-morrow.

Mr. JONES of Arkansas. Then say the sugar schedule will not come up to-morrow.

Mr. ALLISON. That is the next schedule in order.

Mr. JONES of Arkansas. Certainly it is, and I should like to have the Senator say now, before adjourning, whether the sugar schedule will or will not come up to-morrow. It seems to me we are entitled to know that much.

Mr. ALLISON. The Senator from Alabama [Mr. MORGAN] took occasion to say that we ought to take a recess that we might know what is coming up to-morrow. The sugar schedule is in order now, and sufficient unto the day is the evil or the good thereof.

Mr. JONES of Arkansas. The minority has some rights in this matter as well as the majority, and I deny that the majority has the right to say to the minority that "sufficient unto the day is the evil thereof," and that we shall know nothing of what is to come before the Senate.

Mr. ALLISON. I said "the good thereof."

Mr. JONES of Arkansas. There is no good in it.

Mr. ALLISON. If the Senator desires that I shall give notice of what shall be done to-morrow, I will give notice that on to-morrow the sugar schedule will be passed over, if that suits the convenience of Senators.

Mr. JONES of Arkansas. Anything suits us that the Senator wishes; but I should like to know what is going to be taken up.

Mr. ALLISON. I understand that. On to-morrow the tobacco schedule will come up. I shall ask that that schedule be considered to-morrow.

Mr. CANNON. May I ask the Senator a question?

Mr. ALLISON. Yes, sir.

Mr. CANNON. In view of the uncertainty of the first statement as to the tobacco schedule, I was about to ask the Senator from Iowa if he would not consent to have the agricultural schedule taken up to-morrow, and I make that request now.

Mr. ALLISON. After what has been said on both sides of this Chamber, and the apparent good will and good feeling that prevails on the other side, I should like very much to accommodate those who are on the other side and take up these schedules as rapidly as we can in the order of their succession, and therefore the tobacco schedule will come up to-morrow, as I have already stated. It will occupy, I think, only a portion of the day. Then, if the sugar schedule is not ready to be taken up, for the convenience of both sides of the Chamber the agricultural schedule will be next in order; but it will be taken up at the earliest possible time to-morrow, and certainly by the next day.

Mr. CANNON. If the Senator from Iowa will continue his kindness, if the sugar schedule is passed over to-morrow, as I now understand to be the intention of the committee, will the agricultural schedule be taken up immediately following the tobacco schedule and before the recurrence of the sugar schedule?

Mr. ALLISON. I am not able to state that, for I do not know; but I should think the sugar schedule would be taken up at the earliest possible day and gotten out of the way, if that is the wish of Senators.

Mr. QUAY. Regular order, Mr. President.

Mr. CANNON. With the permission of the Senator from Pennsylvania, I give notice that at the conclusion of paragraph 283 of the bill, being the agricultural schedule, I shall move to

amend the bill by the insertion of the amendment offered by me recently for the granting of export bounties to shippers of agricultural products from the United States, and I shall make some remarks thereon. I ask that the amendment I have proposed may be inserted in the RECORD.

The VICE-PRESIDENT. If there be no objection, the amendment intended to be proposed by the Senator from Utah will be inserted in the RECORD.

The amendment referred to is as follows:

At the agricultural schedule insert:

"And from and after sixty days from the passage of this act there shall be paid, out of any moneys in the Treasury of the United States not otherwise appropriated, to any exporter of wheat or wheat flour, rye or rye flour; corn, ground or unground; cotton, hops, or tobacco, produced wholly in the United States and exported by sea from any port in the United States to any port of any other country, the following export bounty, by way of an equalization to agriculture of the benefits of this act to encourage the industries of the United States, to wit: Ten cents per bushel on wheat; 50 cents per barrel on wheat flour; 10 cents per bushel on rye; 50 cents per barrel on rye flour; 5 cents per bushel on corn; 10 cents per cental on corn, ground; 1 cent per pound on cotton; 2 cents per pound on hops; 2 cents per pound on tobacco. And all payments of bounty under this act shall be made upon negotiable vouchers, issued by the collector of customs at the port of clearance, upon presentation at the Treasury or any subtreasury of the United States; and the Secretary of the Treasury is hereby charged with making and enforcing such regulations as may be necessary for the full protection of the exporters and of the Government according to the true intent and meaning of this law."

EXECUTIVE SESSION.

Mr. QUAY. I renew my motion that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After fifteen minutes spent in executive session the doors were reopened, and (at 5 o'clock and 45 minutes p. m.) the Senate adjourned until to-morrow, Tuesday, June 8, 1897, at 12 o'clock meridian.

NOMINATIONS.

Executive nominations received by the Senate June 7, 1897.

SUPERINTENDENT OF CHARITIES.

Herbert W. Lewis, of Maryland, to be superintendent of charities for the District of Columbia, vice John Tracey, deceased.

PROMOTIONS IN THE NAVY.

Ensign Benjamin W. Wells, jr., to be a lieutenant (junior grade) in the Navy, from the 21st day of March, 1897, vice Lieut. (Junior Grade) William E. Safford, promoted.

Ensign Newton A. McCully, to be a lieutenant (junior grade) in the Navy, from the 6th day of April, 1897, vice Lieut. (Junior Grade) William J. Maxwell, promoted.

Ensign Levi C. Bertolette, to be a lieutenant (junior grade) in the Navy, from the 29th day of April, 1897, vice Lieut. (Junior Grade) Franklin Swift, promoted.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 7, 1897.

SOLICITOR FOR DEPARTMENT OF STATE.

William L. Penfield, of Indiana, to be Solicitor for the Department of State.

AUDITOR FOR TREASURY DEPARTMENT.

William E. Andrews, of Nebraska, to be Auditor for the Treasury Department.

AUDITOR FOR WAR DEPARTMENT.

William W. Brown, of Pennsylvania, to be Auditor for the War Department.

CONSUL.

William W. Canada, of Indiana, to be consul of the United States at Vera Cruz, Mexico.

PROMOTIONS IN THE NAVY.

Commander Richard P. Leary, to be a captain.
Lieut. Commander William Swift, to be a commander.
Lieut. Herbert Winslow, to be a lieutenant-commander.
Lieut. (Junior Grade) William J. Maxwell, to be a lieutenant.
Lieut. (Junior Grade) Franklin Swift, to be a lieutenant.
Lieut. Commander Henry B. Mansfield, to be a commander.
Lieut. William H. Turner, to be a lieutenant-commander.

POSTMASTERS.

James R. Barr, to be postmaster at Cambridge, in the county of Guernsey and State of Ohio.

James F. Posten, to be postmaster at Elkins, in the county of Randolph and State of West Virginia.

Alfred York, to be postmaster at Fort Riley, in the county of Geary and State of Kansas.

Richard S. Oakford, to be postmaster at Herington, in the county of Dickinson and State of Kansas.

Harry H. Lusk, to be postmaster at Parsons, in the county of Labette and State of Kansas.

Charles E. Bowman, to be postmaster at Argentine, in the county of Wyandotte and State of Kansas.

Frank M. Atkinson, to be postmaster at St. Joseph, in the county of Buchanan and State of Missouri.

John Alfred, to be postmaster at Leadville, in the county of Lake and State of Colorado.

William Drawe, to be postmaster at Cuero, in the county of Dewitt and State of Texas.

HOUSE OF REPRESENTATIVES.

MONDAY, *June 7, 1897.*

The House met at 12 o'clock noon, and was called to order by the Speaker.

Prayer by the Chaplain, Rev. HENRY N. COUDEN.

The Journal of the proceedings of Thursday last was read and approved.

MESSAGE FROM THE PRESIDENT.

A message in writing from the President of the United States was communicated to the House of Representatives by Mr. PRUDEN, one of his secretaries, who also announced that the President had approved and signed a bill of the following title:

An act (H. R. 16) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1898, and for other purposes.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed bills of the following titles; in which the concurrence of the House was requested:

A bill (S. 1271) for a public building at the city of Wilkesbarre, Pa., and appropriating money therefor; and

A bill (S. 925) to provide for the erection of a public building at San Angelo, Tex.

The message also announced that the Senate had agreed to the amendments of the House of Representatives to joint resolution and bill of the following titles:

Joint resolution (S. R. 45) authorizing the Secretary of War to use rations for the relief of the destitute persons in the district overflowed by the Rio Grande River at and near El Paso, Tex.; and

A bill (S. 1886) to adopt regulations for preventing collisions upon certain harbors, rivers, and inland waters of the United States.

CÁRLOS GUTIERREZ.

Mr. DINSMORE. Mr. Speaker, I ask unanimous consent for the present consideration of Senate joint resolution 40, authorizing the Secretary of War to receive, for instruction at the Military Academy at West Point, Cárlos Gutierrez, of Salvador.

The SPEAKER. The gentleman from Arkansas [Mr. DINSMORE] asks unanimous consent for the present consideration of a joint resolution which the Clerk will report.

The Clerk read as follows:

Resolved, etc., That the Secretary of War be, and he hereby is, authorized to permit Cárlos Gutierrez, of Salvador, to receive instruction at the Military Academy at West Point: *Provided*, That no expense shall be caused to the United States thereby: *And provided further*, That in the case of the said Gutierrez the provisions of sections 1320 and 1321 of the Revised Statutes shall be suspended.

The SPEAKER. Is there objection to the present consideration of this joint resolution?

Mr. PAYNE. Mr. Speaker, I should like to ask the gentleman from Arkansas if there are precedents for this, and what is the reason for it?

Mr. DINSMORE. There are precedents for it. It has been done a number of times. It is merely a courtesy which is frequently extended to foreign countries by our Government. This is the son of a distinguished citizen of Salvador. As will be seen by the reading of the resolution, no expense whatever will be caused to the United States. It merely gives this young man the privilege of being educated in our Military Academy. I feel sure that nobody will object to it.

The SPEAKER. Is there objection?

There was no objection.

The joint resolution was ordered to a third reading; and it was accordingly read the third time, and passed.

On motion of Mr. DINSMORE, a motion to reconsider the last vote was laid on the table.

BRIDGE OVER THE ST. LOUIS RIVER BETWEEN WISCONSIN AND MINNESOTA.

Mr. MORRIS. Mr. Speaker, I ask unanimous consent for the present consideration of Senate bill 956, relating to the construction of a bridge across the St. Louis River between the States of Wisconsin and Minnesota.

The SPEAKER. The gentleman from Minnesota [Mr. MORRIS]

asks unanimous consent for the present consideration of the bill the title of which will be reported by the Clerk.

The Clerk read the title, as follows:

A bill (S. 956) to amend an act entitled "An act to authorize the construction of a steel bridge over the St. Louis River between the States of Wisconsin and Minnesota," approved April 24, 1894, as amended by an act approved August 4, 1894, entitled "An act to amend an act to authorize the construction of a steel bridge over the St. Louis River between the States of Minnesota and Wisconsin."

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The bill was read, as follows:

Be it enacted, etc., That sections 3 and 9 of the above entitled original act and section 3 of the same, as amended by the said act approved August 4, 1894, entitled "An act to amend an act to authorize the construction of a steel bridge over the St. Louis River between the States of Minnesota and Wisconsin," be amended so as to read, respectively, as follows:

"SEC. 3. That the accessory works referred to in the preceding section shall be such booms, dikes, piers, or other suitable and proper structures for confining the flow of water to a permanent channel, and for the guiding of steamboats, rafts, and other water craft safely through the draw and rafting spans, as shall be required by the Secretary of War; and in addition thereto, and before the construction of the bridge to be built under this act, the company or persons owning or holding such bridge shall be required, under the direction of the Secretary of War, or such officer as he shall designate, to dredge above and below said bridge to such depth and for such distance as in the judgment of the Secretary of War, or of such other officer as he shall designate, shall have been rendered necessary by the erection of the piers to said bridge."

"SEC. 9. That this act shall be null and void if actual construction of the bridge therein authorized be not commenced within one year and completed on or before August 1, A. D. 1897."

SEC. 2. That all acts or parts of acts in conflict with the provisions of this act are hereby repealed.

Mr. McMILLIN. Mr. Speaker, I should like to ask the gentleman in charge of the bill whether it has been reported on by any committee of the House?

Mr. TAWNEY. Yes; it passed the House at the last session.

Mr. MORRIS. This bill was reported upon by the Committee on Interstate and Foreign Commerce of the last House and passed unanimously. It went to the Senate and there failed to pass. It has now been passed by the Senate and comes back from the Senate to this House.

Mr. McMILLIN. It has never been considered by any committee of the present House?

Mr. MORRIS. Not by any committee of the present House.

Mr. McMILLIN. And this House is working up the remnants of the failures of the last Congress on its recommendations, instead of recommendations of committees appointed by this House?

Mr. MORRIS. That is for the gentleman from Tennessee [Mr. McMILLIN] to say.

The bill was ordered to a third reading; and it was accordingly read the third time, and passed.

On motion of Mr. MORRIS, a motion to reconsider the last vote was laid on the table.

BRIDGE ACROSS PEARL RIVER, MISSISSIPPI.

Mr. LOVE. Mr. Speaker, I ask unanimous consent for the present consideration of the bill S. 956, which is a similar bill to the one just passed, and also to the bill which was passed here last Thursday. It is an altogether local matter, and no objection can be made to the bill.

The SPEAKER. Has the gentleman a copy of the bill?

Mr. LOVE. No, sir. I thought the Clerk told me he had a copy of it. There is a mistake in the number of the bill. It is the bill S. 1979.

The SPEAKER. The gentleman had given the Clerk the wrong number.

Mr. LOVE. The Clerk gave me the wrong number.

ENROLLED BILLS SIGNED.

The SPEAKER. There is a wrong number somewhere [laughter]; but while the papers are being obtained, the Speaker will announce his signature to the following bills:

A bill (S. 1886) to adopt regulations for preventing collisions upon certain harbors, rivers, and inland waters of the United States;

A bill (S. 1944) to authorize the construction of a bridge across the Clinch River, Kingston, Tenn.; and

A joint resolution (S. R. 45) reappropriating the sum of $10,000 not expended for the relief of sufferers by the floods of the Mississippi River.

SENATE BILLS REFERRED.

Under clause 2 of Rule XXIV, the following Senate bills and concurrent resolutions were taken from the Speaker's table and referred to their appropriate committees as indicated below:

A bill (S. 479) to provide for the purchase of a site and the erection of a public building thereon at Nashua, in the State of New Hampshire—to the Committee on Public Buildings and Grounds, when appointed.

A bill (S. 129) to amend "An act for the correction of the military record of Wilhelm Spiegelburg," approved July 21, 1892—to the Committee on Military Affairs, when appointed.

A bill (S. 925) to provide for the erection of a public building at San Angelo, Tex.—to the Committee on Public Buildings and Grounds, when appointed.

A bill (S. 1271) for a public building at the city of Wilkesbarre, Pa., and appropriating money therefor—to the Committee on Public Buildings and Grounds, when appointed.

Concurrent resolution No. 8—

Resolved by the Senate (the House of Representatives concurring), That there be printed and bound 3,000 copies of the special report describing the methods and results of the investigations conducted by the astrophysical observatory of the Smithsonian Institution, entitled Annals of the Astrophysical Observatory, of which number 500 shall be for the use of the Senate, 1,000 for the use of the House of Representatives, and 1,500 copies for distribution by the Smithsonian Institution—

To the Committee on Printing, when appointed.

Concurrent resolution No. 10—

Resolved by the Senate (the House of Representatives concurring), That there be printed as a document the report of the United States Boundary Commission, pursuant to the convention between the United States and Mexico, touching the re-marking of the boundary line between those two countries west of the Rio Grande, and in addition thereto 3,000 copies of said report for the use of the Department of State—

To the Committee on Printing, when appointed.

SOCIAL AND ECONOMIC CONDITION OF THE ITALIANS IN CHICAGO.

The SPEAKER laid before the House the following message from the President; which was read, referred to the Committee on Labor, and ordered to be printed:

To the Senate and House of Representatives:

I transmit herewith the ninth special report of the Commissioner of Labor, which report relates to the social and economic condition of the Italians in Chicago.

WILLIAM McKINLEY.

EXECUTIVE MANSION,
Washington, D. C., June 4, 1897.

NOTE.—The manuscript of this report has been delivered to the Senate.

RETURN OF BILL TO THE SENATE.

The SPEAKER laid before the House the following resolution of the Senate:

Resolved, That the Secretary be directed to request the House of Representatives to return to the Senate the bill (S. 426) to authorize the construction of a bridge across the Missouri River between its mouth and the mouth of the Dakota or James River, and across the Mississippi River between the mouth of the Minnesota River, in the State of Minnesota, and Donaldsonville, in the State of Louisiana; and across the Illinois and Des Plaines rivers between the mouth of the Illinois River and the city of Joliet, in the State of Illinois; and to prescribe the character, location, and dimensions of the same.

The SPEAKER. If there be no objection, the request of the Senate will be complied with. [After a pause.] The Chair hears no objection, and it is so ordered.

Mr. VINCENT. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution which I will ask the Clerk to read, with the consent of the House.

The SPEAKER. The gentleman from Mississippi has been recognized.

BRIDGE ACROSS PEARL RIVER, MISSISSIPPI.

Mr. LOVE. Mr. Speaker, has the Clerk found the bill to which I referred a few moments ago?

The SPEAKER. The gentleman from Mississippi asks unanimous consent for the present consideration of the following bill.

The Clerk read as follows:

A bill (S. 1979) to authorize the construction of a bridge across Pearl River, in the State of Mississippi.

Be it enacted, etc., That the board of supervisors of Marion County, in the State of Mississippi, be, and is hereby, authorized to construct and maintain a highway bridge and approaches thereto across Pearl River, at or near the town of Columbia, in said county and State.

SEC. 2. That said bridge shall be located and built under and subject to such regulations for the security of navigation as the Secretary of War may prescribe, and to secure that object the said board of supervisors shall submit for his examination a design and drawing of the bridge and a map of the location, and until the said plan and location are approved by him the bridge shall not be commenced or built; and should any change be made in said bridge before or after completion, such change shall be likewise subject to the approval of the Secretary of War.

SEC. 3. That the said bridge shall be so kept and managed as to offer reasonable and proper means for the passage of vessels and other craft through or under the same, and for the safety of vessels passing at night there shall be displayed on said bridge, from sunset to sunrise, at the expense of the owners thereof, such lights or other signal as the Light-House Board may prescribe; and any changes in said bridge which the Secretary of War may, at any time, deem necessary and order in the interests of navigation shall be made by the owners thereof at their own expense.

SEC. 4. That this act shall be null and void if actual construction of the said bridge be not commenced in one year and completed in three years from the date hereof.

SEC. 5. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. PAYNE. I want to ask the gentleman from Mississippi, for the information of my friend from Tennessee [Mr. McMILLIN], who I hope will give attention to it, if this bill has been considered by any committee of this House?

Mr. McMILLIN. My friend from New York needs information worse than I do.

Mr. PAYNE. I think I know; but I wanted to have it understood, so that the gentleman from Tennessee would know.

Mr. LOVE. I would just like to say that that bill has not been referred to a committee, because there are no committees to refer it to.

Mr. PAYNE. It has not been reported by any committee of this House.

Mr. GAINES. That is the fault of the Republicans of this House.

Mr. PAYNE. I have no objection.

The SPEAKER. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none.

The bill was ordered to a third reading; and it was accordingly read the time, and passed.

On motion of Mr. LOVE, a motion to reconsider the vote by which the bill was passed was laid on the table.

ORDER OF BUSINESS.

Mr. GROSVENOR. I move that the House do now adjourn.

The SPEAKER proceeded to put the question.

Mr. BAILEY. Before that motion is submitted——

The SPEAKER. The motion is not debatable.

Mr. BAILEY. I understand it is not. I simply desire to say before the vote is taken that so long as the Cuban resolution and the bankruptcy bill are undisposed of we will feel compelled to resist these motions to adjourn.

Mr. GROSVENOR. Regular order!

Mr. BAILEY. I am ready for the regular order now.

The question was taken; and the Speaker announced that the ayes seemed to have it.

Mr. BAILEY. Division, Mr. Speaker!

The House divided.

Mr. GROSVENOR. The yeas and nays!

The SPEAKER. The gentleman from Ohio demands the yeas and nays.

Mr. BAILEY. I should like to have the vote announced.

The SPEAKER. On this question the ayes are 79, the nays 80. [Applause on the Democratic side.]

Mr. RICHARDSON. Another leader wrecked!

The yeas and nays were ordered.

The question was taken; and there were—yeas 92, nays 79, answered "present" 11, not voting 170; as follows:

YEAS—92.

Adams,	Dalzell,	Hitt,	Royse,
Alexander,	Danford,	Hooker,	Showalter,
Babcock,	Davenport,	Howe,	Simpkins,

The SPEAKER. The Clerk will announce the pairs.

The following pairs were announced:

Until further notice:

Mr. HAGER with Mr. HANDY.

Mr. MCCALL with Mr. JONES of Virginia.

Mr. YOUNG of Pennsylvania with Mr. BENTON.

Mr. BELKNAP with Mr. MAGUIRE.

Mr. FARIS with Mr. ZENOR.

Mr. HENRY of Indiana with Mr. MIERS of Indiana.

Mr. SMITH of Illinois with Mr. MCCULLOCH.

Mr. ACHESON with Mr. WILSON of South Carolina.

Mr. BARNEY with Mr. BANKHEAD.

Mr. WM. ALDEN SMITH with Mr. BRUCKER.

Mr. CHICKERING with Mr. BRADLEY.

Mr. SAUERHERING with Mr. STRAIT.

Mr. BARHAM with Mr. FITZGERALD.

Mr. STEWART of Wisconson with Mr. LITTLE.

Mr. MILLS with Mr. SULLIVAN.

Mr. REEVES with Mr. BALL.

Mr. BELDEN with Mr. SULZER.

Mr. LOVERING with Mr. WHEELER of Alabama.

Mr. MCEWAN with Mr. VEHSLAGE.

Mr. STRODE of Nebraska with Mr. ALLEN.

Mr. JOY with Mr. MARSHALL.

Mr. JOHNSON of Indiana with Mr. MOON.

Mr. BROSIUS with Mr. ERMENTROUT.

Mr. LACEY with Mr. MCRAE.

Mr. PITNEY with Mr. CARMACK.

Mr. KERR with Mr. ROBB.

Mr. BRUMM with Mr. COX.

Mr. LORIMER with Mr. BERRY.

Mr. STEVENS of Minnesota with Mr. JONES of Washington.

Mr. CLARKE of New Hampshire with Mr. KING.

Mr. MINOR with Mr. SPARKMAN.

Mr. HULL with Mr. DOCKERY.

Mr. SPRAGUE with Mr. MCDOWELL.

Mr. HEATWOLE with Mr. DINSMORE.

Mr. PERKINS with Mr. COOPER of Texas.

Mr. MERCER with Mr. DE ARMOND.

Mr. HEMENWAY with Mr. ROBERTSON of Louisiana.

Mr. QUIGG with Mr. BLAND.

Mr. MAHON with Mr. BENNER of Pennsylvania.

Mr. LANDIS with Mr. CRANFORD.

Mr. KULP with Mr. STALLINGS.

Mr. WALKER of Massachusetts with Mr. SLAYDEN.

Mr. WILLIAM A. STONE with Mr. MCCLELLAN.

Mr. DAVIDSON of Wisconsin with Mr. HOWARD of Georgia.

Mr. RUSSELL with Mr. SWANSON.

Mr. MCCLEARY with Mr. TALBERT.

Mr. MITCHELL with Mr. TAYLOR of Alabama.

Mr. OTJEN with Mr. LESTER.

Mr. HOPKINS with Mr. MCALEER.

Mr. WRIGHT with Mr. ADAMSON.

For this day:

Mr. CORLISS with Mr. LAMB.

Mr. LOW with Mr. OTEY.

Mr. MARSH with Mr. COONEY.

Mr. ODELL with Mr. FITZPATRICK.

Mr. HICKS. Mr. Speaker, I was paired with the gentleman from Virginia, Mr. OTEY, but the pair has been transferred to Mr. LOW, of New York, and I have voted "aye."

Mr. SWANSON. Mr. Speaker, I voted in the negative and would so vote, but finding that the gentleman from Connecticut, Mr. RUSSELL, has not voted, and being paired with him, I desire to withdraw my vote.

Mr. KING. Mr. Speaker, I voted "no," but I am paired with the gentleman from New Hampshire, Mr. CLARKE, and I withdraw my vote.

Mr. BROUSSARD. Mr. Speaker, I desire to vote.

The SPEAKER. Was the gentleman present and listening when his name was called, and did he fail to hear it?

Mr. BROUSSARD. Yes, sir.

The SPEAKER. The gentleman's name will be recorded.

Mr. BROUSSARD voted "no."

Mr. BRUCKER. Mr. Speaker, I voted "no," but I am paired with the gentleman from Michigan, Mr. WM. ALDEN SMITH, so I will ask to be recorded as present.

Mr. EVANS. Mr. Speaker, how am I recorded?

The SPEAKER. The gentleman is recorded as present.

Mr. EVANS. I desire to vote. I was under the impression that I was paired, but I am not, the pair having been transferred, and I vote "aye."

Mr. YOST. Mr. Speaker, I answered "present," thinking that I was paired, but I desire to vote "yea."

The SPEAKER. The gentleman's vote will be recorded.

Mr. SAYERS. Mr. Speaker, I ask that my colleague, Mr. SLAYDEN, be excused on account of business.

There was no objection, and it was so ordered.

Mr. BALL. Mr. Speaker, I voted "no," but I find that I am paired with the gentleman from Illinois, Mr. REEVES, and I withdraw my vote.

Mr. SWANSON. Mr. Speaker, I ask that my colleague, Mr. OTEY, be excused for ten days, on account of sickness in his family.

There was no objection, and it was so ordered.

Mr. PIERCE of Tennessee. Mr. Speaker, I desire to know whether the gentleman from West Virginia, Mr. DAYTON, has voted?

The SPEAKER. He has not.

Mr. PIERCE of Tennessee. Then I withdraw my vote.

Pending the announcement of the vote, leave of absence was granted, by unanimous consent, as follows:

To Mr. KIRKPATRICK, for ten days, on account of important business.

To Mr. BUTLER, for one day, on account of death in his family.

To Mr. MINOR, indefinitely, on account of sickness.

To Mr. DAVISON of Kentucky, indefinitely, on account of important business.

To Mr. MCCLEARY, for ten days, on account of important business.

To Mr. OTEY, for ten days, on account of sickness and death of brother.

To Mr. LOUDENSLAGER, indefinitely, on account of sickness.

Mr. TERRY. I make the point, Mr. Speaker——

Mr. GROSVENOR. Regular order, Mr. Speaker.

Mr. TERRY. I make the point, Mr. Speaker, and I would like to be heard just a moment——

The SPEAKER. The Chair anticipates the gentleman's point, and answers it by stating that 92 members have voted in the affirmative and 79 in the negative, while 11 have answered "present," making a total of 182; and although that may be of no consequence in any gentleman's estimation——

Mr. TERRY. My point is that the House can not adjourn without a quorum for more than one day, and I desire to be briefly heard on that point.

The SPEAKER. The Chair declines to hear the gentleman, even on his own basis, because it is not a fact that there is no quorum.

Mr. TERRY. I understood that to be the fact.

The SPEAKER (at 1 o'clock and 10 minutes p. m.). The ayes have it, and accordingly the House stands adjourned until Thursday next, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, the following communications were taken from the Speaker's table and referred as follows:

A letter from the assistant clerk of the Court of Claims, transmitting a copy of the findings filed by the court in the case of Joseph M. Middlekauff against The United States—to the Committee on War Claims, and ordered to be printed.

A letter from the assistant clerk of the Court of Claims, transmitting a copy of the findings filed by the court in the case of Napoleon B. Allen against The United States—to the Committee on War Claims, and ordered to be printed.

A message from the President, transmitting a special report of the Commissioner of Labor, relating to the social and economic condition of the Italians in Chicago—to the Committee on Labor, and ordered to be printed.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS INTRODUCED.

Under clause 3 of Rule XXII, bills, resolutions, and memorials of the following titles were introduced and severally referred as follows:

By Mr. MOODY: A bill (H. R. 3420) to establish a life-saving station at Swampscott, Mass.—to the Committee on Interstate and Foreign Commerce.

By Mr. ELLIOTT: A bill (H. R. 3421) to establish a sanitarium at Castle Pinckney, in Charleston Harbor, South Carolina, for the use of disabled officers and enlisted men of the Regular and Volunteer Army and Navy of the United States—to the Committee on Military Affairs.

By Mr. ELLIS: A bill (H. R. 3435) fixing times when, regulating the manner in which, and declaring the character of the accounts between the United States and the several public-land States, relative to the net proceeds of the sales and other disposition of the public lands made and to be made therein by the United States, which shall hereafter be stated and certified to the Treasury Department for payment—to the Committee on the Public Lands.

By Mr. JENKINS: A memorial of the legislature of the State of Wisconsin for the passage of an act to strengthen the national credit—to the Committee on Ways and Means.

By Mr. BABCOCK: A memorial of the legislature of the State of Wisconsin for the passage of an act to strengthen the national credit—to the Committee on Ways and Means.

By Mr. GRIFFIN: A memorial of the legislature of the State of Wisconsin, for an amendment to the Constitution of the United States relative to trusts—to the Committee on the Judiciary.

Also, a memorial of the legislature of the State of Wisconsin, for the passage of an act to strengthen the national credit—to the Committee on Ways and Means.

By Mr. BULL: A memorial of the legislature of the State of Rhode Island, relative to a memorial to be placed over the graves of American soldiers and sailors at Put in Bay Island—to the Committee on the Library.

By Mr. CAPRON: A memorial of the legislature of the State of Rhode Island, relative to a memorial to be placed over the graves of American soldiers and sailors at Put in Bay Island—to the Committee on the Library.

PRIVATE BILLS AND RESOLUTIONS INTRODUCED.

Under clause 1 of Rule XXII, private bills and resolutions of the following titles were introduced and severally referred as follows:

By Mr. BOTKIN: A bill (H. R. 3422) granting an honorable discharge to Jesse Dotts—to the Committee on Military Affairs.

Also, a bill (H. R. 3423) granting back pension to Isaac Lantz—to the Committee on Invalid Pensions.

By Mr. DOCKERY: A bill (H. R. 3424) granting a pension to Levi R. Long—to the Committee on Invalid Pensions.

By Mr. GAINES: A bill (H. R. 3425) for the relief of George A. Dickel & Co., at Nashville, Tenn.—to the Committee on the Judiciary.

By Mr. HUNTER: A bill (H. R. 3426) granting a pension to Turner J. Bowling—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3427) granting a pension to Sarah A. Denham, widow of Benjamin F. Denham—to the Committee on Invalid Pensions.

By Mr. JOY: A bill (H. R. 3428) for the relief of J. E. Gillingwaters—to the Committee on Military Affairs.

By Mr. RIDGELY: A bill (H. R. 3429) to remove the charge of desertion against Hiram Lane—to the Committee on Military Affairs.

Also, a bill (H. R. 3430) to remove the charge of desertion against E. A. Brown—to the Committee on Military Affairs.

Also, a bill (H. R. 3431) granting a pension to O. C. Denslow—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3432) granting a pension to David W. Thurston—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3433) granting a pension to Martin M. Flint—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3434) granting a pension to John Carr—to the Committee on Invalid Pensions.

By Mr. ELLIS: A bill (H. R. 3436) for the relief of Wilbur F. Cogswell—to the Committee on Naval Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, the following petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BULL: Petitions of citizens of Providence and of East

Providence, R. I., for a more rigid restriction of immigration—to the Committee on Immigration and Naturalization.

By Mr. CAPRON: Petitions of citizens of Hope and East Providence, R. I., for the further restriction of immigration—to the Committee on Immigration and Naturalization.

By Mr. DANFORD: Petition of Local Union No. 20, Belmont Central Trades and Labor Union, of Bellaire, Ohio, praying for the passage of the so-called Minnesota label law—to the Committee on Labor.

By Mr. DOVENER: Petitions of John L. Hunt and 87 other citizens of Church district, Wetzel County; E. R. Coffman and 27 others, of Sardis, Harrison County; W. W. Rogers and 45 others and Thomas D. Bennett and 47 others, of Ohio County; James Welch and 52 others, of Viola, Marshall County; A. E. Sutton and 83 others, of Gaston, Lewis County; J. N. Conley and 29 others, of Barbour County, State of West Virginia, for a more rigid restriction of immigration—to the Committee on Immigration and Naturalization.

Also, petition of Lee Haymond and 17 other late officers of the Volunteer service, United States Army, of Clarksburg, W. Va., for the relief of George J. Stealey—to the Committee on Invalid Pensions.

By Mr. ERMENTROUT: Petition of the National Arbitration Committee, of Washington, D. C., for international arbitration—to the Committee on Foreign Affairs.

Also, petition of Robert Stuntz, of the Persian Rug Factory, of New York City, for higher duty on Persian rugs—to the Committee on Ways and Means.

Also, petition of the Merchant Tailors' Exchange of Boston, Mass., for limit to amount of clothing travelers from abroad shall be allowed to import without duty—to the Committee on Ways and Means.

By Mr. HILBORN: Petition of the Board of Trade of Oakland, Cal., in favor of the Torrey bankruptcy bill—to the Committee on the Judiciary.

By Mr. HUNTER: Paper to accompany House bill granting a pension to Sarah A. Denham—to the Committee on Invalid Pensions.

Also, petition of Henry H. Wright and other citizens of Effingham, Ill., veterans of the late war, favoring the passage of a service-pension bill—to the Committee on Invalid Pensions.

By Mr. JOY: Petition of Edward G. Burles and other citizens of St. Louis, Mo., for an appropriation for the payment of all judgments of the Court of Claims in favor of letter carriers and others, reported in the Fifty-fourth Congress—to the Committee on Appropriations.

Also, petition of D. I. Bushnell & Co. and other business firms of St. Louis, Mo., protesting against the free distribution of seeds by the Government—to the Committee on Agriculture.

By Mr. LOUDENSLAGER: Petition of citizens of Leesburg, N. J., for the restriction of immigration—to the Committee on Immigration and Naturalization.

By Mr. MILLER: Petition of D. E. Stewart and others, of Cabell County, W. Va., asking for the passage of a bill to further restrict immigration—to the Committee on Immigration and Naturalization.

By Mr. OLMSTED: Petition of H. W. Moyer and sundry other citizens of Myerstown; also of E. R. Payne and others, of Harrisburg; also of John A. Berry and others, of Annville, in the State of Pennsylvania, praying for the passage of a law to further restrict immigration—to the Committee on Immigration and Naturalization.

SENATE.

TUESDAY, *June 8, 1897.*

Prayer by Rev. HUGH JOHNSTON, D. D., of the city of Washington.

The Secretary proceeded to read the Journal of yesterday's proceedings, when, on motion of Mr. QUAY, and by unanimous consent, the further reading was dispensed with.

SANITARIUM AT CASTLE PINCKNEY, SOUTH CAROLINA.

The VICE-PRESIDENT laid before the Senate a communication from the Secretary of War, transmitting, in response to a resolution of the 3d instant, a report from the Quartermaster-General of the Army relative to the cost of constructing suitable buildings at Castle Pinckney, near Charleston, S. C., to be used as a sanitarium for disabled officers and enlisted men of the Regular and Volunteer Army of the United States; which was read.

Mr. TILLMAN. I move that the communication and accompanying report of the Quartermaster-General be printed and referred to the Committee on Military Affairs, to accompany the bill now before that committee.

The motion was agreed to.

PETITIONS AND MEMORIALS.

Mr. QUAY. I present a petition of the members of the Philadelphia Wool Merchants' Association, praying for the early passage of the pending tariff bill, and remonstrating against the imposition of lower rates of duty on articles under Schedule K than those proposed by the so-called Dingley tariff bill. As these gentlemen are a very respectable body of men, I ask that the petition be read.

The petition was read, and ordered to lie on the table, as follows:

PETITION.

PHILADELPHIA, *June 5, 1897.*

To the Senate of the United States, Washington, D. C.:

We, the undersigned members of the Philadelphia Wool Merchants' Association, earnestly petition and urge your active cooperation in securing protective tariff legislation at the earliest possible date which will adequately secure American industrial products against the competition of foreign labor. Any lower rates than those provided for in Schedule K by the House bill (H. R. 379) will not furnish adequate protection to the wool industry.

Paul Jagode, president Wool Merchants' Association; J. Philip Jagode & Co.; Justice, Bateman & Co.; Kayser, Fisler & Co.; J. Reifsnyder, Son & Co.; Bullock Bros.; Jno. M. Leslie & Co.; Chas. J. Webb & Co., Jno. S. Whilldin, attorney; H. B. Heston & Co.; Cunningham's Sons; Wm. Mower's Sons; H. L. Cooper; Patrick Roach; Jno. J. McCloskey; Sam'l Lee & Co.; Lee & Bacchus; Joseph C. Mance, jr.; Coates Brothers; H. Cowan & Son; Stone & Christie; Bradford Smith; T. Kenworthy & Bro.; James G. Kibben & Co.; Jagode & Lewis.

Hon. M. S. QUAY,
United States Senate, Washington, D. C.

Mr. QUAY. I also present resolutions adopted by the general assembly of Pennsylvania, favoring the passage of Senate bill No. 1747, providing for the reappointment and retirement of David McMurtrie Gregg, late captain, Sixth United States Cavalry, and brevet major-general United States Volunteers, with the rank of captain, which will be read under the practice of the Senate.

The resolutions were read, and referred to the Committee on Military Affairs, as follows:

IN THE HOUSE OF REPRESENTATIVES, *May 31, 1897.*

Whereas there is pending in Congress Senate bill No. 1747, which provides for the reappointment and retirement of David McMurtrie Gregg, late captain, Sixth United States Cavalry, and brevet major-general of United States Volunteers, with the rank and grade of captain; and

Whereas in consideration of the long and faithful military services of this distinguished son of Pennsylvania before and during the late war of the rebellion, especially for gallant conduct at the battle of Gettysburg, we ask proper recognition at the hands of the Government he so faithfully served, and that the acknowledgment thereof may be testified by the prompt passage of said bill: Therefore,

Be it resolved (*if the senate concur*), That our Senators and Representatives in Congress be requested to support and use their utmost efforts to effect the speedy passage of said bill reappointing and retiring General Gregg.

Resolved further, That a copy of the above preamble and resolution be sent by the governor of this Commonwealth to our Senators and Representatives in Congress.

JERE B. REX,
Chief Clerk of the House of Representatives.

IN THE SENATE, *June 1, 1897.*

The foregoing resolution concurred in.

E. W. SMILEY,
Chief Clerk of the Senate.

Approved the 3d day of June, A. D. 1897.

DANIEL H. HASTINGS.

Mr. DANIEL presented the petition of S. J. Steven and sundry other citizens of Pulaski, Va., praying for the enactment of legislation for a more rigid restriction of immigration; which was ordered to lie on the table.

Mr. CARTER. I present a communication from the governor of Alaska, together with a petition from citizens of the Yukon Valley district in that Territory, praying for the creation of a court of competent jurisdiction for Alaska. I move that the communication and accompanying petition be printed as a document and referred to the Committee on Territories.

The motion was agreed to.

Mr. ALLEN presented a petition of sundry citizens of North Platte, Nebr., praying for the enactment of legislation for a more rigid restriction of immigration; which was ordered to lie on the table.

Mr. WETMORE. I present a petition of the general assembly of Rhode Island, praying that an appropriation be made for the erection on Put in Bay Island of an appropriate memorial over the long-neglected graves of the patriotic soldiers and sailors of the battle of Lake Erie; which I ask, under the rule, may be printed in the RECORD and referred to the Committee on Military Affairs.

The petition was referred to the Committee on Military Affairs, and ordered to be printed in the RECORD, as follows:

[State of Rhode Island, etc. In general assembly, January session, A. D. 1897.]

Resolution relative to a memorial to be placed over the graves of American soldiers and sailors at Put in Bay Island.

Resolved, That the delegation in Congress from Rhode Island be, and they are hereby, requested to use their best efforts to secure a sufficient appropriation by the General Government at Washington to erect on Put in Bay Island an appropriate memorial over the long-neglected graves of the patriotic soldiers and sailors of the battle of Lake Erie;

Resolved, That the secretary of state be, and is hereby, directed to forward copies of these resolutions to each of our members of Congress and to the governor of the State of Ohio and to the mayor of the city of Cleveland, Ohio.

STATE OF RHODE ISLAND,
OFFICE OF THE SECRETARY OF STATE,
Providence, May 24, 1897.

I certify the foregoing to be a true copy of a resolution passed by the general assembly of said State on the 19th day of May, A. D. 1897.

In testimony whereof I have hereunto set my hand and affixed the seal of the State aforesaid the date and year first above written.

[SEAL.] CHARLES P. BENNETT,
Secretary of State.

Mr. WILSON presented a petition of the legislature of Washington, praying for the establishment of a national soldiers' home upon the site of Fort Sherman Military Reservation; which was referred to the Committee on Military Affairs, and ordered to be printed in the RECORD, as follows:

UNITED STATES OF AMERICA:

STATE OF WASHINGTON, *Office of the Secretary of State.*

I, Will D. Jenkins, secretary of state of the State of Washington, do hereby certify that I have carefully compared the annexed copy of the house joint memorial No. 16, adopted by the legislature, session 1897, approved by the governor March 3, 1897, with the enrolled memorial now on file in this office, and find the same to be a true and perfect copy thereof.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington.

Done at Olympia this 1st day of April, A. D. 1897.

[SEAL.] WILL D. JENKINS,
Secretary of State.

House joint memorial No. 16.

A memorial to Congress in regard to a national soldiers' home at Fort Sherman, Idaho, by the senate and house of representatives of the State of Washington.

To the Senate and House of Representatives of the United States of America in Congress assembled:

Whereas by act of Congress and the orders of the War Department, the troops will, at an early date, be removed from Fort Sherman to the newly established military post at Spokane, Wash.; and

Whereas the present site of Fort Sherman, with all its buildings and improvements, will be worthless to the United States, and can not be sold for any very great amount of money; and

Whereas it is located at the north end of Cœur d'Alene Lake, a beautiful body of water, upon which are many steamers, with Cœur d'Alene City near by with good railroad facilities; and

Whereas there is not a national soldiers' home in the extreme Northwestern States: Therefore,

We earnestly ask that you give this matter due consideration and establish a national soldiers' home upon the site of Fort Sherman, in order that those men who defended the country's flag in time of peril may have a pleasant, healthy place to spend their last days upon earth; and that a copy of this memorial be sent to each of our Senators and members of the House of Representatives in Congress.

Adopted by the house February 25, 1897.
Adopted by the senate February 27, 1897.
Approved by the governor March 3, 1897.

[Certificate.]

STATE OF WASHINGTON, OFFICE OF SECRETARY OF STATE,
Olympia, Wash., April 1, 1897.

I, Will D. Jenkins, secretary of state of the State of Washington, and custodian of the seal of said State, do hereby certify that the foregoing is a true and correct copy of the enrolled document now on file in this office.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington the day and year above written.

[SEAL.] WILL D. JENKINS,
Secretary of State.

Mr. WILSON presented a petition of the legislature of Washington, praying that the claims of William A. Newell as the originator of the system of Life-Saving Service of the United States be recognized by the Government; which was referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

UNITED STATES OF AMERICA:

STATE OF WASHINGTON, *Office of the Secretary of State.*

I, Will D. Jenkins, secretary of state of the State of Washington, do hereby certify that I have carefully compared the annexed copy of the house memorial No. 12, adopted by the legislature, session 1897, approved by the governor March 6, 1897, with the enrolled memorial now on file in this office, and find the same to be a true and perfect copy thereof.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington.

Done at Olympia this 1st day of April, A. D. 1897.

[SEAL.] WILL D. JENKINS,
Secretary of State.

House memorial No. 12.

Whereas the legislature of the State of New Jersey did, at its last session, in the year 1896, adopt the following preamble and resolutions, to wit:

"Preamble and resolutions setting forth and acknowledging the claims of William A. Newell as the originator of the system of Life-Saving Service of the United States and thanking him for his agency therein.

"Whereas William A. Newell, Representative in Congress from the Second Congressional district of this State to the Thirtieth Congress of the United States, did, on the 3d day of January, 1848, introduce the following resolution, viz: '*Resolved*, That the Committee on Commerce be instructed to inquire whether any plan can be devised whereby the dangerous navigation along the coast of New Jersey between Sandy Hook and Little Egg Harbor may be furnished with additional safeguards to life and property, and that they report to the House by bill or otherwise,' which was passed without opposition; and

"Whereas the committee made no report whatever upon said resolution, and William A. Newell did, on the 3d day of August, 1848, make a carefully prepared speech detailing his system at length, as is recorded in the appendix to the Congressional Globe of that date, and on the 9th of the same month did offer the following amendment to the light-house bill, to-wit, 'For providing surfboats, lifeboats, rockets, carronades, and other necessary apparatus for the better preservation of life and property from shipwreck along the coast of New Jersey between Sandy Hook and Little Egg Harbor, $10,000, the same to be expended under the supervision of such officer as may be designated by the Secretary of the Treasury,' which passed unanimously; and

"Whereas William A. Newell, at the second session of the Thirtieth Congress, introduced and secured the passage of an amendment appropriating $20,000 for the extension of the system from Little Egg Harbor to Cape May, and the Atlantic coast of Long Island, Fire Island, and Montauk Point, and did, on July 14, 1866, when again in Congress, deliver a speech in the House of Representatives calling for an additional appropriation of $20,000, and strongly urging the justice of paying the life-saving crews, which propositions were adopted: and

"Whereas it is thus made clearly apparent that William A. Newell did, while a Representative from this State, originate the system which has been instrumental in saving many thousands of human lives from shipwreck and an untold amount of property from destruction: Therefore,

"*Be it resolved by the senate and house of assembly of the State of New Jersey*, That we do hereby recognize William A. Newell as the true author and originator of the Life-Saving Service, and that the thanks of this legislature be, and are hereby, extended to him for his agency in establishing this most successful instrumentality in the cause of humanity.

"*Resolved*, That these resolutions be spread upon the minutes, and that the governor of this State be requested to forward to the Hon. William A. Newell an original copy of the same."

And whereas William A. Newell was a governor of Washington Territory, and is now an honored citizen of this State; and

Whereas Washington is preeminently distinguished as a maritime State by reason of ocean frontage, straits, huge inland salt seas, navigable rivers and lakes, and as many of our people are engaged in commercial and seafaring pursuits and thus interested in all measures tending to diminish dangers to life and property from shipwreck: Therefore,

Be it resolved by the senate and house of representatives of the State of Washington, That we do heartily approve of and indorse the action of the legislature of the State of New Jersey in according to William A. Newell the honor of originating and carrying into successful operation the Life-Saving Service of the United States.

Resolved, That an engrossed copy of these proceedings be transmitted to Governor Newell; and

Be it further resolved, That a copy of this memorial be sent to the legislature and the governor of the State of New Jersey; also that copies thereof be forwarded to our Senators and Representatives in Congress, with the request that they secure from the Congress of the United States, where the system was inaugurated, an indorsement of these testimonials of the State of New Jersey and of Washington, so eminently merited and so long withheld.

Adopted by the house February 11, 1897.
Adopted by the senate March 3, 1897.
Approved by the governor March 6, 1897.

[Certificate.]

STATE OF WASHINGTON, OFFICE OF SECRETARY OF STATE,
Olympia, Wash., April 1, 1897.

I, Will D. Jenkins, secretary of state of the State of Washington, and custodian of the seal of said State, do hereby certify that the foregoing is a true and correct copy of the enrolled document now on file in this office.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington the day and year above written.

[SEAL.] WILL D. JENKINS,
Secretary of State.

Mr. WILSON presented a petition of the legislature of Washington, praying that the forest-reserve proclamation issued by President Cleveland on February 22, 1897, be revoked; which was ordered to lie on the table and to be printed in the RECORD, as follows:

UNITED STATES OF AMERICA:

STATE OF WASHINGTON, *Office of the Secretary of State.*

I, Will D. Jenkins, secretary of state of the State of Washington, do hereby certify that I have carefully compared the annexed copy of the senate memorial No. 12, senate joint resolution No. 25, house memorial No. 17, adopted by the legislature, session 1897, approved by the governor March 11, March 10, and March 10, respectively, with the enrolled memorials and resolution now on file in this office, and find the same to be a true and perfect copy thereof.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington.

Done at Olympia this 1st day of April, A. D. 1897.

[SEAL.] WILL D. JENKINS,
Secretary of State.

Senate memorial No. 12.

To the honorable the President and Congress of the United States:

Whereas there has been set apart within the State of Washington three tracts of land containing many million acres as forest reservation;

Whereas these tracts are rich in mineral resources and contain many of the best mines in the State;

Whereas mining is one of the greatest industries of this State and this act strikes at the foundation of our present and future prosperity; and

Whereas we believe that these tracts of land should be opened to prospectors and miners, with full privilege to find, develop, and operate all and any mining properties therein: Therefore,

Be it resolved by the senate (the house of representatives concurring), That we memorialize the President and Congress of the United States to revoke, as speedily as may be, that part of the law which prohibits mining within the above-mentioned reservation, and to enact a law permitting the finding, developing, and operating of mines, the construction of roads and bridges, and all the other necessary adjuncts requisite to a full development of the mineral resources of these reservations.

And your memorialists will ever pray.

Passed the senate March 9, 1897.
Passed the house March 10, 1897.
Approved by the governor March 11, 1897.

[Certificate.]

STATE OF WASHINGTON, OFFICE OF SECRETARY OF STATE,
Olympia, Wash., April 1, 1897.

I, Will D. Jenkins, secretary of state of the State of Washington and custodian of the seal of said State, do hereby certify that the foregoing is a true and correct copy of the enrolled document now on file in this office.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington the day and year above written.

[SEAL.] WILL D. JENKINS,
Secretary of State.

Senate joint resolution No. 25.

Whereas the forest-reserve proclamation issued by President Cleveland on February 22, 1897, includes many mining camps, villages, and homes of settlers within the State of Washington; and this hinders the advancement of one of our most promising industries and retards the efforts of many settlers to build up homes: Therefore,

Be it resolved by the senate and house of representatives of the State of Washington, That our Senators and Representatives in Congress be, and they hereby are, most earnestly urged to secure as speedily as possible action along one of the following lines:

First. By the enactment of a general law to permit miners and settlers to use the timber on all forest reserves, under proper restrictions, and to permit miners to operate and own their mines situated within such forest reserves.

Second. Failing in the above, to induce President McKinley to modify the Executive proclamation of the new forest reserve, if possible, so as to remove the great blight placed on the growing industry of mine development in the State of Washington.

Third. Failing in these efforts, to seek at once, by Congressional enactment, to annul the proclamation of February 22, 1897, by which nearly one-sixth of the lands of this State were withdrawn from settlement.

And be it further resolved, That, inasmuch as it has been manifested in the said proclamation that the nation is willing to relinquish all further profit from the public lands in this State, Congress be urged to cede the remaining public land of all kinds to the State of Washington, and that the management and control of the forest reservations within this State be placed with the State authorities.

And be it further resolved, That a copy of this resolution be forwarded immediately to each of the Senators and Representatives in Congress from the State of Washington.

Passed the senate March 8, 1897.
Passed the house March 8, 1897.
Approved by the governor March 10, 1897.

[Certificate.]

[SEAL.] WILL D. JENKINS,
Secretary of State.

—

House memorial No. 17.

Whereas the late President of the United States, Grover Cleveland, by a proclamation issued February 22, 1897, created a forest reserve in the State of Washington, embracing all that territory in said State from the one hundred and twentieth meridian of longitude to the one hundred and twenty-second meridian, and from the forty-eighth parallel of north latitude to the forty-ninth parallel, or the northern boundary of this State, containing a mountainous area of the Cascade range of 60 miles from north to south and 120 miles from east to west, which cuts off from the four great mineral-producing counties of this State—Okanogan, Whatcom, Skagit, and Snohomish—fully one-half of the territory of each county from settlement and development, and that 90 per cent of the said territory has little or no timber of any commercial value, but is, on the contrary, a rocky, mountainous country, and is practically valueless for any other than its great and almost unlimited mineral deposits, consisting of gold, silver, copper, iron, coal, asbestus, marble, and other minerals, and this very territory is the great mineral belt in the State of Washington, and is now conceded by many of the best experts in the country to be the greatest gold, silver, and copper belt in America; and

Whereas many millions of dollars of the people of the State of Washington and other States have been invested in the development of the mineral resources of this territory, in the building of populous and thriving towns, erection of schoolhouses and churches, and clearing and improving of small farms in the valleys of the mountain recesses, the construction, equipment, and operation of railroads and telegraph lines, the development and operation of extensive mining properties that are large producers of gold, silver, copper, and coal, affording employment at this time to more than 5,000 men in the State of Washington and a means of support to more than 20,000 people. In this territory are included the thriving and prosperous towns and mining camps of Monte Cristo, Silverton, Cascade, Galena, Sultan, Index, Skykomish, Ruby Creek, Methow, Squaw Creek, Chelan, and many others. That more than 20,000 mineral locations have already been made in this very district, and that the number will probably be doubled during the year 1897, and that hundreds of thousands of dollars of investors' and capitalists' money is now ready and waiting only for the spring season to open and develop and bring into circulation the hidden stores of gold and silver deposited by nature in these mountains, which will furnish employment to thousands of idle and hungry men, and a means of subsistence to thousands upon thousands of suffering women and children who are now without the bare necessities of life; and

Whereas if this reserve is continued and maintained and further prospecting prevented and development retarded, this promised and assured prosperity will be diverted from us and our State to the British possessions across the line and immediately adjoining; and

Whereas under the statutes of the United States, volume 26, page 1103, any and all prospectors, settlers, or locators on any of the lands in such territory, after the date of the said proclamation, would clearly be trespassers, and as all prospectors, settlers, or locators already in the country would be unable to reach their lands or improvements without going over other unsettled or unlocated land within the reserve, all would be trespassers; therefore the reservation prevents and obstructs all improvement, railroad building, and mining operations, and is a stupendous and disastrous blow to every commercial and business interest of the State; and

Whereas the future prosperity of this State is largely dependent upon the development of the vast mineral resources of this territory directly tributary to the commercial centers, as is so plainly illustrated and exemplified in the recent and present growth and prosperity of Spokane, which is conceded to be due to the mining interests tributary thereto; and the great cities of Denver, Butte, Leadville, Salt Lake, and even San Francisco are shining examples of the prosperity and bond of union that exists between profitable mining development and successful agricultural and commercial life; and

Whereas it seems almost incomprehensible that such an Executive order creating this particular forest reserve, designated in the proclamation, should have issued on the eve of the retirement of the President, and we being firmly of the opinion that the real facts and truth as to the mineral character and the extensive improvements and state of development of this district could not have been in the possession of the President, and believing and being firmly convinced that a grievous wrong, injustice, and irreparable damage has been done to the mining and commercial interests of all the citizens of this State: Now, therefore,

We, your memorialists, the legislature of the State of Washington, respectfully memorialize the President and the Congress of the United States for the immediate revocation and cancellation of the order of proclamation of February 22, 1897. And we request our Representatives in Congress and instruct our Senators to use every diligence and honorable means to that end. And that copies of this memorial be forthwith transmitted to the President of the United States, the President of the Senate, the Speaker of the House of Representatives, and to our Senators and Congressmen.

Adopted by the house March 8, 1897.
Adopted by the senate March 8, 1897.
Approved by the governor March 10, 1897.

[Certificate.]

STATE OF WASHINGTON, OFFICE OF SECRETARY OF STATE,
Olympia, Wash., April 1, 1897.

I, Will D. Jenkins, secretary of state of the State of Washington, and custodian of the seal of said State, do hereby certify that the foregoing is a true and correct copy of the enrolled document now on file in this office.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington the day and year above written.

[SEAL.] WILL D. JENKINS,
Secretary of State.

Mr. WILSON presented a petition of the legislature of Washington, praying for the establishment of a life-saving station on the coast of Washington at some point between the entrance to Grays Harbor and Point Granville; which was referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

UNITED STATES OF AMERICA:

STATE OF WASHINGTON, *Office of the Secretary of State.*

I, Will D. Jenkins, secretary of state of the State of Washington, do hereby certify that I have carefully compared the annexed copy of the house memorial No. 3 and house memorial No. 8, adopted by the legislature, session 1897, approved by the governor March 6 and March 9, respectively, with the enrolled memorials now on file in this office, and find the same to be a true and perfect copy thereof.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington.

Done at Olympia this 1st day of April, A. D. 1897.

[SEAL.] WILL D. JENKINS,
Secretary of State.

—

House memorial No. 3.

To the Senate and House of Representatives of the United States:

We, your memorialists, the legislature of the State of Washington, respectfully represent as follows:

Whereas that portion of the coast of the United States between the entrance to Grays Harbor and Cape Flattery on the west coast of the State of Washington, a distance of 130 miles, is entirely without either light-house or life-saving station; and

Whereas strong ocean currents setting in along said coast make navigation along said coast extremely hazardous; and

Whereas many ships have been wrecked and many lives have been lost along said coast:

Be it therefore resolved by the legislature of the State of Washington, That the State of Washington respectfully ask the Congress of the United States to take such steps as will result in establishing a life-saving station on the coast of Washington at some point between the entrance to Grays Harbor and the promontory known as Point Granville, and in extending to said Grays Harbor the Government telegraph line now having its terminus at Tatoosh Island.

Adopted by the house February 15, 1897.
Adopted by the senate March 3, 1897.
Approved by the governor March 6, 1897.

[Certificate.]

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington the day and year above written.

[SEAL.] WILL D. JENKINS,
Secretary of State.

—

House memorial No. 8.

To the Senate and House of Representatives of the United States:

We, your memorialists, the legislature of the State of Washington, respectfully represent as follows:

Whereas that portion of the coast of the United States between Grays Harbor and Cape Flattery on the west coast of the State of Washington, containing an area of two and one-half million acres of the best agricultural land to be found within the State of Washington; and

Whereas said area of land is immensely rich in timber and mineral resources; and

Whereas the Olympic Mountains, on the east side of said area of land, is a bar of obstruction to constructing modern railroads and transportation lines into the Quillayute Valley; and

Whereas a harbor constructed at the mouth of the Quillayute River will open up said territory to settlement by the home seekers and homeless; and

Whereas many ships have been wrecked and many lives have been lost near the mouth of the Quillayute River:

Be it therefore resolved by the legislature of the State of Washington, That the State of Washington respectfully ask the Congress of the United States to appropriate $150,000 for the purpose to build a harbor and light-house at the mouth of the Quillayute River.

Be it further resolved, That the Senators and Representatives of this State in Congress are requested to use their most earnest efforts to procure an appropriation for harbor and light-house at the mouth of the Quillayute River; for which your memorialists will ever pray.

Adopted by the house February 15, 1897.
Adopted by the senate March 3, 1897.
Approved by the governor March 9, 1897.

[Certificate.]

STATE OF WASHINGTON, OFFICE OF SECRETARY OF STATE,

I, Will D. Jenkins, secretary of state of the State of Washington and custodian of the seal of said State, do hereby certify that the foregoing is a true and correct copy of the enrolled document now on file in this office.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington the day and year above written.

[SEAL.] WILL D. JENKINS,
Secretary of State.

Mr. WILSON presented a petition of the legislature of Washington, praying that an appropriation be made to cover the claim of the survivors of the Indian war of 1855 and 1856 in that State; which was referred to the Committee on Military Affairs (to accompany Senate bill 1756, for payment of balance unpaid of Oregon and Washington Territory Indian war claims for suppression of Indian hostilities in 1855 and 1856, as found due by commission appointed by Secretary of War, etc.), and ordered to be printed in the RECORD, as follows:

UNITED STATES OF AMERICA:

STATE OF WASHINGTON, *Office of the Secretary of State.*

I, Will D. Jenkins, secretary of state of the State of Washington, do hereby certify that I have carefully compared the annexed copy of the senate memorial No. 10, adopted by the legislature, session 1897, approved by the governor March 6, 1897, with the enrolled memorial now on file in this office, and find the same to be a true and perfect copy thereof.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington.

Done at Olympia this 1st day of April, A. D. 1897.

[SEAL.] WILL D. JENKINS,
Secretary of State.

Senate memorial No. 10.

In relation to the survivors of the Indian war of 1855 and 1856 in the Territory (now State) of Washington.

To the Senate and House of Representatives of the United States of America in Congress assembled:

Your memorialists, the legislature of the State of Washington, would respectfully represent that many of the early settlers of the Territory of Washington, during the years 1855 and 1856, in the protection of the lives of themselves and families and their property, having to contend against the hostile Indians occupying the country at that time, upon the call of the governor of the Territory freely volunteered to suppress the hostility of such Indians; that while fighting these Indians many valuable lives were lost and much property destroyed; that of those volunteers and early settlers but few now survive; that while the service of the soldiers of the Regular Army during that war were promptly provided for by the Government, without diminution of any kind, and received full recognition at the hands of the General Government for their services, the brave men who volunteered and defended the Northwest territory from the hostile Indians in the war of 1855 and 1856, responsive to the call of the governors of the Territories of Washington and Oregon, have failed to receive that recognition and consideration at the hands of the Government of the United States to which they are entitled; that by the eleventh section of the act of August 18, 1850, the Secretary of War was directed "to examine into the amount of the expenses necessarily incurred in the suppression of Indian hostilities in the late Indian war in Oregon and Washington by the Territorial governors of said Territories for the maintenance of the volunteer forces engaged in said war, including the pay of the volunteers," and he was authorized, if in his judgment necessary, to appoint a commission of three persons to ascertain and report such expenses; that by an order issued from the War Department September 4, 1850, Capt. A. J. Smith, United States Army; Rufus Ingalls, United States Army, late Quartermaster-General, and La Fayette Grover, afterwards governor of the State of Oregon and United States Senator from said State, were appointed a commission to ascertain and report upon the expenses incurred by the Territories aforesaid. The commission met at Portland, Oreg., October 20, 1850, organized a board, proceeded to the discharge of the duty assigned them, and after full investigation and consideration found, among other things, that the aggregate number of troops engaged in this war from the Territory of Washington was 1,896, that the approximate number of troops engaged at any one period was 1,000; and in taking action upon the pay of the volunteers from Washington Territory the commission, in the absence of any law of the Territory upon the subject, deemed it proper and just to recommend the same rates of pay and allowances as was reported in the case of the volunteer troops of Oregon. The Oregon statute provided as follows: "Whenever such volunteers are called and received into the service of the Territory each noncommissioned officer and private shall be entitled to receive $2 per day and rations, and $2 per day for the risk of his horse, except for horses actually killed in action, unavoidably lost, or reported unfit for service, in which cases the owner shall receive the appraised value thereof. All commissioned officers shall receive the same pay as officers of the same rank in the Army of the United States: *Provided*, That commissioned officers shall receive the same pay for the use and risk of horses as noncommissioned officers." The commission, upon that basis, found that there is due for troops in the service of the Territory of Washington a total of $519,593.06; and it was further found, in examining into the amount of expenses necessarily incurred for the maintenance of these volunteers that the total amount due for expenses was $961,882.39. That said commission visited extensively both Territories, with the view of being informed fully as to the nature and extent of the Indian hostilities, means employed for their suppression, the rates of labor, the prices current for the property furnished for the service, and the facilities and expense of transportation. They examined into each distinct department of the service, and filed an exhibit of the total expense necessarily incurred in the suppression of the Indian hostilities in the late Indian war by the Territorial governors of said Territories, and further found that the expenses for the maintenance of the volunteer forces engaged in said war from the Territory of Washington, including pay, was $1,481,475.45, and for the State of Oregon the sum of $4,499,940.33, and the total amount reported by the commissioners as due the Territories of Oregon and Washington was $5,011,457.86. That on the 7th day of February, 1860, the Third Auditor of the Treasury reported to the House of Representatives upon these claims, and allowed, under said report, only $2,714,808.55, thus leaving a balance justly due these early pioneers of $3,296,648.81. Your memorialists respectfully refer you to the report of the commission above named and the adjustment by the then Third Auditor of the Treasury, and respectfully ask that an appropriation may be made sufficient to cover the claims above set forth as due the volunteers from the State of Washington and State of Oregon during the Indian war of 1855 and 1856; and to that end your memorialists will ever pray.

Passed the senate February 26, 1897.

Passed the house March 5, 1897.

Approved by the governor March 6, 1897.

[Certificate.]

STATE OF WASHINGTON, OFFICE OF SECRETARY OF STATE,
Olympia, Wash., April 1, 1897.

I, Will D. Jenkins, secretary of state of the State of Washington, and custodian of the seal of said State, do hereby certify that the foregoing is a true and correct copy of the enrolled document now on file in this office.

In testimony whereof I have hereunto set my hand and affixed the seal of the State of Washington the day and year above written.

[SEAL.] WILL D. JENKINS,
Secretary of State.

Mr. SMITH presented sundry memorials of citizens of New Jersey, remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

Mr. ELKINS presented sundry petitions of citizens of New Cumberland, Wyandotte, Pawpaw, Burton, Monongalia County, Cabell County, and Morgan County, all in the State of West Virginia, praying for the enactment of legislation for the more rigid restriction of immigration; which were ordered to lie on the table.

Mr. SEWELL presented the petition of John Bullock and 39 other citizens of Boundbrook, N. J., praying for the speedy passage of the pending tariff bill; which was ordered to lie on the table.

He also presented the petition of L. Fischel and 24 other citizens of Newark, N. J., and the petition of Edward Ruff and 38 other citizens of Newark, N. J., praying for the enactment of legislation for a more rigid restriction of immigration; which were ordered to lie on the table.

He also presented memorials of Alexander Roth and 74 other citizens of Newark; of Lewis Fink, jr., and 24 other citizens of Newark; of Lewis Johnson and 24 other citizens of Bloomfield, and of Philip Messner and 24 other citizens of Newark, all in the State of New Jersey, remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

REPORT OF A COMMITTEE.

Mr. HANSBROUGH, from the Committee on Public Lands, to whom was referred the bill (S. 1985) granting to the State of Wyoming 50,000 acres of land to aid in the continuation, enlargement, and maintenance of the Wyoming State Soldiers and Sailors' Home, reported it with amendments, and submitted a report thereon.

BILLS INTRODUCED.

Mr. HOAR introduced a bill (S. 2099) to grant medals to the officers of the Fifty-fourth Regiment Infantry, Massachusetts Volunteers; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. WETMORE introduced a bill (S. 2100) granting a pension to Hepza Hobson Werden; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Pensions.

Mr. CHANDLER introduced a bill (S. 2101) granting a pension to John C. Emery; which was read twice by its title, and referred to the Committee on Pensions.

Mr. DANIEL introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Claims:

A bill (S. 2102) for the relief of Thomas D. Gold, administrator of Zebedee Gray, of Clarke County, State of Virginia; and

A bill (S. 2103) for the relief of the heirs at law of Maj. Tarleton Woodson, deceased, in accordance with the findings of Court of Claims.

TRANSMISSISSIPPI AND INTERNATIONAL EXPOSITION.

Mr. ALLEN. I introduce a joint resolution which is purely of a local nature, and I should like unanimous consent for its consideration this morning. It will not lead to any debate. I desire to call the attention of the members of the Finance Committee to the joint resolution.

The joint resolution (S. R. 50) authorizing foreign exhibitors at the Transmississippi and International Exposition, to be held in the city of Omaha, in the State of Nebraska, during the year 1898, to bring to the United States foreign laborers from their countries, respectively, for the purpose of preparing for and making exhibits, was read the first time by its title, and the second time at length, as follows:

Whereas the Transmississippi and International Exposition Company of Omaha, Nebr., has extended invitations to various foreign nations to make exhibits at the Transmississippi and International Exposition to be held at said city in the year A. D. 1898, which invitations have been accepted and space for installing foreign exhibits has been applied for and duly awarded, and concessions and privileges have been granted by the exposition management to the citizens and subjects of foreign nations; and

Whereas, for the purpose of securing the production on the exposition grounds of scenes illustrative of the architecture, dress, habits, and modes of life, occupation, industries, means of locomotion and transportation, amusements, entertainments, and the like, of the peoples of foreign countries, it has become necessary for the Transmississippi and International Exposition Company to grant concessions and privileges to certain firms and corporations of the right to make such productions: Therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the act of Congress approved February 26, A. D. 1885, prohibiting the importation into the United States of foreigners under contract to perform labor, and the various acts of Congress prohibiting the coming or bringing of Chinese persons into the United States,

and all acts of Congress amendatory of said act or acts, shall not be construed to prohibit the bringing into the United States under contract to labor such mechanics, artisans, agents, or other employees or persons natives of their respective foreign countries as may be or may be deemed necessary for the purpose of making preparation for installing or conducting foreign exhibits, or preparing for installing or conducting any business authorized or permitted by virtue of any concession or privilege which may have been or may hereafter be granted by the Transmississippi and International Exposition Company of Omaha, Nebr., in connection with such exposition. Nor shall any such act or acts of Congress operate to prevent, hinder, or in any manner restrict any foreign exhibitor, representative, or citizen of a foreign nation, or holder of a concession or privilege from the Transmississippi and International Exposition Company, from bringing into the United States under contract any such mechanic, artisan, agent, or other employee deemed necessary or proper for the purpose of making preparations for installing or conducting foreign exhibits, or preparing for installing or conducting any business authorized or permitted under or by virtue of or pertaining to a concession or privilege which may have been or may be granted by the said Transmississippi and International Exposition Company in connection with such exposition: *Provided, however*, That no alien shall by virtue of this act be permitted to enter the United States to perform labor therein except by express permission, naming such alien, and then not for a longer time than one year after the close of the Transmississippi and International Exposition, and thereafter such person shall be subject to all the processes and penalties applicable to aliens coming into the United States in violation of any act of Congress prohibiting alien contract labor from being brought or coming into the United States.

SEC. 2. *And be it further resolved*, That all articles and property of any kind that may be brought to the United States from any foreign country to be placed on exhibition at such Transmississippi and International Exposition, as well as all tools and implements necessary or proper to be used in preparing for an exhibition and the equipment and paraphernalia of the exhibitors, artisans, laborers, and the like, shall be admitted to the ports of the United States free of duty, under such rules and regulations as may be prescribed by the Secretary of the Treasury: *Provided, however*, That said articles shall be removed from the United States within one year after the close of said exposition. If not so removed, and the same shall be sold or disposed of in the United States, they shall be subject to the customs laws thereof.

The VICE-PRESIDENT. Is there objection to the present consideration of the joint resolution?

Mr. ALLISON. I do not object to the present consideration of the joint resolution, but I suggest to the Senator from Nebraska to allow it to go over until to-morrow morning, and be printed. I suppose it is practically what we have done as respects other international expositions.

Mr. ALLEN. I think so. I have no objection to its being printed and going over.

Mr. ALLISON. It is necessary to have it passed at an early day, and I will confer with the Senator.

Mr. HAWLEY. Before the joint resolution goes over, I should like to ask a question of the Senator from Nebraska. Foreign governments do not usually accept an invitation to a local exhibition or to any exhibition in the country unless it has been extended to them through the State Department or formally through the United States Government itself. Has the Secretary of State invited foreign governments to participate?

Mr. ALLEN. I am not able to say. However, I may state that the managers of the exhibition inform me that they have applied for concessions.

Mr. HAWLEY. As governments or as individual exhibitors, manufacturers, etc.?

Mr. ALLEN. As individuals, and I think in some instances the governments have done so. I will not be certain as to that.

Mr. HAWLEY. It has been the rule in this matter that a government would not act as a government unless our Government acted as a government.

Mr. ALLEN. I think, however, they are mostly private individuals and corporations who desire to make exhibits.

Mr. HAWLEY. Nobody makes any objection to governments, private corporations, or individuals coming here and making exhibits; but a government abroad will not send a commission to take a formal part in the exhibition unless an invitation comes from the United States Government.

Mr. ALLEN. That matter will be attended to without delay.

Mr. HOAR. Before the resolution goes over, I desire to suggest what I think the measure ought to contain—a clause authorizing the Secretary of the Treasury to make regulations for the carrying out of these provisions for the admission of foreign laborers and goods and to see that the existing laws are followed, except so far as the joint resolution remits them. I hope the Senator will add such a clause when the joint resolution comes up to-morrow.

Mr. ALLEN. When the resolution comes up to-morrow morning, I will accept the suggestion of the Senator from Massachusetts and propose such an amendment.

The VICE-PRESIDENT. The joint resolution will be printed and lie over.

AMENDMENT TO THE TARIFF BILL.

Mr. WARREN submitted an amendment intended to be proposed by him to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States; which was ordered to lie on the table and to be printed.

PRESIDENTIAL APPROVAL.

A message from the President of the United States, by Mr. O. L. PRUDEN, one of his secretaries, announced that the President had on the 7th instant approved and signed the act (S. 1886) to adopt regulations for preventing collisions upon certain harbors, rivers, and inland waters of the United States.

THE TARIFF BILL.

The VICE-PRESIDENT. The morning business is concluded, and the unfinished business, being House bill 379, will be proceeded with.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. ALLISON. I ask that Schedule E may be passed over temporarily.

Mr. VEST. The sugar schedule?

The VICE-PRESIDENT. The Secretary will proceed.

The SECRETARY. Schedule F.—Tobacco and manufactures of——

Mr. VEST. Let me understand this matter. Schedule E is the sugar schedule?

Mr. ALLISON. It is the sugar schedule.

Mr. VEST. The Senator, I understand, asks that it be passed over. We ought to be entirely frank with each other about this matter.

Mr. HAWLEY. Mr. President, I hope there will be order in the Chamber. These are very interesting moments and we would like to hear what is said.

The VICE-PRESIDENT. The Senate will be in order.

Mr. VEST. The Senator from Iowa, I understand, asks in behalf of the majority of the Committee on Finance that the sugar schedule be passed over and that the next schedule shall be taken up. It is an open secret already in the Senate that our friends upon the other side, the majority, have modified the sugar schedule, and in common fairness to us those modifications ought to be announced and printed, and some agreement made as to when this most important schedule shall be taken up.

Mr. ALLISON. I entirely concur with the suggestions made by the Senator from Missouri. There are no open secrets that I know of, or other secrets, about the sugar schedule.

Mr. VEST. I used that as a conventional term.

Mr. ALLISON. I asked that the sugar schedule should be passed over temporarily in order that we might take up another schedule for the moment.

I will now announce on behalf of the majority of the committee that that majority proposes to modify the amendments originally proposed and as now found in the printed bill. It proposes to modify the schedule by asking the Senate to disagree to the amendments reported by the committee, or, if it is in order, to withdraw those amendments; and it further proposes, on line 22, page 63, to strike out "eight hundred and seventy-five one-thousandths" and insert "ninety-five one-hundredths."

Mr. VEST. What page does the Senator say? Is not that on page 64?

Mr. ALLISON. It is on page 63. It is to strike out "eight hundred and seventy-five one-thousandths" and insert "ninety-five one-hundredths."

Mr. JONES of Arkansas. In what line?

Mr. ALLISON. In line 22. The majority of the committee proposes also to add after line 19 a new paragraph, which I will read.

Mr. JONES of Arkansas. On what page?

Mr. ALLISON. On page 64, after line 19.

Mr. JONES of Arkansas. At the end of the paragraph?

Mr. ALLISON. At the end of paragraph 206 to insert a new paragraph (which will be paragraph 206½, I suppose), as follows:

206½. That the duties on molasses, clayed, jaggery, and other sugars testing not above 87 degrees by the polariscope shall be one-tenth of 1 cent per pound less than those imposed by the preceding paragraph on corresponding tests of sugars.

I ask that this amendment may be printed.

The VICE-PRESIDENT. It will be so ordered.

Mr. ALLISON. I will say to the Senator that the committee, as notice was given when the bill was reported, have not yet prepared a provision relating to the question of sugar imported from the Hawaiian Islands. Therefore, in considering the sugar schedule, that may possibly be temporarily passed. But I have no doubt that an amendment will be prepared to-morrow.

Now, I suggest, if it suits the convenience of Senators on the other side, that the sugar schedule be passed over for the day and that we have it understood that the schedule shall be taken up to-morrow morning immediately after the assembling of the Senate, as soon as the routine morning business shall have been concluded.

Mr. VEST. That is satisfactory.

Mr. ALLISON. And I suggest that during the day we go on as best we may with the other schedules in the bill. I hope that will be satisfactory to Senators on the other side.

Mr. VEST. It is satisfactory, Mr. President. There is no objection to that course.

Mr. ALLEN. I should like to ask the Senator from Iowa if he will have the amendment which he has presented on behalf of a majority of the committee printed to-day, so that we can see it? Can it not be placed on our desks to-day, so that we may know what it is?

Mr. VEST. It can be printed by special order.

Mr. ALLISON. I have already asked that the amendment—the second amendment—be printed.

Mr. JONES of Arkansas. But let it be printed immediately.

Mr. ALLEN. Let it be printed immediately, so that we can see it this afternoon.

Mr. ALLISON. I hope that monition will be regarded by the clerks at the desk and elsewhere, and that the amendment will be printed at as early a moment as practicable.

Mr. CANNON. I should like to ask the Senator from Iowa in charge of the bill whether, if we shall reach the agricultural schedule before to-morrow and shall be engaged in its consideration, it is his intention to postpone the completion of that schedule in order to return to the sugar schedule?

Mr. ALLISON. My belief is that we shall proceed with the agricultural schedule later in the day, if that will be agreeable to the Senator from Utah, and I think on to-morrow (I had an understanding with the other side at least) the sugar schedule will be disposed of, or, at least, we shall commence the disposition of it to-morrow.

Mr. CANNON. That would be perfectly satisfactory if it were not that we may not reach the agricultural schedule until very late this afternoon. Then to begin its consideration and be interrupted therein to-morrow by returning to the sugar schedule I think would be very inconvenient to those who are disposed to pay attention to the agricultural schedule. So far as I am concerned, I am ready to go on now or at any time with the consideration of the agricultural schedule; but I desire to complete it after once taking it up. I should like to have some understanding on that point, if it will not inconvenience the Senator from Iowa and the other gentlemen who are in charge of the bill.

Mr. ALLISON. If it suits the convenience of the Senate, I am willing to go on with Schedule G and to pass over for the time being the tobacco schedule. I intended, at any rate, to-day, to ask the Senate to pass over the first paragraph in the tobacco schedule. If it suits the convenience of Senators, I am perfectly willing to go on with the agricultural schedule now and allow the tobacco schedule to be passed over until we have completed the sugar schedule, and then take up the tobacco schedule immediately afterwards.

Mr. CANNON. I submit this alternative to the Senator from Iowa then, that if it will not inconvenience those in charge of the bill, we can either take up the agricultural schedule now or take up the sugar schedule immediately after the tobacco schedule and fix a time for the consideration of the agricultural schedule.

Mr. ALLISON. I will suggest that we proceed with the agricultural schedule instead of Schedule F, if that course is convenient to Senators.

Mr. VEST. I speak only for myself. I would prefer to go on with the tobacco schedule, with the understanding that the sugar schedule is to be taken up to-morrow morning. I will be entirely frank about it. I want to dispose of the sugar schedule. As I had occasion to say the other day, it is the most troublesome, the most scandalous, the most irritating of all the schedules in the bill, and I want to get rid of it as far as we can in the Senate and let the country know what we intend to do. Now, if we go on with the agricultural schedule, it is a long schedule, and we shall not finish it to-day, the result will be that the sugar schedule will be crowded out in the morning. The tobacco schedule is a very important one to a large number of people in this country. There is no reason why it should be postponed.

My only objection to taking up the agricultural schedule is that it is a long one, and it will be a troublesome one. The probabilities are that we would not get through with it to-day, and then in the morning we would find that schedule in front of the sugar schedule and ahead of it. I want to take up the sugar schedule in the morning.

Mr. ALLISON. Then, if it will suit the convenience of the Senator from Utah, I suggest that we proceed with the tobacco schedule and take up the agricultural schedule afterwards, and go as far as we can to-day. I think the tobacco schedule will not occupy much time.

Mr. CANNON. I am quite disposed to acquiesce in that suggestion, but I renew the point that it will be extremely inconvenient to those Senators who propose to discuss the agricultural schedule to be interrupted in its consideration. If we are to take up the sugar schedule to-morrow it would be far preferable not to enter upon the consideration of the agricultural schedule to-day.

Mr. ALLISON. I think we will have no trouble in accommodating all Senators.

Mr. VEST. As to the discussion suggested by the Senator from Utah, under the rules of the Senate he can offer his amendment (I believe he has already offered it) and discuss it on the tobacco schedule, which is an agricultural product. There is nothing in the rules of the Senate to prevent him from doing so. If general speeches are to be made upon an export bounty on agricultural products, they can be made just as well upon one schedule as the other. Tobacco is essentially an agricultural product.

Mr. CANNON. It was to avoid a discussion of this question, except directly in connection with the schedule itself, that we have been waiting for this supposed opportunity. I will bow to the wishes of Senators in charge of the measure on the two sides, but it seems to me that there is a very simple arrangement which could be made. The tobacco schedule, being an important one, will occupy some time. It appears that the sugar schedule will be ready for presentation and consideration by the time the tobacco schedule shall be ended. If we could have an assurance of that sort at this time, subject, of course, to necessary changes, then those who are interested in the agricultural schedule would know that their question would not come up until after the determination of the sugar schedule.

Mr. FAIRBANKS. I ask that paragraph 210 of the tobacco schedule be passed over.

Mr. ALLISON. I stated when suggesting to take up the tobacco schedule that I would ask that the first paragraph—paragraph 210—be passed over for the day; and I hope that will be done.

Mr. VEST. That is essentially the whole schedule. It is about all the salient point of discussion in it. The balance of the schedule does not amount to anything.

Mr. ALLISON. Then, if that be true, I trust the suggestion of the Senator from Utah may be adopted, and that we shall go on with the agricultural schedule rather than defer doing so until later in the day.

Mr. VEST. If we are to pass over paragraph 210, of course the balance of the schedule should be passed over also.

The VICE-PRESIDENT. Is there objection to the present request that the tobacco schedule be passed over and that Schedule G be proceeded with? The Chair hears none, and the Secretary will proceed.

The Secretary resumed the reading of the bill on page 68, line 16. The next amendment of the Committee on Finance was, in Schedule G, "Agricultural products and provisions," paragraph 215, page 68, line 19, after the word "cattle," to strike out the words "valued at not more than twenty," and also to strike out the comma, and insert "if 1 year old or over, valued at not more than ten;" in line 21, after the word "head," to strike out "if 1 year old or over, six" and insert "four;" and in line 22, after the word "head," to insert "if valued at more than $10 and not more than $20, $6 per head;" so as to read:

SCHEDULE G.—AGRICULTURAL PRODUCTS AND PROVISIONS.

Animals, live:

215. Cattle, if 1 year old or over, valued at not more than $10 per head, $4 per head; if valued at more than $10 and not more than $20, $6 per head; if less than 1 year old, $2 per head; any cattle valued at more than $20 per head, 30 per cent ad valorem.

The VICE-PRESIDENT. Is there objection to the amendment of the committee? Without objection, the amendment is agreed to.

Mr. VEST. This is taken up in such a hurry we can hardly tell what it is.

The VICE-PRESIDENT. The Chair will not put the question until Senators are ready. The amendment will be again read.

The Secretary again read the amendment of the committee.

Mr. QUAY. I ask the Senator from Iowa to allow this paragraph to go over.

Mr. ALLISON. Very well.

The VICE-PRESIDENT. Is there objection to the request of the Senator from Pennsylvania that the amendment be not considered at the present time?

Mr. JONES of Arkansas. I will offer an amendment which may remain pending to this paragraph. I move to strike out the entire paragraph as it stands and insert:

All live animals not specially provided for in this act, 20 per cent ad valorem.

The VICE-PRESIDENT. The amendment will be read, so that Senators may understand it.

The Secretary read the amendment of Mr. JONES of Arkansas.

The VICE-PRESIDENT. Is there objection to passing over the paragraph? The Chair hears none, and the next paragraph will be read.

The Secretary read the next paragraph, as follows:

216. Hogs, $1.50 per head.

Mr. ALLEN. I desire to ask the Senator from Iowa if this paragraph is intended to cover pigs also? A pig is a hog under 6 months of age, I understand.

Mr. VEST. It covers all.

Mr. ALLEN. It covers all ages?

Mr. ALLISON. I think so.

Mr. ALLEN. I understand that farmers make a distinction

between a hog and a pig, and that animals of this kind under 6 months of age are not classed as hogs.

Mr. ALLISON. This is the phraseology which has always been used in these laws. I am not sure as to the particular time when a pig ceases to be a pig, but I should think it would be a shorter time than six months.

Mr. ALLEN. I do not know what construction may be placed upon the language by the authorities.

Mr. ALLISON. I think it covers what the Senator desires to cover in the schedule.

Mr. ALLEN. I was going to suggest the propriety—I will not move it, however—of inserting the words "and pigs" after the word "hogs" in paragraph 216.

Mr. ALLISON. What is the amendment suggested by the Senator from Nebraska?

Mr. ALLEN. I suggest that the paragraph read as follows:

Hogs and pigs, $1.50 per head.

The VICE-PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to amend the paragraph, after the word "Hogs," in line 3, by inserting the words "and pigs;" so as to read:

Hogs and pigs, $1.50 per head.

Mr. HOAR. The best way is to use the word "swine." That is always used in criminal legislation on the subject.

Mr. ALLISON. I think the suggestion of the Senator from Massachusetts is a better one.

Mr. ALLEN. Yes; I accept it.

Mr. ALLISON. I suggest that the word "Hogs" be stricken out and "Swine" inserted, if that is satisfactory to the Senator from Nebraska.

The VICE-PRESIDENT. The amendment will be stated.

The SECRETARY. In line 3 strike out "Hogs" and insert "Swine;" so as to read:

216. Swine, $1.50 per head.

The VICE-PRESIDENT. The Chair hears no objection, and the amendment is agreed to.

The Secretary read the next paragraph, as follows:

217. Horses and mules, valued at $150 or less per head, $30 per head; if valued at over $150, 25 per cent ad valorem.

Mr. JONES of Arkansas. Was there any action taken on paragraph 216?

Mr. FRYE. Yes; it was agreed to.

Mr. JONES of Arkansas. I intended to offer an amendment to that paragraph. The amendment which I gave notice would be offered in room of the first paragraph will apply to all these paragraphs—to paragraphs 215, 216, 217, and 218. If it is adopted at all, it ought to be adopted in the room of the whole of them, and I offer it now.

Mr. ALLISON. As a substitute?

Mr. JONES of Arkansas. I offer it now, and ask for a vote on it as a substitute for these paragraphs. One paragraph has already been passed over, and of course that will have to remain, but as I do not like to have paragraphs passed over, I will move the amendment now as a substitute for all of these paragraphs and ask for a vote on it.

Mr. ALLISON. I have no objection to a vote on the amendment of the Senator from Arkansas.

Mr. JONES of Arkansas. My purpose is to substitute an ad valorem tax on all live animals instead of the specific rate. I propose to substitute the rate in the present law.

The VICE-PRESIDENT. The amendment proposed by the Senator from Arkansas is in order as a substitute.

Mr. ALLISON. I ask that the amendment of the Senator from Arkansas may be postponed for a moment until we pass upon paragraph 218, as I understand he also desires to have his amendment apply to paragraph 218.

Mr. JONES of Arkansas. Yes; I propose to strike out all these paragraphs.

The VICE-PRESIDENT. The Secretary will proceed.

The Secretary read the next paragraph, as follows:

218. Sheep, 1 year old or over, $1.50 per head; less than 1 year old, 75 cents per head.

Mr. ALLISON. Now the Senator from Arkansas proposes to strike out the four paragraphs which have been read and to insert a substitute.

Mr. JONES of Arkansas. I move to strike out paragraphs 215, 216, 217, and 218 and insert in lieu the following paragraph:

215. All live animals not specially provided for in this act, 20 per cent ad valorem.

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed as a substitute by the Senator from Arkansas.

Mr. JONES of Arkansas. On that I ask for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. DANIEL (when his name was called). I am paired with the Senator from North Dakota [Mr. HANSBROUGH]; otherwise I should vote "yea."

Mr. HARRIS of Kansas (when his name was called). I have a general pair with the Senator from Wyoming [Mr. CLARK]. He not being present, I withhold my vote.

Mr. MARTIN (when his name was called). Has the senior Senator from Montana [Mr. MANTLE] voted?

The VICE-PRESIDENT. He has not voted.

Mr. MARTIN. Then I withhold my vote, as I have a general pair with that Senator. I should vote "yea" if he were present.

Mr. WARREN (when his name was called). I am paired with the junior Senator from Washington [Mr. TURNER]. Were he present and voting, I should vote "nay."

Mr. WILSON (when his name was called). I am paired with the Senator from Florida [Mr. PASCO]. If he were present, I should vote "nay."

The roll call was concluded.

Mr. CLAY (after having voted in the affirmative). I inquire if the junior Senator from Massachusetts [Mr. LODGE] has voted?

The VICE-PRESIDENT. He has not.

Mr. CLAY. Then I withdraw my vote, as I am paired with that Senator.

Mr. BATE. I will state that my colleague [Mr. HARRIS of Tennessee] is absent on account of sickness, and is paired with the Senator from Vermont [Mr. MORRILL].

Mr. FAULKNER (after having voted in the affirmative). I will ask whether the junior Senator from West Virginia [Mr. ELKINS] has voted?

The VICE-PRESIDENT. He has not voted.

Mr. FAULKNER. On this vote I feel that I should observe my pair with him, and I withdraw my vote.

Mr. CLARK. I inquire if the junior Senator from Kansas [Mr. HARRIS] has voted?

The VICE-PRESIDENT. He has not.

Mr. CLARK. I am paired with that Senator, and withhold my vote.

The result was announced—yeas 23, nays 38; as follows:

YEAS—23.

Bacon,	Gray,	Mitchell,	Tillman,
Bate,	Jones, Ark.	Morgan,	Turpie,
Berry,	Kenney,	Murphy,	Vest,
Caffery,	Lindsay,	Pettus,	Walthall,
Chilton,	McLaurin,	Roach,	White.
Cockrell,	Mills,	Smith,	

NAYS—38.

Allen,	Deboe,	Heitfeld,	Quay,
Allison,	Fairbanks,	Hoar,	Rawlins,
Baker,	Foraker,	McBride,	Sewell,
Burrows,	Frye,	McMillan,	Shoup,
Butler,	Gallinger,	Mason,	Spooner,
Cannon,	Gear,	Nelson,	Thurston,
Carter,	Hale,	Penrose,	Wellington,
Chandler,	Hanna,	Perkins,	Wetmore.
Cullom,	Hansbrough,	Platt, Conn.	
Davis,	Hawley,	Pritchard,	

NOT VOTING—28.

Aldrich,	Gorman,	Mallory,	Proctor,
Clark,	Harris, Kans.	Mantle,	Stewart,
Clay,	Harris, Tenn.	Martin,	Teller,
Daniel,	Jones, Nev.	Morrill,	Turner,
Elkins,	Kyle,	Pasco,	Warren,
Faulkner,	Lodge,	Pettigrew,	Wilson,
George,	McEnery,	Platt, N. Y.	Wolcott.

So the amendment of Mr. JONES of Arkansas was rejected.

The reading of the bill was resumed, beginning at paragraph 219, on page 69, and continued to paragraph 220, which was read, as follows:

Breadstuffs and farinaceous substances:

220. Barley, 30 cents per bushel of 48 pounds.

Mr. JONES of Arkansas. In line 14, after the word "barley," I move to strike out "30 cents per bushel of 48 pounds" and insert "30 per cent ad valorem;" so as to read:

220. Barley, 30 per cent ad valorem.

The VICE-PRESIDENT. The question is on the amendment proposed by the Senator from Arkansas.

Mr. VEST. Mr. President, we enter now upon a series of enormous increases upon agricultural products in the interest of the farmers of the United States. Confining myself to parliamentary language as far as possible, these increases are a fraud, a sham, and a pretense. The idea of protecting the farmers of this country upon corn and wheat and barley and oats when we export millions of dollars' worth and import but a few thousand dollars' worth is an insult to the intelligence of the whole country, and especially to the men who raise those cereals. There is not an intelligent man in this country who believes that this is for any

other than political purposes and to deceive the agricultural classes.

I commence with barley. The same thing applies to animals in the schedule, the specifications as to which we have passed over.

We export an immense amount of barley and import a very inconsiderable amount. We export of corn some thirty-odd million dollars' worth, and we import some $6,500 worth.

As to wheat the comparison is much stronger. These increases are made as they were made in the McKinley law, for the purpose of cajoling the farmers of the country into the idea that they are protected and that the prices of their products are increased by putting these absolutely spectacular duties upon their products. It did not succeed in 1890, as the elections after the passage of the McKinley law gave strong evidence to the country. The agricultural States voted against the Republican party, notwithstanding the fraudulent increases—for they were nothing else—contained in the act of 1890; and these increases will not succeed in deceiving the people now. The farmers of the country are not mistaken in regard to the object of these increases.

I will ask the Secretary to read a statement made before the Ways and Means Committee of the House of Representatives by the head of the grangers of Pennsylvania, representing the farmers of that State. This is a statement before that committee expressing the official action of the farmers of Pennsylvania, assembled at Altoona, on December 8 to 11, 1895, and it was embodied in the shape of resolutions, of which I shall ask the Secretary to read the part I have marked.

The Secretary read as follows:

That we can not deceive ourselves with the idea that any measure of protection to our industries offered by a tariff on imports can avail in the slightest degree to benefit the grower of those crops of which he produces a surplus for export, and whose price is necessarily made in the world's market, where they are and must continue to be disposed of.

That we have a right to demand that the same proportion of advantage shall be given to the agricultural industry that is accorded by law to any other in this broad land.

That while protection countries which are importers of agricultural products may in a measure remedy the evil of low prices by increasing the duties of agricultural imports, it is manifestly impossible for those which produce a surplus for export to give the least particle of relief to the interest of their farmers by a high tariff on these products.

That the lessening of production of these farm staples so as to bring them within the limit of our own home consumption is no remedy, as it is an economic impossibility, and in any event could only injure by limiting the opportunities of employment to our people, reducing the actual resources and wealth of our country.

Again, that diversification of our production can afford no certain nor permanent relief, as experience has proved that a largely increased production of specialties, such as dairy products, truck, berries, fruit, etc., only tends to eventually lower these things, as well as the staples, below the profit point.

At a time when the American farmer had a world monopoly in the production of staples, when with cheaper lands he was the almost exclusive user of improved agricultural machinery, he was then able to pay the ultimate net cost of a high protective tariff and live; but when, as now, the world's prices are down to one-half their former rates, in the face of this to even maintain, let alone raise still higher, the protective tariff would be economic suicide.

Mr. VEST. Mr. President, I want to give some object lessons from the official reports to show what a fraud this is. In 1896 we exported $37,836,862 worth of corn and we imported $2,974 worth; yet the increases in this bill, in order to deceive the farmers, are from 20 to 100 per cent upon Western corn. Does anybody believe that will benefit the farmers in the country who are raising this cereal? Where is the competition with $37,000,000 against $2,974? No wonder the head of the Grange in Pennsylvania, testifying before the Ways and Means Committee, in producing this resolution, said that the farmers at the next election would resent that attack upon their intelligence; that they know very well that this will not help them.

Take oats. By the official report, we exported in 1896, $3,497,611 worth, and we imported $6,933 worth. Of wheat we exported $39,709,868 worth, and we imported $9,506 worth, and that was seed wheat to improve the crop in the United States. Yet the farmers are told, "We are your friends; the Republican party will undertake to deceive you now in 1897 as we did in 1890, and we will put an enormous increase upon those articles with which there is no foreign competition at all, relying upon your ignorance to catch your votes."

This gentleman, the head of the Grange, is obviously a very intelligent farmer. When he had filed those resolutions, he proceeded to give his statement. I know the Senate is not listening much to this testimony, but I will ask the Secretary to read the parts of it I have marked.

The Secretary read as follows:

The population of the State——

Mr. VEST. That refers to the State of Pennsylvania.

The Secretary continued the reading, as follows:

has increased about as fast as the property of the farmers has diminished during these twenty-five years.

But while agriculture has so retrograded, manufacturing has gone forward with wondrous strides. Capital thus invested has risen from $416,000,000 to $1,000,000,000 (it was $991,000,000 in 1890), the number of employees has been doubled, the amount of wages paid has increased 60 per cent, and the product of the factories to an even greater rate.

While the population as well as the wealth of farming communities has shrunken, the towns and centers of business have known no setbacks. Twelve agricultural counties have less population now than sixteen years since, while manufacturing towns have doubled their population and quadrupled their wealth.

That the coal-mining industries do not make an equal showing is because the management is more concerned to roll up big profits than to increase the output, and prefer the increment in dollars rather than in tons.

While Pennsylvania farmers have lost $250,000,000 in the assessed value of their holdings, the real estate of Philadelphia alone has in the same time raised from $440,000,000 to $732,000,000.

So that under the protective system, which has prevailed ever since the exigency of the war rendered its imposition possible, because it seemed unavoidable, mining, manufacturing, and kindred business enterprises have been favored and assisted, while farming has depreciated.

If this condition prevailed in Pennsylvania alone it might be held that local causes engendered it; but it is notorious that it is coextensive and affects every State and Territory over which our starry banner waves; more, perhaps, in some and less in other localities, but everywhere, and the loss to farmers is greatest where they have had the most to lose. That it should exist in Pennsylvania, of all States in the Union, is perhaps the greatest anomaly, if there is any truth in the home-market arguments for protection.

The facts as they stand, however, utterly disprove them, and show that no such thing as a sufficient or remunerative home market has been furnished us in return for the immense and incalculable sacrifices made by the farmers on the altar of protection for now a full generation.

If anything, we are now more dependent on the foreign market than we have ever been, and the only reason that the volume of our agricultural surplus is not greater yet than it is now is because of the increasing poverty of our farmers and their inability to continue production without profit.

That the capital of the farmers of Pennsylvania, situated as they are in the heart of the most heavily protected industries of this country, has diminished at least 25 per cent is proven by the censuses of 1870 and 1890, which show that the assessed value of their real estate alone fell in those twenty years from $1,043,000,000 to $922,000,000, and that the capital of the manufacturers augmented in the same time from $406,000,000 to $991,000,000, while the city real estate more than doubled; the value of railroad, telegraph, and other speculative properties nearly tripled.

We submit that we are entirely satisfied that, whoever may have gotten the benefits of a protective tariff, we certainly have not.

Mr. VEST. Mr. President, I take it that ought to be sufficient warning to our friends upon the other side that the farmers of this country are not caught by this chaff of putting up enormous duties upon articles of which we export a large surplus and which do not come in competition with the products of agriculture in the United States. I have seen a statement made, and I believe it is true, although I am not an expert statistician, that the farmers of the United States since 1892 have lost $500,000,000 in the fall in price of farm products. That fall went on under the McKinley Act, and for the two years that act was in force, notwithstanding the enormous duties, as high in a great many instances as some that are imposed in this pending bill.

Our friends in St. Louis told us when they indorsed the McKinley Act that they did not propose to make the tariff higher than that of 1890; and yet they have done it here upon nearly every page in this whole bill, and now, losing the farmer vote as they have done repeatedly in the agricultural States, they propose to attempt this old stale subterfuge of touching the farmers by increasing upon their products the duties that were imposed by the McKinley Act of 1890. In my judgment that can not be done, Mr. President, and the head of the Grange who testified, and whose testimony has been read from Pennsylvania, the great protective State of the Union, is a sufficient answer to this attempt.

Mr. GEAR. May I interrupt the Senator for a moment?

Mr. VEST. Certainly.

Mr. GEAR. This duty upon barley is the same as that which was in the McKinley law.

Mr. VEST. I am not calling attention to the duty on barley, but to others.

Mr. GEAR. In 1889 we imported from Canada, where they had cheaper labor, cheaper lands, and cheaper transportation than the American farmer, eleven and a half millions of barley.

Mr. GRAY. For the brewers?

Mr. GEAR. For the brewers. And at the expiration of the McKinley law we only imported about three millions. It is true that last year we exported some barley to England, for the reason that there was a comparative failure of the crop in Russia.

The farmers in my State indorse the duty on barley, and the grand master of the National Grange helped to form the agricultural schedule of the McKinley law, and every rate put in that bill on barley and every other agricultural product was the work of the grand master of the National Grange of the State of Iowa. So that one officer of the Grange at least indorsed in the highest degree the protection given to agricultural products.

Mr. VEST. Does the Senator pretend to say that the committee have not increased the duty on every cereal over the rates in the act of 1890?

Mr. GEAR. That may be; and if so, there has been a good reason for it.

Mr. VEST. What good reason?

Mr. GEAR. I call the attention of the Senator from Missouri to the fact that they have also increased very largely the duties on animals.

Mr. VEST. But I want to know why these increased duties are proposed to be placed on corn and on wheat when we are exporting

much more largely than we did in 1890? Does anybody pretend to say that we are not now sending out from thirty-five to forty million dollars' worth of corn and wheat and bringing in only four or five thousand dollars' worth? How do you protect the farmers of this country by the imposition of a duty on these cereals? What intelligent man can pretend to say it does? What Republican Senator will rise here and say that will protect the farmers of this country? Then what are we doing it for? That is the question. Is there not some political reason hidden under this, and do you not know it? You are playing upon the ignorance, as you assume it to be, of the farmers of the United States by pretending that you are helping them by giving them protection against nothing—absolutely nothing.

We brought in $9,504 worth of wheat—seed wheat—and exported $39,000,000 worth of wheat; and then you go to the farmer and say, "My dear bucolic friend, let me embrace you; I am your friend. I have protected you against this $9,504 worth of foreign wheat!" If the doctrine prevails that we are to tax everything we have here, without regard to whether it ought to be taxed or not, in the name of equality, I have nothing more to say; if we are to take up this bill and put a duty upon everything because of revenue to be derived from everything in the country, that is an answer to any expostulation at all; that is the end of it.

The Senator from Massachusetts [Mr. HOAR] yesterday, I understood—but I did not have the honor to listen to him, as I was out of the Chamber on business—was kind enough to say that all of us on this side of the Chamber prominently engaged in this discussion had at one time or another voted to protect articles of production in our States. If I had been here, I should have said to the Senator what I propose to say now.

There was a time in my public career when I believed in the doctrine advocated by Monroe and Polk, called a revenue duty with incidental protection. I was ignorant enough once, foolish enough—and I use the word myself—to say here that I did not blame a Senator for voting to put a revenue duty upon an article in his district or his State; and I went into the discussion of the first tariff bill upon which I was engaged in this Chamber with that sort of idea. My mind, however, was very rapidly disabused. I found that whenever you went beyond the limit of a tariff for revenue without regard to protection, you turned the Congress of the United States into that famous convention of monkeys of which a great writer once wrote, who were engaged in a solemn discussion of affairs of state, when some one, without regard to the dignity of the occasion, threw in a handful of nuts, and immediately the Senators and Representatives commenced grabbing for nuts and forgot the public business. [Laughter.] Whenever you once admit the idea of protection into a tariff bill, all restraints are gone, and it is merely a question of who will get there first and get the most. You can not satisfy them. When you put on a high duty one year, the very same men who secured it will come and hold up their emaciated and pallid hands the next year and beg for an increased duty, because, they say, "We are still suffering and languishing and dying," and some Senator or Representative, listening to the domestic appeal, whose election is in danger, says to some gentlemen interested, "I will stand by you in the name of the people of the United States and give you an increased duty in order that money may flow into your pockets and coffers."

It is the old, old story, as old as the world, whenever you allow avarice and greed to enter into any discussion, avarice and greed will control that discussion and the result.

The old doctrine of the Democratic party was protection and is protection to the poor, to those who need protection if protection is to be given, protection in the shape of equality, no governmental partnership—that is the curse of all tariff legislation—no partnership between an individual or any class by which governmental functions are used for individual profit.

I know it is said that Mr. Jefferson, the founder of our party, at one time spoke of a protective tariff. If Mr. Jefferson were living to-day, he would be false to every doctrine of his life if he did not oppose this high protective tariff system. I can understand in the age in which he lived, confronted with the great rivalry and oppression of Great Britain, he could have said, and honestly, that he was for building up the infant industries of the United States. Where are the infant industries to-day? They are hoary, gray, giant in power, all-pervading in influence, and yet they come here with not the feeble whine of the infant, but with the roar of the giant, demanding year after year increased duties.

I voted in 1890, in reparation of what foolishness I had ever uttered upon the tariff question, for free lead, free salt, free lumber, free wool; and I have been voting that way ever since, and expect, God willing, to vote that way until I cease to be in public life. I would rather retire from this Chamber to-morrow than give a vote to tax the lumber, the salt, the wool of the United States. They were the only three features of the Wilson bill that reconciled me to its passage. To take them out now, or either of them, is to strip that bill of what commended it to me more than anything else.

Now, Mr. President, I return to the immediate article before the Senate, the duty upon barley, and ask the Secretary to read the communication which I send to the desk.

The Secretary read as follows:

OSWEGO BOARD OF TRADE, *Oswego, N. Y., April 7, 1897.*

To the honorable the Finance Committee of the Senate, Washington, D. C.

GENTLEMEN: The rate of duty on barley prior to the enactment of what is known as the McKinley Act, the act of 1890, was 10 cents per bushel. The rate was fixed by legislation, following the recommendations of the Tariff Commission of 1883.

After an exhaustive investigation, aided by the best attainable testimony, the commission decided to reduce the existing rate of duty on barley from 15 cents to 10 cents per bushel; and in order to protect American manufacturers of malt against the competition of Canadian malsters, the rate of duty on malt was fixed at 20 cents per bushel. Following the adjustment of these rates of duty on imported barley and malt, the business of converting Canada barley into malt was vastly increased along the northern frontier on the American side of the line dividing the United States and Canada. Large sums of money were invested in malting plants. The investment in this industry was augmented in the city of Buffalo alone from $1,362,000 in 1880 to $3,299,195 in 1890, and during the same period of time like investments in the city of Oswego grew from $85,000 to $802,000.

It is scarcely too much to say that this investment of capital has been rendered valueless by the prohibitory duty on Canada barley under the operation of the tariff enactment of 1890, and not remedied as yet by the later act of 1894. In addition to the destruction of the value of plants and correlative loss to individuals engaged in the business of malting, all revenue, or practically all, for the Government from that source has ceased.

It is alleged that the prohibitive duty would benefit the American farmer; that he would command, in consequence, a higher price for his barley. The facts and the developments since the enactment of the prohibitive duty show conclusively that no such result has followed. Prices of American-grown barley have never before been so low as since the enactment of a prohibitive rate of duty.

The production of barley in the United States is far beyond the malting demand, and the surplus is sold for feed at home and abroad, and the feed price regulates the price of the whole crop. The quantity of barley imported never exceeded, if it ever equaled, 10,000,000 of bushels in any one year, while the production in the United States as far back as 1880 reached the 65,000,000-bushel mark, and is now much larger. The total quantity malted that year was about 40,000,000 bushels, showing a surplus of 25,000,000 bushels. In 1895 the production in this country was 87,000,000 bushels, and the malting consumption did not exceed 50,000,000 bushels, showing that a surplus of about 37,000,000 bushels was necessarily disposed of for feed.

We defy anybody to prove that if barley is admitted into the United States under a 10-cent-per-bushel rate of duty, the quantity likely to be imported under such a rate would lower the price of the home-grown article or do anyone any harm whatever. On the contrary, it would be a great benefit to many citizens of the United States and would yield the United States Government some revenue.

Finally, the subscribers would respectfully suggest that your committee recommend a duty of 10 cents per bushel on barley, and also fix a rate that will establish a just equivalency of protection on malt—say 25 cents per bushel. Such rates, it is believed, will bring considerably increased revenue to the Government, and at the same time make a revival of the malting industries on the northern frontier a possibility, although at a largely reduced margin of profit to those engaged in the business as compared with the profit under conditions as they existed prior to the tariff enactment of 1890.

Craving your consideration of the statements herein set forth, and trusting that your action will be the means of restoring life to an industry seriously crippled, if not yet quite wounded to death, with sentiments of profound respect, we subscribe ourselves,

Very respectfully,

ROBT. DOWNEY, *President.*
F. O. CLARK, *Secretary.*

Mr. MANTLE. I wish to inquire from whom the communication comes?

Mr. VEST. From the Oswego Board of Trade.

The VICE-PRESIDENT. From the Oswego Board of Trade.

Mr. VEST. There is a vast amount of literature upon the question of barley which I shall not inflict on the Senate, as I know the result is predetermined and adjudged. I shall content myself simply with moving to strike out the rates proposed in the bill and to insert those under the existing law. Barley is proposed to be taxed at 30 cents per bushel of 48 pounds. That is the McKinley rate. Under the Wilson Act it is 30 per cent ad valorem. I move to insert "30 per cent ad valorem" instead of "30 cents per bushel of 48 pounds."

Mr. MANTLE. Mr. President, on the question of barley, while I do not care to make any extended remarks, I wish to state that I take it that the communication which has just been read is from what might be called that branch of the barley industry that represents what would be the manufacturing interest as opposed to the producers of barley—what might be termed the raw material. It is about the same contest that is going on all along the line in the matter of the tariff.

So far as a practical result following the levying of a duty upon barley is concerned, I can speak with an absolute knowledge as to the State of Montana. We have in Montana a valley which is especially adapted to the growing of barley, due to some peculiarity of the soil, and I believe it is said that we produce the finest barley that is produced in the United States, or in fact in the world. That is evidenced by the fact that a great brewing concern, known as the Manhattan Company, has bought some 30,000 acres of land in that valley which it has devoted to the growing of barley, and the barley from the valley has been shipped to foreign countries.

Now, I know that by reason of the duty which the McKinley law laid upon barley the value of the barley grown in the valley was enhanced, and the farmers prospered accordingly.

Mr. VEST. Will my friend the Senator from Montana permit me to ask him a question?

Mr. MANTLE. Certainly.

Mr. VEST. The comparative statement shows that in 1896, under the operation of the present duty, we exported $3,100,311 worth of barley. We imported only $312,224 worth. Of barley malt we exported $126,942 and imported $4,774. Now, I would ask him if the interest of the growers of barley does not seem to be in pretty fair condition from that statement? And yet he proposes to increase the duty from 38 to 78.42 per cent.

Mr. MANTLE. I am not familiar with the statistics just read by the Senator from Missouri. What I say I am saying from practical and personal knowledge of the conditions that exist in my State with reference to the barley growth. I know that the price of barley, under the operation of that law, to the farmers of the valley, was enhanced. The farmers were benefited by it.

I made some examination into this subject a year or two ago, and I found that prior to the enactment of the McKinley law the importations of barley had been very much larger than they were subsequent to that law, and that a resultant benefit had been enjoyed by the barley growers of Montana and Minnesota and Wisconsin and the States running next to the Canadian line. Naturally the brewing interests in the great cities of the East would be benefited by the ability to import barley from Canada at a low rate of duty or free of duty. As I said before, they represent the manufacturing end of the industry, and their interest lies in getting their raw material just as cheaply as they possibly can.

Mr. President, I am in favor, as has been so well said by other members of this body, in the adjustment of the tariff, of a duty being laid at every opportunity where the farmer may derive any direct or indirect benefit from it. We are going to have a protective tariff here. I say, let us apply it in every direction, and let us make its benefits felt, so far as it is possible to do so, in all sections and by all classes and all interests. In the very nature of things the farmers of this country are the last to receive a benefit from a protective tariff. It is something that can not be helped. It is natural that it should be so. But I do believe that whenever the opportunity presents in the framing of these duties we should lose no opportunity to make its benefits apply to them, if it is possible to do so. I speak from a practical knowledge, so far as this question is concerned. Without going into the broad details of the subject, I know the duty on barley did benefit the barley growers in the State of Montana.

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Arkansas [Mr. JONES], supplemented by the Senator from Missouri [Mr. VEST].

Mr. VEST. I withdraw my amendment. I did not know that my colleague had offered one. On agreeing to the amendment of my colleague I call for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CLAY (when his name was called). I am paired with the junior Senator from Massachusetts [Mr. LODGE]. If he were present, I should vote "yea."

Mr. FAULKNER (when his name was called). I am paired with the Senator from West Virginia [Mr. ELKINS]. If he were present, I should vote "yea."

Mr. HARRIS of Kansas (when his name was called). I have a pair with the junior Senator from Wyoming [Mr. CLARK]. If he were present, I should vote "yea."

Mr. HARRIS of Tennessee (when his name was called). I am paired with the senior Senator from Vermont [Mr. MORRILL]. If he were present, I should vote "yea" on this amendment.

Mr. PENROSE (when his name was called). I am paired with the junior Senator from Delaware [Mr. KENNEY]. I think he has not voted, and I therefore withhold my vote.

Mr. WARREN (when his name was called). I again announce my pair with the junior Senator from Washington [Mr. TURNER].

The roll call was concluded.

Mr. VEST. I am paired with the Senator from Minnesota [Mr. NELSON]. If he were present, I should vote "yea."

Mr. MANTLE (after having voted in the negative). I inquire if the junior Senator from Virginia [Mr. MARTIN] has voted?

The VICE-PRESIDENT. He has not voted.

Mr. MANTLE. Being paired with him, I withdraw my vote.

The result was announced—yeas 17, nays 34; as follows:

YEAS—17.

Bacon,	Daniel,	Mills,	Walthall,
Bate,	Gray,	Morgan,	White.
Berry,	Jones, Ark.	Pettus,	
Caffery	Lindsay.	Roach,	
Cockrell,	McLaurin,	Turpie,	

NAYS—34.

Allen,	Carter,	Frye,	Hawley,
Allison,	Cullom,	Gallinger,	Heitfeld,
Burrows,	Deboe,	Gear,	Hoar,
Butler,	Fairbanks,	Hale,	Jones, Nev.
Cannon,	Foraker,	Hansbrough,	McBride,
McEnery,	Platt, Conn.	Sewell,	Tillman,
McMillan,	Pritchard,	Shoup,	Wetmore.
Mitchell,	Quay,	Spooner,	
Perkins,	Rawlins,	Stewart,	

NOT VOTING—38.

Aldrich,	Gorman,	Mason,	Teller,
Baker,	Hanna,	Morrill,	Thurston,
Chandler,	Harris, Kans.	Murphy,	Turner,
Chilton,	Harris, Tenn.	Nelson,	Vest,
Clark,	Kenney,	Pasco,	Warren,
Clay,	Kyle,	Penrose,	Wellington,
Davis,	Lodge,	Pettigrew,	Wilson,
Elkins,	Mallory,	Platt, N. Y.	Wolcott.
Faulkner,	Mantle,	Proctor,	
George,	Martin,	Smith,	

So the amendment of Mr. JONES of Arkansas was rejected.

The reading of the bill was resumed, as follows:

221. Barley malt, 45 cents per bushel of 34 pounds.

Mr. VEST. I move to strike out "45 cents per bushel of 34 pounds" and insert "40 per cent ad valorem."

Mr. ALLISON. I suggest to the Senator from Missouri, having settled barley, that barley malt should follow practically in the same ratio. I do not think Mr. Downey, the president of the Oswego Board of Trade, would enjoy the rate proposed by the amendment.

Mr. VEST. We will have a vote on it, anyway.

The VICE-PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Missouri.

The amendment was rejected.

The Secretary read as follows:

222. Barley, pearled, patent, or hulled, 2 cents per pound.
223. Buckwheat, 15 cents per bushel of 48 pounds.

Mr. VEST. In paragraph 223 I move to strike out "15 cents per bushel of 48 pounds" and insert "20 per cent ad valorem." I call attention to the imports of this country, a large and destructive importation. In 1896 it amounted to $162 worth of buckwheat, and the farmers of the United States are languishing and dying under the competition. I call for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. TURPIE. Mr. President, I wish sincerely that the Senator from Missouri [Mr. VEST] would move to place buckwheat on the free list. I do not feel even like voting for the reduced rate which he proposes. It is very clear that the duty is unnecessary. The only revenue derived from it is from the seed for planting the earth and soil of the United States. The seed is a germ—a germ of export. It is a germ of wealth in this country. It ought not to be taxed. It is said seed can be taxed. Certainly we can tax it. All things are lawful to us. But all things are not expedient. I think we might derive a revenue to the Government in abundance without placing a penny of tax upon seed for planting. I think that all seed ought to be admitted free of duty. Nor is it necessary for the protection of the farmers in this country or for their encouragement, because their product is exported as a surplus, the price of which is fixed in the foreign market, and no home or domestic legislation can affect that price.

I agree fully with the Senator from Missouri that the whole of this schedule is fraudulent and is false. There is only one condition upon which it could operate as protection to the farmers or benefit the farmers of the United States. This enormous increase of duty upon cereals would be an absolute benefit to the farmers of the United States if they could form a trust, the same as other favored and protected industries, but the farmers of the United States have never been able to form a trust. I do not know that they wish to form one.

In the first place, they are too numerous. Six or seven million persons is too large a number to go into any combination. In the next place, they are too much divided and scattered, with respect to their habitations and localities, to undertake those sudden changes and shifts which are necessary for the successful operation of a trust in the market. Instant communication, very brief and subtle communication, with every member of the trust, when a trust is made, is one of the absolutely indispensable things which attend it.

In the next place, the interests of the farmers of the United States are as diversified and varied as their habitations and places of abode. The surplus of this great industry—the surplus of the agricultural crop—is exported and must always be exported, and it meets with the agricultural products of all the other nations of the world in free competition, and this trust, even if it were possible otherwise—the agricultural trust of the United States, embracing every member of a family engaged in this country in that business—could not control the price of its surplus products. Therefore there would be no means, no efficient means, to regulate prices, and no means of gain in forming such a trust, if it were possible.

These rates here make opportunity for a trust. These rates make the ability to the farmer to form a trust, if it were physically

possible to form one. But the farmers' trust is a phantom, and these increased rates of duty, except for the purpose of taxing the seed imported for planting, are also phantoms.

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Missouri, on which the yeas and nays have been ordered.

The Secretary proceeded to call the roll.

Mr. CLAY (when his name was called). I rise for the purpose of announcing my pair with the junior Senator from Massachusetts [Mr. LODGE]. Were he present, I should vote "yea."

Mr. FAULKNER (when his name was called). I am paired with the Senator from West Virginia [Mr. ELKINS]. If he were present, I should vote "yea."

Mr. HARRIS of Tennessee (when his name was called). I am paired with the Senator from Vermont [Mr. MORRILL].

Mr. MANTLE (when his name was called). I am paired with the junior Senator from Virginia [Mr. MARTIN]. I therefore withhold my vote.

Mr. VEST (when his name was called). I am paired with the Senator from Minnesota [Mr. NELSON]. I should vote "yea" if he were present.

Mr. WILSON (when his name was called). I am paired with the Senator from Florida [Mr. PASCO], who would vote "yea" if he were present, and I should vote "nay."

The roll call was concluded.

Mr. KENNEY (after having voted in the affirmative). Has the junior Senator from Pennsylvania [Mr. PENROSE] voted?

The VICE-PRESIDENT. He has not voted.

Mr. KENNEY. I withdraw my vote, being paired with that Senator.

The result was announced—yeas 18, nays 28; as follows:

YEAS—18.

Bacon,	Cockrell,	McLaurin,	Turpie,
Bate,	Daniel,	Mills,	Walthall,
Berry,	Gray,	Morgan,	White.
Caffery,	Jones, Ark.	Pettus,	
Chilton,	Lindsay,	Roach,	

NAYS—28.

Allison,	Frye,	McEnery,	Quay,
Cannon,	Gallinger,	McMillan,	Sewell,
Carter,	Gear,	Mason,	Shoup,
Cullom,	Hale,	Perkins,	Spooner,
Deboe,	Hawley,	Platt, Conn.	Thurston,
Fairbanks,	Jones, Nev.	Platt, N. Y.	Tillman,
Foraker,	McBride,	Pritchard,	Wetmore.

NOT VOTING—43.

Aldrich,	George,	Mallory,	Rawlins,
Allen,	Gorman,	Mantle,	Smith,
Baker,	Hanna,	Martin,	Stewart,
Burrows,	Hansbrough,	Mitchell,	Teller,
Butler,	Harris, Kans.	Morrill,	Turner,
Chandler,	Harris, Tenn.	Murphy,	Vest,
Clark,	Heitfeld,	Nelson,	Warren,
Clay,	Hoar,	Pasco,	Wellington,
Davis,	Kenney,	Penrose,	Wilson,
Elkins,	Kyle,	Pettigrew,	Wolcott.
Faulkner,	Lodge,	Proctor,	

So Mr. VEST's amendment was rejected.

The Secretary read the next paragraph, as follows:

224. Corn or maize, 15 cents per bushel of 56 pounds.

Mr. VEST. I move to strike out the duty proposed in the pending bill and to insert 20 per cent ad valorem, the Wilson rate.

The SECRETARY. After the word maize, on page 69, line 21, paragraph 224, strike out the remainder of the paragraph and insert "20 per cent ad valorem;" so as to read:

224. Corn or maize, 20 per cent ad valorem.

Mr. VEST. This is an increase from 20 per cent to 100 per cent in order to protect the farmers of the country of this staple. We exported in 1896, $37,836,862 worth of corn. We imported $2,975 worth, which was not for consumption, but was seed corn brought in principally from Canada. Yet in the interests of the agricultural community we are to increase the duty from 20 per cent to 100 per cent. I call for the yeas and nays upon my amendment.

The VICE-PRESIDENT. The question is on agreeing to the amendment of the Senator from Missouri, upon which he demands the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CLAY (when his name was called). I am paired with the junior Senator from Massachusetts [Mr. LODGE]. I should vote "yea" if he were present.

Mr. HARRIS of Tennessee (when his name was called). I am paired with the Senator from Vermont [Mr. MORRILL].

Mr. VEST (when his name was called). I am paired with the Senator from Minnesota [Mr. NELSON], or I would vote "yea."

Mr. WELLINGTON (when his name was called). I announce my pair with the junior Senator from North Carolina [Mr. BUTLER]. Were he present, I should vote "nay."

Mr. WILSON (when his name was called). I again announce my pair with the Senator from Florida [Mr. PASCO]. If he were present, I should vote "nay."

The roll call having been concluded, the result was announced—yeas 16, nays 30; as follows:

YEAS—16.

Bacon,	Chilton,	Jones, Ark.	Mitchell,
Bate,	Cockrell,	Lindsay,	Morgan,
Berry,	Daniel,	McLaurin,	Pettus,
Caffery,	Faulkner,	Mills,	Walthall.

NAYS—30.

Allen,	Foraker,	McBride,	Rawlins,
Allison,	Frye,	McEnery,	Sewell,
Burrows,	Gallinger,	McMillan,	Spooner,
Cannon,	Hale,	Mason,	Thurston,
Carter,	Hanna,	Platt, Conn.	Tillman,
Deboe,	Hawley,	Platt, N. Y.	Wetmore.
Elkins,	Hoar,	Pritchard,	
Fairbanks,	Jones, Nev.	Quay,	

NOT VOTING—43.

Aldrich,	Gray,	Morrill,	Stewart,
Baker,	Hansbrough,	Murphy,	Teller,
Butler,	Harris, Kans.	Nelson,	Turner,
Chandler,	Harris, Tenn.	Pasco,	Turpie,
Clark,	Heitfeld,	Penrose,	Vest,
Clay,	Kenney,	Perkins,	Warren,
Cullom,	Kyle,	Pettigrew,	Wellington,
Davis,	Lodge,	Proctor,	White,
Gear,	Mallory,	Roach,	Wilson,
George,	Mantle,	Shoup,	Wolcott.
Gorman,	Martin,	Smith,	

So Mr. VEST's amendment was rejected.

The Secretary read the next paragraph, as follows:

225. Corn meal, 20 cents per bushel of 48 pounds.

Mr. VEST. I move to strike out "20 cents per bushel of 48 pounds" and insert "20 per cent ad valorem."

The SECRETARY. In line 23, page 69, after the words "corn meal" it is proposed to strike out the remainder of paragraph 225 and insert "20 per cent ad valorem."

Mr. VEST. This is a small raise over the existing law. I want to call attention to the fact that we exported in 1896, $654,121 worth of this product and imported the enormous amount of $287 worth. But, as a matter of course, the farmer must be protected against that importation. I shall not call for the yeas and nays upon the amendment, but I will ask for a vote upon it.

Mr. BATE. I desire to state in this connection, that I for one should like to have an opportunity to vote upon the question of the duties upon these necessaries of life, these cereals, particularly corn and corn meal, etc. I do not believe in imposing any tariff upon them. They ought to be free. I should like to have the minority members of the committee, if they see proper to do so, move to put them on the free list, so that we who feel this way can put ourselves upon record properly, and show that we are in favor of placing these products upon the free list.

Mr. VEST. I should vote for the Senator's motion if he moved to put it on the free list, but I am afraid we would be a little more lonesome than we are now.

Mr. BATE. I think we should try it.

Mr. VEST. I will stay with the Senator.

Mr. BATE. I shall be glad to have your company.

Mr. VEST. But our votes on this side of the Chamber are getting smaller and smaller.

The VICE-PRESIDENT. The question is on agreeing to the amendment of the Senator from Missouri [Mr. VEST].

The amendment was rejected.

Mr. BACON. I move to insert as a new paragraph:

225½. Raw cotton, 20 per cent ad valorem.

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Georgia.

Mr. BACON. Mr. President, I am unable to understand why the Republican members of the Finance Committee, in their general disposition to give at least equality to some extent in the recognition of all agricultural products, should omit one of the principal agricultural products of the United States.

Before I pursue that, though, I want to say something else. I am going to return to it, and I hope to have some explanation from the learned and distinguished gentlemen as to why they make this discrimination.

I want to say that I offer the amendment in the utmost good faith. I believe that a duty ought to be placed upon all importations of raw cotton, and I believe the rate which I have suggested in the amendment is a strictly moderate revenue rate. I do not desire to repeat what I have already said to the Senate upon a similar question, and therefore I must omit a great deal that is apt and pertinent to this particular discussion.

I recognize the fact that there can be such a thing as a legitimate revenue duty, and I recognize the fact that one who opposes the principle and the system of protection can legitimately favor and support the imposition of a duty which is a revenue duty.

Mr. PRITCHARD. Will the Senator from Georgia yield to me for a moment?

The PRESIDING OFFICER (Mr. GALLINGER in the chair). Does the Senator from Georgia yield to the Senator from North Carolina?

Mr. BACON. Certainly.

Mr. PRITCHARD. Does not the Senator think it would be a better idea to put a specific rate on cotton as well as on these other articles?

Mr. BACON. I do not think so.

Mr. PRITCHARD. I have offered an amendment fixing the rate on cotton at 1¼ cents a pound. Why not agree on that?

Mr. BACON. I will state to the Senator from North Carolina the reason why I do not think a specific duty is a proper one, outside of any question as to whether as a general proposition specific duties are to be preferred to ad valorem rates. We have two distinct kinds of cotton. One is worth twice as much as the other—sometimes three times as much as the other. That, I think, is a sufficient answer to the suggestion of the learned Senator from North Carolina.

I appreciate, of course, the fact that he favors the imposition of a proper tariff duty upon the importation of cotton, and it is simply a question of difference between us as to what is the proper method of imposing the duty. If it were not for the fact which I have mentioned, I would be willing to waive whatever preference I might have on the subject of an ad valorem in favor of the specific duty, in order that those who favor a duty might not be divided.

Mr. PLATT of Connecticut. What is the price of Egyptian cotton as compared with other cotton—the foreign price?

Mr. BACON. I do not know anything about the foreign price. The comparative statement, I think, shows the value of the imported cotton.

Mr. MILLS. The imported cotton is 12 cents a pound.

Mr. BACON. Twelve cents is the average. But the Senator will understand that that is not the extreme price. Some of it is very much higher.

Mr. PLATT of Connecticut. The principal importation is of Egyptian cotton, is it not?

Mr. BACON. I presume it is. I know it is the principal importation, but it is not the exclusive. I am not prepared to state to the Senator the extent of the importation.

Mr. JONES of Arkansas. If the Senator from Georgia will permit me, I will read from the imports. The imports of unmanufactured cotton show that there is a small amount from Germany; a small amount from Russia and the Black Sea country; from the United Kingdom 9,530,000, and from Peru 1,661,000 pounds. There are small quantities from other countries. From Turkey in Africa and Egypt the importations amount to 43,574,000 pounds.

Mr. PRITCHARD. Making in all 55,350,520 pounds.

Mr. MASON. Those are the importations?

Mr. JONES of Arkansas. The importations.

Mr. McLAURIN. I have here a dispatch from Mexico that bears on this point. I should like to give the Senator from Georgia the benefit of it, and I ask the Secretary to read it.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Secretary read as follows:

MEXICO SHIPPING COTTON—THE HIGH RATE OF EXCHANGE FAVORS HER PRODUCTS.

MEXICO CITY, *May 14.*

Mexico is now shipping cotton in certain forms to the United States, thus reversing what has heretofore been the rule. This is particularly true of cotton waste, which, at present, is being bought in large quantities by American firms. There are seventy cotton factories in the Republic, and the total available amount of waste from them per month is about 50,000 pounds, which is handled here almost exclusively by one man. He, by the high rate of exchange at present prevailing, is shipping large consignments of this commodity to the United States.

Two large lots, the first of 400,000 pounds and the second of 700,000 pounds, have already gone forward.

Mr. BACON. Mr. President, as I was proceeding to say, I am offering this amendment in the utmost good faith, because I think as a Democrat and one who does not believe in the protection principle it is a legitimate duty, and a proper duty, and that its omission from the schedule is a violation of the principle enunciated in the Democratic platform, which says:

Such duties to be so adjusted as to operate equally throughout the country and not discriminate between class or section.

I want to illustrate, if I do not trespass upon the time of the Senate, by what I will admit to be an extreme case, but which will prove the rule. Everyone will admit that the imposition of duties upon imports raises the price of similar articles in this country, and necessarily so.

Now, suppose, just for the sake of the illustration, that the tariff bill should lay a uniform duty of 25 or 30 per cent on every article imported into this country except one. Can any man doubt, whether it raises the price to the extent of 25 or 30 per cent or not, that it would raise the prices of all these various articles very materially; and can any man doubt that the one single article which was omitted would be left behind and would not have its price raised to the same plane and in the same proportion as the others? If that were done, is there not the gravest injustice, outside of any protection feature, considering it solely as a revenue measure, confined strictly to revenue duty? Is there any possibility of denying the proposition that there is a grave injustice to the particular article of produce which is left not included in this list of duties? If it would be true in that extreme case, it is true, in a different degree, but equally true, when there is a larger number of articles not included in the list upon which duties are imposed.

Now, the particular article that we have under consideration is one which can derive at best exceedingly small benefit by the way of the raising of its prices equally with the prices of other articles which its producers have to consume. There is no class of producers in this country upon which there falls with such absolute dead weight the burden of the tariff as the class that produce cotton, for the reason that in the main it is impossible for a tariff duty to affect the prices in the way of raising them, and for the other reason that there is not a single thing that the cotton planter has to use in the production of his crop that he does not have to pay a high price upon by reason of the imposition of the tariff. Every implement that he uses—plows, trace chains, harness—every imaginable appliance that he has to use in the production of his crop is raised in price from 25 to 100 per cent by reason of the tariff; and yet, while he has to pay these extreme prices, he is to be left in the lurch.

Mr. President, before I proceed to ask the distinguished gentlemen of the majority of this committee the question that I hope they will answer me, I want to call attention to another fact in connection with the question of the propriety of the imposition of this duty. I have not the slightest idea, and I presume no Senator will pretend, that the imposition of this duty would exclude a single pound of Egyptian cotton or cotton from any other country. The comparative statement shows that last year there were imported into this country 55,350,530 pounds of cotton, and that the value of it was $6,580,823. The imposition of a tariff of 20 per cent ad valorem would yield to the Government over $1,300,000 of revenue. Therefore I say this is a legitimate subject for the imposition of a revenue duty.

Mr. FAULKNER. How much would it produce?

Mr. BACON. It would produce, at 20 per cent ad valorem, more than $1,300,000 to the Treasury of the United States, if there was the same amount of importation in the future that there was last year.

The uses for imported cotton seem to be constantly growing, because the importation constantly grows. In 1887 there were imported into the United States only 3,900,000 pounds. In 1896—I trust the Senators who are in charge of this bill on the other side will notice these figures—there were imported 55,000,000 pounds. To be accurate, the quantity was 3,924,531 pounds in 1887, and in 1896, 55,350,530 pounds. Therefore there is no reason to apprehend that this slight duty would deter the importation of that cotton, for which there seems to be this growing and increasing demand.

Mr. CLAY. I desire to state to my colleague that I hold in my hand a letter addressed to both of us from our State in regard to this matter. It gives the details, and with his permission I will send it to the desk and let it be read.

Mr. BACON. I hope it may be read.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Secretary read as follows:

BLACKSHEAR, GA., *June, 1897.*

DEAR SIR: We beg to call your attention to the importance of having a duty placed upon the importations into this country of Egyptian and other long-stapled cottons.

Three memorials were presented to the Ways and Means Committee of Congress, praying for this duty. One was from a convention of the Sea Island Cotton Farmers' Union, held in this place; one was from a convention of the planters of Georgia and Florida, held in Valdosta, Ga., and one was from a convention of the planters of Florida, held in Gainesville, Fla. When the matter came up before the Ways and Means Committee, two Republicans voted for the duty and two Democrats voted against it.

We beg to inclose you tables showing the size of the various crops the past eighteen years, the average price of the grade "fine" in Savannah, and the number of bales consumed annually in the United States and abroad. You will see that this is a growing industry, or, rather, promises to be if not killed by the competition of Egyptian long-staple cotton.

Last year the imports of Egyptian long-staple cotton exceeded the production of our home crop of sea-island cotton. The New York Dry Goods Chronicle is authority for the statement that the importations this year will double those of last year.

You will notice that our sea-island cotton is worth only about one-half now of what it was worth four years ago. If the importations of Egyptian long-staple cotton continue on an increasing scale (and this is very likely), prices will still further decline. This means ruin to the planters producing this crop.

The negro is, equally with the whites, a producer of this cotton, and nearly all of it is gathered by them. At the present prices for this crop, wages must be cut in half. This means that the laborer must be brought to a condition hard to contemplate.

A moderate duty of, say, 3 cents per pound would put from one to two million dollars a year into the United States Treasury, and would not be a

hardship on those least able to bear additional taxes, for the following reasons, viz: One-half of our crop of sea-island cotton is used by the spool-thread manufacturers. This thread to the consumer is the same in price as when the raw material costs from 40 to 50 per cent more, and it is only slightly cheaper than when the raw material costs 100 per cent more. The balance of this crop is used in a fine grade of lawns, laces, silks, etc., which the poorer class of people do not buy.

The Ways and Means Committee, not content with refusing to put a duty on the importations of long-staple cotton, have put a duty on the bagging to cover it, although not a single yard of this bagging is manufactured in the United States. This is an additional hardship.

The rate of freight from Alexandria, Egypt, via direct ship to New England points is no more than the freight from our ports to New England points. You no doubt well understand that the Egyptian planter will receive his bagging free of duty, and that he is enabled to buy, trading as he does with free-trade England, many articles of consumption at a very much lower price than our planters have to pay, trading as they do in the United States.

It is clearly evident that our planters can not produce sea-island cotton in competition with the Egyptian without reducing labor to the condition of fellah labor of Egypt, and unless our planters can buy their supplies as cheap as the Egyptian buys his supplies.

We inclose a schedule showing the cost of the bagging used for sea-island cotton for the past eighteen years.

Respectfully submitted.

Yours, very truly. A. P. BANTLEY, *President.*

Mr. BACON. I want to call the attention of Senators on this side of the Chamber as well as of Senators on the other side to the question as to whether this is a proper thing to do according to the measure of propriety which they themselves have set up. I do not suppose it will be contended by anybody on either side of the Chamber that there is anything peculiar in cotton which makes it an improper subject-matter for the imposition of a revenue duty. Some might go further; but there is nothing peculiar in the cotton itself, or in the people who raise it, or in the methods by which it is raised which would properly exclude it as an article to be included in a revenue tariff. If that is true, Mr. President, then whatever is recognized as a proper revenue rate for other agricultural products ought to be accepted as a proper revenue rate for this agricultural product, unless it can be differentiated in some way.

Now, what said the Republicans as to other agricultural products? Almost every agricultural product which could be named, certainly every important one, was put into the tariff bill by the Republicans at a rate of from two to four times as high as that which I now propose for cotton. Therefore the particular rate can not be objectionable to Republicans.

What have said the Democrats as to what is the proper rate to impose upon the importation of agricultural products? The Wilson law has been brought here as a test in this particular thing, and the distinguished Senator on my right [Mr. VEST], the leading member of the minority, as I understand, on the Finance Committee, himself offers, in behalf of that minority and as the representative of the party, amendments putting a rate of 20 per cent on each one of these agricultural products. Now, I want to know by what right and upon what reason the Democrats would say that cotton should not enjoy an equal rate of 20 per cent ad valorem? So it seems to me that, taking this question by the rule of consistency, there ought to be a unanimous vote on each side of this Chamber, if we are controlled by the rule which they themselves have laid down, and that this amendment should be adopted.

Mr. President, I asked the distinguished Senators composing the majority of the Finance Committee last week a question which they would not answer. I say I asked it. The senior Senator from Texas [Mr. MILLS] first asked the question, and they did not answer him. I do not know that he put it in the form of a question, but I did, and I called for an answer. It was stated by the Senator from Texas that not only in this bill, but in former tariff bills controlled by the Republican party, they had exempted from all duty the articles which are used by the wheat growers in the preparation of their crops for market and in the bringing of them to market, and that they put binding twine and the material out of which grain sacks are made upon the free list, and at the same time they refused to put cotton bagging upon the free list and refused to put cotton ties on the free list. Yet the cotton bagging and the cotton ties are as essential to the cotton grower in the preparation of his product for market as binding twine and grain sacks are to the wheat grower.

The distinguished Senators in charge of the bill not having responded to the statement made by the Senator from Texas, I took the liberty of putting the question to them direct; and I asked them to explain why this discrimination was made between the wheat grower and the cotton grower. I said to them that if there was a good reason for it we ought to know it, in order that our action should be controlled by that reason; and that if there was no reason for it, they ought to say so, in order that the country might recognize it as a square case of favoritism in favor of one and against the other.

Mr. President, when I took my seat I expected, of course, there would be some reply from the distinguished Senators who sat there, and yet not only was there no reply, but there was no further reference to the subject, and they called for a vote, the question being whether cotton ties should be put on the free list or whether they should have a high duty placed upon them, which would involve an expense to the cotton planter of the South of $900,000 a year at the lowest estimate, taken out of the pockets of the cotton planter, 10 cents on every bale of cotton at the same time when they were letting the wheat grower have his binding twine and his grain sacks free. I say that being the question, the vote was immediately taken without any response from the learned Senators as to why it was that this discrimination existed.

Mr. PLATT of Connecticut. Would it satisfy the Senator from Georgia to have a vote now? We shall be very glad to vote.

Mr. BACON. Most undoubtedly, if the Senator is prepared to vote with me, and if the pressing of this inquiry has brought the Senator to that frame of mind, I am very glad.

Mr. CHANDLER. We are ready to vote with the Senator if he will only let us.

Mr. VEST. Of course the Senators on the other side will vote with the Senator from Georgia.

Mr. HAWLEY. Mr. President, I have been absent from the Chamber, and have not heard all the argument of the Senator from Georgia, but I know what he proposes—a 20 per cent or ad valorem duty upon cotton—and I shall vote with him. I can not see sound logic in a bill which taxes barley and lets cotton come in free.

Mr. CHILTON. Mr. President, I see that there is this logic about it, that, instead of tending to increase, it would tend to diminish the price of cotton if this duty were put on.

It seems to me that the Senator from Georgia [Mr. BACON] admits his whole case away when he says that there would be the same number of bales of Egyptian cotton imported after this duty is imposed as before. I understand him to make that distinct statement; in other words, that the tariff which he proposes would not diminish the competition he complains of, now existing between Egyptian and American cotton.

Mr. President, I should feel very kindly disposed to this proposition if I believed it would tend to increase the price of American cotton. The Senator from Georgia is right in the statement that the cotton raisers in this country are the most defenseless victims of the protective-tariff policy. There is no method by which they can be made the beneficiaries of such a system. That is unfortunately true. They are discriminated against by a tax on their bagging and by a tax on their cotton ties. Their product occupies that peculiar position in the industrial world that no tariff scheme devised by man can enhance its price.

Now, sir, what is there in this cotton question? There is the upland cotton, which has a staple of, say, 1 inch; the sea-island cotton, which has a staple of, say, 1.61 inches, and the imported Egyptian cotton, which has a staple of about 1.41 inches. The Egyptian cotton has a different color from the sea-island cotton or the ordinary upland cotton. The Egyptian cotton is of a dark color, while the other cotton is white.

What is the Egyptian cotton imported for? For use in the manufacture of a certain class of goods, a sort of silk-finished cotton goods, or mixed with silk, such as balbriggan, hosiery, and certain sorts of yarn and threads.

Mr. MASON. Will the Senator allow me to ask him a question?

Mr. CHILTON. Yes.

Mr. MASON. Would not the American cotton take the place of the Egyptian cotton?

Mr. CHILTON. It would not.

Mr. MASON. Why not?

Mr. CHILTON. It would not, as I will show you. It can be demonstrated that the Egyptian cotton does not interfere with the sale of the sea-island cotton. Turn to the statistics referred to by the Senator from Georgia. He tells us that during the last half dozen years the importations of Egyptian cotton have increased wonderfully. That is true. But what further does the record show? It shows that just in proportion as the American consumption of Egyptian cotton has increased, just in that proportion has the American consumption of sea-island cotton increased; so that if my friend from Georgia will go into the figures, he will find that by this increased importation of Egyptian cotton there has been brought about an increased American use of sea-island cotton.

Mr. McLAURIN. May I interrupt the Senator?

Mr. CHILTON. Certainly.

Mr. McLAURIN. There is an upland long-staple cotton, known as the Allen long staple, and if the Senator will investigate he will find that the importation of Egyptian cotton has driven our upland country people out of the production of that staple. That has occurred in the upper part of South Carolina on account of this very importation of Egyptian cotton, which prevents the use of the Allen long staple in connection with the sea island and upland short staple.

Mr. CHILTON. I will tell you why those planters gave up the business of raising the Allen long staple. It was because the price of this cotton had fallen throughout the world, so that those people could find a better profit in other lines.

I have examined this question, and there is a conclusive answer to all this argument in favor of a tax on cotton. What fixes the price of sea-island cotton? What fixes the price of the ordinary upland short-staple cotton in the markets of the world? It is the Liverpool price. Why is it fixed in Liverpool? It is fixed there because the surplus of the American product is sold there.

The surplus of the American product of sea-island cotton is sold in Liverpool just as the surplus of the upland cotton is sold there. What effect, therefore, would it have upon the price of cotton in the United States to keep Egyptian cotton out of our market and throw it into the Liverpool market? Would there not be just that much more surplus cotton sold in the Liverpool market? And it would have exactly the same effect upon the price of cotton in this country as it would when sold in the American market.

If the home consumption of our cotton approached the production, then there might be something in this argument; but as our whole surplus of cotton, both of sea-island cotton and of upland cotton, is sold in Liverpool, so the price of both kinds of cotton is governed by the Liverpool market; and it does not make a bit of difference what tariff is put on cotton, we can not raise the price of it one tittle. It is impossible, in the nature of things, so long as the surplus is sold abroad. It is just like your wheat tariff, and things of that kind. When the surplus is sold in foreign markets, you can not raise the American price? The price of the surplus in the foreign market will fix the American price in spite of your tariff. That is the condition of this cotton question.

I would ask the Senator from Georgia if he does not believe that this bill will raise enough revenue without adding this tax to it? I do, and therefore to put this tax on Egyptian cotton will simply add that much more to the price of the goods made from this Egyptian cotton and sold to American consumers. Either that will be the effect or it will drive out from this country the manufacture of those goods.

This cotton question does not stand like manufactures. It stands by itself, or like wheat, as I have said, or some such product. The surplus is sold abroad, and therefore the price of the surplus fixes the price of the domestic crop. You can not raise the price of an article by tariff when you raise more of it than your home consumption.

That is our condition in this country with regard to sea-island cotton as well as upland cotton, and it is impossible to do anything for these products by means of this tariff bill. The only result, as I say, would be to burden the consumer of balbriggans and hosiery, and other goods made in this country in mixture with our cotton, with an extra price.

If you place such a burden on manufacturers as to drive the industry over to England, then you rather hurt the price of your domestic cotton.

As our cotton is used in mixture with Egyptian cotton to make certain classes of goods, and you are forced to buy those goods from England, then the American cotton to be mixed with Egyptian must be carried across the ocean, there manufactured into goods, and then brought back to this country. In such case somebody must pay the transportation charges both ways. Whereas if you leave the manufacture of these balbriggans, hosiery, and certain classes of yarns to thrive in this country, then you increase the American consumption of your upland cotton and your sea-island cotton, because they are all mixed together. When you increase the American manufacture of these articles, you are saved the transportation of upland and sea-island cotton across the ocean and back again.

Mr. President, you can raise revenue—that is undoubted—you can raise more revenue by imposing this tax upon cotton; and if the Senator from Georgia really believes that we ought to have more revenue, then I think he can cast a logical vote for the amendment. But if, as the Senator says, there will be just as many bales of this cotton imported into this country after you put this 20 per cent duty on as there is now, that very fact shows that you can not raise the price of our cotton. If the tax raised the price at all, it would be by reducing the competition of the Egyptian cotton with the American cotton. How are you going to reduce that competition if the same number of bales of Egyptian cotton will still be imported?

Mr. VEST. Mr. President, as a matter of course, this amendment will be adopted. The Republicans will vote for it because it is in the line of high tariff duties, because they have committed themselves to larger duties upon all sorts of agricultural products, without regard to the fact of the enormous amount of exports and the small amount of imports. It will furnish them with an additional argument for disrupting the solid South and producing dissatisfaction there with regard to the Democratic party, a large majority of whom, I hope, will oppose this amendment.

The Senator from Georgia [Mr. BACON] talks about revenue as if this Government was impoverished and famished, while we have, according to the Monthly Statement this morning, $125,000,000 of surplus money in the Treasury over and above the gold reserve. Where, then, is the necessity for breaking through the precedents of the Government and of the Democratic party and putting a duty upon cotton which will enhance the price of manufactured cotton goods to the consumer?

Mr. BACON. The Senator from Texas [Mr. CHILTON], as I understand his remarks, denies that proposition.

Mr. VEST. I care not who denies the proposition; it will enhance the price of the manufactured article to the consumer, and if it does not, then your whole theory of protection is a farce, a fraud, and an insult to the intelligence of any man who must listen to it.

What do you mean by protection? Do you not mean to protect the American manufacturer and producer? How do you protect him? By giving him a larger price for his product, or else it is not protection. That is the end of it mathematically, not to say logically.

Now, if the Senator from Georgia abandons every argument of the Democratic party against high protection, he must admit what I say, that this 20 per cent he proposes upon raw cotton will enable the manufacturer to add it to the price of his finished product.

The Senator talks about the Chicago platform. I was a member of the Chicago convention and voted for that platform, but I never would have voted for it if I had thought it could be what he says. I understood it to mean that taxation should be equal and just, and not sectional, not discriminating in favor of classes and monopolies. If I had thought it meant this universal expansive protection to everything in the country by imposing a tariff upon everything, without regard to exportations, without regard to importations, without regard to the necessities of the Government, I would not have touched that platform any more than I would touch a rattlesnake when there was no whisky within 100 miles. [Laughter.]

But, Mr. President, when it comes to platforms, what would my friend from Georgia think of the platforms of the Democratic party, not nebulous and indistinct and liable to misconstruction, but so emphatic and so plain that the wayfaring man, though a fool, need not err therein? In 1888 we made a platform unanimously, before the Democratic party was divided as it is now in regard to these questions of tariff and finance, and the very first clause of that platform declared for the Mills bill and for free lumber. That platform declared that the Mills bill must be enacted speedily, and that its principles were correct. What were they? Free raw material, free lumber, free salt, and free wool; and yet we are told now by this modern Democracy that the Democratic party is not pledged to free raw material, but must tax everything in the whole country.

God help us, Mr. President, if the new evangel is to prevail. All my life has been given to an utter misunderstanding of the principles and the doctrines of the party to which I belong, if we are now to be told that we must put a duty upon raw material—upon cotton, upon wool, upon salt, and upon lumber.

Mr. President, I have always understood—and I have given a little attention to this tariff question; it has been my duty to do so—that while depression and gloom have rested upon the wool manufacturers of this country at many times, the cotton manufacturers have flourished in spite of adversity prevailing everywhere else.

I have understood that this has been especially the case with the cotton mills of the South during these five or six years of unexampled adversity. I have stood upon this floor as a Southern man and boasted of the fact and pointed with pride to the fact that the cotton mills of the South were paying regular dividends; that they, in spite of the clouds that rested upon the balance of the country, were prosperous and bathed in sunshine; and, to my surprise, I hear now from a Southern Senator that cotton is depressed, and that the cotton raisers of the South are peculiarly the people who should have the bounty of the Government.

I want to make no sectional distinctions here. If I understand the principles of my party, they apply without sectional division to all the people of all the country; but I distinctly disavow the truth of the statement that the cotton raisers of the South are in any worse condition, so far as their products are concerned or the burdens placed upon them are concerned, than my constituents in Missouri or the people in the great Northwest.

Sir, if I chose to produce the argument, I could prove mathematically, it seems to me, that we are in much worse condition than the people of that sunny clime, who need less clothing, who need less food, to whom the bounty of nature takes the place of artificial methods. In the northern and rigid climates, exposed to the snows and blasts of winter, wool is an absolute necessity of life, without which comes discomfort, and not only discomfort, but disease and death. In the South this is not the case.

Who proposes to lift the prices of the agricultural products of the Northwest? Who expects to do it by this false method of putting enormous duties upon products none of which come into this country and enormous quantities of which go abroad? As was said by the Senator from Texas [Mr. CHILTON], the price of

cotton is fixed in Liverpool, and we can not raise it by a tariff tax. It is fixed abroad, as the prices of our corn and wheat are fixed abroad; and the same arguments apply to the condition of both the people in the North and in the South, with the distinction that the people of the North need more and must have more to meet the ordinary demands of nature.

Mr. President, in regard to competing cotton from abroad, I received a letter—and the Senator from Arkansas doubtless has it here—from the Protective Tariff League, the apostles of the highest protective taxes that are possible, asking me to vote for 3 cents a pound tax upon cotton, all cotton that comes into this country, in order to protect the cotton raisers. They use the specious and delusive argument that there were 55,000,000 pounds of cotton that came into this country in 1896 and only three million and some odd hundred thousand pounds in 1893, and that this was an argument for excluding this cotton by a high protective tariff tax. They did not for one instant fairly and candidly and honestly state the truth, that 43,000,000 pounds of this cotton, out of the 55,000,000 pounds which came into this country, did not compete with the American cotton and could not compete with it.

The same argument which applies to wool applies to cotton. We have contended for free wool because we say we can not compete with the woolen manufacturers of the world unless we have certain forms of foreign wool that can not be produced in the United States. So in regard to cotton. I am told by cotton manufacturers, and have the statements in my committee room, that this Egyptian cotton is necessary for the rough cotton goods now so fashionable in this country and abroad. They can only be made with the long-staple cotton, and we have no cotton in the United States that is equivalent to the Egyptian cotton for that purpose. When mixed with a small quantity of silk, it makes a beautiful textile that the fashionable and wealthy intensely demand. It does not come in competition with the short staple, about which my friend from Georgia is so intensely enthusiastic.

But we are told that we must put on this duty for the sake of revenue, when we have an overflowing Treasury, when the McKinley law, that citadel of protection, did not put any such duty upon cotton. There was no contest even in 1894 in the turbulent scenes of discussion over the Wilson bill, and there was no discussion which involved the question of a tax upon cotton.

As a Democrat, I have always voted for free cotton, always pointed to free cotton as an exemplification of the truth that with free raw material the manufacturers of the United States could compete with those of any country in the world, and now from the South comes a proposition to break down the precedents of our party, to abandon its traditions and its legendary history, and to put a duty upon this raw material of cotton, which justifies a duty upon wool, lumber, salt, and every agricultural product, without regard to exports or imports, and leaves us naked, without argument.

Mr. JONES of Arkansas. Mr. President, I am a cotton grower; I have lived all my life on a cotton farm, and if any man living has a deep sympathy with the struggling thousands who are engaged in this business I have, but I have too high an opinion of these people to fear that they can be imposed on by this movement.

I was out of the Senate Chamber for a few moments, but there are some considerations in connection with this proposed amendment which are conclusive with me. I think it is perfectly natural that the Republicans should fall in with and accept this amendment for several reasons. One is that which was mentioned by the Senator from Missouri [Mr. VEST] a moment ago, because it can be pointed to as an example of the fact that we have been able to say heretofore that this was a clear illustration of the practical working of things, that cotton was not taxed, that there was no necessity for it; and this has given trouble to the other side. They would be glad to be rid of it; they would be anxious to put a tariff on cotton for the very same reason they have put a tariff on wheat and on corn, not because they believe it will do any good except to mislead and deceive those in the country who they think can be misled by this sort of chaff and this sort of talk.

But, Mr. President, in my opinion there is another substantial reason why the gentlemen who are advocating these high rates of tax will be in favor of a tariff on cotton. They know perfectly well that it will not increase the price of cotton one iota. While they make a pretense of protecting American cotton growers, they know they will get no benefit from it whatever; that when this tax is put on cotton and when an American mill is asking here for the protection necessary to enable it to make its business profitable, this committee, before we get through with the cotton schedule, will propose to increase the rates on cotton goods to compensate for the tax put on the raw material. Where will the argument proceed against it? We will answer that no benefit whatever comes to the people of this country who raise cotton; that it will not raise the price. Here is the answer: But there is a provision for a tariff of 20 per cent, or so much a pound, which is to increase the cost of the raw material to the spinners, and therefore they must have the rate of taxation increased by just so much above what was necessary for them to have before the tariff was put on. They get a substantial benefit in that respect.

The increased tariff will go on because of this, and yet the cotton will cost them not one cent more than it did before, and instead of getting the protection they get now, they will get protection increased by whatever this tax amounts to, without any compensation whatever to the public. The consumers of cotton goods will have to pay an increased price for cotton over and above the proposed rates under the pending bill because of this proposed tariff, which amounts to nothing and will bring nothing to the cotton raisers except additional taxes. Instead of its being something for the benefit of the cotton growers, it is an additional burden upon the cotton growers, and they will have to pay for it.

There are 10,000,000 bales of cotton produced in this country. All the high-sounding millions of pounds which gentlemen have been talking about on this floor, after all, amount to 100,000 bales. What figure will 100,000 bales cut in fixing the price of 10,000,000 bales? The price of cotton is not fixed, even now, in the mills of New England. The prices are fixed in Liverpool, where two-thirds of the American cotton crop goes, and where the prices of cotton are fixed. It will make no difference whether 100,000 bales, more or less, come from Egypt to New England or go somewhere else. The price of American cotton will be fixed in Liverpool, and if New England chooses to buy this cotton abroad, which has the peculiarities mentioned by the Senator from Missouri for making rough fabrics, and for which they say no other kind of cotton can be used, and brings that cotton in, and has to pay a tax on it, the foreign producer will simply have to lower the price by the amount of the tariff the manufacturers have to pay here, because they can easily say, "If we do not buy this, we can manufacture something else." So, in my opinion, there will be no increase in cost to the New England manufacturer by reason of this tax, but there will be, I have not the slightest doubt, before we get through the bill, as a compensation, an increased tax on manufactured goods.

I do not believe the farmers of this country have been satisfied by the pretenses that they are being benefited by the taxes on wheat and corn. The Senator from Missouri this morning had a statement read at the desk which I wish every Senator had listened to. It was a clear, strong, forcible statement, showing that these people can not be caught with this sort of chaff. The cotton growers of the South have as much sense as that class of people anywhere else in this country or anywhere else in the world. They will see through this pretense. They will see through all this stuff about increasing the price of cotton as clearly as anybody else. They will not be misled or deceived by an argument so palpably thin and fallacious as it is.

Mr. MCLAURIN. Mr. President, the Senator from Missouri made the statement that the Egyptian cotton does not come into competition with any American cotton. I deny that statement. When the Egyptian cotton was first imported into this country, it was used as a substitute for long-staple cotton in the making of the finer thread. It is now used in the cotton factories for making the cotton warps in cheap woolen goods, and to that extent has supplanted upland cotton. As I said to the Senator from Texas, we produce a grade of long-staple upland cotton, and I defy anybody to distinguish between it and the Egyptian cotton. It is almost exactly the same grade, but owing to the difference of expense in cultivation we have been forced ont of the production of this cotton by the importation of the Egyptian cotton. I can myself remember plantations where ten years ago there were large quantities of the upland long staple grown which have completely abandoned its production in recent years.

Mr. BACON. Mr. President, I dislike very much to delay the Senate in the consideration of this amendment. Some things have been said here, however, which makes it necessary that I should occupy a little of the time of the Senate, and I trust I may be indulged.

If positiveness of statement and vehemence of assertion would establish a proposition, then the distinguished Senator from Missouri has correctly established that for which he contends. But in this forum I submit that argument is the thing which is to control action and that neither I nor any other Senator is to be set down by the vehemence and unqualifiedness of assertion of the distinguished Senator from Missouri, however long he may have been a member of the party, however great an ornament he may be to it, however much we may all respect him.

What is the proposition upon which I base my support of this amendment? I base it, first, upon the proposition that the rate of duty does not make it a protective duty. I stated that plainly. Does the distinguished Senator from Missouri take issue with that proposition? I am always very glad to follow the distinguished Senator, and I endeavored to do so to-day. I had intended to put a higher rate as that which I would suggest to the Senate to be imposed upon the importation of cotton. I had suggested to my distinguished friend on my left [Mr. MILLS] that I would put it at 30 per cent; but as I sat here the agricultural

schedule was taken up, and the distinguished Senator from Missouri himself rose in his place, as the representative not only of the committee, but of the party, and as agricultural product after product was named he himself offered as the rate of duty which he would recognize as a revenue rate 20 per cent ad valorem. He certainly does not regard 20 per cent ad valorem as a protective tariff rate. Otherwise he would not have proposed it.

Mr. VEST. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Missouri?

Mr. BACON. Certainly.

Mr. VEST. It is well enough for us to understand each other, in order that we may avoid any criticism or adverse argument. I stated distinctly to the Senate when the Senator from Tennessee [Mr. BATE] suggested that we put agricultural products on the free list that I agreed with him, but I said to him in the present instance, knowing I would be defeated, I should content myself by simply going back to the duties of the Wilson Act. I was opposed to them at the time they were put there, in 1894, but a majority of my colleagues overruled me. That is all. I do not concede that those duties are necessary. I do not think they will help any farmer, even those that I propose. Where we export enormously and import nothing, I would put all these articles on the free list.

Mr. BACON. The difference between the honorable Senator from Missouri and myself is this: I ask the Senate to impose a duty which I earnestly believe is a correct duty, and the Senator rises in his place and asks the Senate to impose a duty which he himself says he does not believe is a correct duty. That is the difference between us. I do not ask this duty because of any other fact than that I believe it is a proper duty.

I was stating, in order that we may determine this matter by reason and not by bald assertion, that the fundamental principle upon which I base the application to the Senate to include this amendment is that 20 per cent ad valorem is not a protective duty; and the distinguished Senator has not taken issue with that fact.

Mr. BERRY. Will the Senator from Georgia allow me to ask him a question?

Mr. BACON. Certainly.

Mr. BERRY. I wish to ask the Senator if he believes the tax proposed by him will increase the price of American cotton throughout the United States?

Mr. BACON. I will state to the Senator that I think it will have very little or no effect upon the general class of cotton. How much effect it will have upon the particular kind of cotton that is imported, I am not prepared to say.

Mr. PRITCHARD. Will the Senator permit me?

Mr. BACON. In just one moment.

Mr. PRITCHARD. I wish to have a statement read.

Mr. BACON. Let me complete the sentence, and then I will yield to the Senator with great pleasure.

Everyone admits—the distinguished Senators themselves admit it either in direct terms or necessarily by implication—that the imposition of the duty will have an effect upon the price of the articles similar to that upon which the duty is imposed and the article which will come in competition with that upon which the duty is imposed. Therefore it will affect the price of the long-staple cotton. How much, I am unable to say. Now I yield with pleasure to the Senator from North Carolina.

Mr. PRITCHARD. I desire to have read a letter from Mr. Wilbur F. Wakeman, secretary of the Protective Tariff League.

Mr. BACON. I hope the Senator will not stop me to have letters read.

Mr. PRITCHARD. It bears upon the amount of cotton imported and the character of the importation. I presume the Senator would like to have that information.

Mr. BACON. Yes; but I should like to have it introduced at some other time. It breaks up the thread of my argument. I hope the Senator will excuse me. However, I have no objection to its being read.

Mr. PRITCHARD. I send the letter to the desk and ask that it may be read.

The Secretary read as follows:

THE AMERICAN PROTECTIVE TARIFF LEAGUE,
New York, June 7, 1897.

DEAR SIR: The phenomenal increase in the imports of cotton deserves the attention of every legislator. Until recently the importations have been chiefly of Egyptian cotton, but now upland or staple cotton is also being imported to a considerable extent. To illustrate, we give the importations for the fiscal years 1897 and 1896, as follows:

Imports of cotton.

	Pounds.
1897	3,924,531
1896	55,260,520

We earnestly ask that an import duty be placed upon all imports of cotton in the pending tariff measure.

Based upon the importations of 1896, a duty of 3 cents a pound would produce a revenue of more than one and one-half million dollars and give protection to the cotton-growing industry.

Yours, very truly,

WILBUR F. WAKEMAN,
General Secretary.

Hon. J. C. PRITCHARD,
United States Senate, Washington, D. C.

Mr. CAFFERY. I should like to ask the Senator whether he advocates placing wheat, barley, oats, and these other agricultural products on the protected list?

Mr. BACON. I follow the lead of my distinguished friend on my right in making it 20 per cent ad valorem, which he himself proposed and which the Senator from Louisiana voted for.

Mr. CAFFERY. Very well; but I ask the Senator whether he now advocates placing the agricultural products mentioned by me on the protected list?

Mr. BACON. I listened to the distinguished Senator from Missouri without interrupting him, when he had said some things very decidedly personal to me and when I could have interrupted him. I listened to the distinguished Senator from Arkansas without interruption. I am endeavoring to reply to them. I think my distinguished friend from Louisiana will have enough to do to answer the questions which the Senator from Massachusetts [Mr. HOAR] asked him yesterday about a duty on sugar, without stopping now to interrupt this argument.

Mr. CAFFERY. The Senator from Georgia has quite as much to answer as to lumber.

Mr. BACON. Certainly.

Mr. CAFFERY. And not only to the Senator from Massachusetts, but to the Democratic principle in that regard.

The PRESIDING OFFICER. The Senator from Georgia has the floor.

Mr. BACON. The difference between the distinguished Senator from Louisiana and myself is very much like the difference between the distinguished Senator from Missouri and myself, and that is, I advocate that which I say I believe, while these distinguished Senators put their support of the particular things which they advocate on some other ground.

I was endeavoring to reply to the argument of the Senator from Missouri with some degree of continuity. I wanted to present a fact. I had stated the proposition which I submitted to the Senate, giving the reasons upon which I base it. I had endeavored to place them clearly before the Senate, and the Senator from Missouri had replied to me with very great earnestness and very great vehemence, and never once alluded to either of the things which I had presented as arguments. It may be that they were not arguments, but I am asking again to have them considered by the Senate.

I say the first proposition upon which I base it is that 20 per cent ad valorem is not a protective duty, and therefore everything which the learned Senators say with reference to the support of a protective tariff has no application to this particular duty. Is there an answer to that? There can be but one answer to it—that is, that it is a protective duty—and yet we have two distinguished Senators, one of them saying that it will raise the price, and the Senator from Texas, on the other hand, saying it will not.

Mr. VEST. I said it would raise the price of the manufactured cotton goods.

Mr. BACON. The Senator does not think it will raise the price of cotton?

Mr. VEST. I do not think it will.

Mr. BACON. Then here we have these two distinguished Democrats who believe in raising revenue out of goods that do not come in competition with domestic production, and we have the plain fact that $1,300,000 can be raised out of this duty, and yet they are objecting to it in the face of the fact that they do not believe it will raise the price. If that is the old evangel, it is time for a new one.

That is the first proposition upon which I base it, and which I say has not been answered, that 20 per cent ad valorem is not a protective tariff duty, and that therefore nothing which is said with reference to a protective duty has application to this particular amendment.

The second proposition which I made was that there is nothing in the nature of cotton or in the methods by which it is produced or in the locality in which it is produced which makes it an improper article for the imposition of a tariff duty.

Mr. President, if those two propositions are correct, where is the impropriety? If it is a rate which is recognized as a revenue rate and if no reason can be produced here why this particular article should not be subjected to the rate, where is the heinousness of the offense?

If a man is a free trader, then any tariff is an iniquity. If the Senator says he is a free trader, then his argument is good; but if he is not a free trader, if he believes in a tariff for revenue, there is no basis for his argument, because this is within the bounds of

a revenue tariff, and no reason is shown why it should be excepted from it.

Mr. President, the learned Senator from Missouri talks about a new evangel. What is the new evangel? If it is anywhere, it is in the platform which he says he himself assisted in making.

Mr. VEST. It is in the new interpretation.

Mr. BACON. I do not put any interpretation upon it. I let the language speak for itself. I will read it. I ask the Senate if this language from the Chicago platform needs any interpretation?

We hold that the tariff duties should be levied for the purposes of revenue, such duties—

They are talking about nothing but duties—

to be so adjusted as to operate equally throughout the country and not discriminate between class or section.

I say that is plain; it does not need any interpretation, and yet as the distinguished Senator seems to think two constructions can be put upon it, it is proper to examine the construction. What is the object of the convention when it says that tariff duties shall be so levied that they shall operate equally throughout the country, unless, forsooth, the convention had in mind the fact that in the past the tariff laws had not been so framed as to operate equally throughout the country; unless they had in view the notorious, well-recognized fact that for a generation the tariff has been so framed that a particular class of industries has enjoyed all its benefits and a particular section of the country has been the one in which those particular industries have been most found, and that therefore it has operated in the past to the benefit of class and to the benefit of section? What else could they have meant? How did they propose to remedy it? They proposed to remedy it, if language means anything, by recognizing the fact that so far as an article comes within the legitimate range of a revenue duty it shall be included in a revenue tariff. What else could it mean? Do we not stultify ourselves when we seek to say that it means anything else?

Mr. President, that is all there is in the new evangel, that the country shall still levy a tariff for revenue purposes; but, recognizing the fact that wherever a revenue duty is laid it affects the price of the particular article upon which it is laid, recognizing the fact that there is an injustice in raising the price of one class of articles and leaving the other class unraised, the platform seeks to establish the principle and to inaugurate the plan by which there shall be a more general inclusion in a tariff bill than there has heretofore been of all articles upon which, legitimately, revenue can be raised. What other interpretation can be put upon it? I stand here and present an article which, according to the papers upon the Senators' desks, is one where a revenue duty of 20 per cent will place in the Treasury over $1,300,000.

Mr. President, I deny that there is any new evangel in this matter, so far as principle is concerned. On the contrary, I say it is a recognition of the great fundamental principle of the Democratic party as expounded by Jefferson, that the guiding star of the Government in its administration is that there shall be perfect equality in burden and benefit, and I say that it is an impossibility that there shall be an equality either of burden or benefit so long as one class of industries and one class of products have whatever benefit there may be in a tariff law and another class of industries and another class of products have no such benefit, keeping in view all the time that there should be only a tariff for revenue, because when you go beyond that you are doing that which these gentlemen and which I condemn, to wit, the taking of one man's property for the benefit of another.

Mr. GRAY. May I ask the Senator from Georgia a question?

Mr. BACON. Most undoubtedly.

Mr. GRAY. If the imposition of this tax should result largely in prohibiting the introduction of Egyptian or foreign cotton, the Senator thinks part of his object will be secured, does he not?

Mr. BACON. What is the question?

Mr. GRAY. If the proposed tax results in prohibiting in whole or in large part the importation of Egyptian or foreign cotton, would not the Senator think that his object had been attained?

Mr. BACON. No, sir; I would not; but I would be glad if the Senator, when he speaks of my object, would specify which particular object he means. He may have one idea and I another.

Mr. GRAY. Would he be content with the tax then?

Mr. BACON. No; I would not.

Mr. GRAY. The Senator would not?

Mr. BACON. No, sir.

Mr. GRAY. If it should result in reducing the importation of Egyptian or foreign cotton, then he would not be in favor of retaining the tax, for then it would not be a revenue tax.

Mr. BACON. The Senator goes a little too far when he says "if you succeed in reducing it." That depends upon how much the reduction is. If it were prohibition, I should oppose it.

Mr. GRAY. Suppose it should substantially reduce the revenue?

Mr. BACON. There is no revenue now.

Mr. GRAY. Suppose that by prohibition or the reduction of imports the revenue should be inconsiderable?

Mr. BACON. If the effect of the imposition of the tariff is to prohibit, practically, the introduction of cotton, I should not be in favor of that high tariff, because I am not in favor of a prohibitory tariff on anything. That is the answer to the question.

Mr. GRAY. The Senator is in favor, if I understand him aright——

Mr. CHILTON. Mr. President——

Mr. BACON. One at a time.

Mr. GRAY. I shall not interrupt the Senator from Georgia if he intimates to me that he prefers not to be interrupted.

Mr. BACON. I have not the slightest objection.

Mr. GRAY. I do not believe in breaking in on a speech.

Mr. MASON. Mr. President, I should like——

The PRESIDING OFFICER. The Senator from Delaware is speaking.

Mr. MASON. I simply ask for order, so that we may enjoy this family jar.

Mr. GRAY. I understood the Senator from Georgia to say that he is for a tariff for revenue, and that on the principle of a tariff for revenue he advocated this tax. Now, the question, which I do not think he has exactly answered——

Mr. BACON. I desire to say to the Senator that I am not in favor of a tariff for revenue only. I am opposed to any tariff that has not for its primary purpose the raising of revenue.

Mr. GRAY. Does not the Senator think that is Democratic doctrine?

Mr. BACON. But I am not one of those who object to a tariff by reason of the fact that somebody is going to get a benefit from it. I only object to a tariff so far as it is an injury and a burden.

Mr. GRAY. Does not the Senator think that a tariff for revenue only is good Democratic doctrine?

Mr. BACON. I do not think——

Mr. GRAY. The Georgia Democratic convention declared for a tariff for revenue only.

Mr. BACON. They followed the national platform which was adopted before that. I take the platform as it now exists.

Mr. GRAY. I have the Georgia platform before me, and it declares for revenue only.

Mr. BACON. We were loyal to the party and we adopted the platform just as the national convention of 1892 had adopted it, but the platform of 1896 does not say that, and I am one of those who stand upon the platform adopted at Chicago and agree to every line and every letter of it, and until it has been reversed by another national Democratic convention I am bound by it.

Mr. GRAY. Then I understand the Senator from Georgia to say that a tariff for revenue only is not Democratic doctrine to-day?

Mr. BACON. I mean to say that a tariff for revenue is Democratic doctrine.

Mr. GRAY. I said "for revenue only."

Mr. BACON. If the Senator means by the term "for revenue only" that in framing a tariff bill the Congress of the United States should have exclusive regard to the question how much money it will raise, and should utterly ignore the question whether it does justice or injustice to any particular section or any particular class or any particular person, then I say it is not Democratic.

Mr. GRAY. All right.

Mr. BACON. I say the Democratic doctrine is that primarily the object of a tariff is to raise revenue. I say that must be the great object, that without the necessity for revenue there should be no tariff; but as we have to raise revenue, when we raise it we ought to have regard for the needs, the necessities, and the advantages and disadvantages of different classes and different sections, so as to carry out the balance of the platform adopted at Chicago, to which I owe allegiance—

So adjusted as to operate equally throughout the country, and not discriminate between class or section.

Mr. GRAY. Mr. President——

Mr. BACON. So, if the learned Senator will permit me long enough to say it——

Mr. GRAY. I shall not interrupt the Senator if he objects.

Mr. BACON. I do not object to the interruption if the Senator will merely permit me to complete a sentence.

Mr. GRAY. I myself submit so freely to interruptions that perhaps I trespass upon others.

Mr. BACON. I am perfectly willing, and I think the Senator knows by experience that I do not object to interruptions.

Mr. GRAY. I think I do, and I think the Senator is right about it.

Mr. BACON. The Senator has so interrupted me that I am not sure that I am continuous in my expression. The Democratic doctrine and that upon which I stand, not only as a loyal Democrat, but which I believe as a man, is this: That a tariff should be a tariff for revenue; that that should be the prime purpose and object, but that in the levying of that tariff, keeping that primary

object always in view, there still ought to be a reference to the question of equality of burden and equality of benefit growing out of it; and that in the sense that the expression "tariff for revenue only" means that it shall ignore everything else but the question of the amount, that it shall be indifferent to equality and justice between sections and classes, it is not Democratic, and never has been so declared but once, and was repudiated by the party as soon as we had a lick at it.

Mr. GRAY. I will not interrupt the Senator again if he will allow me just there to say a word.

Mr. BACON. Certainly.

Mr. GRAY. If I understand the Senator then, being in favor of this tax because it is essentially a revenue tax, as he supposes, if it should result by its prohibitive effect in not producing sufficient revenue, he will not be in favor of it?

Mr. BACON. I would certainly not be in favor of it if it had the effect to prohibit importations.

As these Senators are so persistent upon that question, I want to see whether they are in favor of protection or not. I think that the very worst form of protection, the very rankest and most offensive and unjust form of protection that can be devised, is a tariff law which puts upon certain classes of products a tariff, and thus increases to the consumer the price of those articles, and at the same time says to the producers of another class of products, "You shall not have your property raised correspondingly, but the man that we have already benefited shall have the further benefit of getting your property at less than he would have had it if he was put on the same plane as yourself."

Now, let us see how that works. I want to see whether the distinguished Senators who take issue with me on this question are for equality or whether they hold to the purpose of protecting certain industries. Take any particular article that enters into the process of agriculture, in the raising of cotton, for instance. Take the man who makes plows. You put a tariff upon the importation of plows of a certain kind which he is obliged to use, so that the manufacturer gets 50 per cent more for those plows than he would otherwise get. When the cotton planter comes to carry on his business he has to use those plows and has to pay the 50 per cent increase on the price.

In the same bill you say that cotton shall be free. Now, for the purpose of argument, we will assume that if a tariff were put upon the cotton it would raise the price of the cotton correspondingly to the rise in the price of the plows. Then the putting of a tariff upon plows and the putting of a tariff upon cotton would be equal in its operation, because while the cotton planter paid that much more for his plows he would get that much more for his product, and there would be an equilibrium. But when you say, "We will put it on the plows and we will deny it to the man who has to use the plows as to his product," you are taking from that man who makes cotton his product at a less price and you are giving the benefit of that reduced price to the other man who makes plows. Are you not in that way benefiting the one to the loss of the other?

Senators grow eloquent on the subject of lumber and say that lumber is manufactured into furniture and the man who manufactures the furniture has to use lumber. You have a tariff on furniture. The price of that furniture is raised by reason of the tariff. The manufacturer of lumber has to buy the furniture, but you say to him, "You shall have no tariff upon your lumber." If there was a tariff on lumber, the price would be raised, and he would have a corresponding elevation of prices. But you say to him that the man who makes the furniture, in whose favor the Senator from Delaware grew so eloquent, shall have the lumber of the man at a less rate than he would have had it if the law dealt equally with each one. Is not that protection? Is it not the worst form of protection, because there is no possibility of excuse of any revenue feature in it?

Mr. President, I will not detain the Senate. I desire to say, however, as we have been talking about platforms, that you may look through the Democratic platforms for the last forty years, further back than that, to the period the Senator from Missouri himself referred to, and you will find that while here and there there are extreme expressions, through them all has run that recognition of the great fundamental Democratic doctrine of equality, and while all have held that the principle that tariff for revenue is the guiding star, that it should never be lost sight of, at the same time they have held that it is proper in the framing of a tariff bill to have regard to the question of equality between different occupations and different industries, so that there might be no injustice to the one at the expense of the other.

Mr. President, if Senators are free traders, then their argument is good. If they are free traders, then it is right to oppose every feature in a tariff bill. If they are not free traders, if they recognize that there should be a tariff, if they recognize that the Government can not be supported properly in any other way than by a tariff, if they are opposed to inaugurating direct taxation and wish to adhere to the collection of revenues, in the main, upon imports, then it is not a question whether every tariff rate is necessarily unjust, but it is a question as to whether a particular article has too high a rate of duty put upon it or whether from any particular reason it should be excepted from the general rule, which would put upon all imports equality of tariff, at least approximately.

Mr. President, as I said the other day, the great defect in the protective-tariff system is the impossibility of equality in its operation. The great defect in it is that it does not benefit all men alike, and that consequently burdens are placed out of which result greater benefits to some than to others. But that is an inseparable and unavoidable characteristic of a tariff so long as we have no uniformity of tariffs. So long as that is necessary, the highest obligation to my mind is the obligation to see to it that tariffs are as near as possible equal.

Now, Mr. President, only a single word more and I have done. Certainly I had no expectation of occupying the time of the Senate. Senators have time and again spoken of the fact that my State is interested in the particular articles upon which I advocated duties. Is that a good argument? If I advocate any duty which is not right in itself, then that of itself is a sufficient argument against it; but if the argument that it will affect some industry in my State is pressed, I say that of itself is not a good argument. I am free to say, and I do not hesitate to say, that while I will not abandon the view which I hold as to the impropriety of a protective tariff, I am not indifferent to the fact that my people will be injured or benefited according as this tariff bill is equal or unequal in its operations.

I propose, so far as I am able, not to do that which is improper, not to seek to get that which ought not to be granted because somebody else may succeed in getting it. I have no patience with any such doctrine as that. But I do say that so far as I am able, recognizing the propriety of a tariff duty, of a tariff for revenue, I do propose to see to it, so far as I am able, that the industries in my part of the country shall be placed upon an equality with those in other parts of the country.

Mr. President, if I may quote from the Bible, there is an expression in it somewhere substantially to the effect that the man who will not provide for his own, and specially for those of his own house, is worse than an infidel; and so far as I am able, without going outside of the lines which I recognize as proper, so far as I am able within legitimate limits in what I consider to be revenue duties, I propose to see that the industries in my State have the same impositions that are made upon the products of other States.

Mr. STEWART. Mr. President, I regret that I do not understand a good deal of the language that is being used in the debate. Consequently I do not enjoy the debate on the tariff question as much as I otherwise would. For example, when I hear some talking about a tariff for revenue and others talking about a tariff for protection, I am very much confused by those two names for tariff. I do not know why a tariff should have those two names, as if there were any difference in a tariff. I am for a tariff for protection, and I am for a tariff for revenue. Any tariff whatever upon any article will have a tendency to some extent to enhance its price, because the imported article must pay for coming in. It has that tendency because it keeps out the imported article. The only tariff for revenue which would not have that tendency would be a tariff on articles not produced in this country. That is the only real revenue tariff in any just sense.

The only item in a revenue tariff that I have heard suggested for a good many years, ever since the war tariff was first modified, is the one brought in by the Committee on Finance to put a duty on tea. That is purely a revenue tariff. The amendment of the Senator from Georgia [Mr. BACON], which I believe is a good amendment and for a good purpose, is purely a protective tariff as well. The Senator from South Carolina [Mr. MCLAURIN] gets up and says that is not true: that there is nothing in this country to protect by your tariff, because Egyptian cotton is taking the place of the long-staple cotton in the islands of his part of the country; that they have been driven out of the business in a vast region. Twenty per cent ad valorem is proposed. The rate ought to be more; it ought to be 2 or 3 cents a pound. But if you make any charge upon the importation, it will make the Egyptian cotton more expensive, and if the rate is sufficient the farmers in his State who raised long-staple island cotton will be enabled to go into the business again. It will have that tendency. It will have a protective tendency. It may not be sufficient protection, but anything that keeps out foreign competition has a tendency to protect American industry. It may not be adequate protection, but you can not raise revenue at all without shutting out foreign competition to the extent of that revenue. That is the fact. It raises the price of what they have to pay to bring it in, and consequently it protects home industries.

All this talk about what is a protective tariff and what is a revenue tariff is Greek to me. I do not understand it. It is confusing. For example, suppose you put a duty of 10 cents a pound on

an article, and the article is worth $10 a pound in the market. You say that rate is so reasonable that it would be only a revenue tariff. But suppose there should be some new device invented whereby it could be produced for 10 cents a pound in the foreign market, then the rate would be 100 per cent ad valorem and it would be prohibitory. It would be protection, but it would be a prohibitory tariff. There is no such thing as a revenue tariff on an article produced in this country that is not protective in its nature, and there is no such thing as a protective tariff not absolutely prohibitory which is not a revenue tariff.

I can understand people when they say they are opposed to a prohibitory tariff. I am opposed to a prohibitory tariff. I am in favor of a protective-revenue tariff. I can understand that very well. But in order that a revenue tariff shall not be protective, it must be put upon things not raised in this country or it must be so high as to be absolutely prohibitive, so that it will produce no revenue.

All this talk about revenue and protection and about a change of a half cent or some little change to bring it into one classification and then into another is too refined for me. We hear Senators talking about those things for hours and hours. I can not make those classifications. They confuse me. Please talk in some language that I can understand. I have been thinking about this matter for thirty years, and you have a new language here that I do not understand. I hear Senators talking about the slightest change, but it is the difference between tweedledum and tweedledee. Yet they say one rate will make it protective and the other rate will make it a revenue tariff.

Now, that is my view. I believe in a good many things that the Senator from Georgia said. He said he desires to equalize the tariff as far as in human skill it can be done, and that when a man has to pay a higher price for what he buys he would compensate him if he could by giving him a higher price for what he has to sell; that he would protect all alike. That is the kind of a tariff that I am in favor of. We all agree that we shall have a protective tariff. There are no free traders in the country. The Wilson Act has not a free-trade clause in it. There are no prohibitory duties absolutely in it; but that is not free trade. There is no article taxed that I know of in that act but what is produced in this country. It is a protective law, as is every law that has been passed. Its principle is protection from beginning to end, and nothing else. Every tariff bill that the Democratic party has ever passed has been a protective bill absolutely.

The Democratic party is as thoroughly committed to protection as the Republican party. There is no difference, so far as the principle is concerned, if you look at the acts. Bring me the acts passed by either party, and I will show you that they are built upon the same principle of protection precisely; that there is no difference in the principle upon which they are built. The only question is as to the legislative acts, and these agree. I do not care for your platforms, what you have said in the vague planks of your platforms that had no meaning at all, that nobody could interpret; but in your legislative acts both parties have been from time immemorial protective parties, and the only question was how to levy that protection so it would be fair.

The Senator from Georgia is acting right when he says that he will try to look out for his own constituents. That is the only means by which a fair protective tariff can be levied. What do we have representatives from different sections for except to represent the interests of our constituents? A Senator near me suggests that we are also here to get offices for our friends. That is not true, because only part of us ever have a chance to do that. The offices are always monopolized by one side or the other. We are all here to see to the various interests in our parts of the country, to enact laws to protect them equally and live under equal laws.

When a gentleman from one section of the country says that an article is raw material and it is raised in his section, and although his people have labored to produce it, there is no duty on it at all; that he will have no protection; that the laboring men in his State may be brought in competition with the Asiatics and he does not care how much they suffer in that competition; that he has a theory that raw material should not be taxed; that everything produced in his section should be treated as raw material; that although his people labor in the fields to produce it, they shall labor in competition with the Asiatics, he says that those who live in cities and live by manufacturing shall buy in the free-trade market there in his State or in Asia or elsewhere, and sell in a protected market, and that his constituents, after having sold in a free-trade market, shall be compelled to buy in a protected market and build up the manufacturers.

It is the duty of every Senator and every Representative to look to the interests in his own State and to see that they are protected, for otherwise we shall never have fair tariff laws. If the tariff laws are unfair, it is because Senators in different sections have not looked after the interests of their constituents. If New England is built up and is more prosperous than the other sections, it is because the representatives of New England have always seen to it that everything that comes to New England shall come as raw material, and that everything New England sells is a completed product to be sold in a protected market. Every section of the country should look to its own interests as New England does. We would then have the thing distributed, and the tariff would not be so unequal and unfair, and there would not be so much agitation.

Equality, as the Senator from Georgia says, is what we are seeking for, and I am glad to see a representative from Georgia and the South—and there are several of them—crying out for this principle of equality, because we are going to have a protective tariff under any Administration, and it is the duty of the South to get her share, and of the West to do the same. Then there will be less complaint.

Here is the place to carry that contest on. It is honorable for each section and for the Senators from each section, representing the rights of their constituents, to see that that is accomplished: and that being done, the tariff may be equalized and so modified that it will not create such inequalities as to destroy the party responsible for it.

Every tariff has brought disaster to the party which has framed it on account of its inequalities. It is almost impossible for any party to go before the country successfully after having passed a tariff bill because of the glaring inconsistencies which will be pointed out in it. People living out in my section of the country will say, "Why has not our labor in the production of a certain article as much right to protection as the labor of the people in New England? We are out in the field; we are herding our sheep; we are cutting hay to feed the sheep; we are shearing them; we are working all the time"—it requires a great deal of work to produce wool—"and we are competing with Asia, with South America and Mexico, where the laborers are paid starvation wages. Why should not we be protected as well as the woolen manufacturers?"

As to every article there will be dissatisfaction, and no tariff law will stand the glaring inequalities which will creep into it if the theory of free raw material is indulged in for a moment, because every man regards everything as raw material which comes to his shop to be manufactured, and everything which he produces is a completed article so far as he is concerned, and he wants a tariff on that. We must recognize the fundamental principle that nothing is raw material upon which labor has been bestowed. If we are to protect labor, I hope we shall recognize the fact that all labor is equally entitled to protection, and that all tariff, by whatever name, upon articles produced in this country is protective, and the name will not change it; it will only confuse matters and lead to further agitation.

Mr. CAFFERY. Mr. President, the Senator from Nevada [Mr. STEWART], in my opinion, has correctly characterized the position of the Senator from Georgia [Mr. BACON] in his application or demand for a tariff upon cotton. He states that this tariff is bound to be protective, that the idea of revenue is incidental, the idea of protection is paramount.

Mr. BACON. Does the Senator hold the same view with reference to the tariff on sugar?

Mr. CAFFERY. I would gladly answer the Senator from Georgia, but on two occasions he has declined to answer my questions, and I decline peremptorily to yield to him.

Mr. BACON. Well, sir——

Mr. CAFFERY. I do not want to be interrupted.

Mr. BACON. I accept that status as between us with pleasure.

Mr. CAFFERY. You made the status yourself, and you must lie on your own bed.

Mr. BACON. Very well. That is a deprivation which I shall endeavor to bear up under.

Mr. CAFFERY. I hope you will have the patience and fortitude to stand it. I am sure it will not disturb my equanimity one particle.

Mr. President, the proposition that is laid down by the Senator from Georgia is that the statement of the Senator from Missouri [Mr. VEST] in regard to the tariff on raw materials, or his interpretation of the tariff in a particular instance, was based upon a bald assertion, and that assertions never made arguments, and that he would proceed to argue the question; and forthwith he made as bald a statement to predicate his argument upon, without any support of reason or fact to back it; and the statement was that a 20 per cent ad valorem tariff was not protective. This statement was made broadly. It did not stop at the tariff of 20 per cent that he asked upon cotton, but he made the bald, general statement that a 20 per cent ad valorem tariff was not protective. Mr. President, these invectives, these disclaimers against unsupported, bald statements seem to come home to the Senator from Georgia with great force.

Why is not a 20 per cent ad valorem tariff under certain conditions absolutely protective, and sometimes prohibitive? It clearly depends upon the margin of difference as between the value of the home article and the foreign article imported, that is all; and a

tariff of 20 per cent ad valorem in certain cases would not only work high protection, but in other cases would work prohibition.

Another statement made by the Senator from Georgia is that the tariff proposed by him would not raise the price of cotton; that the tariff of 20 per cent would have no effect of raising the price of domestic cotton.

Again, the Senator states that he is in favor of laying a tariff all along the line upon any article that will produce revenue, without any sort of regard to the Treasury itself. Therefore, when this proposed bill, according to the statement of the Senator from Rhode Island [Mr. ALDRICH], would produce a surplus of $50,000,000, he proposes to pick out something else, pick out cotton, to swell this $50,000,000 with an additional million or so of dollars. Is that Democratic argument or any other sort of argument? Are tariffs to be raised simply for the purpose of swelling the volume of money in the Treasury? That is the bald proposition made that, notwithstanding all the money that is now in the Treasury and that is proposed to be placed in the Treasury, you must still increase the taxation upon the people in order to follow out this theory that taxes must be laid all along the line upon any and every article that will produce the slightest amount of revenue.

Mr. MCLAURIN. May I be allowed to ask the Senator from Louisiana a question?

The VICE-PRESIDENT. Does the Senator from Louisiana yield to the Senator from South Carolina?

Mr. CAFFERY. Yes, sir.

Mr. MCLAURIN. Would the Senator be willing to make a little reduction of the duty on sugar and place a little on cotton, adjusting it between the two articles in such a way as not to increase the revenue?

Mr. CAFFERY. I see that the bad precedent set by my friend the Senator from Massachusetts [Mr. HOAR] in his various attempts to put me in a hole on sugar are being followed by my colleagues on this side. [Laughter.]

Mr. HOAR. Some other Senators seem to have got into a hole also.

Mr. CAFFERY. The Senator from Massachusetts crawls out of his little casemate once in a while, and now he pokes out his head and asks if there is not somebody else in a hole. Now, Mr. President, I will say that I favor a tariff upon sugar not because I live in a sugar State. While I am not the most unselfish human being in the world, and claim no right to any immaculate purity in any direction, I believe that I favor a tariff on sugar solely upon account of its revenue-producing qualities, and I would be perfectly willing to lower the tariff upon sugar in any line that would benefit the public, but not place it on your cotton, because I believe that would be harmful to the public, would be harmful to the United States, and of no good whatever to the cotton growers of the South.

While the Senator from Georgia, with very great vehemence and no inconsiderable amount of ingenuity and ability, disclaims any idea of protection, he wound up his discourse and argument by a quotation, as he said, substantially from the Scriptures, to this effect, that a man who will not take care of his own household is worse than an infidel. So, however much the Senator may claim he is not for protection, his Scriptural quotation entirely negatives his statement. He has taken care of his household, and that is what he is after. He is for a tariff upon cotton, because he thinks it will do some good somewhere. With an overflowing Treasury we do not want the money, but it is merely for the purpose of taking care of the household gods of the Senator from Georgia that he demands that the Senate of the United States adopt this amendment.

The argument of the Senator from Missouri is entirely conclusive; the admission of the Senator from Georgia is to the same effect, that a tariff upon cotton will not raise the price of domestic cotton, but it will disturb and hurt the domestic manufacturer, it will prevent him, if this tariff should happen to be prohibitory, or if it should work so that the Egyptian cotton would not be imported and the manufacture of that cotton into cloth should be transferred or largely take place in England or some other foreign country—in that event, the American manufacturer would be disturbed and hurt without any compensation whatever to anybody.

I am not one of those who think there is any antagonism between one business in the United States and another when conducted upon legitimate principles. I believe that the tariff has been piled upon manufactured articles in the country unnecessarily. The tariff upon domestic manufactures had its origin in the debts and troubles growing out of the war of 1812; and the hardest thing in the world is to remedy a settled evil; the hardest thing in the world is to take the protective hand off of the throat of the country when once it is placed there. There never has been, in my opinion, any necessity for the placing of a tariff upon the domestic manufactures of cotton in this country for protection. Our natural advantages, our possession of the whole domestic product in cotton, the ingenuity, the genius of our people have, in my opinion, always been enough protection for the cotton manufacturer. But this business has grown up under the guise, under the shelter of protection; and when once a business is grown up and built up, protected and sustained by a tariff, then the legislator, in removing that tariff, must proceed with due caution and consideration to those interested.

The Democratic party, prior to 1861, was rapidly taking steps in the direction of free trade. It has been asserted in this Chamber that there was no free trade in it. When a Democrat plants himself upon a tariff for revenue only, he comes as near to being a free trader as the Constitution of the United States will permit; and that is the sort of a Democrat I am. Free trade has no terrors for me—not one particle—and I believe that when the manufacturing interests of this country develop into larger and greater proportions than they now have, the enlightened self-interest of New England itself will take the initiative step in the direction of free trade in cotton and other manufactures. Under present conditions the tariff must rest upon imported articles. In placing a tariff upon imported articles it is essential, in order to follow out the creed of Democracy, announced in every convention, in every platform of the party, if not expressly, by necessary implication, that the tariff should be placed upon articles which produce most revenue with the least burden to the people.

The primary object is that the money collected by the tax upon consumption should go into the Federal coffers. It is not the purpose of the Democracy, I understand, to build up protected interests in any direction, in any form, and you inevitably do so when you place a tariff upon raw material. That tariff is bound to be recouped in the manufactured product, and that tariff, therefore, does not go entirely, or nearly so, as it should, into the Federal Treasury, especially in cases of domestic manufactures which nearly supply the domestic demand, for the ratio then of the receipt into the Treasury is very small in proportion to the receipts into the pockets of the protected interests.

Sir, I have been attempted to be twitted about sugar. It appears that certain Senators can not understand how a Democrat can be born and reared in the atmosphere of protection and yet be true to his principles. They do not seem to understand that because there is an interest, a small interest in sugar, an infinitesimal interest almost, compared with the great volume of the consumption of sugar in the United States, therefore, a man can be lifted out of a narrow, selfish condition and stand forth an honest and patriotic Democrat.

It is not because sugar is raised in my section of the country that I am a Democrat; it is because I believe in the truth-grounded principles of the Democratic party and their broad and comprehensive humanity. I believe that any other principle of taxation than the Democratic principle of taxation bears with a heavy hand upon the toiling masses of the people. I believe that this tariff for protection is the remnant of the monopoly of privileges of the Middle Ages. I believe that it gives the right to the protected man to place his hands in the pocket of labor; and that, in my opinion, is diametrically opposed to every principle of the Democratic party. "Equal rights to all, special privileges to none," is the declaration of the immortal founder of the Democratic party; and can you comply with that declaration when, by an imposition of protective tariffs, you build up monopolists and privileged classes, legalized to rob and plunder the people? That, in my opinion, is the tendency of the protective idea, and I believe that the doom of that idea is at hand to-day. I believe the handwriting is on the wall.

When the Senator from Rhode Island got up and confessed the failure of protection, it occurred to me that he had a forecast of the doom to come of his protective theories. He had to borrow the Democratic principle for revenue in order to eke out a surplus necessary to uphold the credit of the nation; he had to go to the rejected article of sugar; he had to go to beer, and also tea—to place a tariff upon tea and beer, to be retained until that blessed time shall come when an overflowing Treasury can dispense with them, confessing weakness, confessing the inability or incompetency of a tariff based upon protective principles to meet what the Republican party deems a public exigency.

Protection is a failure, in the words of its apostle; it has passed out. The United States is reaching abroad for the markets of the world. No longer are we an agricultural people exclusively. Of late years we have displayed the greatest ability, the greatest proficiency, in the manufacturing line, and now the United States challenges the supremacy of England itself.

Mr. President, let us buy our ships where we can. Take down the barriers, lower the wall, and our ships will plow the seas, and the proceeds of our manufactures will be in every market of the world.

The VICE-PRESIDENT. The question is on the amendment proposed by the Senator from Georgia [Mr. BACON].

Mr. VEST. On that I call for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CLAY (when his name was called). I am paired with the

junior Senator from Massachusetts [Mr. LODGE], but I transfer that pair to the senior Senator from Kentucky [Mr. LINDSAY] and vote "yea."

Mr. GORMAN (when his name was called). I am paired with the Senator from Maine [Mr. FRYE].

Mr. HANSBROUGH (when his name was called). I am paired with the Senator from Virginia [Mr. DANIEL].

Mr. LINDSAY (when his name was called). On this vote I am paired with the junior Senator from Massachusetts [Mr. LODGE]. I do not know how he would vote, but if he were present, I should vote "nay."

Mr. MITCHELL (when his name was called). I am paired with the Senator from New Jersey [Mr. SEWELL].

Mr. PROCTOR (when his name was called). I am paired with the junior Senator from Florida [Mr. MALLORY].

Mr. ROACH (when his name was called). I am paired with the Senator from Nevada [Mr. JONES]. If he were present, I should vote "nay."

Mr. WARREN (when his name was called). I am paired with the Senator from Washington [Mr. TURNER]. If he were present and voting, I should vote "yea."

Mr. WILSON (when his name was called). I am paired with the Senator from Florida [Mr. PASCO]. If he were present, I should vote "yea." I do not know how he would vote.

The roll call was concluded.

Mr. CHANDLER (after having voted in the affirmative). I inquire if the senior Senator from New York [Mr. MURPHY] has voted?

The VICE-PRESIDENT. He has not voted.

Mr. CHANDLER. Then I withdraw my vote, as I am paired with that Senator.

The result was announced—yeas 42, nays 19; as follows:

YEAS—42.

Allen,	Elkins,	McEnery,	Quay,
Allison,	Fairbanks,	McLaurin,	Rawlins,
Bacon,	Foraker,	McMillan,	Shoup,
Burrows,	Gallinger,	Mantle,	Spooner,
Butler,	Gear,	Mason,	Stewart,
Cannon,	Hale,	Nelson,	Thurston,
Carter,	Hanna,	Penrose,	Tillman,
Clay,	Hawley,	Perkins,	Wellington,
Cullom,	Heitfeld,	Platt, Conn.	Wetmore.
Davis,	Hoar,	Platt, N. Y.	
Deboe,	McBride,	Pritchard,	

NAYS—19.

Bate,	Faulkner,	Martin,	Turpie,
Berry,	Gray,	Mills,	Vest,
Caffery,	Jones, Ark.	Morgan,	Walthall,
Chilton,	Kenney,	Pettus,	White.
Cockrell,	Kyle,	Smith,	

NOT VOTING—28.

Aldrich,	Gorman,	Mallory,	Roach,
Baker,	Hansbrough,	Mitchell,	Sewell,
Chandler,	Harris, Kans.	Morrill,	Teller,
Clark,	Harris, Tenn.	Murphy,	Turner,
Daniel,	Jones, Nev.	Pasco,	Warren,
Frye,	Lindsay,	Pettigrew,	Wilson,
George,	Lodge,	Proctor,	Wolcott.

So the amendment was agreed to.

The VICE-PRESIDENT. The reading of the bill will be proceeded with.

The Secretary read as follows:

226. Macaroni, vermicelli, and all similar preparations, 2 cents per pound.

Mr. VEST. It seems to be useless to have any votes, but I simply wish to call attention to a few facts. In paragraph 226 the duty is raised upon a food product, macaroni, from 20 to 58 per cent, an increase of 38 per cent. It is very well known that macaroni is manufactured in this country, but we do not manufacture any macaroni equal to the foreign article. But this is an entirely consistent tax as our friends on the other side are framing the present bill. It is intended by taxation to force the people of this country to eat American macaroni whether they like it or not.

The reading of the bill was resumed. The next amendment of the Committee on Finance was, in paragraph 229, line 6, before the word "cents," to strike out "two" and insert "one and one-half;" in line 9, before the words "per pound," to strike out "1½ cents" and insert "eight-tenths of 1 cent;" and in line 12, after the word "sieve," to strike out "one-half" and insert "one-fourth;" so as to make the paragraph read:

229. Rice, cleaned, 1½ cents per pound; uncleaned rice, or rice free of the outer hull and still having the inner cuticle on, eight-tenths of 1 cent per pound; rice flour, and rice meal, and rice broken which will pass through a sieve known commercially as No. 12 wire sieve, one-fourth of 1 cent per pound; paddy, or rice having the outer hull on, three-fourths of 1 cent per pound.

Mr. PRITCHARD. I should like to have the paragraph passed over informally.

Mr. ALLISON. The majority of the committee recommend the restoration of the House rates in the first bracket and also in the second bracket. They recommend the withdrawal of amendments Nos. 1 and 2 in this paragraph.

The VICE-PRESIDENT. Does the Senator from North Carolina request that the paragraph shall be passed over?

Mr. PRITCHARD. I withdraw the request.

The VICE-PRESIDENT. The Senator from Iowa moves that the Senate disagree to the amendments he has named.

Mr. JONES of Arkansas. It is not often that we get an opportunity to vote with the majority of the Committee on Finance. I want to vote with the committee occasionally, and I ask for the yeas and nays. I am not willing to disagree to the proposed Senate amendment.

Mr. WHITE. There are a couple of communications here which I have received from people in my State, which I desire to have read.

The Secretary read as follows:

SAN FRANCISCO, *May 4, 1897.*

DEAR SIR: We have before us the new Dingley bill regarding the rice tariff, and learn to-day that representatives from the South are not satisfied with the proposed law, but want to increase the duty on uncleaned rice.

We take the liberty to address you on this subject and ask your intervention in the interest of this Coast, as you have been kind enough to do when the rice tariff of the Wilson bill was discussed.

We can not possibly object to the protection afforded the Southern rice planters by an increase in duty on cleaned rice, and if the rate is fixed at 2 cents per pound as proposed by the new measure, no harm will be done to California. The Hawaiian grower will reap part of this benefit and the Government will share another part thereof. Chinese importations will continue because our Chinese population is averse to using other than Chinese rice.

What we object to is an increase of duty on "uncleaned rice," because it would destroy an industry on this coast which has only lately been developed and would compel us to shut down our mills when just about to earn an interest on the capital and labor invested.

The present differential duty—eight-tenths of a cent per pound on uncleaned rice, with duty of 1½ cents per pound on cleaned rice—is barely sufficient to pay the cost of milling. If the Dingley bill, proposing 1½ cents per pound on uncleaned rice and 2 cents per pound on cleaned rice, is carried through, we will have hard work to keep our mills running without a loss.

We are of the impression that the demand of the Southern planters is unjust and unreasonable. The Louisiana rice miller has no market here, and no matter how high the duty on uncleaned rice is fixed the Hawaiian Islands will always supply us as long as the reciprocity treaty is in force.

The increased duty on uncleaned rice over and above the same proportion as it is fixed by the Wilson bill in relation to duty on cleaned rice would be equal to wiping out the existing rice mills on this coast, depriving a large number of workingmen of their earnings, besides the total loss of capital invested in buildings and machinery, and, to all appearances, without the least benefit to those who propose this measure.

We earnestly request you to use your influence in favor of the existing rates of duty on uncleaned rice; and, as far as paddy is concerned, we have already found it impossible to import the same at the rate of the McKinley and Wilson bills, although we have originally prepared our mills for this kind of rice. Any increase of over 80 cents per hundred pounds on uncleaned rice will make it impossible for our business to exist.

If we understand the tendency of protection correctly, the principal aim is to encourage home industry by free admittance of the raw material, and if we only ask to be protected by a duty not exceeding 25 cents per hundred pounds on paddy, 80 cents per hundred pounds on uncleaned rice, and $2 per hundred pounds on cleaned rice, as demanded by the Southern interests, it seems a very moderate request.

Hoping this will receive your immediate attention, we remain,

Respectfully, yours,

HINZ & PLAGEMANN.

Hon. STEPHEN M. WHITE.

Mr. WHITE. The other communication which I ask to have read is a copy of a letter addressed to the Senator from Rhode Island [Mr. ALDRICH].

The Secretary read as follows:

SAN FRANCISCO, *May 18, 1897.*

SIR: In the public prints we find a notice which Senator BUTLER has given of an amendment to the lately prepared Senate bill on rice, increasing the rates to: Cleaned, 2 cents per pound; uncleaned, 1½ cents per pound; paddy, 1 cent per pound.

We are importers of rice, especially in the uncleaned state, it being afterwards milled by a local rice mill. By close watching and economical work we have succeeded in finding a market for our rice, particularly in such districts as the Louisiana is not directly interested. Under the rates proposed by Mr. BUTLER, it becomes very questionable whether we will be able to continue rice importations in the future, thus giving the Hawaiian rice, which under the reciprocity treaty comes in free of duty, a clear field.

So far as we are able to judge, the Wilson tariff gives ample protection to the home rice interests. No doubt your committee had good reasons for changing the rates proposed by the House back to those of the Wilson bill.

We have before us an article in the Louisiana Planter of the 9th of January, issue No. 2, in which is given the history of a committee of gentlemen from Louisiana and South Carolina before the Ways and Means Committee, explaining, on their part, the reasons why an advance over the existing rates should be made, and we beg leave to take up the different arguments which they have made, and which, in our opinion, do not hold good.

1. "In the two Carolinas, Louisiana, and Georgia the crops had been reduced one-half by the reduction of the tariff, on account of the competition of Asiatic cheap labor."

This is not based on facts. Prices on rice declined owing to the large crops produced in Louisiana and the other States, and the eagerness of the holders to dispose of their products. This was done to such an extent that it considerably reduced the importations of Hawaiian rice, lowering the price of the same to 3½ cents. The importation of Japan and other foreign rice was likewise curtailed, but we could not follow the decline of the market, as the cost and the high duty which we have to pay would not permit us to do so. However, there is a certain trade for Japan rice which, to secure the same, is willing to pay a higher price. Thus, during the constant decline from the spring of 1895 to 1896, the prices of Japan rice hardly varied, except in accordance with the fluctuations of the Japan markets.

We may add further that during the time mentioned all rice markets were weak. You will therefore see that it was not the competition of cheap Asiatic labor, but a state of affairs brought about by the Southern planters and millers themselves.

2. "It was stated in the opening that the annual consumption of rice in this country was about 228,000,000 pounds, valued at $6,840,000, and that destruction

to the industry was threatened by foreign capital and foreign cheap labor. The committee asked that, in framing the new tariff bill, the definitions in the present law be retained, and that the rates on the different grades of rice be fixed on a parity with each other according to values."

It appears to us that the consumption of rice is considerably in excess of the above-mentioned quantity. However, the imports of foreign rice are regulated by our home crops. When the latter are large, the imports will fall off, and with small crops we have to look to other countries to secure our requirements. Up to December 1, 1893, the imports amounted to 73,530,608 pounds against 109,937,552 at the same time in 1893. The last domestic crop was small, and consequently a larger business was done in the foreign article.

3. "If cleaned rice is required to pay a duty of 2 cents per pound, the relation of values of the imported article to the cost of production will be only in a measure restored to what was obtained under the old tariff, while the duty of 1¼ cents a pound on rice, uncleaned, will approximately maintain the true parity, according to the values of cleaned rice and uncleaned rice, and at the same time give ample protection to the interest of the American miller."

Our Southern friends wish to make the committee believe that 50 cents per 100 pounds would be an ample protection for the American miller. The outturn of uncleaned rice varies according to the different kinds of rice from different countries. While Japan, being the most favorable, will turn out about 80 per cent, Java will not give more than 75 to 78 per cent, according to quality, and Rangoon will run even as low as 60 per cent. The duty is payable on the gross weight of the rice. Thus, at the rate of 1¼ cents, it amounts to 1¼ cents on the polished rice, leaving only one-eighth of a cent margin, which is not sufficient to pay even the expenses of storage and cartage, while the offal will not cover the cost of milling. You will readily see that with the other grades the result is still more unfavorable. Two cents per pound duty for polished rice is prohibitive, except in times of a total failure of our domestic crops, and then it would only mean an unnecessary increase in the cost of an article of consumption for our poorer classes, and could only be overcome by placing the duty on uncleaned rice on such a basis that it would pay the American miller to import it, and which, if we understand correctly, is the tendency of the proposed protective tariff—to provide for this margin.

4. "It has been our sad experience that the boldest and most active and successful attacks upon the interests of the producers of rice in the legislation upon the tariff have come from two individuals in New York, who have erected machines of inexpensive character for polishing into cleaned rice the article which has been imported under the name of uncleaned rice."

We believe this may have been true to some extent when, under the former decision of the General Appraisers, rice which went under the commercial name of "rice in the meal" was permitted as uncleaned in New York, and which did not require much machinery for cleaning. However, the Wilson tariff has abrogated this and a distinction between this and uncleaned rice has been maintained since then.

The mill which is located in San Francisco was originally intended to mill "paddy," but was hardly in a fair way of promising good results, even under the old McKinley tariff, with a difference of 1¼ cents between this and cleaned rice, when the Wilson bill, with a reduction to 80 cents, gave a new impetus to the business, and although large returns were not obtained, a fair rate of interest was secured on the capital invested.

5. "Although this interest is confined, as far as known, to these two persons in New York and one other person owning a similar machine in San Francisco, employing about ten operatives, who appear as the American millers, importing uncleaned rice."

We are not prepared to say what the New York mills can do, but, judging by the imports, their capacity must be quite considerable. As to the little mill in San Francisco, it turns out, in busy times, 600 bags of 100 pounds each per day. Furthermore, there is a somewhat smaller mill in Portland and another in Seattle.

As to "paddy," it is impossible to work it at the rate of 75 cents, which is readily explained by its turnout being only 50 per cent on the harder kinds of rice; much less on soft rice, such as Java and India rice.

Concerning China rice, the higher duty on cleaned would probably be an inducement for the Chinese in our country to purchase rice which is milled here, and which, under the Wilson tariff, we also attempted to do, with small success as to its sale.

As to an advance in the duty on cleaned rice to 2 cents, we do not care to give an opinion, but we would suggest that the duties now levied under the Wilson bill on uncleaned rice remain undisturbed, and that, to provide for home industry in the full sense of its meaning, the rate on "paddy" be reduced, so that we may be enabled to import the article in this state, receiving the full benefit of all the work that has to be performed in producing the cleaned rice.

We trust that, in view of the general benefit to be derived from the present tariff provision, you will excuse us for intruding on your time.

Yours, respectfully,

PARROTT & CO.

Hon. NELSON W. ALDRICH,
Chairman Finance Committee, Washington, D. C.

Mr. McLAURIN. The proposed legislation in regard to rice involves an important industry in South Carolina, and I should like to understand if it is proposed to return to the House rate.

Mr. ALLISON. The rates proposed are the rates of the other House, except upon broken rice.

Mr. McLAURIN. What rate is proposed on broken rice?

Mr. ALLISON. One-quarter of a cent per pound.

Mr. McLAURIN. There is no change in the classification?

Mr. ALLISON. No change in the classification and no change in the rate except on broken rice.

Mr. McLAURIN. Mr. President, there is a matter connected with the rice industry of more importance even than the rates of duty; I refer to the classification under which the rice is imported. I send to the Clerk's desk and ask to have read a letter on this subject from an intelligent rice planter in South Carolina.

The Secretary read as follows:

McCLELLANVILLE, S. C., *April 9, 1897.*

DEAR SIR: I learn from the papers that the tariff bill has passed the House and is now in the Senate. The bill is apparently all right, but it will not stand a close examination. It appears on its face that the rice planters have a protection of 2 cents per pound, which, if true, would do very well.

Uncleaned rice, or rice with the outer hull on, is dutiable at the rate of 1¼ cents per pound. Such rice can be brushed or polished by the millers for one-eighth of a cent per pound. You see that class of rice could be placed on the market at a duty of 1.37 cents per pound. For this reason there would be no cleaned rice imported, since it would be more profitable to import the uncleaned rice.

Rough or paddy rice is dutiable at three-fourths of a cent per pound. Now, to illustrate how it would work with this class of rice, 44 pounds of rough rice is a bushel, and the mills in Charleston charge 8 cents for cleaning a bushel. The duty on 44 pounds at three-fourths of a cent per pound would be 33 cents; add 8 cents for milling and we have a total of 41 cents. The 44 pounds of rough rice will turn out 30 pounds of clean rice and about 2 pounds of small rice and rice flour. So you see rough rice can be imported and turned into clean rice at a dutiable rate of about 1½ cents per pound. This again, would be cheaper than the duty on cleaned rice.

The small rice and rice flour come in at a very low rate indeed, and are used by the brewers for making beer. I think that those who drink rice can afford to pay as much duty as those who eat it. There are great frauds perpetrated through the importation of this class of rice. Whole rice can be mixed with it and smuggled through the custom-house, and then separated and put on the market at a low rate.

As the bill stands, there is but little in it for the rice planter. It favors the mill owner and the speculator. I would suggest to you to have the bill altered so as give cleaned rice a duty of 2 cents per pound and rough rice 1½ cents per pound, and have but these two classes. Have the so-called uncleaned and cleaned in one class and the rough, broken, and rice flour in the other. This would prevent fraud and help the rice planter.

Hoping you will do all you can for us and get all the tariff you can for the South, I remain,

Yours, truly,

T. W. GRAHAM.

Hon. J. L. McLAURIN,
Washington, D. C.

Mr. McLAURIN. I shall not consume the time of the Senate further, but will direct the attention of the committee in charge of the measure to just one point connected with the classification of rice. The two classifications of rice in a general way are cleaned rice, fit for food consumption, and rough rice, as it comes from the farmer.

Now, last year the imports of cleaned rice were 41,915,000 pounds; of the uncleaned, 22,748,000; of the rough or paddy rice, 15,894 pounds; of the rice flour, meal, and broken rice, 68,894,000 pounds.

This statement is sufficient, it seems to me, to condemn the present system of classification. The intermediate grades are the uncleaned, the meal and broken rice, and the rough or paddy rice. Of the general classifications there were 41,900,000 pounds imported, while of the intermediate grades 91,773,000 pounds came in from abroad, and I venture the assertion that of these intermediate grades a large proportion were, to say the least, irregular and a fraud on the revenues of the Government, besides being an injustice to the rice planters and millers of this country.

I have here a book which gives the testimony taken before the Ways and Means Committee, containing the statement of a prominent rice dealer in New Orleans, Mr. Ernst. I shall not consume the time of the Senate to read it. Mr. Ernst stated that the rice is broken up and crushed by foreign exporters in order to take advantage of the present system of classification, and to furnish to the brewers of this country a cheap article out of which I suppose they make beer and palm it off as being made from hops, or something of the sort. These facts are well known. They were presented to the Ways and Means Committee of the House, and I doubt not were presented to the committee on this side who had charge of the measure.

Then why, I ask, is the present system of classification allowed to remain in the bill? Are the brewers and speculators of this country of more importance than its rice planters and millers? Must a legitimate line of material production be sacrificed to the interests of those two classes?

Mr. GRAY. I should like to ask the Senator from South Carolina what would be the result on the revenue of the change he proposes?

Mr. McLAURIN. On the revenue?

Mr. GRAY. Yes. I presume this is a revenue measure.

Mr. McLAURIN. Yes, sir. I should think it would produce more revenue, because you will notice that where there is the least importation, as in the rough or paddy class, there is no change made in the House rates. Of course, if you made but two general classifications, and placed the rough and broken rice in one of these classes where the rate of duty is much higher, there would be more revenue than is now received under a lower rate of duty, and hence the revenues of the country would be correspondingly increased.

Mr. GRAY. This is entirely a revenue duty. That is the Senator's proposition.

Mr. McLAURIN. I am not proposing any duty at all. It is a change in classification to which I refer.

Mr. GRAY. And a change in the direction of more revenue?

Mr. McLAURIN. I am not trying to avoid the question. I will state that, irrespective of revenue duty or anything else, the rice planters in this country have just as much right as any other class of people in the country. That is my position on that question.

Mr. GRAY. There we agree.

Mr. McLAURIN. Now, if the Senator wants to know my position, I will give it to him.

Mr. GRAY. I do not want it. I ask the Senator from South Carolina what the effect will be upon the revenue. I want to know.

Mr. McLAURIN. I think the effect will be to increase the revenue.

Mr. GRAY. I notice, carrying out the ad valorem, that there is about 100 per cent duty on rice now.

Mr. McLAURIN. Yes, sir; but I have not made the computation.

Mr. GRAY. And the House rate would figure out about 133 per cent.

Mr. McLAURIN. I presume so.

Mr. GRAY. So I really wanted to know what effect it was going to have on the revenue with this enormous ad valorem duty.

Mr. McLAURIN. I think that it would really increase the revenues of the Government.

Mr. JONES of Arkansas. What is the change in the classification which the Senator from South Carolina proposes?

Mr. McLAURIN. The change I would propose is, instead of four, to make only two general classifications, and strike out all of the intermediate grades and put all rice into the general classification.

Mr. BUTLER. I should like to ask the Senator from South Carolina if it is not a fact that under a schedule like this a great deal of rice will come in as broken rice at a low rate which would come in and pay higher duty if it were not for the low classification on broken rice?

Mr. McLAURIN. I think the Senator from North Carolina is correct.

Mr. BUTLER. Does not that explain why such an enormous amount of broken rice, or rice classed as broken rice, is imported?

Mr. McLAURIN. Yes, sir.

Mr. BUTLER. Larger than under any other schedule, and chiefly because a great deal of it imported as broken rice was not really broken rice.

Mr. McLAURIN. Yes, sir.

Mr. BUTLER. The importers take advantage of the very duty on broken rice to import rice under that classification. It is just the same thing we have to contend with in trying to protect our mica in North Carolina. Under the ad valorem duty they bring in mica under the lowest classification, or rather they undervalue it and get it in without paying much duty, and it yields very little revenue. In the same way they will dodge the duty under the rice schedule as it is now, and therefore in this classification we will always have the largest amount of rice imported under the lowest schedule.

Mr. McLAURIN. Yes, sir.

Mr. BUTLER. So you do not get either protection or revenue.

As the Senator from South Carolina so well says, it is purely a question between the farmer and the brewer. Of course the brewers would like to have the rice they use free. Now, we make a loophole here so that the rice that the brewers want they can get practically free, and therefore not only no revenue will be derived from it, but no protection will come to the farmers under it. If this schedule is left at one-fourth of a cent per pound on broken rice, the largest quantity of rice imported under any schedule will be imported under it. Therefore it reduces the whole schedule down to one-fourth, or near that, in practical effect.

The committee, it seems to me, should restore the House rate of one-half a cent. It is enough favoritism for the brewers, because one-half a cent is the lowest rate under the House bill. Now, I understand the Senate committee propose to lower the House rate from one-half to one-fourth. I hope if the Senate committee are going to change back to the House schedule on all other kinds of rice that they will maintain the House schedule on broken rice. It is unfair to the farmer. It is pretending to give him something and to give him nothing. It is pretending to collect revenue and collecting none.

I have a great many letters here from rice planters, but I will not take the time of the Senate to read them. I have two letters here from the governor of North Carolina, who is one of the largest rice planters in the State, who makes a very clear statement of the whole case. I have letters from other rice planters and millers as well.

Mr. McLAURIN. I will only interrupt the Senator from North Carolina to yield him the floor.

The VICE-PRESIDENT. The Senator from North Carolina will proceed.

Mr. BUTLER. Mr. President, I have stated the case clearly, I hope. I can not add to it except to produce facts and data to back up the statement. No one will question, I think, the statement I have made, and if no one questions it I need not ask more time to argue it except to appeal to the committee in restoring a part of the House schedule to restore all of it, and give us the one-half cent on broken rice as it was in the House schedule. I think my colleague the Senator from North Carolina [Mr. PRITCHARD] will agree with me in the statement that that is simply fair and just to the rice planters from North Carolina.

The VICE-PRESIDENT. The question is on agreeing to the first two amendments.

Mr. ALLEN. I do not think the Senator from Iowa has informed the Senate whether this is regarded as purely a revenue measure or a protective measure. If it be protective, I think the Senate ought to know in what respect and to what extent it is before we are compelled to vote on it.

Mr. ALLISON. It depends, of course, upon the point of view. The Senator from Louisiana [Mr. CAFFERY] would call it a revenue measure, as I suppose would the Senator from Georgia [Mr. BACON]. I call it a revenue measure with protection added, as we think the rates here, especially upon the first two paragraphs, one embracing 133 per cent and the other about 83 per cent, can be called fairly protection, if not excessively so.

Mr. BATE. Will the Senator from Iowa please inform us whether it is his desire to have the terms of the House bill upon rice to remain, or does he want the Senate committee amendment adopted? They are in conflict, and I am myself in doubt, as are others around me, to know what the Senator in charge of the bill desires.

Mr. ALLISON. The last suggestion of the committee, I will say to the honorable Senator from Tennessee, is that the first two brackets, if I may use that term, in this paragraph shall be restored as the House provided, and that the last bracket shall remain as recommended by the Senate Committee on Finance, it being the exact provision of the law of 1890. I confess that the large importations of rice under the last clause seem to indicate that perhaps a higher duty would give us more revenue. I think the duty as provided in the McKinley law, as to all, was fairly satisfactory to the rice interests, as I understand the House provision is.

Mr. BATE. It seems, if I read it correctly, that your committee has sought to lower the rates in the rice paragraph.

Mr. ALLISON. That was the intention of the committee.

Mr. BATE. Now, I want to know whether your committee desire to stand by what you have done, or whether you desire to return to the rates fixed by the House? Has there been anything withdrawn?

Mr. ALLISON. I have endeavored to state that the committee proposes now to return to the rates of the House, and therefore abandon the first amendments in the paragraph.

Mr. TILLMAN. I merely desire to call the attention of the Senator in charge of the bill to the fact that if he will go to the House schedule, or specification, or tariff, of one-half a cent a pound on broken rice, according to the best evidence you have here of those of us who represent the rice States, you will give us protection and you will get more revenue. Now, if you are a protectionist from principle, and want equality, as you have just said, for the South, along with the rest of the country, why can you not do two good things at one stroke by going back to the House rate of one-half a cent a pound, thereby getting more revenue for the Government and giving the Southern rice growers more protection. And I will say, by the way, that in my State nineteen-twentieths of the rice growers are negroes.

Mr. PRITCHARD. In reply to the suggestion of my colleague that I back him in the advocacy of this rate of duty, I beg to say that I have seen the committee and got them to agree to adopt the House rate except this last item, and I still hope to be able to get them to adopt my suggestion in that particular. The rice growers of the South will be satisfied with the rates adopted by the House.

Mr. GEAR. I just want to say a word, Mr. President, about broken rice. Everyone who is familiar with the rice trade knows that broken rice is used solely and expressly in the manufacture of beer. We are the only people in the world possibly that use it for that purpose; therefore, a large quantity of broken rice from the East Indies comes to this country and is sold at a very low rate. Now, does any man of sense think for a moment, notwithstanding the large importations of this kind of rice, that any man who owns a hundred bags or a thousand bags of sound Rangoon rice would take it and break it up for the sake of getting it in at a low rate of duty and selling it for half the real value of sound rice? I think that answers the whole argument.

Mr. ALLEN. If the Senator will permit me, I understood the statement to be made a moment ago that it was expected to break up good rice for the express purpose of reducing the tariff upon it in that form.

Mr. GEAR. That is what is claimed. That is what the Senator from South Carolina claims, and my friend from North Carolina also.

Mr. ALLEN. If that be true, it would seem——

Mr. GEAR. If it were true, it would be all right; but it is not true.

Mr. ALLEN. It is not true, the Senator says.

I do not know that my State is particularly concerned in rice any further than it forms food for babies and young children, and possibly some of it may be consumed in the form of beer. However, I can not help embracing this opportunity to express my deep regret at the seeming disturbance in the ranks of the Democratic party in this Chamber, which has been such a faithful ally of the Populist party for a year or more.

Yesterday, when one of the vital interests of my State was involved, namely, the levying of a tax upon lumber, which must shelter our people from the great storms of the Northwest, I discovered, to my utter surprise, that six Southern Senators here, who had professed the doctrine of Jefferson and Jackson and of the illustrious statesmen of the past, and who claim to be revenue reformers and to levy a tax for revenue purposes exclusively, were willing to place my people absolutely at the mercy of the lumber trust.

It seems from the discussion to-day that my good and amiable friend from Delaware [Mr. GRAY], who entertains very correct views in the main upon some subjects and incorrect views on others, as I view it, and my friend from Georgia [Mr. BACON] got into a discussion as to what constitutes Democratic doctrine, and there was some slight difference, if I heard correctly, between the junior Senator from Missouri [Mr. VEST] and the senior Senator from Georgia [Mr. BACON] upon what constitutes Democratic doctrine.

I do hope, Mr. President, that these faithful allies of ours will go into their caucus room and get together upon the great question of the tariff taxation again; that they will make an effort, like a jury struggling to reach a verdict, to come to some conclusion and reach some definite plan from which they can act harmoniously, so that in three years from now they can unite with us under the Populist banner and bring about victory in this country and rescue the Government once more from the dominating influences of the Republican party.

I regret to see the tendency upon the part of my friend from Georgia [Mr. BACON] and my illustrious friend the senior Senator from South Carolina [Mr. TILLMAN] to run after strange gods and after false doctrines. All through its grand and illustrious history (and it has not only been grand and illustrious, but brilliant in many respects) the South has been preeminently the apostle of equality and freedom to the people. It has been preeminently the advocate of the doctrine that that which should be applied to one man should, under like circumstances, be applied to every other human being, and that there should be no special privileges and no inequalities created by legislation in this country. And yet, all over this side of the Chamber during the discussion thus far upon the pending measure, which is to be the salvation of the American people if our Republican friends are to be relied upon, there has been manifested from time to time a disposition to abandon the tenets of the Democratic party upon this question, notwithstanding Jefferson has been made to do duty for the protectionist and the free trader, too.

There has been, I say, a disposition to abandon the tenets of the Democratic party upon this question and have every man go in for himself, and, as my friend the senior Senator from Texas [Mr. MILLS] says, let the devil have the hindmost. Every man seems to be disposed to run his hand into the grab bag clear up to the shoulder and take everything he can get for his particular locality, notwithstanding it may impoverish a great portion of the people of the United States, notwithstanding it may turn them from shelter of their own into hired or charitable shelter, and notwithstanding it may reduce their state of living.

Mr. PETTUS. Will the Senator from Nebraska allow me?

Mr. ALLEN. Certainly.

Mr. PETTUS. Is not his language too broad when he says every man is doing that?

Mr. ALLEN. Well, possibly my language was a little broad. My friend at my left has been here but a few months and I think he has not been corrupted by the corroding influences of this Chamber.

Mr. President, it occurs to me that it is absolutely absurd to put a tax as high upon rice as is proposed here. Rice can be grown in this country as cheaply as corn, as cheaply as any other field product, and why should it be selected to receive the special favors of this proposed tariff measure?

We will have the travesty of placing a tax upon corn, a tax upon wheat, and a tax upon other farm products. There is not a child in the United States who does not know that a tax of that kind will not be productive of revenue and will not be prohibitive in the slightest degree of the importation of like articles from other countries.

Mr. GRAY. It will not be protective.

Mr. ALLEN. It will not be protective. We are preeminently a corn-growing country. We produce a great surplus. It is the surplus of these products sold in the foreign market that fixes the price at home, and no protective tariff can enhance the value to the producer. Sir, to-day corn is selling in my State at from 7 to 10 cents a bushel, and I say to you, Mr. President, it can not be produced at a profit to the farmer at 14 or 15 cents a bushel. Does any man tell me that the protective tariff will raise the price of corn? It is impossible. Why, then, should the price of rice, which is an essential food in this country, be raised to the American consumer by the levying of a tax upon it which would prohibit the importation of a like article raised somewhere else?

I think the time has come when we must yield to the doctrine of greed; when we must yield the people of this country absolutely into the grasp of the men who are constantly sending Senators letters and circulars importuning protection for their peculiar interests, or when we must stand firmly for the great millions of men, women, and children who are not represented here excepting as they send Senators and Representatives to make laws for them.

Mr. President, there is not a trust in this country that is not constantly importuning the Finance Committee. They want a tariff as high as it can be written. They care nothing about the revenues of the Government; they are not concerned that the nation shall pay its debts and levy a just and fair rate of taxation. They want a high tariff for the sole purpose of creating a scarce market that they may have an opportunity to tax the people of this country for their supplies without restraint.

Mr. CHILTON. Mr. President, I think all have been much edified by the Senator from Nebraska [Mr. ALLEN], and especially by that part of his remarks in which he gave advice to the Democrats to unite on a revenue-reform policy. He says that we should go into caucus and get together. I think his advice is seasonable. But, sir, would it not be a proper thing for the Populist party to go into caucus and get together also? One of the chief architects of this one-sided tariff bill which is about to be thrust upon the American people is that member of the Populist party who, as I understand, holds the balance of power in the Finance Committee.

Mr. ALLEN. Point him out.

Mr. CHILTON. The Senator from Nevada [Mr. JONES]. Not only so, but who has not noticed here how that other distinguished Populist, the Senator from Nevada [Mr. STEWART], has been voting for all these protective duties? It seems to me that gentlemen like our distinguished friend on the left [Mr. ALLEN], who has cast some good votes in connection with the tariff, should first clear up the difficulties which exist in his own household before undertaking to remedy those which disturb the family of his neighbor.

Mr. STEWART. Will the Senator allow me a question?

Mr. CHILTON. Certainly.

Mr. STEWART. Has the Senator from Texas voted for any other than protective duties since this bill has been up?

Mr. CHILTON. Have I?

Mr. STEWART. Yes; has the Senator voted against protection?

Mr. CHILTON. I have voted for the lowest duty invariably.

Mr. STEWART. Was it not a protective duty?

Mr. CHILTON. That depends upon circumstances. Of course I would rather have a small protective duty than a high one.

Mr. STEWART. Point out one that is not protective.

Mr. CHILTON. I prefer to put the articles considered this morning on the free list. Let any man make the motion and I will vote to put them on the free list. I do not deny that there are occasions when the Government needs revenue, and when it needs revenue it is necessary to select articles upon which to raise it; but at this juncture the Government of the United States does not need revenue.

There is no occasion for a tariff bill at all at this particular moment. This whole subject might have been postponed until the December session of Congress. No man can claim that there is such an urgency in the affairs of the American people that there need to have been an extraordinary session of Congress called to raise revenue. Let no man deceive himself. This bill, under the guise of levying taxes, is to be made a great instrumentality of protection. In my humble judgment it will fall by its own weight. It will fall as the McKinley bill fell whenever it comes to the test before the American people and they learn its results by actual experience.

Mr. ALLEN. Will the Senator allow me a suggestion?

Mr. CHILTON. Certainly.

Mr. ALLEN. In vindication of the Populist party, I will say that the tariff is not an issue of the Populist party. It never has been. We regard the whole thing as a snare, a fraud, and a delusion.

Mr. CHILTON. I did not understand the Senator.

Mr. ALLEN. I say the tariff is not an issue with the Populist party at all. You can not find it in one platform.

Mr. CHILTON. There are very few practical things which are made issues by the Populist party.

But, sir, the Populist organization can not escape the responsibility of being a party. The Populist party can not afford to abstain from taking ground on these questions.

Mr. President, I noticed that in the speech of the Senator from Georgia a few moments ago he pointed to the Democratic platform, and claimed that it indorses such a vote as he feels willing to cast in favor of a duty upon lumber, cotton, and other articles. He reads from that platform a general declaration that we believe in the equality of taxation among sections and classes. That is nothing more than the declaration in another form of that great

proposition contained in the Constitution that all the taxes in this country shall be uniform. Everybody believes in that. Let us not haggle about generalities. Let us come to actual cases, to actual paragraphs, to actual brackets in actual paragraphs, and see how our votes shall be cast. Follow the votes upon this bill from the first paragraph of the first schedule down to the item now under consideration, and an examination will verify the statement that there has been far more unity in the Democratic party upon this floor than has been exhibited in the Populist party.

Mr. ALLEN. Will the Senator allow me to suggest to him that the Democratic party has been very willing to follow in the wake of the Populist party upon the silver question? The Populist party is the first political organization in the United States that ever declared unequivocally for the coinage of gold and silver at the ratio of 16 to 1.

Mr. CHILTON. Mr. President, valued Democrats of the olden time advocated the free and unlimited coinage of silver before the Populist party had ever been conceived in the womb of American politics.

Mr. ALLEN. When and by whom?

Mr. CHILTON. Why, sir, it was the standing policy of this country from the origin of our Government down to 1873. Whoever heard of the Populist party before that time?

Mr. ALLEN. I desire to suggest to the Senator from Texas that the question of the free and unlimited coinage of silver at the ratio of 16 to 1 never became an issue until about 1887 or 1888, and your party never did declare in favor of the free and unlimited coinage of silver at the ratio of 16 to 1 until 1896.

Mr. CHILTON. Mr. President, I do not wish to be understood as denying to the gentleman from Nebraska and other Populists due credit for having supported the doctrine of the free and unlimited coinage of silver. Let no man misunderstand me. For one, I am in favor of the free and unlimited coinage of silver. I welcome the help of every Populist in the United States. I would not turn the back of my hand on any one of them. In the ranks of that party there are found many good men. But the attempt to claim that the Populist party is entitled to the credit of first advocating the free and unlimited coinage of silver as an issue in this country is as bald and arrant a pretension as the claim of Amerigo Vespucci that he discovered the continent upon which we live.

Mr. STEWART. The issue between the Democratic party as announced in its platform and the Republican party as announced in its platform is not a tariff issue; it is a financial issue. The Republican party is for the gold standard so long as England is. The Democratic party, the Populist party, and the free-silver Republicans are for the restoration of the coinage laws of the better days of the Republic. They are opposed to contraction, falling prices, and hard times.

The Republican party proposes now to restore prosperity by changing the tariff. That has been tried from the foundation of the Government without eminent success. There was never more than half or seldom half of the people who were in favor of any tariff bill that has been passed.

The Republican party say that they can produce prosperity by this method. I propose to let them try it; knowing, as I do, that it can not supply the place of money with which to do business, and that so long as the volume of money is shrinking business will shrink and times will grow worse. Knowing that, I am willing they shall make the experiment; and in making that experiment I want them to give the country the best possible tariff bill.

Unfortunately, some of my Democratic friends do not understand the tariff question, because they have never considered it. They have been discussing free trade. That is not a question to be discussed. There are no free traders of any consequence in this country; they are mere outsiders.

Every tariff law, as I said before to-day, is a protective law, and we aim in getting this protective law to make it as fair as possible. My colleague [Mr. JONES of Nevada] is in favor of making as good a protective tariff as possible. I say a protective tariff that will not protect what is called raw material is a fraud and uncalled for.

The committee reported in favor of protection on articles produced in my section—and there are many produced there that need protection—and they are as much entitled to it as those in any other section of the country, for those articles are produced by labor; and because my colleague and I vote for the protection of the labor of our section, when we are to have a protective tariff, no matter what party is in power, we are criticised.

I want it understood that a man who talks about free trade talks nonsense so long as either party proposes to raise revenue by tariff on articles produced in this country. In placing that tariff, when it is agreed that we shall have a protective tariff, you say to me that my colleague and I shall not have the privilege of asking that the laborers in our section of the country shall be protected as well as those in New England. I think my friends from the South should look to the articles produced by their labor and see to it that they are protected.

After it has been established by all parties that protection is necessary, when it is the law of the land and the policy of both parties, it is the duty of men from the South to see to it that reasonable protection is placed upon articles produced there by their labor. They know best what articles are produced there and what taxes are necessary, and it is their duty, as well as the duty of my colleague and myself, to see to it that the people of the West shall share equally in protection, because protection is a foregone conclusion. My colleague would have been untrue to his section if he had not stood out for protection upon those articles which the labor of the West and the South produce. He is for honest protection, protection which will protect all labor everywhere; and is opposed to discussing free trade, when there is no free trade in the country; when the thing is impossible; when all parties say that we will raise revenue by tariff on all articles produced in this country; when all parties have put tea, coffee, and other articles produced in other countries on the free list as a rule; when all agree that there shall be a protective-tariff system, he regards the man who will not look out for his own section as really denying the faith and worse than an infidel.

My colleague is for the protection of the whole country, and I indorse what he has done. It was right and proper. It is not to be suggested that we are untrue to our faith, that we are untrue to the principles, and untrue to the grand movement upon which the fate of humanity rests—the great financial question—because we are willing to help to have a protective-tariff law enacted that shall be the best that can be made. I am willing that our Republican friends shall have the best legislation in that direction that they can have.

I wish the tariff would give prosperity. I know it will not. It may help some special interests; it may do that; though it can not furnish money with which to revive enterprise; and as long as the iron hand of contraction paralyzes enterprise in this country and throughout all civilized countries we will be on the downward march toward barbarism. There is not the same freedom in the civilized world now that there was fifty years ago. I have heard it said that we have abolished slavery. Yes, we have abolished chattel slavery in this country, but we have made more progress toward universal slavery in the last twenty years than was ever made in any of the centuries in all the history of man.

Look at the slavery that Great Britain has established. India is enslaved worse than any country ever was in the Dark Ages. The last stroke was to rob them of seventeen hundred millions of their hard earnings and let them perish by the million in the recent famine. Recently Egypt has been enslaved. Now England is marching on to enslave South Africa and break down the struggling republics there. Slavery is progressing, and we find in Italy, we find in Austria, and we find everywhere throughout Europe the condition of the people of the laboring classes harder than it has been for a century. We find the Christian world united to maintain the Turk in the right to kill Christians on account of this money question. We find the world moving backward into the Dark Ages. In America, with resources unparalleled, with 70,000,000 enterprising citizens, with every reason why we should have prosperity, we find grinding poverty and misery and gloom such as has never existed since the landing at Jamestown.

That is the great issue. We must have financial reform before we shall have prosperity or liberty; and in the name of all that is decent, let us make this tariff as equal as we can; let us protect labor everywhere. That is the patriotic duty of every lover of his country. My colleague was right, and he has been right for the last twenty years, in promulgating the issue which now divides the Democratic and Republican parties, and I indorse what he did.

Mr. PETTUS. I move that the Senate proceed to the consideration of executive business.

The VICE-PRESIDENT. The Senator from Alabama moves that the Senate proceed to the consideration of executive business.

Mr. BUTLER. Will the Senator withdraw the motion for a few moments, in order that I may say a word?

The VICE-PRESIDENT. The Senator from North Carolina appeals to the Senator from Alabama to withdraw his motion for a few moments.

Mr. ALLISON. I hope we shall go on for a little while with the tariff bill and have a vote on the first two brackets of this paragraph, and then I think I shall be content to have an executive session or to adjourn.

Mr. PETTUS. I should be willing to do that but for the fact that I do not think we are getting to a vote. I think we shall vote more coolly in the morning.

Mr. BUTLER. Mr. President, I am anxious to get a vote on a part of this schedule, but I wish the indulgence of the Senate for a few minutes, as I can not allow the statement of the Senator from Texas [Mr. CHILTON] to go unchallenged.

The VICE-PRESIDENT. The Chair has no choice except to put

the motion of the Senator from Alabama, if he so desires. Does he insist upon his motion?

Mr. PETTUS. I insist upon my motion.

The VICE-PRESIDENT. The Senator from Alabama insists upon his motion, that the Senate proceed to the consideration of executive business.

Mr. BUTLER. I hope the Senator from Alabama will withdraw his motion for a few minutes.

Mr. PETTUS. I would for anything that was not interminable; but this debate is interminable. [Laughter.]

The VICE-PRESIDENT. The question is on the motion of the Senator from Alabama, that the Senate proceed to the consideration of executive business.

The motion was not agreed to.

Mr. BUTLER. Mr. President, I can not allow the statement of the Senator from Texas [Mr. CHILTON] to go unchallenged. He states that his party has always stood for the free coinage of silver, the money of the Constitution, and that he is glad to accept our assistance to help them to secure what they have always been most ardently striving for. Unfortunately for the Senator, the record of his party is to the contrary.

Mr. President, the People's Party, it is true, has not been in existence as long as the Democratic party, but it came into existence when there was great need for such a party, when the Democratic party backslided from the principles upon which it was founded and organized and fought manfully for a number of years. The People's Party came into existence when the Democratic party stood no longer for the principles of Thomas Jefferson and Andrew Jackson; the People's Party came into existence when the Republican party stood no longer for the principles of Abraham Lincoln. It came into existence to preserve, support, and defend those principles. We stand there to-day. I challenge any Senator or anyone else to point to a single principle for which the People's Party stands that is not good Republicanism as represented by Abraham Lincoln and good Democracy as represented by Jefferson and Jackson.

It was after the great fundamental principles of good government had been ignored and trampled under foot by these two old parties, and while they were fighting sham battles over schedules in tariffs, that the People's Party came into existence. It planted itself at the beginning on the great fundamental principle of good government represented in the beginning by these two parties, and it stands there to-day.

We brought to the front the financial and the monopoly questions as the great vital issues that the Democratic party had run away from. The People's Party forced these issues to the front and forced the Democratic party in its last convention to reform to some extent—to get nearer back to first principles. The Chicago convention never would have declared for what it did had it not been for the People's Party. They realized that the rank and file of their party would leave them, as we had left, and get back to the original principles of good government if they did not reform themselves, and they partially reformed.

Now, I wish to say to the Senator from Texas and to his Democratic colleagues that if they do not backslide before the next election we will accept their help as far as they can help us; that is, as far as they are reformed; as far as they can get back to the original principles of their party we shall be glad to have their help; but they must reform further than they have before they will be in good fellowship with the original Democrats and original Republicans represented in the People's Party.

The Democratic party and the Republican party have both been in copartnership with the enemies of good government, they have both been in copartnership with the trusts, the combines, the monopolies, and the shylocks. They are both responsible for the national-banking system, the demonetization of silver, the contraction of the currency, and the rule of monopolies. Both parties had agreed to keep in the background the great vital issues. It was while these two parties were fooling the people with a sham fight over schedules and rates, the difference between tweedledee and tweedledum, while the monopolies, the shylocks, and the privileged few were absorbing the wealth of the country and the millions were growing poorer each day, that the People's Party came into existence and raised the banner of pure democracy and pure republicanism. It is standing there to-day, and nothing can take it from its true and impregnable position; but if either one of these old parties will reform itself entirely, then we will gladly accept their fellowship or help.

The Senator from Texas objects to the rice duty. I should like to ask him if he could put a duty on cotton, and thereby protect the cotton farmers of his State to-day from the competition of India and other silver-using countries, so ruinous to our farmers, if he would not do it?

The Senator says the People's Party has no position on the tariff question. I say it has. The tariff is a third or fourth rate question, but our party is always on the right side of every question. Its position is to do whatever will benefit the American people; to do what will help in any way to restore prosperity. If we could put a moderate duty on cotton to-day and protect the American farmer from the competition of silver-using countries, and thus make cotton again bring 10 or 12 cents a pound, I should most cheerfully vote for it; and I challenge the Senator from Texas to say in the face of his constituents that he would not.

Now, if we can protect the rice farmers with an import duty, let us do it. We can protect the American wheat and cotton farmer with an export bounty—and the Senator from Texas will be called upon to vote with the People's Party for that reform. He can protect his people and raise the price of their cotton in that way, and before another week he will have a chance to go on record to help the People's Party to help the farmers of this nation. Will he do it?

EXECUTIVE SESSION.

Mr. ALLISON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After twenty minutes spent in executive session the doors were reopened, and (at 5 o'clock and 45 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, June 9, 1897, at 12 o'clock meridian.

NOMINATIONS.

Executive nominations received by the Senate June 8, 1897.

ASSISTANT ATTORNEY-GENERAL.

Henry M. Hoyt, of Pennsylvania, to be Assistant Attorney-General, vice Edward B. Whitney, resigned.

MARSHAL.

John M. Barnes, of Georgia, to be marshal of the United States for the southern district of Georgia, vice John D. Harrell, to be removed.

SUPERINTENDENT OF MINT.

Frank A. Leach, of California, to be superintendent of the mint of the United States at San Francisco, Cal., to succeed John Daggett, removed.

ASSAYER OF MINT.

William M. Lynch, of Louisiana, to be assayer of the mint of the United States at New Orleans, La., in place of Frank F. Claussen, deceased.

PROMOTIONS IN THE ARMY.

Infantry arm.

Second Lieut. Vernon Avondale Caldwell, Twenty-fifth Infantry, to be first lieutenant, June 7, 1897, vice Defrees, Fifth Infantry, retired from active service.

Candidate Sergt. Thomas M. Anderson, jr., Troop G, Fourth Cavalry, to be second lieutenant, June 8, 1897, vice Fox, Thirteenth Infantry, retired from active service.

Candidate Corpl. John E. Hunt, Troop H, Eighth Cavalry, to be second lieutenant, June 8, 1897, vice Caldwell, Twenty-fifth Infantry, promoted.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 8, 1897.

ASSISTANT ATTORNEY-GENERAL.

Louis A. Pradt, of Wisconsin, to be Assistant Attorney-General.

TREASURER OF THE UNITED STATES.

Ellis H. Roberts, of New York, to be Treasurer of the United States.

CONSUL.

Henry H. Morgan, of Louisiana, to be consul of the United States at Horgen, Switzerland.

CONSUL-GENERAL.

Carl Bailey Hurst, of the District of Columbia, now consul at Prague, Bohemia, to be consul-general of the United States at Vienna, Austria.

MARSHAL.

John K. Thompson, of West Virginia, to be marshal of the United States for the district of West Virginia.

DISTRICT JUDGE.

John J. De Haven, of California, to be United States district judge for the northern district of California.

ASSISTANT TREASURER OF THE UNITED STATES.

Conrad N. Jordan, of New York, to be assistant treasurer of the United States at New York City.

POSTMASTERS.

Peter P. Smith, to be postmaster at Adams, in the county of Berkshire and State of Massachusetts.

Earle E. Doud, to be postmaster at Sheffield, in the county of Colbert and State of Alabama.

E. D. Powell, to be postmaster at Exira, in the county of Audubon and State of Iowa.

Benjamin M. Foreman, to be postmaster at Texarkana, in the county of Miller and State of Arkansas.

Eugene S. Upson, to be postmaster at Durand, in the county of Shiawassee and State of Michigan.

W. W. Colfax, to be postmaster at Wyandotte, in the county of Wayne and State of Michigan.

Eugene H. Merriman, to be postmaster at East Hartford, in the county of Hartford and State of Connecticut.

Ira Kidwell, to be postmaster at Elwood, in the county of Madison and State of Indiana.

Oliver C. Gordon, to be postmaster at Union City, in the county of Randolph and State of Indiana.

John H. Daugherty, to be postmaster at Frankton, in the county of Madison and State of Indiana.

Patrick B. Gibbons, to be postmaster at Paris, in the county of Lamar and State of Texas.

John E. Shields, to be postmaster at Alderson, in the county of Monroe and State of West Virginia.

Morris B. Pote, to be postmaster at New Harmony, in the county of Posey and State of Indiana.

SENATE.

WEDNESDAY, *June 9, 1897.*

Prayer by Rev. WALLACE RADCLIFFE, D. D., of the city of Washington.

The Secretary proceeded to read the Journal of yesterday's proceedings, when, on motion of Mr. QUAY, and by unanimous consent, the further reading was dispensed with.

MANUFACTURE OF ARMOR PLATE.

The VICE-PRESIDENT laid before the Senate a communication from the Secretary of the Navy, transmitting, in response to a resolution of the 25th ultimo, a statement prepared by the Chief of the Bureau of Supplies and Accounts, showing the number of tons of armor plate bought from the Carnegie Steel Company and the Bethlehem Iron Company; which, with the accompanying papers, was referred to the Committee on Naval Affairs, and ordered to be printed.

PETITIONS AND MEMORIALS.

Mr. PLATT of New York presented sundry memorials of citizens of New York City, Brooklyn, Richmond, Long Island City, Yonkers, Buffalo, Haverstraw, Hurleyville, and Sheldrake, all in the State of New York, remonstrating against the proposed increase of the tax on beer; which were referred to the Committee on Finance.

Mr. FRYE. I present a petition of the Stove Flexible Shaft Company and sundry citizens of Philadelphia, Pa., and the petition of F. D. Banks and sundry other citizens of Hampton, Va., praying for the early passage of the pending tariff bill. I am heartily in favor of the prayer of the petitioners. I move that the petitions lie on the table.

The motion was agreed to.

Mr. COCKRELL. I present a memorial of the legislative committee of the Medical Society of the District of Columbia, remonstrating against the passage of Senate bill No. 1063, for the further prevention of cruelty to animals in the District of Columbia, introduced at the present session. I move that the memorial lie on the table and that it be printed as a document.

The motion was agreed to.

Mr. ALLEN presented sundry papers to accompany the bill (S. 2096) granting a pension to Almon Stuart, of Minden, Nebr.; which were referred to the Committee on Pensions.

BILLS INTRODUCED.

Mr. QUAY introduced a bill (S. 2104) for the recognition of the military service of the officers and enlisted men of certain Pennsylvania military organizations; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. MCMILLAN introduced a bill (S. 2105) authorizing the restoration to the Reform School of boys who have been discharged on probation, and for other purposes; which was read twice by its title, and referred to the Committee on the District of Columbia.

Mr. MARTIN introduced a bill (S. 2106) granting a pension to James Willard, late assistant surgeon First Regiment Potomac Home Brigade, United States Volunteers; which was read twice by its title, and referred to the Committee on Pensions.

Mr. TURPIE introduced a bill (S. 2107) granting an increase of pension to Theodore S. Cross; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Pensions.

AMENDMENT TO DEFICIENCY APPROPRIATION BILL.

Mr. CARTER submitted an amendment intended to be proposed by him to the general deficiency appropriation bill; which was referred to the Committee on Appropriations, and ordered to be printed.

TRANSMISSISSIPPI AND INTERNATIONAL EXPOSITION.

Mr. ALLEN submitted the following concurrent resolution; which was considered by unanimous consent, and agreed to:

Resolved by the Senate of the United States (the House of Representatives concurring), That the President of the United States be, and he is hereby, requested to invite, by proclamation or otherwise, as he may deem most proper, foreign nations to make exhibits at the Transmississippi and International Exposition to be held at the city of Omaha, in the State of Nebraska, from the 1st day of June to the 1st day of November, A. D. 1898.

Mr. ALLEN. I ask unanimous consent to call up a joint resolution lying on the table which went over until this morning. It is a local resolution pertaining to our exposition at Omaha. It has been submitted to the senior Senator from Massachusetts [Mr. HOAR], and, at his suggestion, I will offer an amendment to it.

Mr. FRYE. Is it a joint resolution?

The VICE-PRESIDENT. It is joint resolution No. 50.

Mr. ALLEN. It was introduced yesterday and passed over. It is now in print on the table of each Senator. It was passed over at the suggestion of the Senator from Iowa [Mr. ALLISON] yesterday.

Mr. ALLISON. I read the joint resolution in the RECORD this morning, but I have not had time to compare it with the statutes that were passed for the expositions at Chicago and other places.

Mr. ALLEN. I can say to the Senator that I think it is in substance the same as the resolutions that were passed respecting the World's Fair and the Atlanta Exposition.

Mr. ALLISON. My recollection is that the former statutes provided that the foreign exhibits, etc., should be returned within six months after the close of the exposition. I see that the Senator provides for a period of one year.

Mr. ALLEN. Very well; I will accept an amendment as to the time in which the articles shall be removed from the United States.

Mr. ALLISON. I only ask the Senator if that is not true as respects former expositions?

Mr. ALLEN. I think, in reference to the World's Fair, it was the case, although I am not certain as to that.

Mr. ALLISON. I think six months is a period long enough.

Mr. ALLEN. I shall be perfectly willing to accept an amendment of that kind and make the period six months.

Mr. ALLISON. Then I shall make no objection to the passage of the joint resolution.

Mr. ALLEN. I ask unanimous consent to call it up.

Mr. ALLISON. Of course I yield for this purpose, with the understanding that it will not occupy time.

Mr. ALLEN. No, sir; I think not.

Mr. ALLISON. If it should lead to debate, I must call for the regular order.

Mr. COCKRELL. Let it be read for information.

The Secretary read the joint resolution (S. R. 50) authorizing foreign exhibitors at the Transmississippi and International Exposition, to be held in the city of Omaha, in the State of Nebraska, during the year 1898, to bring to the United States foreign laborers from their countries, respectively, for the purpose of preparing for and making exhibits; and, by unanimous consent, the Senate, as in Committee of the Whole, proceeded to its consideration.

Mr. ALLEN. In section 1, line 33, I move to strike out the word "act" and insert the word "resolution;" so as to read:

That no alien shall, by virtue of this resolution, be permitted to enter the United States to perform labor therein, except by express permission, etc.

The amendment was agreed to.

Mr. ALLEN. In section 2, line 11, I move to strike out "one year" and insert "six months;" so as to make the first clause of the proviso read:

That said articles shall be removed from the United States within six months after the close of said exposition.

The amendment was agreed to.

Mr. ALLEN. In compliance with the suggestion of the senior Senator from Massachusetts [Mr. HOAR], I move to add at the end of the joint resolution the following additional proviso:

Provided further, That the Secretary of the Treasury be, and he is hereby, authorized and directed to make such rules and regulations as may be necessary, in his judgment, to carry into execution the provisions hereof and to prohibit the infraction of existing statutes, except as the same may be temporarily modified and changed by this resolution.

The amendment was agreed to.

The joint resolution was reported to the Senate as amended, and the amendments were concurred in.

The joint resolution was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. ALLEN. In the fourth line of the first clause of the preamble, after the word "city," I move to strike out the words "in the year."

The amendment was agreed to.

The preamble as amended was agreed to.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. O. L. PRUDEN, one of his secretaries, announced that the President had on this day approved and signed the following act and joint resolution:

An act (S. 1944) to authorize the construction of a bridge across the Clinch River, Kingston, Tenn.; and

A joint resolution (S. R. 45) reappropriating the sum of $10,000 not expended for the relief of sufferers by the floods of the Mississippi River.

THE TARIFF BILL.

Mr. ALLISON. I ask the Senate to proceed to the consideration of House bill 379.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

The VICE-PRESIDENT. The pending question is on agreeing to the amendments of the Committee on Finance to the first two brackets in paragraph 239. The amendments will be stated.

The SECRETARY. In paragraph 229, line 6, before the word "cents," strike out "two" and insert "one and one-half;" and in line 9, before the words "per pound," strike out "1¼ cents" and insert "eight-tenths of 1 cent;" so as to read:

229. Rice, cleaned, 1¼ cents per pound; uncleaned rice, or rice free of the outer hull and still having the inner cuticle on, eight-tenths of 1 cent per pound.

Mr. ALLISON. As I stated yesterday, the majority of the committee recommend that these two amendments be disagreed to.

The amendments were rejected.

The next amendment of the Committee on Finance was, in paragraph 229, page 70, line 12, after the word "sieve," to strike out the words "one-half" and insert the words "one-fourth;" so as to make the paragraph read:

229. Rice, cleaned, 2 cents per pound; uncleaned rice, or rice free of the outer hull and still having the inner cuticle on, 1¼ cents per pound; rice flour, and rice meal, and rice broken which will pass through a sieve known commercially as No. 12 wire sieve, one-fourth of 1 cent per pound; paddy, or rice having the outer hull on, three-fourths of 1 cent per pound.

Mr. PRITCHARD. After having received a letter which I shall ask to have read, I have concluded to withdraw my opposition to the committee amendment bearing on this question. I ask that the letter may be read, in order to explain the matter.

The Secretary read as follows:

WASHINGTON, D. C., *June 9, 1897.*

DEAR SIR: It was agreed by the representatives of the rice industry from Charleston, Savannah, and Louisiana that they would make no contest over the duty on rice flour and broken rice that would pass through a No. 12 sieve, as this broken rice is not a home product of sufficient quantity to materially affect the producing interest. It is never sold upon the general market, and is chiefly used for brewing purposes.

Very respectfully,

S. A. KNAPP,
Representing South Carolina, Georgia, and Louisiana.

Hon. J. C. PRITCHARD,
Washington, D. C.

Mr. ALLISON. The committee desire that the amendment proposed in line 12 shall be agreed to.

The amendment was agreed to.

Mr. MILLS. Before we leave the question of a duty on rice, I move to strike out the whole paragraph and insert:

Rice in all forms, 40 per cent ad valorem.

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Texas.

Mr. MILLS. Let us have the yeas and nays on that question.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. KENNEY (when his name was called). I have a general pair with the Senator from Pennsylvania [Mr. PENROSE], and withhold my vote.

Mr. MITCHELL (when his name was called). I am paired with the Senator from New Jersey [Mr. SEWELL].

Mr. WILSON (when his name was called). I am paired with the Senator from Florida [Mr. PASCO]. If he were present, he would vote "yea" and I should vote "nay."

The roll call having been concluded, the result was announced—yeas 19, nays 40; as follows:

YEAS—19.

Bate,	Harris, Tenn.	Morgan,	Turpie,
Berry,	Jones, Ark.	Murphy,	Vest,
Chilton,	Lindsay,	Pettus,	Walthall,
Cockrell,	Mallory,	Rawlins,	White.
Gray,	Mills,	Smith,	

NAYS—40.

Allen,	Davis,	Hoar,	Platt, N. Y.
Allison,	Debse,	McBride,	Pritchard,
Bacon,	Fairbanks,	McEnery,	Proctor,
Burrows,	Foraker,	McLaurin,	Quay,
Butler,	Frye,	McMillan,	Shoup,
Cannon,	Gallinger,	Mason,	Spooner,
Carter,	Gear,	Morrill,	Stewart,
Chandler,	Hale,	Nelson,	Thurston,
Clay,	Hawley,	Perkins,	Tillman,
Cullom,	Heitfeld,	Platt, Conn.	Wellington.

NOT VOTING—30.

Aldrich,	Gorman,	Mantle,	Teller,
Baker,	Hanna,	Martin,	Turner,
Caffery,	Hansbrough,	Mitchell,	Warren,
Clark,	Harris, Kans.	Pasco,	Wetmore,
Daniel,	Jones, Nev.	Penrose,	Wilson,
Elkins,	Kenney,	Pettigrew,	Wolcott.
Faulkner,	Kyle,	Roach,	
George,	Lodge,	Sewell,	

So Mr. MILLS's amendment was rejected.

The Secretary read the next paragraph, as follows:

230. Rye, 10 cents per bushel; rye flour, one-half of 1 cent per pound.

Mr. VEST. I wish to call attention to the fact that in 1896 we exported $445,075 worth of rye and imported $291 worth. Of rye flour we exported $11,163 worth and imported $1 worth. Under the doctrine which obtained yesterday in the Senate upon the votes, I know it is entirely useless to make any protest and to show that this increased duty is absolutely unnecessary upon rye. Everything is to be taxed now, and I suppose the importation of rye flour, although only $1 worth comes into the United States, is a standing menace to the farmers of this country, and we must therefore increase the duty upon it. I will not make any motion to amend the paragraph, but let it go.

The next amendment of the Committee on Finance was to strike out paragraph 231, in the following words:

231. Tapioca, cassava or cassada, farina, and sago in flake, pearl or flour, one-half of 1 cent per pound; arrowroot flour, 3 cents per pound.

The VICE-PRESIDENT. Without objection, the amendment is agreed to.

Mr. RAWLINS. Mr. President, I rise for the purpose of occupying the attention of the Senate for a few moments with reference to the speech which was delivered yesterday by the distinguished Senator from Missouri [Mr. VEST]. The feeling and earnestness which he displayed on that occasion, it occurred to me, perhaps were by reason of some remarks which I had made on the previous day in regard to exempting from duty raw material. I have always had and still have the highest respect and admiration for the Senator from Missouri. He seems to think that the declaration in the Chicago platform, as construed by the remarks of mine and some other Senators upon this side, is a new evangel, a political heresy, a departure from the Democratic faith. My sole purpose in rising now is to give the genesis of that declaration, to show that it is in strict accordance with the teachings of the Democratic party. That declaration, as contained in the platform adopted at Chicago in 1896, is in this language:

We hold that the tariff duties should be levied for purposes of revenue, such duties to be so adjusted as to operate equally throughout the country and not discriminate between class or section, and that taxation should be limited by the needs of the Government honestly and economically administered.

As a member of the committee on platform and resolutions in the Chicago convention, I had the honor to present the feature which has been the subject of so much criticism, and upon my motion it was adopted. Is it a heterodox in the political history of the Democratic party? The political division between the parties upon the tariff question first came significantly to the front in 1824, and there was a revision of the tariff in 1832. As the basis of that revision a petition was presented to the Congress of the United States by Albert Gallatin.

Mr. LINDSAY. Will the Senator from Utah permit a question?

Mr. RAWLINS. With pleasure.

Mr. LINDSAY. I understood him to say that this part of the platform was adopted upon his motion.

Mr. RAWLINS. The part relating to the equality of duties.

Mr. LINDSAY. I will ask if the word "only," after the word "revenue," was intentionally omitted from the platform?

Mr. RAWLINS. I think not.

Mr. LINDSAY. Was it accidentally omitted from the platform?

Mr. RAWLINS. It was omitted from the platform.

Mr. LINDSAY. Accidentally or purposely? I ask the question

because the Senator said that he proposed that particular clause of the platform, and I took it for granted that he knew whether the old-fashioned Democratic word "only" was omitted purposely or accidentally.

Mr. RAWLINS. Perhaps what I say will be a sufficient answer to the question as propounded by the Senator.

Mr. TILLMAN. I can give some light on that subject, if the Senator will allow me. It was omitted purposely, after discussion.

Mr. RAWLINS. Mr. President, I do not wish to detain the Senate any longer than possible upon this question, but simply to set ourselves right in regard to it. I will read a letter from Albert Gallatin, addressed to the Congress of the United States, in this instance to the Hon. John C. Calhoun, Vice-President and President of the Senate, under the date of 23d of January, 1832. I read from a compilation, State Papers and Speeches on the Tariff, by F. W. Tausig, professor of political economy in the University of Harvard:

NEW YORK, *23d January, 1832.*

SIR: I have the honor to inclose the memorial of the committee appointed by the convention of delegates from several States, held at Philadelphia in September and October, 1831, for the purpose of preparing and presenting to Congress a memorial setting forth the evils of the existing tariff of duties, and asking such a modification of the same as shall be consistent with the purposes of revenue and equal, in its operation, on the different parts of the United States and on the various interests of the same.

I pray that the said memorial may be laid before the Senate; and have the honor to be, with great respect, sir,

Your most obedient servant,

ALBERT GALLATIN,
Chairman of the Committee.

The Hon. JOHN C. CALHOUN,
Vice-President of the United States
and President of the Senate.

This paper thus presented to Congress is an elaborate, candid, dispassionate, and most able presentation of the question of the tariff in opposition to the theory of Hamilton. The very end and purpose of the discussion was to establish, or, to use the language of the petition, "asking such a modification" of the existing tariff law "as shall be consistent with the purposes of revenue, and equal in its operation on the different parts of the United States and on the various interests of the same." In further explanation, I read from page 117 of the same paper:

The question then at issue is, simply, whether the amount wanted shall be so raised as to fall equally upon all the consumers, or, in other words, on the community, and so as to encourage equally every branch of industry, or whether certain branches shall receive special protection by high and sometimes prohibitory duties.

Whether taxes are laid on income or on consumption, it is equally the duty of a government founded in justice to lay them equally on all in proportion, as the case may be, to the income or the consumption. Were there no taxes of the latter description, every part of the country and every class of society would be left at liberty to supply its wants on the cheapest terms and to pursue that branch of industry for which each was best fitted. If a tax equivalent to an average duty of 20 per cent (or at any other rate) on all foreign commodities becomes necessary for the support of government, and is laid at an equal and uniform rate on all such commodities, all the sections of the country, classes of society, and individuals are left as far as practicable in the same relative situation as before. But any law materially varying the rate on any of the taxed articles will in some respect change that relative situation and, to an extent proportionate to the change, render the burden of the tax unequal.

I next invite attention to another leading state paper which, perhaps more than any other in the history of the country, has been referred to as containing a correct representation of the Democratic view of the tariff question, and upon the basis of which a tariff bill was framed which has ever been held up as a model for imitation by Democratic advocates before the American people. I refer to the Treasury report of 1845, by Robert J. Walker, an able statesman from the State of Mississippi; and I read from this same compilation at pages 219 and 220, where the following language is used:

In suggesting improvements in the revenue laws, the following principles have been adopted:

First. That no more money should be collected than is necessary for the wants of the Government economically administered.

That is in the Chicago platform.

Second. That no duty be imposed on any article above the lowest rate which will yield the largest amount of revenue.

Third. That below such rate discrimination may be made, descending in the scale of duties, or for imperative reasons—

Mark the language—

or for imperative reasons the article may be placed in the list of those free from all duty.

Fourth. That the maximum revenue duty should be imposed on luxuries.

Fifth. That all minimums and all specific duties should be abolished and ad valorem duties substituted in their place, care being taken to guard against fraudulent invoices and undervaluation and to assess the duty upon the actual market value.

Sixth.—

This is embodied in the Chicago platform. It is the origin of the declaration which was the subject of animadversion by the distinguished Senator from Missouri—

Sixth. That the duty should be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section.

No article is to be exempt from duty except for imperative reasons. It excludes the idea of free raw material as does this last principle with reference to which the Walker tariff was framed. I have that tariff bill here and I desire to call attention to the free list or articles exempt from duty as contained in that act. It covers a little more than one-half of a page of this volume and it contains no hint or suggestion of exempting raw materials from duty. I will ask permission to print it in the RECORD at the end of my speech as an appendix, but I shall not detain the Senate by reading it.

What is the interpretation according to this standard of well-recognized Democratic authority of the declaration which has been embodied in the Chicago platform? I call attention, further, to the language of this report on page 227, and I desire Senators to mark the language, because we have a contemporaneous, a recognized, and a clear exposition and interpretation of the meaning, not only of the principle upon which that Democratic tariff was framed, but of the same declaration as contained in the Chicago platform.

The present tariff—

Says this distinguished Democrat—

is unjust and unequal, as well in its details as in the principles upon which it is founded. On some articles the duties are entirely prohibitory and on others there is a partial prohibition. It discriminates in favor of manufactures and against agriculture by imposing many higher duties upon the manufactured fabric than upon the agricultural product out of which it is made.

It discriminates in favor of the manufacturer and against the mechanic by many higher duties upon the manufacture than upon the article made out of it by the mechanic. It discriminates in favor of the manufacturer and against the merchant by injurious restrictions upon trade and commerce, and against the shipbuilding and navigating interest by heavy duties on almost every article used in building or navigating vessels. It discriminates in favor of manufactures and against exports, which are as truly the product of American industry as manufactures. It discriminates in favor of the rich and against the poor by high duties upon nearly all the necessaries of life and by minimums and specific duties, rendering the tax upon the real article much higher on the cheaper than upon the finer article.

That is not only a good criticism of the pending measure, but it is a clear exposition of the doctrine of the Democratic party as embodied in the Chicago platform.

Mr. President, in 1884, and again in 1888, and it was repeated in 1892, at the suggestion, I believe, of the factory and mill owners to a large extent of New England, as a sop to the people whose support in that direction was sought by the Democratic party, that the traditions of the party should be so far departed from as to exempt from duty, for the benefit of one section of the country largely, all the product or a large part of it of the greater proportion of the country; I said it was taken up in deference to that sentiment and that it was as vicious in principle as it was unequal in operation. As a result of that, the Democratic party came to disaster. No Democrat can stand in the West or the South or in any of the great producing regions of this country as justifying a monopoly to the Eastern or Northern manufacturers, their political enemies, by saying that the burden of taxation shall not be imposed upon them to the degree that is possible in a just and equitable distribution of tariff burdens.

Then this declaration in the Chicago platform, excluding as it does the idea of free raw material, is not a new evangel; it is not an evil genius; it is not a vile reptile or rattlesnake. There is no need for any Senator, in order that he may be protected from it, to make any solemn and dramatic invocation to the Almighty and in agony and despair to ask God to help him. It comes to us fresh and pure and undefiled from the very source and fountain of Democratic faith, and, so far as any vote that I cast is concerned, it will be in accordance with the declaration and principles of my party.

SCHEDULE I.—(Exempt from duty.)

Animals imported for breed; bullion, gold and silver; cabinets of coins, medals, and other collections of antiquities; coffee and tea, when imported direct from the place of their growth or production in American vessels, or in foreign vessels entitled by reciprocal treaties to be exempt from discriminating duties, tonnage, and other charges; coffee, the growth or production of the possessions of the Netherlands, imported from the Netherlands in the same manner; coins, gold, silver, and copper; copper ore; copper, when imported for the United States mint; cotton; felt, adhesive, for sheathing vessels; garden seeds, and all other seeds not otherwise provided for; goods, wares, and merchandise, the growth, produce, or manufacture of the United States, exported to a foreign country and brought back to the United States in the same condition as when exported, upon which no drawback or bounty has been allowed: *Provided*, That all regulations to ascertain the identity thereof prescribed by existing laws or which may be prescribed by the Secretary of the Treasury shall be complied with; guano; household effects, old and in use, of persons or families from foreign countries, if used abroad by them, and not intended for any other person or persons, or for sale; junk, old; models of inventions and other improvements in the arts: *Provided*, That no article or articles shall be deemed a model or improvement which can be fitted for use; oakum, oil, spermaceti, whale and other fish, of American fisheries, and all other articles the produce of such fisheries; paintings and statuary, the production of American artists residing abroad, and all other paintings and statuary: *Provided*, The same be imported in good faith as objects of taste and not of merchandise; personal and household effects (not merchandise) of citizens of the United States dying abroad; plaster of paris, unground; platina, unmanufactured; sheathing copper, but no copper to be considered such, and admitted free, except in sheets 48 inches long and 14 inches wide,

and weighing from 14 to 34 ounces the square foot; sheathing metal; specimens of natural history, mineralogy, or botany; trees, shrubs, bulbs, plants, and roots, not otherwise provided for; wearing apparel in actual use, and other personal effects not merchandise, professional books, implements, instruments, and tools of trade, occupation, or employment, of persons arriving in the United States: *Provided*, That this exemption shall not be construed to include machinery or other articles imported for use in any manufacturing establishment, or for sale.

Approved July 30, 1846.

Mr. MILLS. Mr. President, we have been listening for two months to the efforts to adjust and readjust, and unadjust and readjust again, the relative claims of the beneficiaries who are to share in the monumental trust fund that this measure is intended to raise. The Ways and Means Committee of the House of Representatives struggled with this question all through the winter, and in the early spring the House sent to this body the product of their long labor. Their work has been again considered with great deliberation, and the relative shares of the claimants have been again readjusted, and as we progress with the bill the controversy goes on, former decisions are reopened, and new decisions made The claimants are not content with the shares of the spoil as they have been divided.

The relative proportions distributed to each have not been satisfactory. The work of redistribution goes on, and the representatives of 73,000,000 of people sitting in the Capitol of the Republic are engaged day by day and hour by hour trying to settle, as in a court of equity, the relative shares of each one of these claimants in this great fund which is to be raised by Congress for distribution. Little, sir, has been said about where this money is to come from. Senators and Representatives dispose of it, and levy these great shares as though it was to be let down in a sheet from heaven, as if it was to be taken from no one, as if it were a bounty which, like the atmosphere and the rain which God gives to the people, each one of these favored classes was to have a certain share of; and we are sitting here to determine the proper amount to be given to each claimant.

I come, sir, to speak for the forgotten man—the taxpayer. I come to speak for those from whose pockets this vast sum is to be raised: from whose labor and sweat, day and night, this vast contribution is to be taken. They have some right to be heard in the councils of the nation when their property is to be taken by an act of legislative rapine and distributed among men who have paid no consideration for it.

I have been surprised, Mr. President, when we have called upon the originators and constructors of this measure to explain it, that they have sat in silence, feeling conscious of power, and have not deigned even to give a reason to the taxpayers of this country for this measure which they propose to put upon the statute books of the nation.

Where is this money to come from? I look upon the rates of taxation in this bill with the profoundest astonishment, and ask you where this money is to come from? Commencing at the very beginning of this measure, I find that you have put a tax upon boracic acid of $126.89 on $100 worth of that product. Who is to pay it? What right have you to take the property of the taxpayers of this country and distribute it among the men who own boracic acid?

Here are some, and only some, of the rates of taxation imposed upon the necessaries of life:

Rates of duty levied by Senate bill.

Boracic acid	$126.89	Morphia	$82.64
Tannic acid	128.15	Opium for smoking	81.86
Alcoholic perfumery	71.22	Red lead	88.71
Alcoholic compounds	349.27	Spirit varnishes	95.17
Borax, refined	71.48	White lead	63.96
Collodion	70.42	Putty	69.19
Copperas	62.50	Strychnine	77.00
Sulphuric ether	318.33	Glass bottles	80.38
Fruit ethers	128.90	Window glass	115.16
Window glass	126.43	Salt	114.23
Plate glass	109.72	Compounds of distilled spirits	1,206.34
Plate glass	118.73	Brandy	346.02
Iron and steel in sheets	67.28	Bay rum	112.95
Iron and steel in sheets	70.43	Wines	272.72
Cutlery	111.05	Plushes, cotton	74.07
Razors and razor blades	88.08	Shoddy	217.39
Shotguns	60.00	Nails	109.02
Wire nails	60.22	Nails	102.00
Silver leaf	158.88	Woolen rags	172.63
Pig lead	111.11	Woolen cloth	128.23
Sugar	75.62	Blankets	135.95
Tobacco leaf	134.20	Flannels	119.41
Tobacco leaf	222.22	Wool shawls	171.15
Tobacco leaf	288.11	Felts	224.55
Cigars	110.80	Plushes, woolen	127.60
Cigarettes	133.63	Wool carpets	80.22
Rice	133.33	Total carpets	104.17
Currants	93.75		

When the Constitution of the United States was formed, it was intended to be the great charter for the government of a free people. It laid down distinctly the just powers of the Government it created, and it defined in the clearest language the limitations of those powers and guarded, as far as words could guard, against their abuse. It gave to Congress power to lay and collect taxes. For what purpose? Was it to raise money to distribute among favored classes? It does not say so; but to lay and collect taxes to pay the debts and provide for the common defense and general welfare.

Mr. President, no clearer definition of the proper functions of government on this continent has ever been given than that which was given by the noble old Commonwealth of Massachusetts in her constitution of 1780. She knew what liberty was worth, and she knew the proper functions of just government. She estimated the blessings of freedom as we estimate all blessings—by their flight. She was then struggling against the oppression of arbitrary power located on another hemisphere. She was the first to lay her lambs, without spot or blemish, upon the altar of sacrifice. She poured in the streets of Boston, in 1770, the first blood offered as a protest against tyrannical taxation.

She emphasized her devotion to liberty at Lexington, Concord, and Bunker Hill before this great charter of free government was written. She made the declaration while the struggle was still on and the warm blood of her own children was still flowing, and before the coveted boon came to her and her confederates at Yorktown. Let me call your attention to her words:

> The end of the institution, maintenance, and administration of government is to secure the existence of the body politic, to protect it, and to furnish the individuals who compose it with the power of enjoying in safety and tranquillity their natural rights and the blessings of life. * * * Government is instituted for the common good, for the protection, safety, prosperity, and happiness of the people, and not for the profit, honor, or private interest of any one man, family, or class of men.

Virginia, by the hand of George Mason, wrote the same great truth in the bill of rights to her constitution in 1776. She said:

> No man or set of men are entitled to exclusive or separate emoluments or privileges from the community but in consideration of public services.

It is the same thought, it is the same idea, but not the way in which Massachusetts spoke it. Was it true in 1780 that in a free government no one man, no one family, no one class of men were entitled to separate emoluments? Was it true in 1780 that government was instituted for the common good and for the protection, safety, prosperity, and happiness of the people, and is it now to be administered for the profit of one man, or one class of men, or one family of men? If the declaration was true then, it is true now.

The Democratic party, that started with the birth of the Government, started with the idea that liberty could only be perpetuated on this continent by strictly construing the words of that grant. There was where the battle started. They did not mean to construe the words of that instrument so as to make them mean what they did not mean, but to construe them to mean what they meant in the common conversation of the day. There is not a word in that Constitution that authorizes Congress to take one man's property and give it to another. It is contrary to the fundamental principles of honesty as well as of free government, and all our constitutions contain the interdiction that government shall not even take private property for public purposes without paying for it.

But here is a bill of confiscation, proposing to take the property of the forgotten men, who are not sharers in this grand slush fund, who are under the ban of their Government, laboring in their fields on their crops and in the highways trying to make a support for themselves and their wives and children, and the all-powerful classes, built up by the plunder of the people by legislation, put their hands upon the throats of the people, and when we stand here and ask for some explanation of these exorbitant levies, they look at us as much as to say, "What are you going to do about it?" They may go on recklessly in their bold career, but I call to their memory the admonition of the wise man who speaks from the Bible:

> Rejoice, O young man, in thy youth; and let thy heart cheer thee in the days of thy youth, and walk in the ways of thine heart, and in the sight of thine eyes: but know thou, that for all these things God will bring thee into judgment.

We have got no tribunal here. These doors are slammed in our faces. The old fundamental maxim of Saxon liberty, that every man shall be heard before he shall be condemned, has no place in this court. Thank God, there is a tribunal whose doors stand wide open day and night; and to that tribunal we will take you gentlemen.

You made a bill like this in 1890, and while you were making it you were outraging the public sentiment of this country. The response came to you in the elections that followed.

You talk now about the depression of the business interests of the country. It began in 1890, and the evidence of it was in the elections of November of that year. The country gave some premonitory symptoms of the bubonic plague, and in 1892 they put the Republican party in quarantine, there to remain until it had been thoroughly fumigated. Now, Mr. President, it is proposed to reenact that law with all its horrible iniquity intensified.

Look at the enormous rates of taxation in the list I have mentioned; $100 worth of tannic acid taxed $128.15; $100 worth of alcoholic compounds taxed $349.27; $100 worth of compounds of distilled spirits taxed $1,206.34. All this money you levy on the pockets of the forgotten man, whose pockets, alas, are now empty.

Where is this money to come from? Who is to pay it? It is to come from somebody. We have been told when we have pressed for an answer to this question, "Why, the foreigner pays that tax; you have nothing to do with it; it gets into the public Treasury, and is expended by the Government, and the foreigner pays it." Do you think that the foreigner contributes the material cost, the labor cost, and all the expenses incident to the production of a hundred dollars' worth of product, reserving to himself a little profit to live on and carry on his business—that he pays all that and pays $1,200 besides that to get to sell it for $100? No man in his senses believes any such thing.

But if the foreigner pays the tax, if we compel him by law to pay a tax for the support of our Government, in which he has no interest, what is the difference between that and piracy on the high seas? Why should we take from any foreigner a solitary dollar for any purpose in the United States? It would be highway robbery if done upon land, and it would be piracy if committed upon the high seas. But every child 10 years old knows that the foreigner does not pay a particle of this tax.

But, Mr. President, if we grant that the foreigner pays all the taxes upon the foreign imports that come into this country, amounting now to about $160,000,000, who pays the protective tax on domestic goods consumed in this country? The foreigner never touches them. Who pays the enhanced price placed upon those goods by these exorbitant tariff rates? There is no escaping the answer to that question, that it is the forgotten man who pays all those bills—the forgotten men, women, and children, about 72,500,000, perhaps, out of the 73,000,000 of American people.

Mr. President, I hold in my hand a book, written by a man recognized throughout the world as a statistician and a man skilled in financial matters, entitled Industries and Wealth of Nations, written by Mr. Mulhall. We have often had quotations from him. He gives the value of the manufactured products of the various countries, and compares them with each other. He tells us in his book that he has converted foreign money into pounds sterling at $4.80 to the pound. I have converted his values into dollars at $4.80 to the pound, and they stand as follows:

Great Britain	$4,204,800,000	Italy	$912,000,000
France	2,860,800,000	Spain	580,000,000
Germany	3,312,120,000	Belgium	569,000,000
Russia	1,824,000,000	Switzerland	196,000,000
Austria	1,574,400,000	United States	9,360,000,000

We can form some estimate of the correctness of his figures for other countries by his approximate estimate to our official reports of 1890. Our census reports show their value to be $9,372,437,283, and his figures show $9,360,000,000. In making this comparison, listen to what Mr. Mulhall says: "The value of American manufactures is artificially raised by protective tariffs fully 33 per cent over the real value: the latter amounts, therefore, to about one thousand four hundred and sixty-four millions sterling, or the value conjointly of British and French manufactures." In his table, expressed in pounds, he put the value of our manufactures at £1,952,000,000. He says the correct value is £1,464,000,000; that the protective tariffs have added £488,000,000 to their true value. Four hundred and eighty-eight millions of pounds sterling, at $4.80 to the pound, amount to $2,342,400,000! Deducting the $200,000,000 worth of manufactures we export, we consume $9,172,437,283 at a price 33 per cent too high because of high tariff rates.

Their value in the open market would be $6,879,327,000, and $3,293,327,000 is the increased price we pay annually for protective tariffs. The value of the products of labor in agriculture, horticulture, dairies, vineyards, orchards, gardens, forests, mines, manufactures, and fisheries are less annually than $15,000,000,000, and more than one-sixth of that is extorted from the taxpayers every year as bounty to protected producers. Where does this monumental pile of boodle come from?

Not out of the pockets of the foreigner, but out of the pockets of the forgotten man, out of the taxpayers of the United States; and yet we do not hesitate to put a tax of 200, 300, 400, and even 500 per cent on many articles contained in this bill. Many of those articles escape attention because the cheaper product bearing the higher rate is eliminated and prevented from coming to the country, and our people are compelled to pay higher rates than even those mentioned in these schedules; and the forgotten man, the farmer in the field, the miner in the mine, the laborer on the highway, the man behind the counter and in the offices and in the schoolhouses all over this country have got the strong and powerful hand of the Government rammed down into their pockets to take out of the whole annual income of the people of the United States almost **$2,300,000,000** annually of their earnings. I want the Public Printer to put these figures in heavy black.

I want to fix the attention of the country, if possible, to this stupendous system of legislative rapine and robbery. Two billion two hundred and ninety-three million dollars annually goes to the beneficiaries of this fund, to the protected classes, contrary to the doctrine of liberty as written by Massachusetts, contrary to all the teachings that are written in Virginia, contrary to the teachings of our fathers from that day to this; and the attempt to bring this idol into camp and compel us to uncover our heads and bow down and say our prayers to this god of Dagon will not be accepted in the Democratic camp, no matter where it comes from. When you attempt to bring this Philistine idol into our temple and compel us to worship it, if it does not fall down like the statue of Dagon fell before the Ark of the Covenant, the American people will kick it down, and then kick the life out of it after it is down.

What is the reason for this harsh, oppressive, and destructive measure? Why is it that these enormous exactions are demanded? What cause exists for it? The revenues are increasing. The Government Treasury is full to overflowing. We know of no such instances of taxation in any of the States or in any of the cities. Go to the great city of New York, the great city of Chicago, or any other great city, and you do not find the tax rate over 3 per cent; and if it does go beyond that, it almost raises a revolution. Why is it that the people resent a 3 per cent tax in the States and submit to a tax of 300 per cent by the National Government? Because the tax in the States is levied upon wealth and every man knows when he pays his tax that he is paying it upon his property, and there is a boundary beyond which no government can pass. But here this taxation is indirect.

The people do not know it; they pay it in the stores where they buy. It is constantly taken from them under false pretenses. They only know that depression and distress exist all over the whole land, and they are told that it exists because this tariff bill is delayed here. We are told that the wheels of machinery are standing still and rusting; we are told that the people are in rags waiting for the coming of a Messiah—the tariff bill, that is to be "the be all and the end all" of everything for which they can hope for their benefit. They are standing still and waiting for the tax-gatherer to come and bring them good times by demanding more taxes!

Mr. President, when this Government was first formed we had no manufactures. We had just passed through a most trying and bloody ordeal of seven years, one which I do not think we ever could have passed through but for the friendly hand of France. All through that revolution we felt the necessity of the products of manufacture, of arms, munitions of war, clothing, wagons, and everything to transport, to mobilize an army, and to support and maintain it while it was struggling in the field. Hence our great fathers at that time agreed, for the public benefit, for the national safety, to put a protective duty of 5 or 10 or 15 per cent on goods coming into this country, in order to encourage an infant industry.

Henry Clay, who is said to be the father of the American system, called it an infant industry, and after it had existed for some years—in 1833, I believe—when introducing the compromise tariff of that year, which every two years was to reduce by 10 per cent the rate of existing duties until they would come to a horizontal level of 20 per cent in 1841 or 1842, he gave nine years of time, at the expiration of which the infant was to arrive at maturity, put off his boyish garments, and stand forth as a man in full stature. The period of infancy, in the judgment of the protectionists of the early day, was to terminate by 1840, and when the Whig party in 1842 restored our manufactures to their state of infancy it was assailed all over the country in the campaign of 1844. James K. Polk was made President of the United States, and the Walker tariff of 1846 was placed upon the statute book—the first step in advance toward free trade.

I speak that word regardless of how it may grate on the ears of some of my Democratic friends. They then took the position that this country was to embark in manufactures, to give employment to its people, and send the products of their labor all over the whole world and compete with the whole world. How was it to be done? It was to be done by putting the raw materials of manufacture upon the free list and reducing the finished products to a low revenue duty. The revenue tariff of 1846, Mr. Walker tells us, did not accomplish so much as he intended that it should, because of the efforts of Mr. Calhoun. But I will read you what he says. In a letter written by him in 1867 as the financial agent of the Government of the United States, he says to the world:

> But the tariff of 1846, although it remained much longer in operation than any other tariff, and produced much more beneficial results, was susceptible of great improvements, especially in its application to the present condition of our country—
>
> First. The raw material of manufactures, as recommended in my first annual report, shou'd be duty free, as is the practice of all enlightened nations. This proposition, then made by me, was to some extent defeated at that time by Mr. Calhoun. His argument was this: That, so far as no revenue was collected on the raw material of manufactures imported here, we must make good the loss from other articles, and that this was an unjust and unconstitutional discrimination in favor of American manufactures.

We hear something of the same sort to-day.

> My answer was: First, that it would never be unconstitutional to permit any one or more articles to come in duty free; second, that Mr. Calhoun had agreed to a large free list in the compromise tariff of 1832; third, that, in point of fact, there was no real loss of revenue, but an actual gain, resulting in this way: That, as our imports were measured by our exports, specie

only liquidating occasional balances, and that, as we reduced our exports, we were necessarily diminishing our imports, and decreasing our revenue. To illustrate this, I said that dyestuffs are now free from duty, and we have a considerable export of dyed goods to foreign countries. But if we impose a tax upon dyestuffs, which are admitted duty free by all other countries, we shall either annihilate or gradually diminish our exports of dyed goods, correspondingly decrease our imports, and diminish the revenue. This proved to be the case, as shown by the tables of our exports of dyed goods under the tariff of 1846, as compared with those of 1842.

After a close investigation of this subject, and after examining the tariffs and the manufacturing establishments of foreign countries in 1851-52 and 1853-54, I am convinced that to admit the raw material of manufactures in all cases duty free would greatly increase our wealth, augment our exports, imports, and revenue, and diminish the burdens of taxation. Let us remember that in taking the duty off the raw material, the consumers, the people of the United States, get the manufactured article at a lower rate. This, then, is another step in the reduction of taxes. With this principle in view, we could take up the 5 and 10 per cent schedules, and, having admitted, duty free, all the articles specified in them constituting the raw material of manufactures, we should abolish those two schedules and put the remaining articles into the 15 per cent schedule, thus simplifying and improving the system and increasing the revenue.

Mr. President, we have been told what Democracy is, as though it were a revelation that just came down from heaven in 1896 at Chicago. Have there been no Democratic utterances in this country except at Chicago in 1896? Have there been no battles fought for Democratic doctrine prior to 1896? Was there an inspiration direct from heaven that selected each one of the words? I am reminded that there has been a struggle of late years to switch the Democratic party out of its beaten path as the guard of liberty on this continent and to make it go blindfolded into the Republican camp as the defender and vindicator and espouser of protective-tariff legislation and tariff abominations.

It was tried in 1884. It was tried in 1888. It was tried in 1892 at Chicago. I happened to be there when the committee on platform brought in the equivocal declaration made by some members in the interest of protective tariffs. The plank was brought to me by a friend of mine, and I said to him, "Make open battle before the body of the convention for Democratic doctrine." It was done. What was the result?

The platform, when it was reported to the Democratic convention in 1892, was equivocal. It was a straddle. It contained a provision on which we could either go into the Republican camp or some Republicans in disguise in our ranks could stand upon the platform and say, "This is Democracy." But when it was brought before the convention the Democratic doctrine was written out in clear, ringing words, unequivocal, and it was adopted by a vote of 564 to 342. I find Georgia casting 22 votes for it and 4 against it. I find South Carolina casting 18 votes for it and none against it. Utah cast 2 Territorial votes for it and none against it.

Mr. President, they simply declared in that platform, as I will show later on, the old doctrine of Democracy, the doctrine that it is the duty of the Government to secure to every citizen in the country every natural right and take none of them from him.

That is old Jeffersonian Democracy as declared by Massachusetts, and Massachusetts was the stronghold of Democracy in 1780. Mr. Jefferson, after the tariff of 1816 had been passed, making a departure from that principle, said in a letter that "our legislators are not sufficiently apprised of the rightful limits of their power; that their true office is to declare and enforce only our natural rights and duties and to take none of them from us." You notice he says "only." Only is a Democratic shibboleth. The duty of the legislator is to declare and enforce "only" our natural rights and duties and take none of them from us. He says that "the idea is quite unfounded that on entering into society we give up any natural right."

Mr. President, I will go back to the first national convention the Democratic party ever had in the United States, if I am not mistaken, that of 1836, and, copying from that letter of Jefferson, they say in this one sentence—they do not give it all, but it is a creed as clearly written as that in the constitution of Massachusetts:

> Every man is under the natural duty of contributing to the necessities of society, and this is all the law should enforce on him.

Taxation to support the government that protects him in his natural rights, and nothing else. That is the only contribution just government has a right to exact from him. The government is only society, to whose necessities he is required to contribute. If one man is not making by his occupation as much money as he wants, the others are not bound to contribute to a fund for that purpose. The Democratic national conventions have always declared against such perversions of governmental power.

In 1840 they said:

> Justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another, or to cherish the interests of one portion to the injury of another portion of our common country.

Did the Democratic national convention of 1896 antagonize this principle? Did they intend to renounce the faith of a century? I say no. The convention intended to reiterate the fundamental principle for which the party had stood through all its history. We are told the committee on platform intentionally struck out the word "only." But the convention did not know of their intention. If it had, the convention would have run over the committee as they did in 1892. It seems the committee attempted to derail the train and run it into the woods. They intended, or a majority of them intended, to blindfold the old guard and lead it away from the citadel of liberty, around whose walls it had been doing duty for a hundred years.

Mr. RAWLINS. Will the Senator from Texas permit one question?

Mr. MILLS. Certainly.

Mr. RAWLINS. If I understand the proposition of Mr. Jefferson aright, it was that one class of citizens should not be fostered at the expense of another. The question which I desire to propound is this: If you arrange a tariff bill in favoritism to manufacturers by imposing taxes to give them a monopoly, on one side, and in favoritism of manufacturers by exempting materials they use in their manufactures, on the other side—double favoritism—and you bestow no corresponding benefit to the other class, which, as I understand, is the operation of the principle for which the Senator now contends, is it not the grossest violation of the proposition Mr. Jefferson founded?

Mr. MILLS. I do not know that I can answer the Senator's long question. I am stating what Mr. Jefferson believed and what the Democratic party believes, and I will go on and state it, and my friend the Senator from Utah can draw his answer from what I am going to say.

In 1848, after the enactment of the Walker tariff, when the Democratic party assembled in convention again, they said they reaffirmed what they had said in 1844. They reaffirmed their former declaration of Democratic principles, and then they congratulated themselves "on the fulfillment of the hopes of the Democracy of the Union in the noble impulse given to the cause of free trade by the repeal of the tariff of 1842 and the creation of the more equal, honest, and protective tariff of 1846." They were not afraid of the question of free trade. It was no bugaboo to men who loved freedom, free labor, free speech, free thought, free religion, free locomotion, free occupation, free exchanges, and the freedom to take to the consumer the products that you make for the consumer and take back his which he makes for you, a natural right upon which both lives depend.

In 1852 they reaffirmed again, and in 1856, without going straight to free trade, they said, "The time has come for the people of the United States to declare themselves in favor of free seas and progressive free trade throughout the world." No protective tariff in that. No class legislation in that. The men who carried the banners of liberty in those days and who worshiped liberty as the representative of divinity did not uncrown her when she got in the presence of a rice field or a sawmill or a sheep ranch. They loved liberty. They stood by it. Why did they say they were in favor of free seas? Because it had not been very long since Great Britain claimed that the seas were her private property.

Franklin Pierce and William L. Marcy only a short time before had, by negotiation with Denmark, opened the sound and abolished the sound dues that Denmark charged upon the commerce of the world. All the great Democratic statesmen were laboring to free the seas, declaring them to be the common property and the common heritage of the people of the earth, and that they had a right to traverse them without paying sound dues or ocean dues or having their vessels searched by any power on the globe. The next thing after that, they were starting with Great Britain to strike down all this class legislation, that it was building up an aristocracy, building up nobility, building up titles, and standing as a buttress around thrones and monarchies. They were starting to diffuse throughout the earth the blessings of liberty.

They were "progressing," as they used that word, and in 1856 they made further progress. How did they do it? They reduced the duty on finished goods and put a large number on the free list, and yet we are told that a tariff to be equal and to be just and to be democratic must be imposed on every article imported into the United States. I defy any man living to point to a tariff from Hamilton's, in 1789, to the present that does not discriminate and carry a free list. The very first tariff that was made put wool and other articles on the free list—George Washington's tariff, Thomas Jefferson's tariff, for he was Secretary of State in the Cabinet, and, of course, was counseled upon a measure of such importance, Alexander Hamilton's tariff—it is called Hamilton's tariff. He was Secretary of the Treasury, and Hamilton was a protectionist. Not after the idea of to-day, however. Every one of our old leaders followed them without a faltering step and believed that the materials of manufacture should be free. Why?

Was it for the benefit of Massachusetts alone? Oh, no. Was it for the benefit of Vermont, New York, or New Jersey? Oh, no. They had a higher and loftier object than that. They said that every man had a natural right to labor and to live. They said, "If we tax the raw materials of manufacture and discriminate against our manufacturers in the cost of production a half cent to the yard, that half cent drives him out of every market beyond

our boundaries. If we discriminate against him by increasing the cost of his product a half cent a pound, it closes the markets of the whole world against him. We must strip him to the waist, 'lay aside every weight, and the sin which doth so easily beset us;'" and if any sin doth more easily beset than a protective tariff, I have yet to learn about it.

Leave all these free of duty to the manufacturers. What, then? We have got cheaper labor than any country in the world, because machine labor is cheaper than hand labor. In many branches of manufacture one man with a machine does ten times as much work as one man by hand. Everyone who has studied the question knows that. Mulhall gives that as the reason why we excel all the world in the value of the products of our manufactures. He says, "American manufactures have multiplied just twenty-fold since 1840, while those of Europe have only doubled. Nearly all American manufactures are produced by machinery, while in Europe more than half is hand work. The result is that the output per hand in the United States is much greater." He puts the average value of product per hand in British manufactures at $513.60; France, at $638.40; Germany, $379.20; Austria, $350.40.

It is amusing to contrast these figures with the value of product per hand in the United States. Here it is $2,204 per hand—more than three times as much as the Frenchman; more than four times as much as the Englishman; more than five times as much as the German and Austrian, and more than eight times as much as the Russian and Italian, the first of which turns out $242 worth of product, and the latter $266 worth.

Mr. GRAY. That is the reason why he gets more wages.

Mr. MILLS. Of course that is the reason why he gets more wages; and yet he gets almost double the wages of the man in Great Britain, hardly double those of France, nearly three times more than those of Russia and Austria. Yet when you look at the fact and see a British laborer turning out about $513 of product a year, and look at the American turning out $2,204 worth of product, when you look at the others turning out two or three hundred dollars' worth of the products, you see how far we have distanced them.

Now, what is the policy of the party? Is it not to stand true to the faith of our old fathers, that the natural right of the citizen is what we should secure? They believed that God is wiser than man; that He has so created man and endowed him with these natural rights, and that in their enjoyment he rises to his highest beneficence all over the globe.

Mr. RAWLINS. Will the Senator from Texas allow me to ask him a question? If I understand the logical conclusion of the Senator's argument, it is that there is no necessity for and there ought not to be protection either to the raw material or to the finished product; that the ideal condition is universal freedom of commerce or trade. If he will put himself there and demonstrate that that is a practical proposition in American politics to-day, I shall be glad to stand with him.

Mr. MILLS. I would say to my friend the Senator from Utah that he had better quicken his steps if he wants to get with me on that line.

Mr. RAWLINS. Mr. President——

Mr. MILLS. I must go on. I have the greatest respect in the world for my friend, but he is breaking the line of my argument. I will go along, and do the best I can with this matter.

Mr. RAWLINS. I understand, and I shall not interrupt the Senator further.

Mr. MILLS. I want to illustrate the free-raw-material position a little. We had a few years ago a tax on wool. We have not now, but we will have one in a very short time. It was a tax of 11 cents a pound. The manufacturers say that it takes 4 pounds of wool in the grease to make 1 pound of cloth. Let us see how that works.

The American manufacturer and the English manufacturer go together to the wool dealer in London. Each buys 4 pounds of wool at 15 cents a pound in the grease, making 60 cents. The Englishman goes and expends for labor 30 cents on that 4 pounds, making 90 cents for the whole cost, leaving him a margin of profit, after other things, of 10 per cent to him. The American goes along at the same time, buys 4 pounds of wool costing 60 cents, brings his wool home, and pays 44 cents duty at the custom-house. That is $1.04. He pays 30 cents for labor, which makes $1.34. Now, if you leave those two persons right there in that situation, the Englishman comes in and undersells the American by 44 cents in the yard of goods at home, not in the foreign market.

What does it mean? The demolition and destruction of every wool-manufacturing establishment in the United States, the throwing out of employment of perhaps a half million men, and if you carry that policy out in all branches of manufacture, you will throw out of employment 5,000,000 people. You destroy your manufactures. Not only that, but let us see what condition the woolman is going to be in who is demanding this thing. The woolman now with free wool compels the wool producer in Argentina and Russia and Australia and everywhere else to pay the cost of transportation to the American market to compete with him at home. Merchants tell us that is equivalent to about 10 per cent. Now, with this wool market gone at home, he has to transport his wool to the English and German and French markets and pay 10 per cent cost to compete with the foreign wools in their own markets. Is that the policy which is commended to us? They say, "No; that will not do. You must put a duty on the woolen goods of the Briton and the Frenchman and every other."

What for? To compensate the manufacturer for what he has advanced to the woolgrower. Of course you will have to do it, and put back in his pocket the 44 cents that he expended for the duty on his 4 pounds of wool. Now, then, you leave him exactly as he was at the beginning. Then what have you got to do? To put him on equal terms with the woolgrower, you have to protect him to the extent of 11 cents a pound. There are two taxes, double taxes. And it is so as you go on with the schedule, as all know who have investigated the subject, and none know it better than the two distinguished Senators who are so ably representing our party in this controversy [Mr. VEST and Mr. JONES of Arkansas]. Every step we advance toward the finished product we have to increase taxation.

Mr. GRAY. Who compensates the forgotten man?

Mr. MILLS. Nobody compensates him, and nobody cares for him but Democrats. Protectionists tell him he is getting rich when he is poor. They tell him that the advance agent of prosperity is coming on horseback, but he never appears. They tell him when he is plundered with taxation that he is better off than any other people in the world. But he is forgotten, badly forgotten.

Look at your tax on iron ore, on raw material; your tax on coal, another. It takes coal and iron ore to make pig iron. You tax pig iron. There are three taxes on one product. When the pig iron is converted into steel, bar steel or any other, it is taxed again. There are four taxes. When the bar steel is converted into cutlery it is taxed again, and there are five taxes—taxes piled on top of each other like Ossa upon Pelion—all to be paid by the forgotten man.

Then, what does it all amount to? It amounts to keeping our manufactures from going into the world. It keeps us from the employment of our labor to the best advantage. It denies work to every laborer in this country who is out of employment, because it is a fact beyond question that with free trade, with all imports on the free list, with this Government supported by taxation on wealth—as it ought to be, like the State government—or by the tax alone on the last finished product that goes into consumption, and that a light one, we could manufacture the four to five hundred million dollars' worth of cotton goods that Great Britain is shipping to the world, for she shows by her own statisticians that we have cheaper labor and better machinery. We have the cotton at home, and we do not have to pay any cost of transportation to Great Britain on it.

The two-thirds of our crop of 9,000,000 bales could be manufactured at home and give employment to three times as many people as we employ in manufacturing one-third of it at home. Would they not be more prosperous? Would they not make more money? Would they not have more wants, and would they not want more bread? Would they not give a higher price for wheat? Would they not, by the increased demand for bread, raise the demand for wheat to the farmers of the country? Would they not eat more meat? Would there not be an increased demand for that meat? Would it not increase the price of meat? Would not the wealth made by the labor of our people distribute itself all over our country, in the pockets of all our people, by a natural God-given law? Unquestionably it would. All agricultural products would rise in value. All manufactured products and others now raised by law would fall to the level of the world's markets, and wealth created by labor would remain around the homes of the laborer.

Mr. President, as I said, in 1857 we started on in the line of progress toward free trade—toward that happy condition that our fathers had been looking for. We put all wool under 20 cents a pound on the free list, and put a small duty on the other—a trifling duty. They ought to have put the whole of it on the free list, but the advance thought was not strong enough at that time.

Mr. Blaine says in his book that about that period there was nobody in the United States contending for a protective tariff. The idea had been so strongly embedded in the brain of the people of the United States that protection was wrong and freedom of trade was right that there was nobody contending for it. Hence, after the war was over and these high-protective duties had been imposed to raise an extraordinary fund to support the war, we find in 1870 a large body of the people, I think clearly a majority, began to cry for low taxes; and I do not believe that there has been less than a pronounced majority of the people who have not been in favor of low taxes from that day to this. I have never found it the case anywhere. If the issue is directly made and all money is kept away from the polls and nobody bought or intimidated, the

people of the United States would vote by more than a million majority for low taxes.

So in 1870, after they had been demanding a reduction of the then existing rates, Congress responded to it, and what did they do? They reduced the duties on imported goods and put 178 articles on the free list. That was not sufficient to satisfy the public demand, and in 1872 they further reduced the duties on finished goods and put 213 articles on the free list. They did it under a misapprehension of the manufacturers. They thought that it was going to decrease the revenue $57,000,000. They did not want to increase the revenues.

The two acts resulted in an increase of revenue, just exactly what Democrats have been contending for all the time, and when they found out that instead of decreasing the revenue $57,000,000 and stopping the payment of the bonds of the United States in the interest of another allied money class, then light shone in on the minds of the protectionists, and that was that the idea of going toward free trade and pushing their products into the markets of the world would not be as productive of wealth to them as to stop the whole business and fortify and build up trusts in this country to control the product and levy two thousand three hundred million dollars a year out of the forgotten man's pockets in the United States. That has been the policy and that is now the policy.

Everybody knows that the increased rates in this bill do not make up a difference in labor cost, which is cheaper in this country than anywhere else. Everybody knows that there are no infant industries in this country, when our product was $9,372,000,000 in 1890 and over ten billion to-day; as I said the other day, leaving England out, almost equal to the entire product of the balance of the world, on account of machinery and the inventive genius of a free people standing by their natural rights and believing that their highest material development comes from freedom, and that, standing fast by it and defending it on all occasions, this Republic would rise and overshadow the whole earth with its glory.

But, alas, we are taking the backward track now, and what are we doing? Building up a vast and sordid plutocracy in this country. Somebody asked the other day how many millionaires there are in the United States. You could count them on the fingers of one hand before 1860. The policies and measures adopted by the Democratic Administrations before the war did not permit the growth of such monsters in this country. Republican policies have fostered and fattened them. They now insolently refuse to be taxed, and insolently demand that other people shall work out their lives to pay them tribute.

I read from a paper written by Thomas G. Shearman, one of the ablest lawyers in the United States. It was published and republished again in the magazines. It was published in 1890. It has never been questioned. It has been sent broadcast; it has been commented on everywhere; and never have I heard one breath of contradiction or criticism of the article. I will read what he says, and he gives the names of some of them in his discussion, and they do not deny it:

There are 200 persons worth $20,000,000 each	$4,000,000,000
There are 400 persons worth $10,000,000 each	4,000,000,000
There are 1,000 persons worth $5,000,000 each	5,000,000,000
There are 2,000 persons worth $2,500,000 each	5,000,000,000
There are 6,000 persons worth $1,000,000 each	6,000,000,000

Twenty-four billion dollars owned by 9,600 persons!

Then he puts down 15,000 people who own $500,000 each, making $7,500,000,000. Thus, these 24,600 people own $31,500,000,000, or more at that time than one-half of the national wealth of the United States. Startling as are these figures, the work of creating and multiplying millionaires still goes on, and to-day the people are confronted with a bill proposing to levy one-hundred-dollar taxes and two-hundred-dollar taxes and three-hundred-dollar taxes on a hundred dollars' worth of the necessaries of life—not to raise revenue and pay the debts of the Government, but to raise revenue for the private pockets of a favored class, and to an amount estimated at nearly $2,300,000,000 a year. Now, then, the democratic people want to stop this business and return to the old canons of free government, and we are met with the assertion that the creed was changed at Chicago in 1896. This I deny.

In 1887 the House was Democratic by a small majority, and Mr. Cleveland, then President, sent to Congress a ringing message, calling on Congress to reduce the duties on imports. In April, 1888, a bill was reported to the House and passed in July, which took from the dutiable list articles amounting to more than twenty-two millions in value and made a reduction of about thirty millions of taxes on dutiable goods. The Democratic national convention of 1888 indorsed that bill and indorsed the men who supported it. The Democracy was advancing, not retreating, then. We were progressing toward freer trade, open markets, just government, and economical expenditures. We were getting back around the old family hearthstone. There were some gentlemen in that convention who were opposed to "only," but the great body of the convention were not, and the Democratic people of the nation were not. The bill, largely increasing the free list, with lumber, wool, and tin plate among the items freed from taxes, was indorsed by the national convention and by almost every State convention of that party in the United States.

In 1892, in the national convention at Chicago, there were some protectionists who wanted to evade the direct issue and put in the platform some words that could be construed both ways; but the scheme failed. The Democratic principle of taxation was not revealed to the world for the first time in 1896 at Chicago. When the differences were carried to the body of the convention for decision, they spoke the ancient faith in words that it is impossible to misunderstand.

Here is the plank put in that platform by the vote of the convention:

SEC. 3. We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few.

That sounds like the old doctrine.

We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties except for the purposes of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered.

That is the canon of the old faith as I understand it.

We denounce the McKinley tariff law enacted by the Fifty-first Congress as the culminating atrocity of class legislation; we indorse the efforts made by the Democrats of the present Congress to modify its most oppressive features in the direction of free raw materials and cheaper manufactured goods that enter into general consumption, and we promise its repeal as one of the beneficent results that will follow the action of the people in intrusting power to the Democratic party.

Mr. JONES of Arkansas. We won on that.

Mr. MILLS. And we won largely on it; yet we are told that to tax imports coming into the United States is not Democratic, and we are told that Democratic doctrine was the doctrine proclaimed at Chicago by striking out the word "only." In other words, that taxation is for the purpose of protection against competition and building up a rich and powerful class and incidentally to raise some money for the support of the Government.

Let me quote for the delectation of my friends some utterances from old tariff literature which I have culled from the Library. It is not complete, but it is enough to show conclusively that the Democratic people have been, without variableness or shadow of turning, in favor of limiting the power of taxation and confining it to its constitutional purpose. They have declared over and over again in State and national conventions that that power was to be exercised "only" to raise revenue for the Government. The national conventions from 1840 to 1860 were for "progressive free trade." From 1876 to the present they have been for revenue "only," which is the same thing in different words.

In 1870 the Democratic State convention of Maine said:

"*Free trade is the right of the people.*"

In 1876 New Hampshire said:

"We favor a tariff for revenue *only*."

In 1876 Vermont said:

"A tariff for the purpose of revenue *only*."

In 1871 Massachusetts said:

"We demand a tariff for revenue *only*."

In 1876 Connecticut said:

"The tariff law should be adjusted for the purpose of revenue *only*."

They had no war to make on "only."

New York in 1871 said:

"Government should lay no tax on imports *except for revenue purposes*."

In 1874 New York said:

"Federal taxation for revenue *only*."

In 1876 New York said:

"We are in favor of a tariff for revenue *only*."

In 1877 New York said:

"A tariff for revenue *only*."

In 1880 New York said:

"A tariff for revenue *only*."

How strange it is the word "only" has hung all along in our history as a proper limitation of the taxing power of the Government, and now we are told that it is to be carted out and dumped in the rubbish.

Mr. LINDSAY. And purposely.

Mr. MILLS. And purposely done to define the new doctrine of Democracy.

Ohio said in 1869:

"A tariff based upon revenue principles *alone, with the closest possible approximation to free trade.*"

Ohio in 1871 said:

"We are in favor of a *strictly revenue tariff.*"

Ohio said in 1875:

"A tariff for the *sole* purpose of raising revenue."

Ohio in 1876 said:
"We are in favor of a tariff for revenue *only*."
In 1877 Ohio said:
"A tariff for revenue *only*."
Indiana in 1870 said:
"We are in favor of a tariff for revenue *only*."
In 1871 Illinois said:
"Taxes should be levied *solely* for the support of the Government."
Illinois in 1880 said:
"No tariff for protection."
In 1874 Michigan said:
"We demand a tariff for revenue *only*."
In 1877 Iowa said:
"A tariff for revenue *only*."
Iowa said in 1878:
"A tariff for revenue *only*."
Minnesota said in 1874:
"A tariff for revenue *only*."
In 1876 Minnesota said:
"A tariff for revenue *only*."
Wisconsin in 1871 said:
"A tariff for revenue *only*."
In 1876 Wisconsin said:
"A tariff for revenue *only*."
Kansas in 1878 said:
"A tariff for revenue *only*."
Nebraska in 1874 said:
"A tariff for revenue *only*."
Nevada in 1878 said:
"A tariff for revenue *only*."
Oregon in 1872 said:
"We are in favor of a tariff to raise money *only* for the necessary expenses of the Federal Government."
California in 1876 said:
"A tariff for revenue *only*."
Missouri in 1874 said:
"A tariff for revenue *only*."
Kentucky in 1876 said:
"A tariff for revenue *only*."
Tennessee in 1870 said:
"No candidate is worthy of support who is not in favor of a low revenue tariff *which closely approximates free trade*."
Georgia in 1894 said:
"A tariff for revenue *only*."
Texas in 1882 said:
"A tariff for revenue *only*."

Mr. GRAY. And Georgia in 1896.

Mr. MILLS. Yes; Georgia has said it, and all the rest of them, because the cardinal doctrine of our faith, the fundamental, bedrock doctrine of Democracy is that the taxing power of this Government should be limited to the purposes of raising revenue to support the Government.

Mr. President, we are told that there is a new doctrine, and a new definition of Democracy, which has come down to us in these latter days after the Democratic party has carried this country in triumph from its infancy up to its gigantic proportions, and that new revelation is that we must go into the camp of the enemy, that "only" must be stricken out, that the limitations upon the abuses of the taxing power must be destroyed, that the enemy must be let in, and we are all to be blindfolded and led into the camp of the Republican party and to cry hosannas when they are piling up this monster fund for the corruption of the politics of this country and the overthrow of republican institutions.

Mr. President, the Bible tells us that one of the prophets of God smote the army of the Syrians with blindness and led them into Samaria and delivered them captive to the King of Israel. But the Democratic people of the United States are not Syrians and there are no Elishas in this country authorized by God to smite the Democratic people with blindness and lead them into the Republican camp.

Mr. RAWLINS. Mr. President——

The PRESIDING OFFICER (Mr. CHANDLER in the chair). Does the Senator from Texas yield to the Senator from Utah?

Mr. MILLS. Certainly.

Mr. RAWLINS. To whom does the Senator refer when he speaks of some gentlemen leading other gentlemen into the Republican party?

Mr. MILLS. What is that?

Mr. RAWLINS. To whom does the Senator refer?

Mr. MILLS. I hold that the doctrine of protection——

Mr. RAWLINS. I thought the Senator was alluding to those gentlemen on this side who voted the Republican ticket last fall.

Mr. MILLS. I am alluding to men who assert that the Democratic party must abandon the word "only," that it must tear down the limitations upon taxation and become a party for protective tariff. I do not name anybody. Every man can wear the garment if it fits him, and if it does not, he can throw it aside. That is what I am talking about.

Now, Mr. President, what is all this for—this building up of great fortunes, this enormous fund creating and multiplying millionaires? Have we not been witnessing for the last few years a thing that must be humiliating to every lover of the institutions of this country?

Have we not seen the daughters of the millionaires endowed with money wrung by legislation from the pocket of the *forgotten* taxpayers of this country shipped to Europe like fatted heifers and peddled for titles? What a spectacle to see American women exported and sold like so many carcasses of mutton or fresh beef for aristocratic titles forbidden by the Constitution of their country to be worn within its jurisdiction—titles declared to be at deadly enmity with its institutions. And yet we are constantly beholding it.

Of what moment was it that the old fathers of the Republic, whose bodies wore the wounds and blood stains of the Revolution, fought to secure their liberty and the liberty of their posterity? Of what use was it for them to declare that titles of nobility should not be conferred in this country? It was natural that they should do so. It was the democracy of a free government that they were creating—a free, popular government, whose whole power came from the governed. It was a government of the governed; a self-government; a free government; and there was no place in our system for titles or titled classes. And yet we see, as soon as these people get this inordinate wealth, their daughters are shipped over to Europe and put on the market, hawked and peddled and sold with American money, to become princesses and duchesses and countesses and marchionesses, and we are here levying upon the pockets of the poor laboring people $200 and $300 and $400 and $500 on $100 worth of the necessaries of life to raise the money to enable our girl to make the trip and buy the title.

Do you think there is no hereafter, gentlemen? Wait until the swallows homeward fly. There is a tribunal whose doors are always open, and we will invite you to meet us there. If the people of the United States indorse your doctrine and the policy that you write on the statute books to-day, they are not fit for self-government. Nor will they do it, either. They will bring you to an account, and the places that know some of you to-day will know you no more hereafter forever.

Mr. President, why pile up duties 150 per cent on woolen goods? Why put up the duty to 75 and 80 and 100 per cent on sugar? It is because the forgotten men pay these taxes, the fellows whom you think you can fool by telling them that they are not paying the taxes but the foreigner is paying them.

Suppose you should put a tax of 10 per cent on a yard of domestic woolen goods made in the United States. You would hear the thunders and see the lightning. Why should you not tax domestic woolen goods as well as tax beer? You have already an internal-revenue tax on beer, you have an internal-revenue tax on whisky, you have an internal-revenue tax on tobacco, you have an internal-revenue tax on oleomargarine, you have it on cheese. Do you know any good reason why you should not have it on woolen goods, and on cotton goods, and on iron, and steel, and lead, and leather?

The distinguished Senator from Rhode Island [Mr. ALDRICH] said very truly the other day that the time is coming (and it will come much sooner, perhaps, than he thinks, if he pushes this measure any further) when we shall have to rely on internal-revenue taxes. When we have to impose internal-revenue taxes, why not put the tax on some things that we protect against competition? If we put in the pockets of the woolen manufacturer $100 worth of bounty or booty, whichever you may please to call it, why should you not tax $10 of that out for the support of a Government that is so beneficent and kind to him? Is there any reason why it should not be done? When we put a tax on cotton goods, why can we not put a tax of 5 or 10 per cent on the domestic goods, and let that tax come out of the pockets of the manufacturer? It would not come out of the pockets of the forgotten men.

The manufacturers had to pay these taxes during the war, but those gentlemen came to Congress and said, "This money all comes out of our pockets; the war is all over now; take it out;" and Congress took it out and repealed the taxes and stopped taking the money from them.

If we are in favor of equal taxation, of equal and just laws, why should we not require the protected industries of the country into whose pockets we pour this enormous bounty to contribute money enough at least to support the Government that does it? Five per cent on $9,300,000,000 would support the Government and give you nearly $500,000,000. While we are creating this enormous fund, two billion and nearly three hundred million dollars, of pure bounty every year to build up these enormous fortunes, can we

not ask these gentlemen kindly and condescendingly to submit to a taxation of just 5 per cent instead of 100 or 150?

Mr. President, I shall give the gentlemen a chance to vote on a proposition of that sort to lower the taxes on imported goods and put some taxes on the domestic products as well as on beer, that already has an internal-revenue tax, and as well as on whisky, and tobacco, and cheese, and playing cards. If that policy is wise, let us apply it all along the line.

I wonder if our friends think of the pernicious results to come to this country from stopping importations? They boldly proclaim that this duty is necessary to stop the imports, and, of course, stop the revenues. But have you ever thought what the consequences of stopping importations would be? Every dollar of importation that is stopped from coming to this country stops a dollar of exportation. There is nothing truer than that all foreign trade is an exchange of products.

A few years ago I asked a distinguished Republican member of Congress the question, "Suppose you stop all imports from coming into the country, what would you do with our products that we send away, our cotton, breadstuffs, and provisions? What would you have in exchange for them?" He said, "Gold and silver." Let us see how perfectly fallacious that proposition is. There are eight thousand million dollars of gold and silver in all the world. A great quantity of it is in the vaults of governments. We export from $800,000,000 to $1,000,000,000 of products every year.

In ten years, if the thing were possible, we would exhaust all the gold and silver in the world, and what would we do on the eleventh year and all the other years that are to follow? How supremely ridiculous that proposition is! When silver and gold begin to leave a country, prices of all commodities rise behind them and attract the precious metals back and restore the equilibrium of prices throughout the world. The thing is impossible. One product must go to bring the other, and when one stops the other stops. Then what would we do?

We must import in order to export. Old Dr. Johnson once said, "If you want to bring the wealth of India to England, you must take the wealth of England to India." Whenever you stop the importation, cotton, breadstuffs, and provisions must go, but they will go at a lower price. In 1887, 7,000,000 bales of cotton were worth in our markets $291,000,000, but in 1894 9,000,000 bales were worth only $250,000,000. At the prices of 1887, the 9,000,000 bales would have been worth $374,000,000. Here is a loss of more than a hundred millions. Whether it was caused by lessening the demand for it by prohibiting the import of things to exchange for it or not, that is one of the causes that will lower the prices of all exports. The farmer is the man who is the worst hurt of all, and the cotton farmer is the most seriously injured of all farmers. They are all among the forgotten men, but he is forgotten with a relish.

Supporters of this bill know that the foreigner can not buy our products when we will not take his. They know he has nothing to give in exchange. They know he has nothing but the surplus products of his labor to give for the surplus products of ours. But what do they care?

The Republicans have been fooling the sheep men all over the country and making them believe that they are benefited by the tax on wool. In 1890 a tax of 27½ cents a pound was put on woolen yarns to compensate the yarn manufacturer for what it was assumed he paid the woolgrower as protection on 2½ pounds of wool. He demanded this for *compensation* for the increased price on wool. But wool did not rise; it fell. Imported woolen cloths were taxed 33 cents a pound to compensate the manufacturer for 33 cents on 3 pounds of wool, which he assumed he would pay by reason of the tariff of 11 cents a pound on imported wool, but wool did not rise; it fell and the manufacturer got what the woolgrower thought he was to get. The compensation floated in the immaterial regions of the imagination of the woolgrower, but it materialized beautifully in the pockets of the wool manufacturer. The same thing occurred with blankets and other manufactures of wool. In every instance where duties were imposed on woolen goods to compensate for duties paid to the woolgrower, the woolgrower was left in the lurch. When he pushed his hand down into his pocket to realize his share of the good things, he recoiled and whispered to his inner consciousness—

Alas! empty is the cradle—baby's gone!

Tariffs have never raised the price of wool. Wool has been steadily falling for forty years, not only in the United States but all over the world. The fleece has been increasing in weight on each sheep and the number of sheep has been increasing everywhere faster than population, and that has forced a steady decline in wool. Besides that, cheaper substitutes for wool have been increasing rapidly in the last thirty years. In 1890 there was consumed in woolen manufactures in the United States 75,428,865 pounds of cotton, every pound of which displaced a pound of wool; 73,678,066 pounds of shoddy and animal hair, besides 7,684,804 pounds of camel hair and 2,136,244 pounds of mohair. Every pound of these substitutes took the place of a pound of wool. They were mixed with 207,584,746 pounds of scoured wool.

All these substitutes are cheaper than wool, and will be used in its stead as long as wool is higher than they and as long as the Government pays the manufacturer a compensatory duty on cotton shoddy and hair used in wool manufacture. Wool was worth 50 and 60 cents a pound forty years ago, but it has been falling ever since. It had high rates of duty till 1894, but still it continued to fall. In 1890 the duty was put at 11 cents a pound, and in 1891 the price in the Philadelphia market of Texas wool was 17 to 20 cents; in 1892 it was 14 to 18 cents; in 1893 it was 10 to 12 cents, and it was at that in 1894 when it was put on the free list; it is now 13 to 15 cents.

It has been slowly rising since it was put on the free list. Within the last few months the rise has been rapid, and I see by the paper put in my hand by the Senator from Kentucky [Mr. LINDSAY] that in the Louisville market it is quoted at 5 cents higher this year than last. With the fact staring them in the face that duties on wool do not raise the price of wool, it is astonishing that woolgrowers continue to demand it.

When I was in the other House, a gentleman from Texas came before the Committee of Ways and Means to ask for higher duties on wool. He had, he said, $128,000 invested in the business, 18,000 sheep, and more than 80,000 acres of land in his ranch, and he said he wanted protection because the woolen manufacturer got it. He wanted his business to be as remunerative as other people's business. He was willing to increase the price of the shirts on the backs of the men he was paying $15 per month, and gave us to understand that he and his people would vote the Republican ticket if they did not get what they wanted.

In fact, he said at the Presidential election in 1884 his precinct gave "Cleveland two hundred and odd and Blaine 11," but in 1888 "Cleveland got 11 and Mr. Harrison got two hundred and odd." He said he was a Democrat in 1884, but with $128,000 invested in sheep raising he could not vote the Democratic ticket while wool was so low. His loyalty to his party was on a parity with the loyalty of the Turk to Mohammed:

Thou for my sake at Allah's shrine,
And I at any god's for thine.

Raising money by taxation to give to favorites is a scourge to the people and exhausts the strength of the Republic. It has already built up a tremendous power whose heavy hand is felt on legislation every day. It is felt everywhere. We see it at the ballot box. We see it in the executive and judicial departments of governments, and everywhere its repulsive features are scowling upon our institutions and threatening their overthrow.

Of what use was it for our fathers to warn us against perpetuities, monopolies, entailments, and primogenitures? Why did they tell us in the early constitutions that they were against the genius and spirit of a free people? And yet they have hung those signboards all along our path.

The fathers of the Republic of Texas, when framing their first constitution, wrote those words down for our guidance. We have had five constitutions, and every one of them to this day proclaims to us these ominous words. We have had line upon line and precept upon precept to warn us away from the rocks upon which the ship of state may be driven. We have been told that concentrated money is equally as powerful for evil as concentrated swords and bayonets, and that liberty must leave the land where either tyrant rules. We are trampling to-day all these admonitions under our feet.

We are casting our pearls away faster than our enemies can gather them. We are turning dead ears to the voices that come to us from Massachusetts and Virginia that our Government is for free men, for the preservation of our natural rights, for the security of our happiness and well-being, and not for the profit of any one man, or family, or class of men. Our ship is driving upon the rocks, and unless we seize the helm and change its course, the historian will emerge from the darkness to write the melancholy pages of the decline and fall of the great American Republic.

The PRESIDING OFFICER (Mr. CHANDLER in the chair). The question is on the adoption of the amendment of the committee to strike out paragraph 231.

The amendment was agreed to.

The reading of the bill was resumed at paragraph 232, on page 70, line 21.

Mr. VEST. I suggest that paragraphs 232 and 233 be read together, as I desire to submit a motion which will apply to both.

The PRESIDING OFFICER. The Secretary will read paragraphs 232 and 233 as requested.

The Secretary read as follows:

232. Wheat, 25 cents per bushel.
233. Wheat flour, 25 per cent ad valorem.

Mr. VEST. Mr. President, this raises the duty upon wheat from 20 to 44 per cent, and upon wheat flour from 20 to 71 per

cent. We exported in 1896, $39,709,868 worth of wheat, and imported $9,506 worth. Of wheat flour we exported in 1896 fifty-two million seven hundred and odd thousand dollars' worth, and imported $6,258 worth.

I move to strike out both of those paragraphs, for the purpose of moving hereafter to put them on the free list, and I ask for the yeas and nays.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Missouri to strike out paragraphs 232 and 233, on which he asks for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CAFFERY (when his name was called). I am paired with the Senator from Michigan [Mr. BURROWS]. I should vote "yea" if he were present.

Mr. CLAY (when his name was called). I am paired with the junior Senator from Massachusetts [Mr. LODGE].

Mr. HARRIS of Tennessee (when his name was called). Upon this, and indeed upon all other questions, I am paired with the senior Senator from Vermont [Mr. MORRILL]. If he were present, I should vote "yea."

Mr. JONES of Arkansas (when his name was called). I am paired with the Senator from Maine [Mr. HALE], who is absent from the Senate Chamber. If he were present, I should vote "yea."

Mr. PROCTOR (when his name was called). I am paired with the junior Senator from Florida [Mr. MALLORY].

Mr. QUAY (when his name was called). I am paired with the Senator from Alabama [Mr. MORGAN].

Mr. VEST (when his name was called). I am paired with the Senator from Minnesota [Mr. NELSON]. If he were present, I should vote "yea."

Mr. WILSON (when his name was called). I am paired with the Senator from Florida [Mr. PASCO]. If he were present, I should vote "nay."

The roll call was concluded.

Mr. HANSBROUGH. I announce my pair with the senior Senator from Virginia [Mr. DANIEL]. I should vote "nay" if he were present.

The result was announced—yeas 15, nays 35; as follows:

YEAS—15.

Bate,	Harris of Kans.,	Murphy,	Smith,
Berry,	Kenney,	Pettus,	Turpie,
Cockrell,	Lindsay,	Rawlins,	Walthall.
Gray,	Mills,	Roach,	

NAYS—35.

Allen,	Fairbanks,	McBride,	Pritchard,
Bacon,	Foraker,	McEnery,	Shoup,
Cannon,	Frye,	McLaurin,	Spooner,
Carter,	Gallinger,	McMillan,	Stewart,
Chandler,	Hanna,	Mason,	Thurston,
Clark,	Hawley,	Penrose,	Tillman,
Cullom,	Heitfeld,	Perkins,	Wellington,
Davis,	Hoar,	Platt of Conn.	Wetmore.
Deboe,	Jones of Nev.,	Platt of N. Y.	

NOT VOTING—39.

Aldrich,	Faulkner,	Mallory,	Quay,
Allison,	Gear,	Mantle,	Sewell,
Baker,	George,	Martin,	Teller,
Burrows,	Gorman,	Mitchell,	Turner,
Butler,	Hale,	Morgan,	Vest,
Caffery,	Hansbrough,	Morrill,	Warren,
Chilton,	Harris, Tenn.	Nelson,	White,
Clay,	Jones, Ark.	Pasco,	Wilson,
Daniel,	Kyle,	Pettigrew,	Wolcott.
Elkins,	Lodge,	Proctor,	

So the amendment of Mr. VEST was rejected.

Mr. CANNON. I move to amend the bill by inserting what I send to the Secretary's desk, to come in after paragraph 233, the new matter to be known as paragraph 233¼.

The PRESIDING OFFICER. The amendment submitted by the Senator from Utah will be stated.

The SECRETARY. On page 70, after line 22, it is proposed to insert as paragraph 233¼ the following:

And from and after sixty days from the passage of this act there shall be paid, out of any moneys in the Treasury of the United States not otherwise appropriated, to any exporter of wheat or wheat flour, rye or rye flour; corn, ground or unground; cotton, hops, or tobacco, produced wholly in the United States and exported by sea from any port in the United States to any port of any other country, the following export bounty, by way of an equalization to agriculture of the benefits of this act to encourage the industries of the United States, to wit: Ten cents per bushel on wheat; 50 cents per barrel on wheat flour; 10 cents per bushel on rye; 50 cents per barrel on rye flour; 5 cents per bushel on corn; 10 cents per cental on corn, ground; 1 cent per pound on cotton; 2 cents per pound on hops; 2 cents per pound on tobacco. And all payments of bounty under this act shall be made upon negotiable vouchers, issued by the collector of customs at the port of clearance, upon presentation at the Treasury or any subtreasury of the United States; and the Secretary of the Treasury is hereby charged with making and enforcing such regulations as may be necessary for the full protection of the exporters and of the Government according to the true intent and meaning of this law.

The PRESIDING OFFICER. The question is on the adoption of the amendment submitted by the Senator from Utah [Mr. CANNON].

Mr. CANNON. I yield a moment, Mr. President, to the Senator from Nebraska [Mr. THURSTON], who desires to be heard briefly.

Mr. THURSTON. Mr. President, I do not rise to make a speech on the bill, but I wish to announce to the Senate that a little of the expected prosperity has appeared, perhaps in the most proper place in the world where it should appear first, in the city of Omaha. In evidence of this, I ask to have read a double-leaded editorial from the Omaha World-Herald of Sunday last, one of our great Democratic free-silver papers, of which the Hon. William J. Bryan was the editor in chief.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Secretary read as follows:

[From the Omaha Sunday World-Herald, June 6, 1897.]

OMAHA RETAIL TRADE GROWS.

Never before in the history of Omaha has so much building been in progress for retail-business houses.

The new addition to Hayden Bros.' store; the enlargement of the Boston store, just announced; the building of the Nebraska Clothing Company store; the alteration of the Karbach block for Nicoll the tailor—these are the leading building improvements being made at this time, and they are significant. They are not made on a haphazard plan. They are being carried on by the shrewdest and most successful business men in this city because the present growth and immediate prospects for their trade demand the enlargement of facilities.

But the big stores are not the only ones which have commenced to feel an increase in business. It came to the wholesale houses first, and then it extended to the big retail stores; but inquiry proves that the small retailers, where they have shown any enterprise at all, have done far more business this year than last up to date.

The improvement in business in Omaha is gaining momentum weekly now. Last year every month grew duller than its predecessor; but this year, from January on, the reverse has been the case, and the present prospect is that the summer months, usually dull, will be very lively.

There will be more demand for labor in building operations in Omaha during July and August alone than there was for the whole twelve months of 1896.

Mr. GRAY. May I ask the Senator from Nebraska if the Wilson tariff law is not still on the statute book?

Mr. THURSTON. The expectation of the new tariff law is in the minds of the people; and if Senators upon the other side will give us a chance to pass it, we shall then commence to realize in full measure what we can now only hope to see the beginning of.

I also ask to have read, Mr. President, an article from the same paper of the same date.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Secretary read as follows:

BUSINESS HAS DOUBLED—MANUFACTURERS SPEAK WELL OF THE MONTH OF MAY.

Mr. W. H. Roberson, manager of R. G. Dun & Co.'s mercantile agency, speaking of trade for the last week, says:

"One of our leading manufacturers says his business for May was double that of one year ago, and another in an entirely different line reports his trade better for May than it has been for three years past. The new factories manufacturing envelopes and chicory are quite enthusiastic over the outlook and are loud in praise of Omaha as a center for their lines.

"At the banks money continues easy. Regular customers are allowed liberal lines and 8 per cent is the ruling rate. There is a demand for gilt-edge commercial paper and well-secured bonds and mortgage notes.

"In real-estate circles inquiries are active, and some sales are being made, usually small properties to wage earners, who are taking advantage of the very low prices of lots to secure homes and holdings. There is more building and repairing in progress now than before in five years. During the week a strike of carpenters for increased pay was reported. This is significant. The thought of striking has not entered the mind of the workmen for many moons, for the reason that work at any price was not available.

"At South Omaha the receipts continue heavy, and large forces are at work in all the packing establishments. The packing town takes on something like its old time life and energy, and at the yards there is evidence of present prosperity and future promise in the improvements progressing there."

Mr. THURSTON. I also ask to have printed as part of my remarks the tables which I send to the desk, and will only ask the Secretary to read the printed portion of the article.

The PRESIDING OFFICER. If there be no objection, the document submitted will be printed as part of the remarks of the Senator from Nebraska.

Mr. CANNON. Before that document is read, I should like to ask the Senator from Nebraska what the vote of his State declared for last year?

Mr. THURSTON. What was the question of the Senator?

Mr. CANNON. I ask the Senator what Presidential candidate received the vote of Nebraska last year?

Mr. THURSTON. It declared for all the heresies of the Chicago platform; but that was the first time that my State has ever taken that position, and I believe it will be the last time.

Mr. CANNON. I should like to ask the Senator if he is quite sure that he has not mistaken the cause of this prosperity which has come to Nebraska? One hundred and fifteen thousand of the population there declared for what the Senator calls the "heresies of the Chicago platform." I think, perhaps, they are building in Omaha in expectation of disappointing the Senator and his confrères and voting with the vast majority of the people of the United

States in the year 1900 for many of those same so-called heresies and bringing actual prosperity to the United States.

Mr. THURSTON. Mr. President, I am not here to make an argument or to make a speech at this time, but the people of my State do not anticipate so far in advance. They are looking now to the immediate future, and it is for the development and prosperity of the immediate future that they are beginning to build.

Mr. BERRY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield the floor?

Mr. CANNON. I will cheerfully yield.

Mr. BERRY. I wanted to ask the Senator from Utah to yield to me for a moment.

Mr. CANNON. I do so with great pleasure.

Mr. BERRY. I should like to have read a short extract from a statement said to have been made by Mr. Wanamaker, a distinguished citizen of Pennsylvania.

The PRESIDING OFFICER. The Senator will suspend a moment. The Senator from Utah [Mr. CANNON] had the floor.

Mr. CANNON. And I can not yield to the Senator from Arkansas for the purpose he indicates. I do not believe in unconstitutional punishment, and the reading of the declaration of Mr. Wanamaker after the declaration of the Omaha paper here in the presence of the Senator from Nebraska would be inflicting cruel, inhumane, and unjustifiable punishment. [Laughter.] I decline to yield to the Senator from Arkansas.

Mr. BERRY. Well, Mr. President, I will ask the Senator from Utah if he will permit a short extract to be read from a letter written by Mr. Creelman, of the same date, June 6, at Cleveland, Ohio? It is very short, and I should like to have it read.

Mr. ALLISON. I object to any further reading of documents at the Secretary's desk.

Mr. ALLEN. I hope my colleague will be allowed to proceed.

The PRESIDING OFFICER. The Chair understood the Senator from Utah [Mr. CANNON] to yield to the Senator from Nebraska [Mr. THURSTON], and the Chair did not know whether the Senator from Nebraska had finished.

Mr. CANNON. I should be perfectly willing to allow the conclusion of the reading.

Mr. THURSTON. I think it will appear by reference to the Secretary's desk that "the Senator from Nebraska" has not finished.

The PRESIDING OFFICER. The portion of the document will be read, as requested by the Senator from Nebraska.

The Secretary read as follows:

THE LIVE-STOCK MARKETS.

UNION STOCK YARDS, *South Omaha, June 5.*

Receipts for the last week, with comparisons.

Date.	Cattle.	Hogs.	Sheep.
Monday, May 31	1,583	3,128	1,858
Tuesday, June 1	2,684	9,502	507
Wednesday, June 2	3,517	8,680	1,087
Thursday, June 3	2,290	6,936	3,091
Friday, June 4	3,783	8,050	4,104
Saturday, June 5	1,897	5,795	260
Receipts this week	15,754	42,091	10,887
Receipts last week	13,846	52,952	22,450
Same week last year	7,073	38,832	3,514

Most of the trading was on a steady basis, the market becoming tolerably active as the morning advanced. There were some choice 1,300-pound beeves that brought $4.90, the highest price paid in several weeks; but, as usual, most of the offerings were on the fair-to-good order, and sold at from $4.45 to $4.65. The common-to-fair 1,000 to 1,250 pound steers brought from $4.10 to $4.40. Toward the close the tone to the trade was quite firm, and a good early clearance was made. Receipts for the week, 15,754 head, were about 2,000 heavier than last week, and nearly 7,000 heavier than a year ago. During the greater part of the week the market has been in very good shape, with prices tending upward, the week's advance on desirable beef steers being pretty close to 15@20 cents.

Beef steers.

Number.	Average.	Price.	Number.	Average.	Price.	Number.	Average.	Price.
2	985	$3.75	2	1,085	$4.00	43	1,076	$4.30
13	1,008	4.15	8	1,056	4.30	53	1,503	4.30
56	1,215	4.30	52	1,304	4.30	21	1,347	4.35
23	932	4.35	38	1,225	4.35	44	1,092	4.45
23	1,131	4.40	24	1,018	4.40	25	1,149	4.45
22	1,208	4.45	31	1,242	4.45	23	1,262	4.45
11	1,359	4.45	60	1,246	4.45	26	1,323	4.45
18	1,324	4.45	36	1,245	4.45	61	1,482	4.50
31	1,402	4.47½	36	1,429	4.50	17	1,420	4.50
10	1,270	4.50	16	1,250	4.50	107	1,274	4.55
17	1,286	4.52½	55	1,269	4.52½	22	1,280	4.65
34	1,560	4.60	20	1,192	4.60			
13	1,303	4.90	70	1,172	4.10			

Mr. THURSTON. I also ask to have printed in the RECORD certain tables from the same issue of the same paper, showing the prices current in Omaha on products.

The PRESIDING OFFICER. Without objection, it will be so ordered.

The tables referred to are as follows:

Hogs.—The week closes with a moderate run. There were 84 fresh loads, 5,795 head, or about 2,000 short of last Saturday's arrivals. Receipts for the week foot up 42,091 head. This was nearly 11,000 short of last week, but 3,000 more than were here during the same six days last year.

Mr. LINDSAY. I will ask the Senator, with his permission, whether or not all these evidences of prosperity are confined to the city of Omaha? That is the way I understand it.

Mr. THURSTON. I am introducing now the evidence of the Democratic free-silver press of my city. I have no other witnesses to call at the present time. I judge that prosperity has chosen wisely in selecting the finest city of the United States wherein to herald her approach.

Mr. LINDSAY. I will ask the Senator if the Congress of the United States did not act with equal wisdom when it chose the city of Omaha in which to expend $200,000 of Federal money in assisting the Omaha Exposition——

Mr. THURSTON. There is no doubt about it.

Mr. LINDSAY. And whether the State of Nebraska did not

choose equally wisely, and whether the beginning of the expenditure of those sums of money in the city of Omaha is not coincident with this revival of prosperity in that particular city?

Mr. THURSTON. Not one dollar of those moneys has been expended yet, and in all these declarations of the Omaha World-Herald not one reference is made to any prosperity or any increase of prosperity or any increase of prices which could in any manner relate to the Omaha or Transmississippi Exposition.

Mr. CANNON. All this movement in Omaha is doubtless due to the expectancy——

Mr. LINDSAY. Of the expenditure of the money.

Mr. CANNON. As I was about to say, of the expenditure of these hundreds of thousands of dollars.

Mr. ALLEN. I should like to interrupt the Senator from Utah just once.

Mr. CANNON. Certainly.

Mr. ALLEN. I do not want to rob my colleague of any glory for the prosperity that may attach to Omaha. We are both interested in the progress of Nebraska and Omaha, its metropolis, and I should be glad to know that prosperity, that is, permanent prosperity resulting from legislation or proposed legislation, is making itself felt in that city and that State. Of course I can not afford to put myself in the attitude of saying that our people are not getting along so well as the people of any other Western or Southern section, because it would be incorrect, and I should subject myself to the argument sometimes used by the demagogue, that I was undertaking to run down and belittle my own place and my own people.

My colleague lives in the metropolis of Nebraska, a splendid city of splendid possibilities, and I have no doubt that under proper legislation Omaha, instead of being a city of one hundred and fifty-odd thousand people, might be, within a very few years, a city of a half million population, with its industries increased 500 per cent, and that a wave of general prosperity would not only reach Omaha, but every section of the State.

Now, it is due for me to say that in my judgment the prosperity that has reached Omaha now, or is reaching it—that is, that prosperity which is greater than the prosperity at like places at the present time—is due in a very large measure to the preparations that are being made for the holding of the Transmississippi and International Exposition in 1898. I had occasion to visit the city but a few days ago, and my information was to that effect. I have no doubt, knowing the World-Herald and its managers as well as I do, that they are speaking with reference to the approaching exposition when they speak of this wave of prosperity.

Let me say another word, through the kindness of the Senator from Utah, as respects prices in South Omaha, where our cattle and hog market is found. It is true that the prices of cattle in Nebraska are higher than they have been for some little time, but it is not due in the slightest degree to any kind of legislation. In 1894 the farmers of the State of Nebraska were compelled to sell short on their cattle, and in 1896 there was and in 1897 there is being done in the State of Nebraska what has never been done in its history before, namely, cows are being put into the feed pen and fattened and sent to market, thus each year shutting off the supply of cattle. I have occasion to know to some extent, because I am in a small way engaged in raising cattle.

As respects the prices which the farmers of Nebraska receive for their grain, permit me to say that the reports from this market are in a certain sense and in a very large sense misleading. Transportation is a great thing with the farmer of Nebraska. I have occasion to say from experience, and experience within the last sixty days, that corn has been sold and is being sold in that State to-day by the farmer at from 7 to 10 cents a bushel. I sold some within thirty days for 7 and 8 cents a bushel, within 125 miles of the Omaha market, and it was good corn, too.

I wish it were true, and I would rejoice with my colleague, notwithstanding we differ politically, if it were true, that the million and a half people in the State of Nebraska, all of them, not a few of them, did feel a genuine wave of prosperity coming back to that struggling and growing Commonwealth, but what has been referred to is, in my judgment, due in a very large measure, if not altogether, to the prospect of the exposition.

Mr. CANNON. Mr. President, in support of the motion to amend the bill, I lay down the following preliminary grounds:

I. A bill justly to claim the name of protection and justly to demand the support of believers in that doctrine must be as nearly equitable as the intellect of its framers, conscientiously devoted, can devise.

II. The pending measure is grossly, palpably inequitable. It discriminates against the American producer of agricultural staples, since, under its provisions, he must sell his commodity at the lowest price of the world and must buy manufactured goods at the highest price of the world.

Contributory to the foregoing:

An import duty on agricultural staples, of which we export considerable quantities, does not add one jot or tittle to the price at home or abroad.

An import duty on other articles aids our staple agriculture only indirectly and to an almost inappreciable extent, since whatever advantage is derived therefrom is shared equally by all the producers of staple agriculture in all the world.

III. An export bounty on staple agricultural commodities will give protection prices to their producers.

Mr. President, every nation has its primary industry. With us it is agriculture. It has always been so. It always will be, so long as the Republic is to survive in strength and dignity in this world. Not necessarily because agriculture is the first essential to the sustenance of human life, for other nations may have manufacturing for a primary industry, since by the character of their people, by their experience in the mechanical arts, by their financial situation they may be better disposed as well as better qualified to pursue manufacturing industries than agriculture.

In the beginning, of course, as all new nations with vast area, we were producers of raw material, so called, and it was the thought of the fathers of the Republic that we should stimulate the diversification of employment for our people for high patriotic as well as practical reasons. It was not deemed by them to be the part of wisdom that this new nation, setting a mark for all the ages yet to come, should be dependent for any of the necessaries of life comprised within manufacturing on those countries which at that time were our enemies, because we differed essentially with them in the purposes and objects of government and of community life. Nor was it deemed wise that the agriculturist should be compelled to sell that which he produced entirely in a market over which he had no control.

I think if there was a thought of a practical nature absolutely crystallized at that time in the purpose of legislators, and in the view of those who gave their support to the first protective tariff bill, it would have been this: We will protect manufactures until the two great pillars of community strength shall have reached an equality, manufacture and agriculture, each employing its hosts within the land, and neither one trespassing upon the proper domain of the other or being an unjust burden upon the other.

I give my adherence now, as I always have done and believe I always shall, to the doctrine by which it was proposed to stimulate manufactures at that time. Had agriculture remained the sole industry of the country, as it was and is the prime industry, we could not have achieved the distinction among the nations which we have acquired, nor could our people have been so prosperous and contented at home. But, Mr. President, the day came when the equilibrium was reached, and we passed it without a pause, passed it as a thief in the night. The farmer had been taught to vote for protective tariff for the benefit of the country, for the sustenance of his own industry, so that he might have a better home market for the product of his toil. The day came when manufacturing in the United States more than balanced agriculture, and the farmer continued to vote for the protective tariff upon manufactured goods while not receiving directly any benefit from it.

I can not state exactly when that equilibrium was reached, nor when there should have been such modification of the method of applying tariff law as to have insured to the farmer his just benefit therefrom. We are never conscious of the exact moment of a crisis or a great occurrence depending upon thought or general progress. We often predict with absolute certainty. We look back and point the exact time of any occurrence. But in the doing of great formative matters we are unconscious of the crisis.

The moment the manufacturing industries of the United States in manufactures had reached such magnitude and such volume of participation by our industrial population that those pursuits were as well equipped to sustain themselves at home as agriculture was equipped to sustain itself the tariff laws should have been modified. They should have provided equitable protection for all classes, and by equitable protection, I mean they should have reached out to the farmer exactly the same proportionate benefit that they extended to manufacturers. That we have long passed the point of equilibrium is proved by a table compiled from the United States census reports, which shows the number of wage earners in various occupations in the United States. I submit it at this time, and ask its insertion in the RECORD as a part of my remarks, if I may have the consent of the Senate.

The PRESIDING OFFICER. If there be no objection, the table will be printed in the RECORD.

The table referred is as follows.

Comparative statement of population, and of wage earners, proprietors, capital invested, value of products, etc., in agriculture and in manufacturing and mechanical industries in the United States, 1850 to 1890.

[From United States Census Reports.]

Population, wage earners, etc.	1850.	1860.		1870.		1880.		1890.	
	Total.	Total.	Increase over 1850.	Total.	Increase over 1860.	Total.	Increase over 1870.	Total.	Increase over 1880.

a Including dairymen and dairywomen, lumbermen and raftsmen, stock raisers, herders, drovers, and wood choppers.
b Not reported in censuses of 1850 and 1860.
c Decrease.
d Including overseers, apiarists, gardeners, florists, nurserymen, and vine growers.
e Including miners, quarrymen, fishermen and oyster men, and persons engaged in trade and transportation, and in domestic and personal service.
f Including professional occupations.
g In currency at a discount in gold, which was worth an average premium of about 25 per cent during 1870.

Mr. CANNON. Mr. President, that a continuation of protective tariff upon manufactured goods, with absolutely no protection to agricultural staples, is an injustice, and that if we shall continue the present form of imposition of tariff the farmer must, as declared by me in the beginning, buy at the highest price in the world and sell at the lowest price in the world, seems to me to be beyond dispute. The whole theory of protection and the whole efficiency of its maintenance before the people of the United States have been upon the idea that the United States was the greatest market in the world, the best market in the world; that its toilers were paid higher wages; that there was more opportunity here than anywhere else under God's sun.

If that be true, then the manufacturers have received better prices; they have had greater stability in the market in which they have had to sell than prevailed anywhere else; and therefore the farmer of the United States has had to pay higher prices. Everyone knows that the home market has never been sufficient to absorb the great product of agricultural staples in the United States, and that the man who has produced cotton year after year and wheat year after year, and tobacco and rye and hops, has been looking vainly for the time when manufacturing should have been so stimulated by the farmers' unselfish willingness to support protective tariff that all the staples produced in the United States would be consumed here.

On the contrary, all the surplus staples have been sold in the markets of the world at the world's free-trade prices, and the world's free-trade prices have controlled the domestic price. The American farmer has received in England the English free-trade price for his agricultural product; and, more momentous to him, he has received that same price for all which he has sold at home, and at the same time he has paid the protective prices for the goods which he received in exchange.

In so far as the pending bill contains any intentional protection—and some of the protection which it does contain, I am grieved to learn, is unintentional on the part of some of the gentlemen who propose amendments to the schedule—it is necessarily in behalf of labor. The only ground of morality upon which the protective doctrine can stand is that our people in the United States—those who toil, not those who live off the toiler—are of more value to the sum of human progress than any other people in the world.

Protection is for the labor of this country, to guard it against the industrial fight inaugurated in the pauper lands of the world. How can any man say that the hand which has toiled in mills, in factories, and at the forge must be guarded from competition with pauper labor abroad, but that the farmer of the United States must go into the world and compete with the most degraded labor there is on the face of the earth? If any man can contend it here, I hope he will be able and will have the frankness to contend it before his agricultural constituents. Put it in that exact form of truth, for that is what it is. The farmer sells in open competition with all the pauper labor engaged in agriculture in all the world, and the agricultural labor in other lands than this receives less compensation than a toiler of the same land in any other industry.

One of the great elements in the consideration of this bill, as enunciated by the very able Senator from Rhode Island [Mr. ALDRICH] upon its presentation, one of the essentials which he proposed, was that the law should endure for a time. I take it there will not be very much prosperity in Omaha resulting from expectation or realization of tariff, nor in any other place in the United States, long to endure through expectation or realization of a new tariff enactment, if we are to be plunged anew into the agony of a tariff fight before the people of the United States next year or two years later.

I fancy that our friends, who have had to make so many apologies within the last few months that they are adepts in formulating and presenting them, would give to us next year this idea: "Prosperity was ready to spread her benignant wings over the people of the United States. Omaha, the greatest city of the world, felt the reviving effect of the prospective protective tariff; but just as soon as we got the bill passed we realized that the people were intending to agitate for its repeal, and all prosperity came to a sudden stop. The people are to blame, and not the framers of the law, and not the political party which proposed the law."

Let us have this bill just, and it will endure. It is a homely truth, but it is absolutely the truth, that into every tariff bill of recent years, perhaps from the beginning, there has crept the deadly poison of wrong toward one great class or another. The wronged class has always agitated for redress, and, happily for the dignity and hope of America, any class, however small, which agitates for the redress of a real grievance can find plenty of support from the noninjured classes of the country.

Mr. President, I should like to see the pending bill passed in such form that it would endure, with slight modifications at most, for many years, because this world is waiting for some other reforms than the revision of the tariff. Weightier matters than this pause on the threshold of the Senate Chamber and the other House of Congress. There are mighty questions of principle which the people desire to see considered here, and I shall hope that the tariff bill may be so framed and may be so acceptable to the mass of American voters that there will not be any great urgency nor any haste nor any political madness directed in behalf of its immediate repeal.

I stand entirely within the lines of protection in proposing this amendment, because I do believe in the policy of protection, because I think that self-preservation is as much the law for a nation as it is the first law of nature. I did not believe in this particular method of protecting the farmer when I first heard of it. The distinguished Senator from New Hampshire [Mr. CHANDLER] now occupying the chair inquired of me the other day, when the amendment was proposed with some few remarks by me in support of it, when I first came to a knowledge that

tariff was a robbery of the farmer. I replied to him, as became my weakness, very inefficiently, but truthfully, that I thought this system of imposition of tariff, so-called protection, was a robbery of the farmers just as soon as I had the opportunity and the occasion to look into the question to such depth that I found the injustice of it.

No man in this Chamber who shall oppose the amendment was ever more determined against the idea than I was. If, in answer to the Senator from New Hampshire more fully than I was able to answer him the other day, because of not desiring to continue the discussion, I may be permitted to be reminiscent to this extent, I will say that a man named David Lubin brought this proposition to the Transmississippi Congress three years ago, when I was chairman of the committee appointed by that body to consider the question. I was full of zeal for the farmer, for free silver, and for the Republican party. I had just been elected a Delegate to Congress from the Territory of Utah. I was as grateful to the Republican party as the Republican party at that time professed to be grateful to me for the great result achieved in the Territory.

When Mr. Lubin offered this, I said to him, "Free silver is the remedy for the farmer." He answered that he would not contend against that idea, but the realization of it was too remote. I then stated that protection of manufactured goods would so stimulate the consumption of agricultural staples in the United States that we would soon cease to be exporters; and then, with high protection on corn and wheat, on cotton and tobacco, on hops and rye, the farmer of the United States would set his prices for himself within the great domain reserved to him by legislation.

I accepted and contended for the Republican interpretations of the tariff, as I had never been brought into any other than remote contact with the schedules, and when it was put forth as a cardinal doctrine of the Republican party that protection on manufactured goods could and would eventually give efficient, substantial, and commensurate protection to the American producer of agricultural staples, I believed it.

Heaven forgive me, I was instrumental in defeating Mr. Lubin's proposition before that Transmississippi Congress.

I looked into the question and I found I was wrong. Having found that I was wrong, I had the zeal which a man usually has when he discovers that he has been treading a wrong path and chooses to take the right one. I said that at the first opportunity I would contend for equitable protection for the farmer of the United States, who all these years had borne the burden of a protective-tariff system, not only by payments from his pocket, but had sustained the protective-tariff system by his vote.

Mr. President, we have reached a new-world condition. We are in an era of falling prices. However sufficient may have been the remedy of protective tariff for ills which existed in an earlier day, however efficient it may have been to create a condition of industrial equilibrium which the fathers desired to see attained within the Republic, it is not sufficient now unless it shall be modified, unless it shall be added to, unless it shall be so thoroughly rebuilt as to answer and meet the requirements of to-day.

There has been a fall of prices so tremendous that the industrial world has practically been shattered by that fall. From within the Republican party the doctrine is enunciated that it is overproduction; and from within the Democratic party the same announcement is made, that it is overproduction. And the people starve because there is overproduction of wheat, and go naked because there is overproduction of clothes, and are shelterless in the land because there is an overproduction of houses. The plea is not sufficient. I think we should adopt some other policy than that which forces us to make such an answer to misery.

It is the duty of lawmakers to confront the new condition, to rise to the same plane of devotion to the interests of all the people of the United States that our fathers stood upon when they formulated the first great act for the protection of the industries of this country. That was new. They occupied hitherto untrodden ground in this country. Why should not the lawmakers of to-day, equally patriotic, animated by the same spirit, say, "We will meet the conditions of this time with the same sacred devotion to the interests of the people that our fathers showed when they met and conquered difficulty."

There have been two causes for the fall of prices. One has been the multiplication of all kinds of labor-saving machinery, by which one man has been able to perform, through the assistance of steel and iron and wood fashioned cunningly to his hand, the work which was formerly done not alone by ten men, as the Senator from Texas [Mr. MILLS] stated, but often by a hundred or a thousand men.

Another cause of the fall of prices has been the withdrawal of a large portion of the power of the people to buy. It follows, naturally, that you can not sell what no one else has the power to purchase, and that excess in the stock of produced articles necessarily tends to a fall of prices.

Mr. STEWART. May I interrupt the Senator from Utah to make a suggestion on one point?

Mr. CANNON. It never interrupts me to hear the Senator from Nevada.

Mr. STEWART. I know it is the popular idea that the use of machinery has produced a great fall of prices. That is true as to the articles upon which machinery operates, but there is a countervailing force. In the intellectual development of the country new articles, new luxuries, are invented that are high priced and bring up the average. On an examination, if you take the average price of all commodities, including new luxuries that have been created since machinery has made the common article so cheap, you will find that it has raised the average to about the original level. I do not believe there has been a fall of all prices. If you go into any household you will find high-priced luxuries created by the genius of man. Take the plumbing and the painting and all that is done in the house, and you will find that the average cost of furnishing that house, or the average cost of commodities in the house, will be as high to-day as fifty years ago. That ought to be taken into account in studying this question.

Mr. CANNON. Mr. President, before I shall conclude, I hope, if I do not trespass too much upon the time of the Senate, to submit a brief observation on the fall of prices induced in special lines and within certain circumscribed areas by inventions in the mechanical arts. In the main, I agree with what the Senator from Nevada has stated. I am not proceeding now to discuss this dual proposition in detail. I put forward, as a generality, the declaration that falling prices have been produced in part by the invention of labor-saving machinery, so sudden, so almost miraculous, that the people of the world have not been able to keep pace socially and in the application of law to the needs of men and customs to the requirements of men with this wonderful development in mechanical arts. It will be no news to Senators here for me to declare that I regard as the chief factor in the fall of prices the restrictions upon the money of the people.

Mechanical development is a blessing to mankind. God never gave an inspiration to the mind of man, in poetry, in art, or in mechanics, except for the blessing of the world. It is our fault if we turn it to a curse. Money restrictions are not a blessing. Mechanical development which has led to a fall of prices destructive to the opportunity of people to buy in some slight direction is a blessing, but the money restriction placed upon the people which forbids them to buy because they have not the wherewithal to pay for that which they buy is an unmitigated curse.

Falling prices have come with terrific weight upon the manufacturers. No one disputes that. Mills are closed; factory hands are idle; warehouses are overstocked with goods. The shelves of mercantile establishments rot away with their burden of goods which can not be sold. Therefore the manufacturer can not have good prices.

But under any distress which threatens the manufacturer he has opportunities to ward it off that do not exist with the agricultural producer. The trust in the United States is the absolute outgrowth of the spirit of self-defense and self-preservation which animates the manufacturers.

When prices fall and the people have not the same extended power to buy, the manufacturer of one town joins with the manufacturer of another town, and they combine together to hold up the prices of their product. The result has been trusts; trusts which will go on, I fear, stimulated and defended as they are in this country, until we shall see the natural result, which will be the taking possession of all natural opportunities by the one great trust, the Government, in order that they may be administered for the good of the people.

The trusts are making Populists of the people of the United States. The trusts were organized to withstand the fall of prices, and they are used to fight against some of the remedies for that fall proposed by our friends the Populists. If they shall continue to demonstrate that the greater the combination the cheaper the article to the consumer and the better wages paid to the producer, they will have taught to the people that in order to have absolutely just prices for that which you buy and absolutely good wages for your daily toil there must be one gigantic trust, under the name of the Government, whose profits go to the people. That is the result which they will produce if we continue unrestrainedly in the same line in which we have been proceeding for some time past.

The farmer can not make these combinations. He is their victim. The farmer knows nothing in advance concerning what he will get for his product. It is largely true of the whole country, it is especially true of that region of semiarid America from which I come, that there is no science more exact than that of agriculture. The farmer can tell almost to an hour largely all over the country, and absolutely within the semiarid region, how many days of toil he must devote to the production of a given quantity of agricultural product. After all, that is a better test of the cost and enables us to form a better judgment of the cost than the number of dollars that have to be paid for anything. We have gotten so that we make a sacred standard of the dollar. The real

standard which God Almighty set was how many pulse beats of the human hand it took to produce anything, how much of labor it took to create it. That is the measure; and we will never have righteousness in social economy until that is not only a method of judgment, but is the finality of the judgment.

The farmer can only tell how much he knows it costs in toil and sweat to produce a bushel of wheat or a bale of cotton. My distinguished friend from Georgia [Mr. BACON], who is to benefit his cotton producer by a tariff, may pass through the whitened fields of his State and say to the men engaged in the production: "Taking the years by and large, my friend, you know just what time in the year you have to begin your labor; you know what time in the year you have to devote yourself and the help of your assistants to any given stage of this production; you can tell in the dawning springtime precisely how much of labor will have been devoted by you to the production of a bale of cotton. But can you tell me whether you are to get 5 cents or 16 cents a pound for your cotton?" The farmer will have to answer, "No." He has no means of setting a price on his product; nor can he have advance knowledge of what that price is to be.

I have seen men engaged in the wheat fields. I have watched their labor from the time they sowed the seed through all the steps of irrigation and harvesting and thrashing. I have asked the farmer how much he was going to get per bushel, and he has always answered that he did not yet know; that he found out from his local merchant, who not only set the price of the goods which the farmer bought from the merchant, but set the price of the goods which the farmer sold to the merchant, and the farmer had no guess on it either way; that the local merchant found out from the commission house in the nearest large town; that the commission house ascertained from Chicago, and that Chicago ascertained from Liverpool. Some man in Liverpool who never saw an American wheat field, and some man in Liverpool who never saw an American cotton plantation, is the man from whom the American planter and the American farmer receives dictation as to the price of his commodity.

Congress proposes to supplement the power of the local manufacturers within the United States to combine together for their own protection and benefit by giving to them the aid of law. If you vote against this proposition, you propose to vote to deny to the man who most needs it that power of protection and that particular benefit which tariff acts are supposed to bestow upon all American industries alike; and you will leave the American producer of agricultural products still the victim of free-trade prices.

There is a threat of a continued fall in manufactured products as well as continued fall in agricultural products. We stand on the Atlantic Seaboard and gaze through purblind eyes into Europe, thinking that the land from which the menace was first directed against us, the land from which we got most of our thought of political economy, is likely to descend upon us with an avalanche of manufactured products to destroy the American market. We are looking in the wrong place. There rises an industrial power in the Orient which will do for the manufacturing industries of the United States precisely what has already been done for the agricultural industries in this country, and no protective tariff will avail you.

We pay an export bounty to the Chinaman of 100 per cent on all he sends to this country, and we rear an import duty in his behalf of 100 per cent on all he buys from us by the system of exchanges permitted under the gold standard. The manufacturer who thinks that 30 or 40 per cent or 75 per cent or 100 per cent will be sufficient protection for him when that wonderful people of the Orient shall have risen from the ashes of their past and shall assail the industries of the United States will find himself sadly mistaken.

Mr. President, I do not think that the fall of prices is a general advantage to the world. It would be true if all things fell exactly alike, that is, in exact relation to each other, but there are so many things which do not fall. As a commodity goes down, public taxes, public salaries paid out of public taxes, the demands of a luxurious civilization, rise in proportion to the fall of commodities in the market, and so we can not have that exactitude of relation which would make a general fall in prices advantageous to the people of this country.

I do not contend that a fall in prices directly resulting from a mechanical invention ought to be an evil. We simply ought to provide to prevent any evil effects from that fall. But we do not thus provide; we have come to a strange social condition. If Mr. Tesla addresses himself to a financier, a politician, or even a minister of the gospel and says, "After years of investigation I have discovered a means whereby I can telegraph from one place to another without the use of a wire; I can put in a million of my instruments in the United States and telegraph from one to another and no two will conflict," the politician, the financier, or even the minister of the gospel answers him, "Form a joint stock company quick and let me in on the ground floor."

No tale of physical possibility is too wild for men to accept in this time of miracles in physical advancement. But let some man who has worked for years in his study evolving plans for the betterment of men go to the politician, or to the financier, or in some instances even the minister of the gospel, and say, "I have discovered a method whereby we can make the application of law more just to all the people and the disposition of nature's bounty more equitable to all who need; I have discovered a method by which no child shall be without shoes, and no man shall be hungry, and no woman shall cry because there is want in the home," and that same politician and financier, and even perhaps the minister of the gospel, will answer, "This is my busy day; call to-morrow."

We have not time nor willingness for the consideration, to say nothing of the acceptance, of great social truths.

Mr. President, there is a righteous and world-wide remedy for falling prices. I shall not apologize to the Senate for stating what that remedy is, nor shall I feel that the time has been wasted, by me at least, no matter how much of an infliction upon the Senate and upon the country, which is devoted to a declaration that this fall of prices will go on until we restore money justice to the people of the world—not only to the United States, but to all the world. Some of my friends of the bimetallic cause in this Chamber have authorized me to say for them, as I say for myself now, that this bill for a protective tariff will not restore prosperity to the American people in any general sense. It will not give to the people the power to buy, no matter how easy it may make domestic production.

We must have a wider basis for the money of this world and the business of this world if we would have prosperity. When we make the dollar measure too much of everything else in the world, then the wise investor who likes to have his wealth in the thing least subject to mutation puts his wealth in dollars and hoards them. If you make dollars less attractive to the investor, and the things which the people produce by toil a little more attractive to the investor, there will be more dollars go into things, and there will be more dollars in circulation in the United States and the rest of the world. No labor is ever uplifted under an appreciating money standard. I challenge contradiction at any time upon this assertion: Labor is not generally uplifted under an appreciating money standard.

Is the protective tariff for the uplifting of labor? So the teaching has been. But it can not elevate toil under that appreciating money standard which now exists in the United States and throughout the world. Not only should there be, and not only will there be, I think—if I also may pose as a prophet, since the rôle has been taken up this afternoon—a restoration of silver to the money of the world, but there will be such wider expansion of the money volume as the needs of the people of the world shall dictate.

Does any man in his senses suppose that a great, intellectual, courageous people will forever submit to having general poverty simply because the thing with which we measure commodities has been contracted? That thing created by law called money is not now sufficient to do the measuring of to-day; and as we can get nothing without its first being measured, we can not get it except we have a sufficient volume of money with which to measure it. That is true of all the world, but what folly without a parallel it is for the people of the United States, a debtor nation, to permit conditions to prevail which essentially depress the price of that with which they pay their debts!

If a farmer deliberately did that, the probate court in his county would send him to a lunatic asylum. If he practiced that in his private business, his friends and relatives, his wife and children, who had been defrauded by his folly, would have a guardian appointed for him. The people of the United States are doing it; and yet we are told that every man who raises his voice in remonstrance must be either "heretical," to quote the word of the Senator from Nebraska [Mr. THURSTON], or an anarchist, to use the word which was so much abused last year.

We pay our interest and other money obligations to the world in money, of course—$600,000,000 of it every year, some writers say; but we get the gold for such payment from the commodities which we sell to the world, and we are engaged in reducing the price of these commodities—agricultural staples—so that our creditor shall have twice as much in payment of any given dollar of our obligation to him as he could have gotten when the debt was incurred. And the opponents of that idea are called "heretics" and anarchists.

The creditor nations of the world are forcing the silver-using nations to the gold standard; and they are doing it while we are waiting on international bimetallism. Japan, for the sake of being able to borrow, has gone to the gold standard—not as the gold-standard press and its advocates would lead the people to believe, for while Japan has made her coinage at the ratio of 32.34 of silver to 1 of gold, yet she has done it by giving to the gold yen twice the value it had before, so far as value can be given by legislative enactment. Peru is being forced to the gold standard. Every

debtor and every borrowing nation is being crowded in these critical days by the gold power to go to that standard, so that after we shall have finished our international minuet in behalf of bimetallism there will not be any country on the earth to join with us in the effort.

There is not time here and now, nor is there occasion at this hour, to discuss the question of independent bimetallism. But I ask permission of the Senate to print as an appendix to my remarks an article published in a magazine called Money, issued at New York, written by Hon. Charles A. Towne, under the title, "Is independent free coinage of silver practicable?" I am satisfied that the Senate will consent rather than to impose the use of the time for me to read the article.

The PRESIDING OFFICER. If there be no objection, the paper referred to by the Senator will be printed in the RECORD.

Mr. CANNON. Mr. President, I stated a little while ago that we gave an export bounty of 100 per cent to oriental producers of agricultural goods and to oriental producers of manufactured goods, and that we reared a wall of 100 per cent protective tariff around the Orient to prevent those people from receiving our goods. The explanation of that statement belongs properly within my brief, cursory statement of the general remedy for the ills from which the agriculturist is suffering.

Take the producer of cotton in China, for China does produce cotton, though not much of it reaches the markets of the world yet, but it will. Russia is going down through Manchuria to reach the Yellow Sea. There is a secret arrangement between the Czar of Russia and the Emperor of China by which she can establish a military outpost every 10 miles, and she proposes to guard those outposts by railway and telegraph lines, which they are ostensibly themselves to guard, and thus she will open a vast region, where, within the latitudinal extent of 14 degrees, you can produce upon the same soil both wheat and cotton growing side by side. I am advised by a gentleman who comes from the cotton-producing States that the latitudinal range of that production in the United States is only 4 degrees; that, perhaps, with the exception of Texas and the Indian Territory, you can not produce from the same land both wheat and cotton. When the Chinaman gets into the markets of the world——

Mr. BACON. The Senator is mistaken as to the limit of that range. I have seen the same thing in the upper part of the State of Georgia, in which that can be done. In the upper part of the State, in Floyd County, we produce both wheat and cotton.

Mr. TILLMAN. It can be done in every part of the State.

Mr. BACON. It can not be done in the lower part of the State.

Mr. TILLMAN. It can be done in all that section of country except in Florida.

Mr. CANNON. I did not quite grasp what the Senator from Georgia said. Is the latitudinal range of cotton in this country greater than 4 degrees?

Mr. BACON. I did not understand that to be the particular thing to which I addressed my remarks. I understood the Senator to say that there was but a limited territory in which both cotton and wheat could be raised on the same land. I understood him to limit it to Texas and some other portion of the country.

Mr. CANNON. The Indian Territory.

Mr. BACON. Yes; the Indian Territory.

Mr. CANNON. I was so advised by the very able senior Senator from Louisiana [Mr. CAFFERY], who is not now here. Yesterday I made the inquiry, not being certain as to the facts, and I have repeated his statement substantially as he made it to me.

Mr. BACON. I think it is substantially true that the territory in which both of those products can be advantageously raised is limited.

Mr. CANNON. It was only a general statement, of course.

Mr. WHITE. If the Senator will permit me, I observe, looking at the statistics of the Agricultural Department with reference to the production of wheat, that, while it is true that wheat is produced to some extent in the cotton States, the production is not very extensive; I do not know what the capabilities may be, but the production is limited. On page 596 of the report of last year it is shown that it is not very great comparatively.

Mr. CANNON. I thank both Senators for the information.

In general it can be maintained—it certainly is undisputed—that the agricultural producer in China, the man who raises cotton and wheat, has not only the advantage conferred by nature, but he has a great additional advantage, if it be an advantage, in the cheap labor of the country. Against those things a protective tariff is supposed to erect a guardian wall; but, Mr. President, the producer of staples in China receives under the money system of the world, the gold standard, 100 per cent of export bounty, and the producer of manufactured goods in China has 100 per cent of import duty arising from the maintenance of that standard.

The producer of cotton in China will sell his cotton in the same markets, at the same prices, under the same exchanges as the Southern planter will sell his cotton, and the Chinese producer of cotton will get 10 cents in gold while that is the metal in which the world's exchanges are written. He will take it home to his country and he will exchange it for 20 cents of the money of his country at the present ratio of gold and silver in the commercial world, and with that 20 cents he can pay 20 cents' worth of the obligations which exist upon him as a member of the community. And this is equivalent to an export bounty of 100 per cent. But the unaided, unprotected American planter will sell his cotton for that same amount of 10 cents, and will bring it home, and it will pay just 10 cents of the obligations which he must meet as a member of the community. The system which works so advantageously to the oriental producers of agricultural staples is reversed when you come to manufactures which those countries import. It takes 200 cents of the money of their country to make $1 of the money of the world.

Not long since a steamship company doing business upon the rivers of China wanted to renew its fleet. It found that under the changed conditions which had arisen in the money of the world within twenty years it would cost $10,000 of the money of China to buy one of the little launches which had formerly cost $5,000 in the money of China and $5,000 in the money of the world. Instead of buying those ships from the United States or from Great Britain, they made them right on the banks of the Chinese river, for under the gold standard they have 100 per cent of protection against the gold-standard world.

We can not withstand that competition. Agriculturists suffer most from it now, because rivalry is reaching out from Argentina and from Uruguay, as well as from all the countries of the Orient, and taking away the market where the farmer of the United States formerly sold his surplus, from the proceeds of which all the balance of trade was paid and all our civilization was maintained. But the manufacturer will have his day of darkness.

Mr. President, I ask permission to insert here some documents relating to the special interest of agriculture in this question, being the remarks of Mr. M. G. Boutmy before the Imperial Economical Society at St. Petersburg, April 9, 1897, and the views of the economists gathered at the agricultural congress in Budapest. If I may have the permission of the Senate, I desire to have them inserted as part of my remarks.

The VICE-PRESIDENT. If there be no objection, that will be the order.

The papers referred to are as follows.

[From the address of M. G. Boutmy before the Imperial Economical Society at St. Petersburg, April 9, 1897.]

I do not know whether the united efforts of France, the United States, England, and Germany will shortly rid the world of the tyranny of gold, the effects of which are becoming more serious daily and are tending to the ruin of producers; but I hope and trust that they will succeed, in the interests of the commerce, progress, and prosperity of the whole world, and of Russia in particular. But so long as the monetary schism exists which divides the world into two camps—the yellow camp, where agriculture is ruined, and the white camp, where the farmers are protected from the crises that occur in the yellow camp—I fail to understand how any Russian patriot can desire to see his country go over from the white camp to the yellow camp, or how a Russian minister can pursue such a reform with so much tenacity, without regard to the consequences, and in spite of the law and the legislature.

The gold standard will mean the ruin of agriculture, manufactures, and commerce—the ruin of Russia as a nation. Moreover, the reform that proposes to bring it about would be a disgrace to our country. Instead of maintaining the par of our credit ruble at 1 silver ruble = 4 silver francs, in accordance with the law and the obligations entered into by the State, it is proposed to ruin Russian agriculture, in order to make 1 credit ruble equal to 2½ francs in gold. It is a combination of prodigality and bankruptcy. Very well, but we neither wish to deceive others nor be deceived ourselves; we simply desire to maintain the law in its present state, and this we can and ought to do.

The gold standard, while ruining debtor countries like Russia, is a source of profit to none save the international bankers and speculators. I do not know what motive the minister of finance may have in advocating this baneful régime, but I fully realize that the time has come for all friends of the Russian fatherland and Russian social order to unite and exert all their strength in order to prevent the accomplishment of this reform. If we are to be vanquished, let the calamity come upon us while fighting it to the last.

VIEWS OF THE ECONOMISTS OF THE INTERNATIONAL CONGRESS OF AGRICULTURE AT BUDAPEST (SEPTEMBER 17-20, 1896) ON THE MONEY QUESTION.

Alphonse Allard, director of the mint of Belgium, Brussels: All the nations that accept but gold ruin themselves; the prices go down.

The products of the earth having gone down by 50 per cent, the soil itself must go down by the same per cent.

The decrease of prices caused by the present standard of money has arrived at 50 to 60 per cent.

To the demonetization of silver in Germany in 1871, in the Latin countries in 1876 (August 5), and since then successively in all Europe we must attribute the changes wrought in the relation of value of the precious metals.

The prices have gone down by 50 to 60 per cent everywhere where the gold standard has been adopted.

The crisis of low prices would be arrested by the remonetization of silver or by the creation of a bimetallic union.

All the countries are prepared for that step. The United States are on the point of marching alone.

Dr. Otto Arendt, member of the Prussian Landtag, Berlin: The variation of the relation of value must be attributed not to the change of the conditions of production, but to the modification of monetary legislation.

The fall of the value of silver, the increase of the value of gold, have accentuated the differences of values and almost changed an exception into a rule. Value is a factor of price in the international competition. In proportion as the differences of the standard of the two precious metals increase the producer of the countries with an inferior money can lower the prices of the

world's market by his simple offer to sell. An efficient exportation is not even necessary.

Nowhere is there a thought of the introduction of silver monometallism. But a bimetallic union would raise and consolidate the price of the white metal, would make the differences of values an exception, would establish similar conditions of production everywhere, and would arrest the depression of prices in the world's market. Even the partisans of the gold standard expect from bimetallism a lowering of the value of gold; that is, that desirable "goldverschlechterung," or an increase of the price of merchandise in proportion to the natural (not artificially raised) value of gold.

If the principal countries coin gold and silver at a fixed standard or fixed relation of value, the price of the precious metals on the regulating markets can not waver from that fixed relation. This would mean the stopping of the fluctuations of the relation of values and the ceasing of losses produced by these fluctuations. All the countries have an equal interest in the realization of this agreement, and the opposition to this needed reform will indeed be overcome one day. Even if England will not join, bimetallism will be introduced without and against England.

—

Barfoot-Saunt, delegate of the Central Chamber of Agriculture, London, (gold monometallist): The cause of the variation of the relation of the precious metals is the cheapness and the great quantity of silver produced in comparison with the production of and the demand for gold. In course of history gold always was the more precious metal; equally, the demand for gold was never inferior to the offer of the same. As to silver, the demand for it could always be satisfied, and even oversatisfied. Thus the relation of gold to silver sank from 1 to 11.8 in 1581 down to 1 to 16 in 1813. This decrease of the value of silver took place between 1867 and 1874 to such an extent that France and the Latin Union were obliged to cease coining silver in order to escape a financial catastrophe. But this diminished the demand for silver still more, and lowered yet its value in comparison with gold.

The remonetization of silver would produce a still further decrease of the cost of production. It is just this cheapness which permits the producers of the countries with the silver standard to compete with the gold countries.

The reestablishment of the former value of silver respecting the former relation between the two precious metals (16 to 1) would really mean the demonetization of gold and the establishment of the silver standard in all the countries of the world. The relation of value between the different articles of consumption would be absolutely the same as to-day, except the actual debts of the gold-standard countries, which could be paid by a depreciated money.

There is absolutely no prospect that the relation between the two metals will ever be rearranged by the gold countries.

—

Charles Baross de Bellus, political economist, Budapest: The cause which brought about the variation in the relation of value between the precious metals is the preference given to gold by certain countries and the colossal power acquired by the keepers of gold in the domain of political economy. By artificial means they arrived at unduly augmenting the demand for gold, a demand which could not be reached by the production of the yellow metal. The special increase of the value of gold as against silver (for the value of gold rose without that of the silver going down in its purchasing power) augmented still more the value of money.

The silver still continued to serve as standard in a great many States important from the point of view of political economy, but in the world's market gold prevailed. Thus the agricultural products have to struggle not only against the general "hausse" of money, but especially against the "hausse" of gold. This means: You must, for a certain quantity of gold, give in exchange a greater and ever greater quantity of products, especially breadstuff. This brings about the lowering of the prices of the products.

The remonetization of the value of silver would make cease the ever-continued efforts of raising by force the value of gold; one would suddenly see on the market a much more considerable quantity of "sound money;" the demand for money would be easier satisfied and its value in consequence fall to a normal point. On the other hand, the price of grain would rise without fail in a certain measure and for a certain time. For all these reasons I consider bimetallism as a very important factor, but not entirely as a panacea for all the economic faults. In the interest of the agricultural population bimetallism must be established as a rational part, but, as I recognize, only as a part of a new system of political economy.

In my opinion the stardard of the still remote future times will be neither gold nor silver, but paper money sustained by a special convention between the interested States, and will thus be guaranteed by the credit of the human race.

The establishment of international bimetallism is a question of might, pure and simple. Bimetallism will surely be established if the poor men and the farmers will prevail in the direction of political economy in the world. It will not be established if supremacy remains with the bankers and merchants.

—

D. F. A. Bauduin, president of the Dutch Society of Agriculture, member of the National Society of Agriculture of France: I express my full and entire conviction that the only remedy for the critical condition of agriculture in the countries with an exclusive gold standard consists in the necessity of a union of all these states for the reestablishment of the bimetallismof gold and silver in a certain proportion.

No one can deny that if silver were again admitted in the international transactions in a fixed proportion with gold, if the governments again opened their mints to the coinage of silver, the great advantage of the British Indies would cease.

Undoubtedly also the Argentine Republic would then see its value at par in no remote time, if it could revert to specie payment in silver instead of its extremely depreciated paper.

Everyone can easily calculate that in this case the competition with this fearful enemy would be much easier for us.

Bimetallism is our only hope for an amelioration which is not very far removed.

If we had to wait till the production of gold in the world surpassed to such an extent that of silver that the rôles would be equal or reversed, we would expose the working and producing population to that cruel and cynical exploitation which it suffers now for twenty-four years on the part of the great money lenders, for there is no doubt that the opposition to bimetallism proceeds from this side.

This class enjoys constantly the great advantages which the gold of their rents procures to them by the general fall of prices, "baisse," of the products, which, for example, has brought it about that the agriculturist must give to-day two hectoliters of grain for £1, while formerly one single hectoliter sufficed.

It is to be remarked that this general fall of prices of the agricultural products for a number of years went apace with the fall of the price of silver, and in almost equal proportions.

This coincidence must find its explanation in the fact that in 1873 a sum of silver valued at 2,000,000,000 livres sterling ($400,000,000) had been excluded or demonetized for the international circulation. In excluding the silver from the mission which it fulfilled before together with gold, Mr. Chaplin, of London, has well shown that there was in circulation before 1873 about 3,600,000,000 livres sterling. Since then Europe and America must content themselves with 1,600,000,000 livres sterling, with a yearly production of gold which Mr. Chaplin values at only 30,000,000 livres sterling.

There is consequently less than one-half of the volume of money at present that there was formerly as the metallic basis of exchange and of all transactions.

This explains clearly the general fall of prices by the proportionate scarcity of money which serves to pay for products.

Instead of seeking the explanation of the general depression in the diminution of the volume of money, the silver being driven from the international service in Europe, the monometallists seek by all kinds of false reasonings to complicate the question and to render it frequently incomprehensible to most people by enveloping it with a cloud of so-called scholarship. It is especially in England, in the great city of London, that the opposition to bimetallism seems to have its seat, and one considers pitilessly, with an almost criminal cynicism, how much the country suffers by the destruction of its agriculture and even to a great extent of its industries.

Not long ago the director of an English company of navigation declared that he would soon be obliged to have his ships constructed or repaired in the Orient, where silver was in circulation, and that it would cost him half of what it would cost in England.

The textile industries, which develop so enormously in the Indies, Japan, and China, will soon have the same advantage over English manufactures.

—

Count André Bethlen, deputy to the Hungarian Parliament: The demonetization of silver, producing an insufficiency of money, respecting means of circulation, is one of the principal causes of the general debasement of prices, especially those of grain.

The restoration of bimetallism by international action will have as a consequence the rise of prices, the diminution of public charges, and a very great revival in business transactions.

The rapid propagation of the bimetallic movement, as well as the importance of the personages who direct it, assure its future success.

—

Dr. Charles Bunele, attorney and political economy writer (Vienna), is against bimetallism.

—

R. Lacey Everett, member of Parliament (Rushmore, Ipswich): The closing of the mints to the free coinage of silver in the United States, in France, etc., has brought about the changes in the relation of values between gold and silver. As long as the mints were open to both metals, the old relation of the two precious metals could be maintained in spite of the great difference in the production of the metals. Since the mentioned mints have been closed, the two metals have continued to be produced at the ratio as before. But since silver has been excluded from free circulation in the markets which were open to it heretofore, and since gold must now accomplish the double task, it is but natural that the value of gold has been unduly pushed upward. By the term price one understands, to-day, gold. Owing to the rise of the value of gold, brought about by the increase of its demand (silver having been demonetized), grain and other merchandise are exchanged now for one-half of the quantity of gold paid before the demonetization of silver, while the exchange of merchandise and silver goes on at the same ratio as before. Owing to the fact that at the head of the British Government there is to-day a statesman who is a sincere partisan of an international understanding, it seems that there may be hopes for a betterment. English agriculture is progressively ruined by the actual conditions.

—

Louis Frankl, deputy to the Landtag and landed proprietor: The changes produced in the relation of value between the two precious metals can not be attributed, according to the given statistics, to an overproduction of silver, or this can have taken place only in a very insignificant measure. The changes in question have been provoked by the demonetization of silver in most of the countries, following the example set by Germany. These changes have been aggravated by the fact that gold, though increased considerably by production, has not by far increased to such an extent as would have been necessary in view of the enormous extension of its need for industrial ends and business requirements.

This change has exercised a very unfavorable influence upon the constitution of agricultural products. It is true that the baisse of prices has been produced to a certain extent by the decrease of the cost of production, and especially by the diminution of the existing means of circulation, owing to the retirement of paper money, which has taken place these last years on a large scale. But the decisive reason lies always in the great rise of the value of gold, for every increase in the value of money has as a necessary consequence a corresponding decrease of the price of merchandise.

This gives a considerable advance to the production of countries with silver and paper money, in view of the fact that the wages of labor, and consequently the cost of production of all the merchandise manufactured in the country, usually follow only very slowly the rise of the value of money. Since the countries in question must mainly depend upon the exportation of agricultural products, the competition will become considerably aggravated in this respect. This explains why it is just the agricultural products which are in the first place affected by the depression of prices.

The establishment of the silver standard, or, better, the creation of a bimetallic league strong enough to maintain a definite relation between gold and silver, would have as a consequence an increase of the means of circulation and at the same time a decrease of the price of money, which would be followed immediately by a considerable increase of the value of merchandise. On the other hand, the wages will follow only slowly afterwards; consequently the cost of production will become cheaper. All the public or private charges resulting from the introduction of the double standard would be paid in less dear money, and thus be borne easier. The countries which have actually a silver or paper basis would be less able to compete and could only flood the market with their products in a much weaker proportion. The economic consequences of a similar measure would then be extremely advantageous for the producer in general, first of all for the agriculturist.

An understanding of the interested countries in regard to an accommodation of the two precious metals could only be reached jointly with England, otherwise they would run a risk of seeing the gold dispossessed by silver.

—

Geza de Gerloczy, professor at the Royal Agricultural Institute at Kassa, Hungary: The gold standard is one of the causes of the depression of prices. It is a universally acknowledged fact that the introduction of the gold standard and the suppression of the white metal have lowered the price of our grain. With bimetallism, a system by which the fluctuations of the two precious metals would be equalized, we should have stable money; the sale of our products abroad would be carried on more advantageously; the prices of our products would not be exposed to those perpetual fluctuations. The relation between the two precious metals ought to be fixed in a stable manner and by international agreement, the only way to make it stable and to

prevent fluctuations; the establishment of a bimetallic union would then ameliorate the situation. These are the remedies to extenuate the agricultural crisis.

—

Charles de Alberti Givola, delegate of Argentina, agricultural engineer, Buenos Aires: Statistics show that the change between the value of the two precious metals can not be attributed to an overproduction of silver, for the quantity of silver produced is far from surpassing the growing needs of commerce and industry. It is its suppression for payment which has diminished its value. At the same time gold is sought more and more, especially since the establishment of the gold standard, and though its production has not diminished, it has not increased either in the proportion required by the necessities of industries and its function in countries with the gold standard.

Gold has become more scarce, owing to the destruction of half the volume of money, i. e., silver, and its demand has increased considerably. A by far greater quantity of merchandise is necessary in order to buy the same quantity of gold, and the price of goods, especially agricultural products in general, has decreased. But it is not gold alone which has provoked this baisse; also the multiplication of the means of transportation, the diminution of freight expenses, the development of international competition have exercised a great influence upon prices.

The restoration of the silver standard would produce an increase of money and better prices for the products, which would be favorable for agriculture; but at the same time the wages and other expenses of production would increase; life would become more expensive, which would tend toward leveling the benefits which the people hope to derive therefrom, and after some time the situation would become the same. The conditions of production of exporting countries would not be much modified, and the situation of international agriculture would not be much benefited.

To avoid a disordered monetary circulation, an agreement between the interested States would be necessary; but this seems hardly probable. The countries which have imposed to themselves great sacrifices to establish the gold standard would not enter into the proposed reform, and the certain absence of other countries would make the union worthless.

—

William James Harris, Beauworthy, Devonshire: To the suppression of silver as a general means of payment in some countries; to the introduction of paper money in lieu of all the other species of money. This exercises a considerable influence, because the nations of western Europe have an unfavorable opinion of the value of foreign money which they can not coin anew in their own mints.

If all the nations could be forced to admit silver money in a fixed, determined ratio with gold, countries like Argentina, Russia, and India would probably lose their important advantages in regard to their products. I do not believe that any group of States could force the nations who have a paper standard to adopt a metallic valuata. Moreover, certain States—for instance, the Argentine Republic—would be unable to retire their paper money from circulation and to replace it by silver which they would have to buy on the open market.

—

Hugo Hitschmann, editor of the Landwirthschaftliche Zeitung, Vienna: The cause of the variation of the relative value of gold and silver must be attributed on one side to the great demand for the yellow metal, in consequence of the introduction of the gold standard in a number of European States, though there was no great increase in the production of gold; on the other hand, to the demonetization of silver by the adoption of the system in question, though the production of the white metal has not diminished.

According to economic laws, the prices of merchandises go down when they are more abundant than money. Owing to the introduction of the monetary system by which silver is deprived of its character as money, gold has increased in value so that a smaller sum will buy a far larger quantity of merchandise.

The restoration of the double standard would bring about an increase of the means of circulation, a rise of prices of merchandise, and consequently economic prosperity.

Mr. Hitschmann urges strongly international bimetallism, in order to remedy essentially the economic situation and to arrest the depreciation of agricultural products.

—

Emile Levasseur, membre de l'Institut, professor at the College de France. (gold-standard man): One must attribute the changes to the considerable increase of the production of silver for twenty years; to less coining of silver in several great states, though in general the coinage of silver money by the mints is far from having diminished in the world as much as is said generally. The increased offer of silver and the decreased demand would have lowered the price of any merchandise.

If silver has sunk in value, has gold risen? I believe that there is a tendency to increase, though little accentuated. Indeed, the production of gold has increased considerably for twenty years. The procedures of credit have increased still more than the means of payment, which suffice entirely for the large trade. Gold plays an infinitesimal role in the exchange regulated by the bank. Statistics show that the wholesale prices of certain common merchandises are always at baisse. But is it the gold that has risen in price or the merchandise which has sunk in price? The retail prices have not diminished, or diminished imperceptibly, and the salaries—probably the most important factor—have increased.

The economy in the production and the abundance of the products are certainly the two principal causes of the baisse of the wholesale prices, especially in grain. The agricultural products have decreased in value because they are offered in larger quantities than before on the regulating markets, with a smaller cost of transportation from countries where the production is cheaper owing to cheaper wages, or to cheaper economic procedure of work (machines), or to small agricultural taxes. These are the great influences.

The species of money, however, exercises an influence. Countries with a silver standard are at an advantage when they sell their grain in countries with a gold standard. This advantage is shared in various proportions between the producer, the exporter, and the intermediary agents. If this influence were as great as certain publicists have said, India would be to-day covered with harvests and Europe deluged with its grain.

The consequences of the restoration of the double standard in the gold countries would be the gradual diminution of the circulation of gold, the rise of prices of most merchandises, first in wholesale, then in retail. The agricultural products would probably be among the first to profit from this baisse, and the wages among the last prices that would rise. The transition would be advantageous to the farmers, noxious to the laborers.

At the end of a certain number of years the equilibrium would adjust itself. There would consequently be no particular profit for anybody, except in long-term contracts concluded before the baisse (rents, obligations, pensions, trusts on property), in which cases the creditors would be robbed and the debtors profit. All prices would be raised and the country would find itself with a depreciated currency, in a state of unfavorable exchange, and a disadvantageous situation in general as regards its commercial relations with the foreign countries.

There is no hope for international bimetallism, but it is possible that a political majority would drag the United States to voting separately for free coinage of silver, which would become an argument for the bimetallists of Europe. As regards England, it uses the theory of bimetallism only as an article of exportation for the use of foreign countries!

—

Dr. W. Lexis, privy councilor, professor at the University of Gottingen (gold-standard man): The depreciation of silver in relation to gold has been produced (1) by the enormous increase of the production of the white metal within the last twenty-five years; (2) by the cessation of free coinage of silver in a certain number of countries, especially the Latin Union. Of a demonetization of silver one can, however, speak at most from November 1, 1893, since the repeal of the Sherman Act in the United States, for up to that time, i. e., twenty years, there has been coined or deposited for the circulation of bank notes a larger quantity of silver than ever before during an equal course of time. But, in spite of the agitation of the bimetallists, no state has been able to decide upon a legal recognition of silver in the former proportion of value with gold. Therefore the tendency is toward gold monometallism in spite of all difficulties.

There has, however, come no increase of the intrinsic value of gold; the variation of the relation of the two precious metals has been due solely to the diminution of the value of silver. The decrease of prices of several merchandises can be perfectly explained by the conditions of international competition and the diminution of the expenses of production and transportation. An increase of the intrinsic value of gold is therefore impossible, because the production of this metal has doubled within ten years, and because the average production of gold and silver is more considerable than between 1860-70 and 1850-60; because the stock of gold of the great European central banks rises to a quantity which would have been deemed incredible formerly; because in the important exchanges the use of coined gold is reduced more and more by the check and clearance system; because for several years the Bank of England has possessed always from twelve to fifteen million pounds of sterling more than the amount of its bank notes in circulation. Besides, all the branches of production and commerce have been in a favorable condition excepting agriculture.

The depreciation of silver has had only a minimal influence upon the constitution of the prices of agricultural products.

The creation of a bimetallic league—suppose that it could maintain itself—would undoubtedly raise the price of silver quite close to its legal relation of value with gold, but there would always remain a premium on gold which would have to amount only to 1 per cent to drive the gold from the daily transactions and to make of silver the only means of current circulation. Such was also the situation in France under the régime of the double standard before the invasion of the Californian and Australian gold.

The production of silver would surpass the actual amount so much that the legal value of silver as against gold would rise comparatively to its actual value on the market. If we admit the ancient legal relation between the two precious metals, it would rise to twelve hundred millions and more, in view that the European capital and that of North America would be extremely tempted to exploit the mines of Mexico and South America, and, indeed, with the best technical means of modern times. The consequence would be a great depreciation of all the money—that is, the increase of the nominal price of all the merchandise in the trade. As to agriculture, it might happen that it would derive no profit therefrom, because the rise of value of its products might be neutralized by the rise of wages and other expenses of production, and by the general higher price for the means of subsistence.

—

Andre de Llaurado, engineer, inspector general of forests (Barcelona): The monetary question may be summed up as follows: I. Unfavorable balance, not only commercially but financially. II. Scarcity of gold on account of the demonetization of silver and the increase of business transactions.

—

Dr. Rudolph Meyer, economic writer (Austria): In the countries with the silver standard—India, Japan, China—the prices of agricultural products have risen by 10 to 20 per cent since the period of 1865-1875. In the countries with the gold standard they have fallen by about one-third and sometimes by one-half since that period. I see the pernicious character of the gold standard for the states which have adopted it, in so far as they present themselves as exporting countries and not only as creditor countries, inasmuch as the silver valuata respecting the paper valuata (Argentina, for example, with 80 per cent) acts as a premium of exportation of grain and other products, and as a tariff of protection against the importation of merchandise coming from countries with a gold valuata.

It is very likely that the remonetization of silver in several great states would have as a consequence a very important increase of all the products and merchandise. But the encouragement which would result from it for agriculture, an agricultural and industrial overproduction, would terminate fatally in a general crisis. Thus the remonetization of the white metal would surely be more dangerous than its demonetization.

The European States will not decide to abolish the gold standard except under the pressure of the great political parties, and I do not see which these parties would be, in view that they would have to be recruited especially from the landed proprietors. It is true they are debtors for the most part, and the debtors are normally weaker than their creditors. But this pressure could be exercised by the American farmers, whose monetary situation is always very independent. If they succeed in conquering in the United States, the counter act will make itself momentarily felt in Europe, but I do not believe that it may exercise a lasting effect. I have not failed in its time to strongly advise against the introduction of gold monometallism, but I shall beware of participating in the agitation which demands its suppression.

—

Paul Orosz de Balasfa, landed proprietor, delegate of the Society of Agriculture, Hungary: In view of the fact that the production of silver is abundant and that this metal is little employed in industry, there is an excess of the white metal, and consequently a larger quantity of it has to be given as a price. On the other hand, the introduction of gold monometallism has considerably increased the price of gold. This has lowered the prices for agricultural products.

The restoration of silver would at all events have beneficial consequences—the rise of prices, more active trade and commerce, and the lowering of interests for borrowed capital, which is the most important question. There will be bimetallism, if the aims of certain interested groups can be avoided.

—

Leon Louis A. Raffalovich, counselor of state of the Bank of Commerce (St. Petersburg): The change of value between the two precious metals has been brought about, one may say, solely by the legislative measures taken in 1871 and from that date on.

These changes have produced a pernicious influence upon the movement of prices by provoking a baisse which has never had its like.

The reestablishment of the status quo ante is desirable in all respects. The establishment of the silver standard, pure and simple, does not present real advantages and is not possible at present, though more realizable than gold monometallism, which is not realizable at all.

A bimetallic union is the sole possible and acceptable solution. This system is well known; it has existed very long and its restoration would consequently only be the return to a normal condition.

Arthur Raffalovich, corresponding member de l'Institut de France, holds it unlikely that the countries which impose upon themselves sacrifices to reform their money in order to have stable money and to live a normal life with an unchangeable currency will enter anew upon bimetallism. He is a gold monometallist.

Mr. CANNON. Mr. President, speaking generally, the restoration of the money conditions which will enable the people to buy freely is the right remedy for the distress of the times.

A protective tariff alone will not do it. A protective tariff makes a country rich, and bad money laws make the people poor. What object is it to a Christian nation that we should build the general fabric so high to the ruin of the masses of the people who stand beneath the Government? The statistics by which we show that every person in the United States has got an average of a thousand dollars are no longer satisfactory. It is no use to make the country rich and the people poor. That is not a remedy for existing ills. But at present we can not get a just money law.

There is an alternative. If one class of our people, and that the largest individual class, the one upon which we must most rely, is to be compelled by conditions which exist in the world and by our method of making law to sell in a free-trade market, then common justice demands that they shall be permitted to buy in a free-trade market; and I renew here the declaration that, coming, as I think I have, to the comprehension of the justice of this case, I should prefer to stand for a policy which enabled the farmer to buy in a free-trade market if he must sell there, rather than to speak for and vote for a policy which compels him to sell in a free-trade market and at the same time buy in a protected market. A house divided against itself will not stand; and while this great proposition of inequity abides in the United States the people are not united—they are severed upon the one great vital proposition of life and the means of living.

But no party is going to propose free trade. Our friends of the Democratic faith, I regret to see, are torn by dissensions the moment some one of their Senators says that he is not afraid of the word "free" as applied to trade. And we who share their money views witness the harrowing spectacle of a quarrel about the tariff, which is not an issue before the American people and will never be made the vital issue again before the people of this country. No great party will stand on a declaration for free trade. It is foreign to the genius of America. We believe in ourselves and in our self-sufficiency. We believe that all the work and all the wages of America belong to Americans, and that as much of the work and wages of the rest of the world as Americans can get belong to Americans. No party will stand long in the United States on a free-trade platform, but no party will stand very long upon a platform one-half of which is free trade.

We can not have free trade in America any more than they can in England, and have the satisfaction of the masses. It is good for the rich and the powerful, who can buy where they please, but it is poor policy for the people who produce.

There is a partial remedy for existing ills, and there is absolute equity for the farmer of the United States under a protective tariff if the amendment I have offered shall be adopted. It gives to the American producer of agricultural staples a protection price, and that is all it does.

Mr. ALLEN. Will the Senator permit me to ask him if he has made an estimate of the expenses attending the administration of this amendment if it become part of the law? How much will it cost the Government of the United States?

Mr. CANNON. Calculated upon the exports of the calendar year 1896, it will cost the Treasury of the United States annually $47,944,580.

Mr. ALLEN. On the rates fixed in the amendment?

Mr. CANNON. Yes. The figures are slightly different from those which I gave in my remarks at the time the amendment was introduced, because those figures were based on computations for the fiscal year ending in June, 1896. I have been able since to prepare tables from which I give the figures for the calendar year 1896.

To fully answer the inquiry of the Senator from Nebraska, and in order to give a full showing upon this question, I ask the privilege of inserting the table which I have here, prepared from the reports of the United States Treasury Department. This table meets in detail the inquiry of the Senator from Nebraska and all similar questions which may be propounded.

The VICE-PRESIDENT. The table referred to will be printed in the RECORD, in the absence of objection.

The table is as follows:

Quantities and values of certain agricultural products exported from the United States from 1887 to 1896.

[From reports of the United States Treasury Department.]

	1887.	1888.	1889.	1890.	1891.	1892.	1893.	1894.	1895.	1896.

Mr. CANNON. Mr. President, if this amendment to grant an export bounty shall be accepted and shall become a part of the law, the Treasury of the United States will be compelled to pay out to private individuals, citizens of the United States, that immense sum of money, that great bonus, that largess of $47,944,580 every year, and more if we shall export more of the staple commodities.

Republicans believe in a bounty. I do not see how they can afford to vote against the amendment. They believe in governmental aid to the industries of the United States which can not stand alone. That is a general proposition, but it has not been applied to the farmer. He has been supposed to stand alone or fall. But the idea that it is right to extend governmental aid to any industry in the United States capable of development here which can not stand alone has been advanced from the beginning of the party until now.

I have here a few words uttered by William McKinley, jr., in the House of Representatives in the Fifty-first Congress, which will be found in the speech from which this extract is taken, in volume 21, part 11, of the CONGRESSIONAL RECORD. The present President of the United States then said:

> This is called a "sectional" bill. Now, what has this bill done? It has taken care of every product of the South, unless you except sugar. And it has given to the producers of sugar a bounty equal to the duty they heretofore have been enjoying—a direct and assured protection.

A bounty is called by the present President of the United States "a direct and assured protection."

> And we propose, Mr. Speaker, to go right on protecting the South. We propose to go on giving them such protection as will still further increase their industrial prosperity and development. We have done it for twenty years or more, and we will not stop so long as we have a majority in Congress.

I appeal to the Republicans in this body, who belong to the party which has a majority in Congress, to see that these words of the present President of the United States are vindicated before the American people, and that we shall give a direct and assured protection to the agricultural classes of this country.

The distinguished Senator from Rhode Island [Mr. ALDRICH], in his speech in the presentation of this bill, said:

> It is believed by the friends of the beet-sugar industry that we can successfully imitate the example of Germany in the rapid development of beet-sugar production. Germany has within four years increased her product by 50 per cent, and, as the result of her system of bounties, is now successfully invading the sugar markets of the world.

There is an inferential commendation of bounty. But why should it be limited to the one great agricultural industry of the United States which can be protected by a tariff? The production of sugar, either beet or cane, can be protected by a tariff, and there is no absolute need—if the tariff be placed high enough—why we should have a bounty; but the production of agricultural staples of which we export large quantities can not be protected by a tariff. That is why the bounty is demanded.

The farmer would not only get the $47,000,000 from the Treasury of the United States, but he would receive an enhancement in the price of his commodity in the domestic market to the full extent of the bounty granted by Government. The farmer sells his surplus abroad, and receives at home and abroad the world's price. He would continue to sell his surplus abroad and continue to answer the needs of the domestic market, and he would receive for all his wheat, whether exported or whether consumed at home; he would receive for all his cotton, whether sent abroad or used in the mills of the United States; for all his tobacco, whether smoked in Europe or America; for all his hops, whether they went into beer in Germany or into beer in Milwaukee, the world's price plus the bounty granted by the Government. That would yield to the farmer of the United States an enhancement of $225,000,000 per annum, speaking in round figures, on the normal production of those staples.

The manufacturer of the United States derives under protective tariff an enhancement of more than $4,000,000,000 per annum, and some of my friends on the Democratic side contend that he receives much more, if the figures given by the Senator from Texas show with any degree of correctness the average of the burden placed upon American buyers of manufactured goods.

The objectors to this proposition say that the Government can not afford the bounty. That is always the first proposition advanced by those who oppose the amendment. The distinguished chairman of the Ways and Means Committee of the other House gave out an interview to the press not long since, authoritative, I think, in which he intimated that there would be no trouble about the gold reserve when we should get the tariff law fairly at work; that there never had been any considerable withdrawal of gold so long as we had more revenue than expenses. Every man in this Chamber knows that the gentlemen who entertain the idea of a necessary retirement of the greenbacks rely entirely upon the excessive revenue to be produced from this bill in order to insure that retirement by stealthy action. If it be true that the bill will produce an excess of revenue, the greatest blessing which could come to the United States would be to have that surplus disbursed among the people equitably and honestly within the channels of trade.

But I waive that. I confess that I have no means even of forming an opinion as to whether the bill will produce a surplus of revenue or a deficit. I plead absolute ignorance on the question, although I have examined carefully the statements of the leading Senators of this body who have had the formulation of various tariff bills within recent years. I find absolutely no prediction fulfilled upon which I can hinge any judgment. No man has been able to tell what the result would be, in a revenue sense, of any bill proposed. We can provide the means, however, even if there shall be no surplus, based upon our present expenditures. The people would welcome economy in Government expenditures to the extent of $50,000,000 every year.

I have been struck repeatedly by the declarations which have emanated within the last two years from the distinguished senior Senator from Maryland [Mr. GORMAN] on this subject. He has repeatedly called attention to the fact that the Government is making too many expenditures for the good of the Republic, for the satisfaction of the people. That sentiment has been echoed in every hamlet in the United States. We can give two great benefits to the people of this country—economizing in our expenditures to the extent of $50,000,000 a year and then paying the $50,000,000 to the producers of agricultural staples in the United States, so that they may have a share in the protection which they have maintained.

Another objection is that the bounty would not reach the farmer, but would get to the speculator. I refer anyone who chooses to advance that objection, which I have heard repeatedly, to the remarks made by Mr. George F. Stone, secretary of the Chicago Board of Trade, which are shown in Report No. 1999 of the House of Representatives, Fifty-third Congress.

Another objection is that the bounty would be paid again and again; that a man would take out a cargo of wheat or of cotton or of tobacco from some port in the United States, receiving the bounty therefor, and, without unloading it, would bring it back and reship it, receiving a repetition of the bounty. The last possible ground upon which that objection can stand was removed by the Senator from Georgia [Mr. BACON], under whose amendment cotton is to be protected by an import duty. Thus all the commodities mentioned in this amendment are protected by import duties, and therefore can not return to the country.

Another objection is that staples consumed in the United States would not be increased in price and that all the good a farmer would get would be from the bounty of the Government, and that he would still sell his wheat and cotton at the free-trade prices of the world within the markets in this country. That is answered by another objection from the same people, who say that the price of breadstuffs will be increased by the bounty, and that therefore it would be an injustice to the toiler in the cities who buys the products of the farmer. The toiler in the cities would pay more for his breadstuffs, but under the Republican theory he would find it easier to buy.

All through the campaigns of 1888 and 1892 as Republicans we proclaimed the doctrine that high prices were absolutely necessary in order to have plenty, and that a coat for the American artisan or farmer to cost him $20 was better than a coat that cost him $10. A distinguished gentleman, now in the happiness of private life, who was during that period the Chief Magistrate of this nation, used to say that it was better to have a coat costing $20 and have $25 to buy it than a coat costing $10 and have only $5 to buy it with.

People do not eat more wheat when wheat is cheap, and recent statistics demonstrate that when wheat was the lowest in this country there was less of it being eaten per capita than at any other time. In February, 1894, there were 30,000 unemployed men in Liverpool. I saw thousands of them, idle, penniless, hungry, gathered around Wellington Column in that city, and on that very day you could buy a ton of wheat at Liverpool docks for the same price that a ton of hay would cost. Hay, of English production, cost as much a ton as American wheat, and 30,000 hungry men were gathered in the city on that day. You can not give plenty to the poor by merely making goods cheap.

If you can, then a protective tariff—I will not say a protective tariff, as I know the Senator from New Hampshire [Mr. CHANDLER] would be justified in challenging me; but this Republican tariff bill is not only wrong to the farmer, the producer of agricultural staples, but it is an iniquity from beginning to end upon all classes. If cheapness is the consideration, then let us have the cheapness of the great fight that is going on through all the world. Let us have the cheap man who wears the cheap coat, and the cheap man who buys the cheap loaf. The higher the price of wheat in this country and the higher the price of cotton in this country the better off are the employees of the manufacturing industries of the country who have to buy wheat and whose employers have to buy cotton.

The final objection which I have heard is that this proposition would be unjust, because the benefit of protection percolates through the manufacturing industries and reaches the farmer, and this would give to him a double benefit. If the indirect advantage of a protective tariff is sufficient for the farmer, then the indirect benefit of the bounty will be sufficient for the manufacturer, and we can take off the import duties, because if import duties percolate through the manufacturing industries down to the farmer, then export bounties will percolate up from the farmer to the manufacturer. We can dispose of all this trouble about schedules and remove the whole difficulty by just giving a bounty to the farmer of the United States on every staple that he produces.

At this point I desire permission to insert in the RECORD certain tables of statistics taken from Government reports showing the prices of agricultural staples for a term of years.

The VICE-PRESIDENT. Without objection, the tables will be printed in the RECORD.

The tables referred to are as follows:

Cotton crop: Estimated annual acreage, product, and value by States and Territories, in 1850, 1860, 1870, 1878 to 1880, 1882 to 1888, 1890, 1892, 1894, and 1895.

[For 1850, 1860, 1870, and 1890 from the Census Reports, and for the other years from the Annual Reports of the Department of Agriculture.]

* No estimates of crops prepared by Agricultural Department for 1889 to 1892.

Mr. CANNON. Mr. President, it is time that we relieved the congestion of the cities. We have stimulated manufacturing under protective tariff, city life itself has had so many attractions, and great centers of population have had such magnetic force to draw the people of the United States that there is a menace and a danger of vast importance to the people in the magnitude of one element at least in the cities of this country who should be out learning the lessons of independence for themselves and teaching the lessons of industry and patriotism to their children.

It is not too much to say that under every great city in this country slumbers a volcano. We should make agriculture more attractive, and relatively, therefore, city life less attractive, to the masses of the people. The strength of our civilization comes from wider lands than Manhattan Island, splendid as is its civilization. You can not expect a race of great, liberty-loving people to grow up within the cities where every man can touch the horizon of his whole life with his finger tip. You can not expect a race of Americans to do honor to the history of the past and to protect the present for the sake of the future if that race of Americans is to be reared in the great congested cities of this country, where the masses live without hope.

Mr. President, you can not expect the prosperity of this country to begin in the cities, not even in Omaha. The first announcement of it will not be in the Omaha World-Herald, even if that paper was once edited by William J. Bryan. There was a happy conjunction in some of the declarations of the Senator from Nebraska [Mr. THURSTON]. He could not even mention prosperity in his own town of Omaha without mentioning William J. Bryan.

The first sound of prosperity will not be in the newspapers. The sign will not first be visible above the steeple of Trinity Church. Until the farmer of the United States, until the toiler of the West and the cotton planter of the South shall see that sign in the sky, its existence is only a dream. There will be no conquering by our people until the farmer sees the redemption. Rather than all the newspaper editorials which were ever written as a true indication of prosperity, I would hear the cheerful lullaby sung by a million wives of farmers in the United States at the cradles of their children. Prosperity in this country will start from the farm and nowhere else, and until it is there it is not at all.

The manufacturer will sell in the United States only what the farmer can buy. The protective-tariff wall which has been reared is just as strong for inclusion as it is for exclusion, and, righteously applied, when the American producer is to sell in the best market of the world under protective tariff, that will be his only market, and it is only when you attack the protective-tariff principle itself that you can give him any other market. Therefore the measure of the farmer's prosperity is the measure of the prosperity of the people of the United States.

Mr. President, it is in no spirit of self-importance in connection with this question that I say that, in my humble judgment, the action of the American Congress upon this amendment, and the action of the Executive, if it shall pass beyond this body and be considered by the Executive, will show the course the Republic is to pursue. Let no man deceive himself with the idea that the people are not thinking of this matter. The plan was called at first "a wild idea, properly emanating from the West." I wish I might have been the modern author of it. It is not an absolutely original proposition, but to another than myself belongs the credit of bringing it forth anew.

All over this country the people who produce agricultural staples and who buy manufactured goods are saying that they must have this or some similar measure of equity for themselves or they will rebel against the protective-tariff system. And some of the splendid men who occupy pulpits in the large cities are indorsing the farmer's demand. We have seen an exhibition of the chaos, politically speaking, in which protection is thrown on the tariff question. All the exhibition has been from the other side of the Chamber, but in reality Republicans are no more at a unity of faith on this question than are Democrats.

We all remember the time when for a man to say within Republican ranks that we wanted the markets of the world was to commit heresy. He had no right to the markets of the world; he did not want them. Steadily the manufacturer of the United States has been moving to the opinion that he wants to compete for the trade of all the human race. We have found that the policy of noncommercialism, which was established under protection, is not thoroughly satisfactory even to the immediate beneficiaries of protection. Noncommercialism would be the absolute result of absolute protection—that we should not trade with the world because we were competent to maintain ourselves within our own borders.

The manufacturer finds that with us, as with England, the wonderful producing capacity of the people has been multiplied into such stupendous energy that it threatens now with us, as in the case of England, to become a battering ram to break down the wall of protection. My friends on the Democratic side who have contended always for the markets of the world for the manufacturer need only to possess their souls in patience a little while longer and the manufacturer will be here asking for those markets in his own proper person; and, if we may judge the future by the past, he will probably get what he demands.

England built up her industries under protection, and, even without the magnificence of mechanical development which belongs to our people to-day, she found that she had to reach out for the trade of all other lands. I do not believe in it. I think the world is entering upon a struggle which should make every American desire to put the most irrefragable guardianship around the shores of the United States and its boundary lines, so that we may not share in the sins of the world nor partake of its plagues.

I believe there are coming movements which will shatter thrones and destroy republics, and that the policy of noncommercialism is the policy for us in America. But it must be a just policy of noncommercialism. If not, then the elements within the wall of tariff, incited by injustice and indignation, will turn and tear the fabric of our own social order.

The very logic of Republican tariff, as opposed to the Democratic idea of free trade, is that we will care for our own, and that every man in the United States is the Government's own; that we will provide means under statute by which willing hands shall have toil, and a method by which they shall be justly compensated. There is a great law: "In the sweat of thy face shalt thou eat bread." It is the universal law of labor that every man must work if he would live; and the Government of the United States, when it passed a protective tariff bill, took upon itself the responsibility of providing toil for the men who want to work in this country.

There is no escape from the logic that the responsibility is on the Government to-day, and the people will demand such laws under this policy of noncommercialism as will insure the opportunity for every man to labor. The people have taken advanced ground. Some political parties are taking advanced ground. The battle of the future will be fought far beyond the river which has separated the parties in the past; and the party which does not march forward to the needs of humanity and say that so long as society compels obedience to the law of God that men shall work, society is under a solemn obligation to provide opportunity for that obedience, will not be intrusted with the responsibility of government.

APPENDIX.

IS INDEPENDENT FREE COINAGE OF SILVER PRACTICABLE?

[By the Hon. Charles A. Towne, chairman provisional national committee Silver Republican party.]

In the short answer I have been asked to make to this question I shall not enter at large upon the general discussion of the subject of bimetallism nor attempt any exhaustive treatment of even the relatively narrow field here indicated. I can only point out the main conditions on which the practicability of free coinage hinges and some of the more obvious facts that, in my judgment, seem to meet and satisfy these conditions.

The very statement of the question, indeed, relieves us from considering the evils of the gold standard, because it admits them. It admits free coinage of silver to be desirable. For why discuss whether it is practicable to do a thing which it is undesirable should be done? And if bimetallism is desirable, it can be so only because the single gold standard is undesirable.

The question also assumes that bimetallism is possible. The query is whether independent free coinage is practicable, the necessary implication being that an international concert of action on the subject would be effectual. Thus the mental attitude of the supposed inquirer is that of perfect conviction as to the evils of gold monometallism, assurance of the necessity of the restoration of the full-money uses of both gold and silver, confidence in the ability of "the leading commercial nations" to open their mints to the free coinage of both metals and maintain them at a parity; but doubt whether the United States alone may safely undertake to do it.

Let it be remarked that the argument deals with probabilities and not with absolute certainties. It lies rather in the domain of historical reasoning than in that of mathematical demonstration. It is this fact that has supplied the gold-standard advocates with much reenforcement of their arguments. All men are naturally conservative. Every presumption is in favor of that which now is. The gold standard has thus far been upheld not so much by reasonings in its behalf as by cunningly stimulated doubts as to the efficacy of the substitute proposed, and by lurid representations of ruin as sure to follow the remedy. Undoubtedly, with large numbers of men, these aroused suspicions and factitious fears will avail to cause submission to the existing system until such time as its rigors shall have become so intolerable that its victims are ready to seek relief in what it will no longer terrorize them to bear called an "experiment."

The believer in the adequacy of the international treatment must, of course, eschew the common adages of the gold-standard cult, such as, "You can not change value by law;" "You can not make 50 cents' worth of silver into a hundred-cent dollar;" "The value of gold is independent of statute," etc. For they are as valid against the bimetallism brought about by international cooperation as against that brought about by independent action. If law per se is powerless to affect value, the law of many nations would be as impotent as the law of one nation.

Law can, and does daily, affect value. It affects value by setting in operation forces that act upon the equation of supply and demand; and value is ratio between supply and demand. This principle, essentially true of commodities, is absolutely true of basic money substances. The cost of production of bullion bears an infinitesimal relation to the value of the full-money coins made out of it. The sole determinant of the value of such money units is the ratio between the number there is of them and the demand there is for them. No sophistry can elude the demonstration of this truth. A piece of money is worth what it costs to get it, not what it costs to make it. It will call for more things in exchange in proportion as it grows scarce; and it may grow scarce from either of two causes: Lessening the supply of it while the exchanges to be performed by it remain the same, or increasing the exchanges it must perform while its supply remains unchanged.

The purchasing power of gold has been enhanced by both of these processes, one operating naturally and the other artificially. The increase in the world's population, and the relatively much greater increase of its exchanges, have together furnished a natural expansion of the demand for gold out of all proportion to its increase in supply; while contemporaneously therewith the nations have been guilty of the inexcusable and immeasurable folly of artificially—that is, by statute—adding vastly to that demand by taking away, in gradual but growing increments, the power of silver to respond to the practically limitless money demand, and imposing this magnified burden on the gold alone. Prior to 1873 not 40,000,000 of people were using gold alone for full-power money. To-day, to use Bismarck's expressive metaphor, the number engaged in tugging at the gold blanket and trying to make it cover them is more than 400,000,000.

That gold and silver are in some of their forms commodities and subject to a demand for use as such, has occasioned much of the muddy thinking on monetary matters. The fact is that in considering these metals when used as money we must practically neglect their commodity aspect. As commodities, gold and silver are fitted by their physical and chemical properties for certain purposes, and are necessary thereto, and will be so employed no matter what they may cost. There are some other uses where their cost undoubtedly qualifies the extent of their consumption. In the great field of ornamentation, decoration, and display, however, it is safe to say that their employment will rather increase than otherwise in proportion as they become costlier.

There their dearness is their chief charm. If gold were as plentiful as iron, very few rich men's tables would groan under the weight of gold service, and watches and bracelets of gold would be replaced with objects of more precious material. Take away from gold to-day its use as money, and a man would not have to be a moral philosopher to hold it as "dross." With at least seventy years' supply for all other purposes on hand, it would become a veritable drug in the market.

The demand for money has sometimes been called an "unlimited demand," an expression that has come in for no small share of the ridicule of the advocates of gold. And yet the phrase embodies an almost literal truth. Since the economic demand for any commodity is a desire for it by some one ready to exchange an equivalent, and since the instrument of exchanging commodities is money, we may truly say that the demand for money is practically equal to the demand for all other things together; and since commodities will always be exchanged as long as human wants remain unsatisfied, and the imagination can set no bounds to human necessities and desires, it may be claimed with a close approach to scientific exactness that the demand for money is "unlimited." This conclusion is emphasized by the consideration that untold millions of dollars are annually necessary for the payment of taxes and of the principal and interest of debts, not to mention the vast sums disbursed as wages and salaries.

Suppose that by law you confer upon a substance not previously in use as money the right so to be used without restriction. The commodity use was one thing, but the new-money use is a totally different thing. The former applied to a very small segment in the great circle of human wants. The latter touches that whole circle at every point. The greater comprehends the less, and, where the whole is so almost infinitely greater than the part, is it not plain that the value of money must be studied and understood through the principles that grow out of the money function? Nine-tenths of the analogies adduced between commodities as such and commodities which have lost commodity individuality, so to speak, by becoming money, are false and mischievous.

For example, it is common for the opponent of bimetallism to state his position, that the law can not restore the relation of 16 to 1 between silver and gold, in terms that treat the attempt to do so as an ordinary case of selling and buying, of fixing prices by law. "You might as well," says he, "propose to fix a price upon the farmer's wheat as upon the miner's silver." But it is not an attempt at all to fix the "price" of silver. The chief vice of the gold-standard intellect is that it can not rid itself of the superstitious and awful prepossession for gold that habit and false teaching have bred there; the unconscious acceptance of the notion that gold is somehow not subject to the frailties that attach to every other material thing, and the instinct of comparing everything with gold as a mental standard even when the nature of the argument is supposed to postulate an exact equivalence of dignity, power, and right in both metals.

Under bimetallism it is no more the business of silver to be at parity with gold than it is the business of gold to be at parity with silver. When by law a ratio is established between the two, at which they may be freely taken to the mints and, not exchanged the one for the other, but coined and given back to the one bringing them, and when, after being coined, either may be used indifferently for any purpose for which the other may be used, the person that has a payment to make (for example, the debtor) being always allowed to choose in which kind of coin he will make it, and nobody being permitted by contract to discriminate against either metal, the law has not fixed a "price" (in the usual sense of that term) upon anything. It has simply determined the ratio to each other at which two substances may discharge, not a commodity function, but a new and added function, which the law itself at that very moment confers. "Prices" will be fixed by the relation between things and these money units, as always.

Rightly viewed, then, as it seems to me, the question of ratio is a relatively simple matter. When we consider how all-dominating the money function is, and how limitless and constant the demand is for whatever will fully perform that function, it appears reasonable that the law, in the very act of conferring on two substances interchangeably the right to discharge this function and respond to this demand, may have quite a latitude in fixing the ratio each-to-each at which they may do so. The law itself in granting the power to both imposes the condition on which alone either can exercise it. When so tied together they become, as Cernuschi said, practically one money.

These observations seem to be confirmed by historic facts. For hundreds of years, in spite of the widest fluctuations in relative production and in the midst of a great variety of ratios prevailing in different countries, the market ratio, so-called, of gold and silver remained almost constant and very close to the coinage ratio of the most powerful mints. Between 1687 and 1873 the extremes were 14.14 to 1 in 1760, and 16.25 to 1 in 1813. The coinage or mint ratios in Europe varied from 12 to 1 to 16.50 to 1, that of England being, in the earlier part of this period, 15.21 to 1, and that of France from 1785 to 1873, 15.50 to 1. Since 1873 the market ratio has fallen to about 33 to 1, no great mint now being open to the free coinage of both gold and silver. This fall of silver since 1873 has been coincident with a less disproportionate production of the two metals than has taken place for over four hundred years.

Confining our attention to the last two hundred years, there was produced from 1681 to 1720 80 per cent more silver than gold, from 1721 to 1760 38 per cent more silver than gold, from 1761 to 1800 150 per cent more silver than gold, from 1792 to 1848 100 per cent more silver than gold, from 1849 to 1862 200 per cent more gold than silver, from 1863 to 1873 100 per cent more gold than silver, from 1874 to 1897 10 per cent more silver than gold. From Mulhall's Dictionary of Statistics and the reports of the Director of the Mint we may also learn the following curious and interesting facts: Between 1800 and 1897 the relative proportions, in weight, of gold and silver "coin and bullion available for coinage" in the world have been as follows:

Ratio by weight of coin and bullion available for coinage in the world.

Period.	Silver stock.	Gold stock.	Period.	Silver stock.	Gold stock.
1800-1820	32.2	1	1860-1870	22.6	1
1820-1840	31.1	1	1873-1890	18.6	1
1840-1860	31	1	1892-1896	16	1

Considering, therefore, the facts, and very remarkable ones they are, that for hundreds of years the market ratio of gold and silver remained practically coincident with the mint ratio, notwithstanding a disproportionate production for many years, at a time amounting to as much as 200 per cent, while what we may term the quantity ratio varied over 100 per cent from the coinage ratio; and that the market ratio began to fall as soon as the mints were closed and has fallen over 100 per cent during a time when gold and silver have been produced in more nearly equal quantities than at any period in four hundred years preceding, and has reached 33 to 1 when the quantity ratio is 16 to 1, I venture to think that it has been demonstrated that law has had incalculably more to do with determining the relation between gold and silver used as money than all other influences combined; has been in fact the almost exclusive factor. Indeed, I believe the incontestable data of history prove that this relation is susceptible of legal fixation for all practical purposes at any convenient point within very wide limits.

But can the United States alone accomplish this? I have myself no doubt of it. Let us first reason by example. It is an established fact that France from 1803 to 1873, with her mint open to the free coinage of gold and silver at the ratio of 1 to 15½, maintained the actual parity of the metals within her own territory and practically even on the London markets. The London market quotations show no wide divergence from the French mint relation, the greatest being, very naturally, during the Napoleonic wars; but are so close as to show that, making allowance for cost of shipment, insurance, etc., the parity must have been maintained in France.

Indeed, correcting the mint ratio by allowing for the different charges (nominal) for coining gold and coining silver, which thus becomes 15.58 to 1, the average market ratio for eighty years (1792–1873), by the London quotations, almost exactly tallies with it, being 15.60 to 1. Of course, during part of this time the name of France embraces the other countries of the Latin Union—Italy, Greece, Belgium, and Switzerland; but as I remember it, they had nearly all their coining, which was very small, done in France, and were of practically no importance in the task of sustaining the system.

It is often said, when the case of France is being examined, that her example affords no guide to us now because she then had the assistance, in the maintenance of silver, of several of the nations of Europe that have since adopted the gold standard. Here, again, our gold-standard friends need to be reminded that we are speaking of a system of bimetallism, and that France had to maintain the parity of gold with silver as well as that of silver with gold. If she then had assistance in maintaining silver, we should now have it in maintaining gold. During the period under discussion, events occurred of the most startling description and calculated to put her system to violent and perilous trial.

The unprecedented and revolutionary increase in the output of gold, coupled with the sudden demonetization of it by Holland and Germany, acting under the fear that it might become "cheap" and "dishonest" money, subjected the exchanges of France to a severe shock and threw a heavy burden upon her mint. But she met it, and her system survived practically unimpaired—a triumphant demonstration of its strength and practicability.

The evidence that France succeeded is overwhelming. Lord Aldenham (formerly Sir H. H. Gibbs), for over forty years a director, and for a time governor, of the Bank of England, has emphatically and authoritatively declared this. Sir Robert Peel, in a speech in the House of Commons May 24, 1844, bore testimony to the same effect when he declared that because of the bimetallic system in France international remittances could be made as well in silver as in gold. Similarly the great economist, Bagehot, was of the opinion that France might safely have continued the system, and that if she had done so the effects of the unloading by Germany of her mass of silver would have been rendered "scarcely observable." The findings of the English royal commission of 1886 are specific enough. I quote briefly from that part of its report signed by all twelve commissioners—six gold monometallists and six bimetallists:

"So long as the bimetallic system of the Latin Union was in force we think that, notwithstanding the changes in the production and use of the precious metals, it kept the market price of silver approximately steady at the ratio fixed by law between them, namely, 15½ to 1. The fact that the owner of silver could in the last resort take it to the mints of the Latin Union and have it converted into coin, which would purchase commodities at the ratio of 15½ of silver to 1 of gold, would, in our opinion, be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever country it was destined. It would enable the seller to stand out for a price approximating to the legal ratio and would tend to keep the market steady at about that point."

The last authority I shall cite in support of the statement that France realized practical bimetallism is the late and lamented Gen. Francis A. Walker, universally esteemed the weightiest name in the list of American economists and one of the greatest of his time. At page 101 of his last book, International Bimetallism, he says (the italics being mine):

"The astonishing spectacle is exhibited of *one nation, alone, unaided*, not only *maintaining that monetary system* unshattered and *almost unshaken, through the greatest storm of centuries*, but even preserving the monetary peace of the world and carrying Europe safe through what threatened to be a complete wreck of industry and finance."

It seems to me that what France did the United States can do. This is the opinion of Lord Aldenham, Moreton Frewen, W. H. Grenfell, also an ex-governor of the Bank of England; Dr. Arendt, the famous German economist; Prince Bismarck; President Andrews, of Brown University, and an increasing number of students and statesmen with whom it is a satisfaction to be in accord.

Let us ask, paraphrasing the above citation from the English commission, "If the owner of silver could in the last resort take it to the mints of the United States and have it converted into coin which would purchase commodities (and, let me add, pay taxes, debts, and interest) at the ratio of 15½ of silver to 1 of gold, would not this fact be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever country it were destined? Would it not enable the seller to stand out for a price approximating the legal ratio, and tend to keep the market steady at about that point?"

Whether or not under bimetallism the metals were maintained at a parity would depend upon the sufficiency of the demand for them to give them use enough to absorb them at par. If a man could bring 15½ ounces of silver to the mint and get it stamped into coins with which he could do himself the same service that he could do with the coins struck from 1 ounce of gold, and vice versa, then silver and gold would be and remain at a parity, and no man anywhere in the world would take less than such an equivalent for either. It is a question of use and demand. All that is needed is enough demand and enough use. If one great nation can afford such use and create such demand, it is as well as if a dozen nations did it.

What could a man do with silver money newly minted in the United States? What use has money here, how extensive and varied? The answer is, of course, that there is more scope and opportunity for its employment here than anywhere else on earth. Time has been when the exchanges of the people of the United States exceeded $65,000,000,000 in a single year. The total indebtedness, public and private, of the country is probably $35,000,000,000, installments of which are constantly maturing, and on which the interest, averaging it at 4 per cent, payable each year, would amount to at least $1,400,000,000.

The total taxes paid annually to State, national, and local governments will reach at least $800,000,000. These figures indicate to some extent the demand for money in the United States. But not fully. We must remember the hundreds of thousands of square miles of territory, rich in every natural resource of soil and climate, as yet scarcely subdued from the wildness of nature, yearning for settlement and civilization, and ready, as soon as the artificial dearness and scarcity of full money shall once more be succeeded by a supply of dollars that thrive by use rather than by idleness, to welcome a large population and employ it in a diversified commerce.

We must remember the increase of more than two millions a year in our population, which must enter into the performance of its share in production and exchanges, and which therefore calls for a proportionate addition to the basis of trade and values. We must remember the vast regions in the country where the resources of credit are so slender, but whose expansion can proceed only upon the procurement of an enlarged support in more fundamental money.

The figures will show, with whatsoever thoroughness they be examined, that, in every respect qualifying a nation to absorb money, the United States bears to the total similar power of the world to-day a relative proportion from two to eight times as great as that which France sustained to the world's total in 1870. In steam power we are more than three times as strong; in commerce at least an equal preponderance is ours; in agriculture the proportion is about two to one; in manufactures, more than two to one; in railway mileage, more than six to one; in freight tonnage, about eight to one; in banking power, eight to one. Mulhall declares that in energy we practically equal Germany, France, and England together. These are fair indices of the ability to make use of the great instrument of production and exchange, and they show, in my opinion, a proportionable capacity to-day on the part of the United States to equalize by use the values of two freely coined and equally empowered metals, greater than three Latin Unions in 1870.

The actual operation of the system as we should expect it to appear upon the opening of our mints as exhibited in the following words of the late William P. St. John, a practical banker and financier connected with affairs for many years, who began the study of the coinage question as a gold-standard man, but ended, as nearly all careful and thorough students do end, by becoming an earnest convert to independent bimetallism, and whose untimely loss to the cause and the country is deeply to be deplored:

"This, then, is what will follow the reopening of our mints to silver: The gold already in the Treasury will remain there, if common sense dictates the Treasury management; that is, if the Treasury exercises its option to redeem United States notes in silver. A premium on gold [which, let us remember, is conceded, for the sake of argument, as a probable, immediate, and temporary result] will not occasion a contraction of the currency, bank hoards of gold continuing to serve as a portion of bank reserves against their liabilities. A premium on gold will tend to increase our exports by causing a higher rate of foreign exchange; that is to say, by yielding a larger net return in dollars on the sale of bills of exchange drawn against goods exported. Such premium will tend to diminish our imports by increasing the cost of bills of exchange with which to pay for goods imported.

"The tendency of increasing our exports and decreasing our imports will be, first, to set our spindles running, swell the numbers of paid operatives, increase their wages, thereby adding to the number and paying capacity of consumers, and thus enlarge our home markets for all home products and manufactures, with prosperity in general as the result assured. The tendency of increasing our exports and decreasing our imports will be, second, to establish a credit balance of trade for the United States. A credit balance of trade means that Europe has become our debtor and must settle with us in money. Europe's silver money is overvalued in her gold, compared with ours, by from 3 to 7 cents on the dollar. [He refers to the European token coinage ratios of about 15 to 1, at which their coined silver is employed, as compared with our 16 to 1.] The European merchant or banker will therefore make his trade settlements with us in gold more profitably by from 3 to 7 per cent than in his silver. With the instant that European trade settlements with the United States are made in gold, parity for our gold and silver money is established in the markets of the world."

Our products are in constant demand abroad. With the advance in their prices that would follow an addition to the money fund that measures them, and with the destruction of the advantage now enjoyed by our chief competitors through the loss of the par of exchange between silver and gold, by the restoration of that par, our products exported would yield us a tremendous and continuing favorable balance and prevent any possible disaster due to an excessive drain upon our resources in either metal. How little, indeed, is to be feared from the alarmist cry about driving out gold may be seen in the events following the same dire prophecies made in 1878 upon the passage of the Bland-Allison Act. In 1876 our net exports of gold had amounted to $23,184,341. In 1878 (the act was passed in February) the net import of gold was $4,125,760; in 1879, $1,037,334; in 1880, $77,119,371; in 1881, $97,466,127; in 1882, $1,789,174; in 1883, $6,133,261.

The speculative element would greatly assist the establishment of the parity in the market in correspondence with the ratio of the mint. Everybody is familiar with the fact that when, June 26, 1893, the Indian mint was closed to the free coinage of the rupee, the market value of silver bullion fell 25 per cent in a very few days. Conversely, in 1890, when a bill for the free coinage of silver in the United States appeared to have some chance of becoming a law, the London market price of silver went up, in anticipation of the restoration of the demand of our commerce for the use of silver equally with gold, from a ratio of 22.10 to 1 (the average ratio of 1889) to about 17 to 1, or within one point of par (the average for the whole year 1890 being 19.76 to 1).

It seems wholly reasonable to me that the certain prospect of the passage of a free-coinage law in this country would instantly start gold and silver toward a parity, and that its actual enactment would be speedily followed, indeed but for temporarily effectual manipulation would be actually preceded, by their absolute equivalence in every portion of the world—a condition of inestimable importance to the progress of the United States and to the peace and happiness of mankind.

CHAS. A. TOWNE.

WASHINGTON, *April 19, 1897.*

Mr. BUTLER. Mr. President, the amendment offered by the Senator from Utah [Mr. CANNON] is as follows:

And from and after sixty days from the passage of this act there shall be paid, out of any moneys in the Treasury of the United States not otherwise appropriated, to any exporter of wheat or wheat flour, rye or rye flour; corn, ground or unground; cotton, hops, or tobacco, produced wholly in the United States and exported by sea from any port in the United States to any port of any other country, the following export bounty, by way of an equalization to agriculture of the benefits of this act to encourage the industries of the United States, to wit: Ten cents per bushel on wheat; 50 cents per barrel on wheat flour; 10 cents per bushel on rye; 50 cents per barrel on rye flour; 5 cents per bushel on corn; 10 cents per cental on corn, ground; 1 cent per pound on cotton; 2 cents per pound on hops; 2 cents per pound on tobacco. And all payments of bounty under this act shall be made upon negotiable vouchers, issued by the collector of customs at the port of clearance, upon presentation at the Treasury or any subtreasury of the United States; and the Secretary of the Treasury is hereby charged with making and enforcing such regulations as may be necessary for the full protection of the exporters and of the Government according to the true intent and meaning of this law.

The purpose of this amendment is to correct, to some extent, the inequalities in the pending tariff bill. Its purpose is to extend a measure of justice to the American farmer, and this has never been done by any Democratic or Republican tariff measure.

If the revenues to sustain the Government are to be derived, in the main, from imposts, and the policy is to be continued that articles not produced in our own country are to be exempt from duty, then protection upon articles produced in this country similar to those upon the dutiable list becomes an incident to the collection of all duties regardless of whether the law be passed by Democrats or Republicans; and I submit that the measure should be so framed as to distribute the burdens and extend the benefits as equitably as it is possible so to do between all classes of our citizens. This I believe to be Democratic doctrine.

But the Wilson bill—the present law—in no sense approaches that standard. The Wilson bill justly characterized would be called the McKinley bill, junior. All of the benefits, or incidental protection as it is called, accrued to the manufacturers, while the interests of the farmers and the other producers of raw materials were either sacrificed or overlooked. In short, the present Democratic tariff law, like its predecessors, is unjust to the farmer and discriminates against him.

If we are to have a tariff for protection—and every tariff that places import duties on articles which are produced in this country is a protective tariff—then I submit that such protection

should be fairly and equitably distributed between the various sections of the country and the various industries in each section. The Republican party stands pledged to that doctrine, but it has never applied it or even attempted to do so in good faith. The pending bill fails to measure up to their campaign declarations. On manufactured articles the duty is placed so high as to be almost prohibitory, thus making it impossible for much, if any, revenue to be derived from such duties, because few such articles can be imported under it, while, on the other hand, it will give to the manufacturers a monopoly on these articles.

The protection thus given to the manufacturers will enable them to so advance the price of their products that it will give them several hundred millions additional profit each year before reaching the point that will admit of foreign competition. The authors of this bill, fearing a diminishing revenue because of its prohibitive character, have included in its provisions an import duty on articles not produced in this country and have increased the internal-revenue tax on tobacco and other domestic products.

There is no protection in this bill for agriculture. Those who produce wheat, corn, cotton, and other staples of agriculture, of which we produce a surplus for export, have the prices of their own products fixed in Liverpool in competition with the products of the pauper, serf, ryot, and coolie of Europe and Asia, the fellah of Egypt, and the cheap labor and cheap lands of South America.

The farmer is forced to pay the advanced price not only for domestic manufactured goods, but also forced to pay more for the articles upon which a revenue duty and an internal-revenue tax is placed, and at the same time is left to struggle with the free-trade markets of the world in which to sell his products.

In short, the farmer is forced by law to buy his supplies in the dearest market in the world and to sell his products in the cheapest markets of the world. He must buy in a protected market; he must sell in a free-trade market. Is this fair? Is it just? If this is not robbery, then what is it?

The Republican party offers this bill to the American people as the measure that will redeem their promise to restore prosperity. Can such a measure possibly contain this boon? Can it accomplish this universally desired result?

If the effect of this bill will be to enlarge the ability of the one-half of our people who live by agriculture to purchase the products of our manufactories, a general revival of business will follow. If it fails to do this, the increased price of the manufactured goods will compel the farmers to consume less than they now do, and more factories will be shut down or work on short time and the yearly income of factory operatives will be less than before its passage. Thus the laborers in our mills and factories will find themselves unable to purchase as much of the products of the factory or the farm as before, and the effect of the bill will be to aggravate and intensify the evils which its authors proclaim it a remedy to cure.

The pending tariff bill is framed upon the idea that the American people are purchasers and consumers of large quantities of foreign manufactured goods. It is framed upon the idea that if we shut out from our markets foreign goods our people will buy and consume the products of our own factories, and that then the mills will start up, labor will be employed, and the prosperity that has been promised will be restored.

If the authors of this bill will go with me to any town in my own State and follow up a drummer or salesman as he enters one of our stores with his samples and price list for the purpose of selling one of our merchants a bill of goods, I will be able to show them a practical illustration that would teach them an important lesson. They would learn through the medium of their own eyes and ears why it is that so many mills of this country have shut down and labor is out of employment. They would hear the merchant tell the salesman either that he could give him no order or that he must give him a smaller order than formerly. The merchant would either point to the goods on his shelves unsold or to his books which contained the accounts of his customers showing where he had sold on credit and had not been able to collect—accounts against customers who in prosperous times paid promptly but who now are unable to pay.

What is the matter? Are the needs of the people growing less? Is population diminishing? No. The merchants in every section of the country will testify and statistics will prove that the population around him is increasing and that the needs of the people in his county and town are increasing; that there are more mouths to feed and more backs to clothe, but that the people do not buy. Why is it? Is it because his customers have ceased to work? No. The merchant will testify and statistics will prove that his customers are creating each year more and more produce, more wheat, more cotton, more corn, and more of all of the great staples than ever before; yet this merchant tells the salesman that these people are economizing, economizing because they must because they are unable to pay. What is the result? The salesman sends in smaller and fewer orders, and therefore the jobber and wholesale man place fewer and smaller orders with the factories, and therefore the factories must make fewer goods, and therefore some of the labor employed in factories is thrown out of employment.

Mr. President, this tells the whole story. It is the condition of the consumer, the inability of the masses to purchase, that has shut down some mills and caused others to run on short time. You may open the mills again, but you can not keep them open; they will close down and simply have increased the surplus goods each additional day that they run, until you do something to improve the condition of agriculture. Will this bill accomplish that? No. Even its authors are not rash enough to make such a claim.

The cause of industrial depression is much deeper than the difference between the Wilson Act and the proposed tariff bill. It is deeper and wider than the difference between a so-called revenue tariff and a so-called protective tariff. We have suffered business depressions, strikes, lockouts, and hard times alike under Democratic and Republican tariffs. We have always felt the pall of business stagnation whenever the agricultural classes, who create the wealth of the country, have not reaped a fair reward for their labor and products.

The Republican party proposes two remedies to restore prosperity—the gold standard and a protective tariff. This is an illogical combination. It is an attempt to ride two horses going in different directions.

The gold standard is a decree that prices must continue to fall rapidly for a protracted and indefinite period in the future as the world's money demands are narrowed to conform to the volume of gold alone, and a universal price level shall govern exchanges between all the nations adopting it; while the purpose of a protective tariff is to uphold domestic prices and exempt the people of our own country from the competition of lower civilizations and cheaper labor. The two propositions are antagonistic and irreconcilable, and, joined together as the policy of a political party, are absurd.

Free trade and the gold standard go together hand in hand. The position of the Senator from Delaware [Mr. GRAY] when he pleads for free trade and the gold standard is more logical than the Republican position. If I were for the gold standard, I would be for free trade. If I favored this so-called money of the world, then I would favor going into the international scramble for the markets of the world. To my mind there is a greater objection to free trade than the one advanced by the Republican party. Free trade would at once send our merchants and traders seeking foreign markets. This would lead to far-reaching consequences that would, to say the least, be undesirable in a republic like ours.

We do not seek special foreign markets for the staples of agriculture. They are put on the market at the world's price, and distribution takes care of itself. But when our manufactured products are forced to seek foreign markets they must seek and hold special foreign markets. This leads to colonization and conquest, and conquest leads to monarchy. The history of Phœnicia and of Carthage in ancient times, and of England in modern times, tells the story. In short, free trade leads to international commercialism, which is antagonistic and fatal to the genius of our republican institutions. I believe that it is best for a great Republic situated as ours is to pursue a domestic policy.

On the other hand, I do not believe in or indorse the system of protection as it has been presented and illustrated by the Republican party. Nearly all, if not all, the great nations of the world, except ours, that have the protective system in any form have what we may call a dual system—that is, they not only protect their manufacturers with an import duty, but they also protect their agriculturists with an export bounty. If we are not to have free trade, then certainly equity demands that agriculture should be protected equally with manufacturing. I believe in an American financial system, in a domestic currency sufficient in quantity to meet the needs of our ever-increasing population and business, and therefore I believe in a home market and an American industrial system.

I will not, however, at this time attempt to discuss the financial question, but I wish now to address myself to my Republican friends, who have preached on every stump in America the doctrine of protection to American labor and American industry. I would be glad to see the Republican party carry out in good faith in this bill its promises and pledges to the American people. Will this bill do it? No Republican Senator will attempt to prove that the pending bill measures up to their promises and declarations. Nine-tenths of the benefits which this bill affords is given to a few special industries and to a very small class of our people.

It is not a protection measure in any fair sense. Labor is not protected. The bill as framed does not and can not afford any safe and just protection to even the labor employed in the factories. The price of labor depends upon the demand for it, and the demand is dependent upon the primary industry, agriculture. The farmer must be prosperous, must be able to buy and consume, before the

labor employed in the factories will get steady employment at good wages. When the farmer can not buy, the manufacturer shuts down. He has sufficient to live on while his factory is closed, but his laborers are thrown out of employment and their families suffer.

But let us suppose, for argument's sake, that this bill will give ample protection to the labor employed in the factories. Let us suppose that the bill will carry out in good faith the Republican promises to the manufacturer and to the laborers he employs. Is that all of the Republican promises? The promise was to protect American labor and American industries against cheap foreign competition—not a part of our labor and industries, but all American labor and American industries. Do the manufacturing concerns of this country comprise all of our industries? I now put this question to my Republican friends: Do you consider agriculture an American industry? Do you consider the labor employed upon the farms of the nation American labor? You must answer this question now, or you will have to answer it on every stump in the United States. You have done nothing for agriculture or farm labor in this bill.

The American farmer who has voted for protection for lo these many years has done it knowing or feeling that he got little or no benefit from it, but he did it because he felt that he was protecting some American citizen from competition abroad. I wish to ask you how you can satisfy that farmer in the next campaign when he is shown that you could protect him by this amendment, that you could protect him equally with the manufacturer by applying your principle of protection through an export bounty, and that you would not do it?

Protection is the principle. These import duties are simply the method employed by you to apply the protection to the manufacturer. The export bounty is the method which you should employ to extend the same protection to the farmer. Will you do it? If not, how can you expect the farmer to continue to support this unjust and one-sided protective system? Such discriminations will drive him to free trade, if anything will. How many laborers are employed in the manufacturing concerns to-day? Only about 4,000,000. How many are employed upon the farms of the nation? How many American laborers are employed in the wheat fields of the West, the cotton fields of the South, and in the agricultural interests of the country generally? More than twice as many as are employed in the factories. Are they not American laborers? Are they not forced to compete with the cheap pauper labor of India, Egypt, Argentina, and Russia, just as the manufacturing concerns of America would be if we had general free trade? When the farmer exports his products, he meets competition in Liverpool.

The cheap foreign pauper labor that you are so afraid of, that gives the nightmare to your manufacturing concerns, stands in Liverpool to crush the life out of agriculture. You protect the manufacturer against such competition by an import duty. You can protect the farmer from the same competition by applying the principle of protection by the method of an export bounty. But you have not done it; you have deliberately drawn a tariff bill that says to the 9,000,000 American laborers engaged in agriculture that "you must stand under free trade while paying tribute to a minority class protected; you must sell in a free-trade market and at the same time pay more for what you buy from the protected class." You know, and every farmer who has supported protection knows, that these duties increase the price of the manufactured goods that he buys; yet you want him and expect him to continue to support this one-sided protection while you refuse to give to him the same benefit that you give to the manufacturer. He will not be satisfied with such discrimination any longer. He is growing too poor to stand it.

Suppose that you reverse the position of the farmer and the manufacturer. Suppose you protect the farmer against the cheap foreign competition and then put the manufacturer under free trade and force him to compete with the world; and when he began to grow poor under such competition, that you should attempt to appease him by telling him that he should go into some other business or should diversify, as you now tell the farmer. How long would the manufacturer submit to such injustice, such insult, such impudence? But the American farmer is more conservative than the manufacturer. He is more patient and long-suffering. You advise him, when cotton, wheat, and the other great export staples get too low to return a profit, to diversify.

In the South he has begun to take your advice. He has begun to raise potatoes, beans, grapes, strawberries, cabbages, and all the other perishable farm products which are not exported. He is rushing them into the Northern and Eastern markets in larger quantities each year. He is competing with your New England truck farmer. This has lowered the prices of such products, to the detriment of your New England farmer. To illustrate, in 1894 there was raised in the United States 170,787,338 bushels of potatoes, which brought $91,526,787; in 1895 there was raised 297,237,870 bushels of potatoes, which only brought $78,984,901. Over 100,000,000 bushels more potatoes produced in 1895, yet the whole crop sold for nearly $13,000,000 less. This has caused your New England farmers to consume less of manufactured goods and has helped to shut down the mills and to throw factory labor out of employment.

This is but the beginning. If you do not do something to increase the price of the great agricultural staples for export, the competition at home will grow fiercer and more destructive. To-day my own State is sending train loads of such perishable products to all of the markets of the North and East. Why? Because you have made cotton raising unprofitable. This competition will continue to grow in volume until it is again profitable for us to raise cotton and the great staples. No; diversification is not the remedy. It aggravates and spreads the disease.

The Senator from Missouri [Mr. VEST] held up the agricultural schedule of this bill on yesterday and pointed out with derision the import duties which you have placed on wheat, corn, barley, cotton, and the other export staples, and showed that it would give no protection to the farmer. He grew eloquent denouncing these pretended import duties on export articles as a sham and a fraud. He was right. But he offered no remedy. He should have gone further and put the sincerity of our Republican friends to the test. He should have pointed out to the country the fact that you could protect the farmer by placing a bounty upon these exports equal to the import duty given to the manufacturer. But he did not. He and the Senator from Texas [Mr. MILLS] satisfied themselves by simply declaring that they favored "a tariff for revenue only."

What do our Democratic friends mean by a tariff for revenue only? If we are to judge by their record, they mean that an import duty of 40 per cent on hats and shoes is for protection when levied by the Republican party; that when this duty is lowered by the Democrats to 35 per cent, then it is a tariff for revenue only. Are they correct? No. An import duty of 35 per cent on hats and shoes is a protective duty; it protects the manufacturer; and when our Democratic friends in addition, put hides and wool on the free list, they do what the manufacturer most wants, and they give him in fact more protection than the Republican duty of 40 per cent gives while hides and wool are protected by a duty. If free raw material (while the manufacturer is protected) is the essence of Democracy, as we have been told, then I have no sympathy with such Democracy. It is to that extent worse than the essence of Republicanism.

But what is "a tariff for revenue only?" It is a tariff *only* on articles imported which are not produced in this country, such as *tea, coffee, etc., and no duty whatever* on articles imported which are produced in this country. Have our Democratic friends ever offered such a bill? No. Every bill which they have offered has been a bill for protection to the manufacturer, with no protection for the farmer. Every import duty, high or low, placed upon imported articles which we produce is a protective duty pure and simple. No one will question this. The Mills bill, the Wilson bill, and every other tariff bill offered by our Democratic friends has been full of such duties. Therefore every Democratic tariff bill offered or passed has differed from the Republican bill, not in principle, but simply in the percentage of the duty levied. The Mills bill would have discriminated against the farmer. The present Wilson law discriminates against the farmer.

Indeed, there is no way to protect the farmer and put him on an equal footing with the manufacturer under the present Democratic law except to amend it by adding an export bounty on agricultural staples that are exported. I challenge any Democrat to deny this. Now our Republican friends propose to increase the protection which the Democrats have been giving to manufacturers. Therefore let them now give the farmer the export bounty, which he should have had before, and let them increase the export bounty to the farmer every time they increase the import duty to the manufacturer. This is fair; nothing less would be just or fair.

The farmer is now discriminated against in two ways. Not only is a bounty given to manufacturers, from whom the farmer must buy and pay an increased price on account of the tariff, but a bounty is also given to his competitors who raise wheat and cotton in foreign countries. The Republican party is to a great extent responsible for this double discrimination, this deadly competition which the farmer is to-day struggling against. Our competition comes largely from silver-using countries. That competition is deadly largely because of the enhanced price of gold and the fall in silver exchange. The cotton farmer in India and Egypt raises a pound of cotton, takes it to Liverpool, and sells it for, say, 5 cents in gold, which he takes home, where it becomes 10 cents in the money of his country. With this 10 cents he makes 2 pounds of cotton and faces the American farmer in Liverpool next year. The American farmer sells his 1 pound of cotton for 5 cents in gold, takes it home, and it is still but 5 cents, in gold-standard America. He has 5 cents capital, his competitor has

10 cents. It amounts to a bounty of 100 per cent to our competitors.

Those of you who favor the gold standard favor a policy that gives this bounty to our competitors. The competition would be hard enough on the farmer if our competitors did not have that bounty. In fact, if you would restore the money of the Constitution and thus take this bounty from our competitors, still the American farmer ought to have an export bounty as long as the manufacturer has an import duty, which is but another name for a bounty.

Mr. President, this is no new doctrine. It is not a doctrine started up since the gold standard has been fastened upon our country. One of the clearest-headed men that this country has ever produced preached this doctrine of justice in the early days of the Republic. Alexander Hamilton, when Secretary of the Treasury, in 1780, in an official document, said:

> As often as a duty upon foreign articles makes an addition to its price, it causes an extra expense to the community for the benefit of the domestic manufacturers; a bounty does no more.
>
> The true way to conciliate these two interests (agriculture and manufacture) is to pay a duty on foreign manufactures of the material the growth of which is desired to be encouraged, and to apply the produce of that duty by way of bounty.

It was the clear head of Alexander Hamilton, at the beginning of the Republic, looking at our broad country, foreseeing that there would be a clash of interests between agriculture and manufacturing if one was protected and the other was not, seeing that they ought to work in harmony, seeing that they both ought to be treated alike as American industries, seeing that it was necessary for agriculture to prosper in order that the whole country might prosper, who made this proposition, who offered this solution. He favored giving all the money collected from import duties which would enhance the price of domestic manufactures to agriculture in export bounties as a compensatory protection to them. Yet this amendment proposes to apply only a small portion of such import duties to agriculture by way of an export bounty. Henry Clay gave utterance to the same opinion when discussing the tariff bill in 1824. In the same debate Daniel Webster substantially approved the position of Hamilton and Clay. If it was just and fair then, it is tenfold more so now, with America on the gold standard and our competitors on the silver standard.

Mr. President, this is such a plain, simple proposition of wisdom and justice that it seems only necessary to be stated to be comprehended and assented to by all: That, if we are to have an American system, not only should all industries and all classes of labor be treated equitably and justly, but that above all agriculture should come first. It should be the first care of any man and any party that has any regard for the future of the Republic and the welfare of our people.

Our Democratic friends can not help the farmer by simply standing up and fighting this tariff bill and denouncing it in the name of the farmer. He has grown poorer each year while they have pursued that policy, and when they came into power they continued to discriminate against him and gave him no protection. They gave protection to the manufacturer and gave no equal benefits to the farmer. He has grown poorer each year under the Wilson bill. If that law were to stand, it should be amended by adding the provisions contained in the amendment now before the Senate.

Our Republican friends have gone along all the time promising that the farmer would get the benefit of the tariff after a while in some indirect way. He has not got it and he can not get it in this bill. There is no sentiment about this matter. This proposed bounty is a simple business proposition. Every Senator, whether he be a free trader or a protectionist, will admit that it will raise the price of the farmer's products; that it will protect him to some extent against the deadly competition which he now faces. If it will do that, why, in God's name, shall we not give it to the farmer?

The farmers of the South assent each year to an appropriation of $150,000,000 for pensions to the Union soldiers. Do we complain? It is voted in five minutes, but you have no right to ask us to pension your manufacturers at our expense. The farmer is taxed to help everybody, but nobody helps him. Here is a proposition to expend only $47,000,000. What will be the effect? It will put over $200,000,000 into the pockets of the American farmers each year. Is that not a fine investment? The Government will only pay the bounty on the articles exported, but the result will be to raise the price of every pound of cotton and every bushel of wheat used in this country. It will be a direct and immediate benefit. It will increase the capacity of the farmer to consume. Therefore it will benefit the factories and every other industry in the whole country.

It is true that this alone will not remove the causes of industrial depression or restore prosperity, but it will to some extent be a measure of justice to the farmer and improve his condition. Therefore I am ready and willing to vote for this amendment and for any other fair and equitable measure that will give the farmer a modicum of justice and relief. Foreign competition has been as deadly to the farmer every hour since the war as it would have been to the manufacturing concerns of this country had they been under free trade. How much longer will you put free trade on the farmer while giving his neighbor ample protection?

Mr. President, I do not believe that present conditions can be righted by any tariff bill, however wise or just. I consider the tariff only a third-rate question. There are other questions more vital to American interests and welfare. I believe that a contracting volume of money and the rule of monopolies are the twin curses that are bringing stagnation to business and poverty to the masses of the country. I believe that there must be legislation to remove these causes before our people will ever enjoy the prosperity that the Republicans have so profusely promised.

But, sir, I put the welfare of the people above every other consideration, and I am ready to vote for any proposition that will give them a measure of relief, however small. It can be done to some extent by the Republican party adopting this amendment and carrying out its principle of protection fairly and equitably. I am ready to cast my vote to help do it. I hope that every Democratic Senator will do the same. Every Populist and every Silver Republican Senator will vote for it. Therefore if every Democrat on the floor of the Senate will vote for this amendment, it will be adopted, even if every Republican voted against it. It is no excuse for you to say that it is against your principles.

Remember that the pending tariff bill will become a law; and remember also that until we have an income tax or some other means of equalizing taxation, we will always have a high-tariff bill, whether you are in power or the Republicans are in power. Now, shall the farmer be discriminated against during all of this time? The pending bill may be ever so unjust, yet Democratic Senators now have an opportunity to take some of the money which they have said it will wring from the farmer and pile up in the Treasury and distribute it back to the farmer. The Democratic party has now an opportunity to give at once some relief to the farmer, for whom they have recently pleaded so eloquently.

I would be glad to see the Republicans vote for this amendment because it is their doctrine and they have promised to protect all alike. If they will, the Silver Republicans and Populists will furnish the votes to give them a majority, but I fear they will not. They favor protection, not for the farmer but for the other fellow only. The Senator from Texas [Mr. MILLS] on yesterday made an eloquent plea for the "forgotten man" (the farmer), and said that everybody was ready to help the farmer with chin music. Now let the Senator from Texas and his Democratic colleagues help us to test the sincerity of the Republicans and at the same time prove that they are willing to help the farmer with something more than chin music. Let every Democrat vote with us for this amendment and we will place it on the bill. Then the Republicans must pass the bill with the amendment or not pass it at all. If either one of the old parties are willing to treat the farmer as they have the manufacturer, he will get this relief and get it at once. Will you do it? The vote will show.

Mr. QUAY. Mr. President——

Mr. ALLISON. Will the Senator allow me?

Mr. QUAY. I was about to move an executive session, but I will yield to the Senator.

Mr. ALLISON. I ask the Senate to consent that when we adjourn this afternoon it be to meet to-morrow morning at 11 o'clock. I have an understanding with those who are in charge of the opposition to the bill that that shall be done.

Mr. BATE. Will the agreement extend beyond to-morrow?

Mr. ALLISON. I have no agreement as to that. My motion is simply that when we adjourn it be until to-morrow morning at 11 o'clock. I hope the Senate will consent to that.

The VICE-PRESIDENT. The question is on the motion of the Senator from Iowa, that when the Senate adjourn to-day it be until to-morrow at 11 o'clock.

The motion was agreed to.

EXECUTIVE SESSION.

Mr. QUAY. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After twelve minutes spent in executive session the doors were reopened, and (at 5 o'clock and 37 minutes p. m.) the Senate adjourned until to-morrow, Thursday, June 10, 1897, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate June 9, 1897.

ENVOYS EXTRAORDINARY AND MINISTERS PLENIPOTENTIARY.

Henry L. Wilson, of Washington, to be envoy extraordinary and minister plenipotentiary of the United States to Chile, vice Edward H. Strobel, resigned.

William F. Powell, of New Jersey, to be envoy extraordinary and minister plenipotentiary of the United States to Haiti, vice Henry M. Smythe, resigned.

John G. A. Leishman, of Pennsylvania, to be envoy extraordinary and minister plenipotentiary of the United States to Switzerland, vice John L. Peak, resigned.

CONSUL-GENERAL.

John F. Gowey, of Washington, to be consul-general of the United States at Kanagawa, Japan.

ASSISTANT APPRAISERS OF MERCHANDISE.

Michael J. Brown, of Pennsylvania, to be assistant appraiser of merchandise in the district of Philadelphia, in the State of Pennsylvania, in place of Sheppard G. Young, removed.

Fred P. Vincent, of Pennsylvania, to be assistant appraiser of merchandise in the district of Philadelphia, in the State of Pennsylvania, to fill an existing vacancy.

DEPUTY AUDITORS.

Daniel A. Grosvenor, of Maryland, to be deputy auditor for the War Department, to succeed John C. Edwards, resigned.

Robert S. Person, of South Dakota, to be deputy auditor for the Interior Department, to succeed George W. Sanderlin, resigned.

PROMOTIONS IN THE NAVY.

Asst. Engineer John K. Robison, to be a passed assistant engineer in the Navy, from the 9th day of May, 1897 (subject to the examinations required by law), vice P. A. Engineer Frank H. Eldridge, promoted.

P. A. Engineer Edgar T. Warburton, to be a chief engineer in the Navy, from the 28th day of May, 1897 (subject to the examinations required by law), vice Chief Engineer John A. Scot, retired.

Medical Inspector James M. Flint, to be a medical director in the Navy, from the 6th day of June, 1897, vice Medical Director Thomas N. Penrose, retired.

Surg. Charles U. Gravatt, to be a medical inspector in the Navy, from the 6th day of June, 1897, vice Medical Inspector James M. Flint, promoted.

Passed Asst. Surg. Victor C. B. Means, to be a surgeon in the Navy, from the 6th day of June, 1897, vice Surg. Charles U. Gravatt, promoted.

POSTMASTERS.

Lee McLaughlin, to be postmaster at Sanger, in the county of Fresno and State of California, in the place of Lee McLaughlin, whose commission expired April 8, 1896.

George E. Smith, to be postmaster at Laurel, in the county of Sussex and State of Delaware, in the place of M. Ellis, whose commission expired April 14, 1897.

Charles W. Warner, to be postmaster at Hoopeston, in the county of Vermilion and State of Illinois, in the place of William Finley, resigned.

John M. Long, to be postmaster at Clay City, in the county of Clay and State of Indiana, in the place of George E. Oberholtzer, removed.

Lewis Signs, to be postmaster at North Manchester, in the county of Wabash and State of Indiana, in the place of Samuel M. McCutchen, removed.

Elizabeth M. Broadwell, to be postmaster at La Cygne, in the county of Linn and State of Kansas, in the place of William H. Judson, removed.

Edson E. Burnham, to be postmaster at Amite City, in the parish of Tangipahoa and State of Louisiana, the appointment of a postmaster for the said office having, by law, become vested in the President on and after July 1, 1897.

Thomas B. Leland, to be postmaster at Water Valley, in the county of Yalobusha and State of Mississippi, in the place of Henry T. Crosby, removed.

Mathew J. Orr, to be postmaster at Osceola, in the county of St. Clair and State of Missouri, in the place of John S. Smith, resigned.

Carl Kramer, to be postmaster at Columbus, in the county of Platte and State of Nebraska, in the place of D. F. Davis, removed.

Aaron Brining, to be postmaster at Versailles, in the county of Darke and State of Ohio, the appointment of a postmaster for the said office having, by law, become vested in the President on and after July 1, 1896, Isaac Marker, appointed by the President and by him nominated to the Senate, not having been confirmed.

Walter McKay, to be postmaster at Lead, in the county of Lawrence and State of South Dakota, in the place of Albert R. Garretson, removed.

A. M. Lee, to be postmaster at Huntingdon, in the county of Carroll and State of Tennessee, in the place of James P. Wilson, removed.

E. B. Atterbury, to be postmaster at Comanche, in the county of Comanche and State of Texas, in the place of A. L. Hamilton, removed.

George J. Elam, to be postmaster at Marlin, in the county of Falls and State of Texas, in the place of Isham J. Pringle, removed.

William C. Smith, to be postmaster at Bowie, in the county of Montague and State of Texas, in the place of Elbert A. Gwaltney, removed.

Orrin H. Jones, to be postmaster at Wilmington, in the county of Windham and State of Vermont, the appointment of a postmaster for the said office having, by law, become vested in the President on and after October 1, 1896, Eli H. Porter, appointed by the President and by him nominated to the Senate, not having been confirmed.

May Mosby Campbell, to be postmaster at Warrenton, in the county of Fauquier and State of Virginia, in the place of Lizzie C. Yates, removed.

Luzerne P. Harper, to be postmaster at Suffolk, in the county of Nansemond and State of Virginia, in the place of E. B. Britt, whose commission expired April 11, 1897.

Verlin M. Scott, to be postmaster at Saltville, in the county of Smyth and State of Virginia, in the place of Rufus K. Sanders, resigned.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 9, 1897.

ENVOYS EXTRAORDINARY AND MINISTERS PLENIPOTENTIARY.

Lawrence Townsend, of Pennsylvania, to be envoy extraordinary and minister plenipotentiary of the United States to Portugal.

Henry L. Wilson, of Washington, to be envoy extraordinary and minister plenipotentiary of the United States to Chile.

John G. A. Leishman, of Pennsylvania, to be envoy extraordinary and minister plenipotentiary of the United States to Switzerland.

CONSUL-GENERAL.

Andrew D. Barlow, of Missouri, to be consul-general of the United States at the City of Mexico, Mexico.

PROMOTIONS IN THE ARMY.

Artillery arm.

Lieut. Col. John Isaac Rodgers, Second Artillery, to be colonel.

Maj. William Lawrence Haskin, First Artillery, to be lieutenant-colonel.

Capt. James Monroe Ingalls, First Artillery, to be major.

First Lieut. Clermont Livingston Best, First Artillery, to be captain.

Second Lieut. Edward Fenton McGlachlin, jr., Fifth Artillery, to be first lieutenant.

Infantry arm.

First Lieut. Hunter Liggett, Fifth Infantry, to be captain.

Second Lieut. Charles Carr Clarke, Ninth Infantry, to be first lieutenant.

Candidate Sergt. Fred L. Munson, Company A, Sixth Infantry, to be second lieutenant.

PROMOTIONS IN THE NAVY.

Ensign Benjamin W. Wells, jr., to be a lieutenant (junior grade).

Ensign Newton A. McCully, to be a lieutenant (junior grade).

Ensign Levi C. Bertolette, to be a lieutenant (junior grade).

POSTMASTERS.

George W. Farmer, to be postmaster at Martin, in the county of Weakley and State of Tennessee.

W. L. Paine, to be postmaster at Argenta, in the county of Pulaski and State of Arkansas.

William H. Illian, to be postmaster at Humphrey, in the county of Platte and State of Nebraska.

Tracy R. Thomas, to be postmaster at Prescott, in the county of Nevada and State of Arkansas.

Cyrus E. Hunter, to be postmaster at Wakefield, in the county of Dixon and State of Nebraska.

C. H. Cornell, to be postmaster at Corona (late South Riverside), in the county of Riverside and State of California.

F. J. Heinemann, to be postmaster at Kirkwood, in the county of St. Louis and State of Missouri.

George W. Tilton, to be postmaster at Epping, in the county of Rockingham and State of New Hampshire.

SENATE.

THURSDAY, *June 10, 1897.*

The Senate met at 11 o'clock a. m.

Prayer by Rev. WALLACE RADCLIFFE, D. D., of the city of Washington.

On motion of Mr. FAULKNER, and by unanimous consent, the reading of the Journal of yesterday's proceedings was dispensed with.

COMMITTEE SERVICE.

Mr. BERRY. I ask that I may be excused from further service upon the Committee on Railroads.

The VICE-PRESIDENT. Is there any objection to the request of the Senator from Arkansas, that he be relieved from further duty upon the Committee on Railroads. The Chair hears no objection, and the Senator from Arkansas is excused.

Mr. GORMAN. I ask unanimous consent that the junior Senator from Florida [Mr. MALLORY] and the junior Senator from South Carolina [Mr. MCLAURIN] be assigned to committee vacancies now existing as designated in the paper I send to the desk.

The Secretary read as follows:

Mr. MALLORY: Committee on Fisheries, Committee on Patents, Committee on Territories, Committee on Revision of Laws, Committee on Railroads, Committee on Woman Suffrage.

Mr. MCLAURIN: Committee on Claims, Committee on Coast Defenses, Committee on Immigration, Committee on Indian Affairs, Select Committee on International Expositions.

The VICE-PRESIDENT. If there be no objection, the assignments proposed by the Senator from Maryland will be ordered. The Chair hears no objection, and that is the order.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented sundry memorials of citizens of New York City, remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

Mr. FAULKNER. I present the petitions of J. A. Avey and 27 other citizens of Hedgesville; of J. Ferns and 61 other citizens of Pawpaw; of J. W. Garland and 66 other citizens of Hancock County, and of Guy Peck and 51 other citizens of Cabell County, all in the State of West Virginia, praying for the enactment of legislation restricting immigration. I move that the petitions lie on the table, the bill having already been reported.

The motion was agreed to.

Mr. GALLINGER. I present the petition of A. E. Stearns and 11 other citizens of Manchester, N. H., praying for the enactment of immediate tariff legislation. As the petition relates to the tariff bill now under consideration, I move that it lie on the table.

The motion was agreed to.

Mr. PLATT of New York presented petitions of sundry citizens of New York City, Buffalo, and Philmont, all in the State of New York, praying for the immediate passage of a protective-tariff bill; which were ordered to lie on the table.

He also presented sundry memorials of citizens of New York City, Brooklyn, Flushing, Westchester, Nyack, Tappan, Congers, Mamaroneck, Long Island City, Rochester, Waverly, Richmond County, and Commack, all in the State of New York, and memorials of sundry citizens of Jersey City and Hoboken, in the State of New Jersey, remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

Mr. HALE presented a petition of sundry citizens of Hartland, Me., praying for the enactment of protective-tariff legislation, at the earliest possible date, which will adequately secure American industrial products against the competition of foreign labor; which was ordered to lie on the table.

Mr. HANSBROUGH presented a memorial of sundry citizens of Bismarck, N. Dak., remonstrating against the proposed duty of $2 per thousand feet on white-pine lumber; which was ordered to lie on the table.

Mr. SEWELL presented the petition of Samuel Pancoast and 43 other citizens of Vineland, N. J., praying for the enactment of legislation restricting immigration; which was ordered to lie on the table.

He also presented the petition of Watts Cook and 189 other citizens of Paterson, N. J., and the petition of William Hemethy and 66 other citizens of Newark, N. J., praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

He also presented memorials of C. J. Wilson and 48 other citizens of Boundbrook, of Richard A. Boyce and 24 other citizens of Plainfield, of Peter J. Brady and 25 other citizens of Bayonne, and of William W. Gaertner and 114 other citizens of Newark, all in the State of New Jersey, remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

Mr. PRITCHARD presented a memorial of the Tobacco Board of Trade of Raleigh, N. C., remonstrating against the proposed increase in the tax on tobacco; which was ordered to lie on the table.

Mr. PROCTOR presented the petition of James H. Habberly and 35 other citizens of Bennington, Vt., praying for the enactment of immediate protective-tariff legislation; which was ordered to lie on the table.

He also presented the memorial of A. V. Vance and 45 other citizens of Lunenburg, Vt., remonstrating against the enactment of legislation intended to destroy the present system of ticket brokerage; which was referred to the Committee on Interstate Commerce.

Mr. QUAY presented a memorial of sundry brewers of Lancaster County, Pa., and a memorial of sundry business men of Lancaster County, Pa., remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

Mr. FORAKER presented sundry papers to accompany the bill (S. 128) granting an honorable discharge and status of pilot in the United States service to Oscar B. Jolly; which were referred to the Committee on Military Affairs.

REPORTS OF COMMITTEES.

Mr. ALLEN, from the Committee on Claims, to whom was referred the bill (S. 57) for the relief of the heirs of Jacob R. Davis, reported it without amendment, and submitted a report thereon.

Mr. VEST, from the Committee on Commerce, to whom was referred the bill (S. 2063) to authorize the White and Black River Valley Railway Company to build a bridge across the Black River in Arkansas, reported it with amendments.

BILLS INTRODUCED.

Mr. FAULKNER introduced a bill (S. 2108) to amend section 4 of the act of Congress entitled "An act relating to the supreme court of the District of Columbia," approved June 21, 1870, and for other purposes; which was read twice by its title, and referred to the Committee on the District of Columbia.

He also introduced a bill (S. 2109) for the relief of James V. Moore; which was read twice by its title, and referred to the Committee on Claims.

Mr. FORAKER introduced a bill (S. 2110) to remove the charge of desertion against Phillip Schaefer, late of Company K, Twenty-seventh Regiment Missouri Volunteer Infantry, and for other purposes; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Pensions:

A bill (S. 2111) granting a pension to George Thompson;

A bill (S. 2112) granting a pension to Jesse O. Davy;

A bill (S. 2113) granting a pension to Mary Hughes;

A bill (S. 2114) granting a pension to Rebecca E. Kutz;

A bill (S. 2115) granting a pension to Milton T. Bedford;

A bill (S. 2116) granting a pension to Isaac Neer;

A bill (S. 2117) granting an increase of pension to Fannie Kautz; and

A bill (S. 2118) granting a pension to Daniel Uptegraft.

Mr. ALLEN introduced a bill (S. 2119) granting a pension to Elsie Desmond, of Norfolk, Nebr.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Pensions.

Mr. WHITE introduced a bill (S. 2120) granting a pension to William A. P. Fellows; which was read twice by its title, and referred to the Committee on Pensions.

Mr. COCKRELL introduced a bill (S. 2121) for the relief of James W. Howell, late of Company H, Fifty-fourth Regiment Illinois Infantry Volunteers; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. QUAY introduced a bill (S. 2122) to remove the charge of desertion from the military record of Edward T. Lewis; which was read twice by its title, and referred to the Committee on Military Affairs.

AMENDMENTS TO THE TARIFF BILL.

Mr. WARREN submitted three amendments intended to be proposed by him to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States; which were referred to the Committee on Finance, and ordered to be printed.

AMENDMENTS TO DEFICIENCY APPROPRIATION BILL.

Mr. FAULKNER submitted an amendment intended to be proposed by him to the general deficiency appropriation bill; which was referred to the Committee on Appropriations, and ordered to be printed.

Mr. CARTER. I ask that the reference of the amendment submitted by me on yesterday intended to be proposed to the general deficiency appropriation bill be changed from the Committee on Appropriations to the Committee on Commerce.

The VICE-PRESIDENT. In the absence of objection, it will be so ordered.

RECEIPTS AND EXPENDITURES, ETC.

Mr. COCKRELL. I ask for the present consideration of a resolution simply calling for statistical information from the Treasury Department.

The resolution was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the Secretary of the Treasury is hereby directed to make to the Senate a report showing in tabular form the total receipts from all sources, excepting from sales of United States bonds, and the total expenditures for all purposes for each fiscal year, 1875 to 1896, both inclusive, and the excess of either for each year; and also the total receipts from all sources, except from sales of United States bonds, and the total expenditures for all purposes, with the excess of either for each annual period, beginning March 1, 1885, and ending March 1, 1897; and also showing in tabular form the payments of the principal, of the interest, and of any premium of the public debt and any increase of principal for each fiscal year, 1885 to 1896, both inclusive; and further showing the payments of the principal, of the interest, and of any premium for each annual period from March 1, 1885, to March 1, 1889, and the total for such four years; and from March 1, 1889, to March 1, 1893, and the total for such four years; and from March 1, 1893, to March 1, 1897, and the total for such four years.

THE TARIFF BILL.

The VICE-PRESIDENT. The morning business appears to be closed.

Mr. ALLISON. I move that the Senate proceed to the consideration of House bill 379.

The VICE-PRESIDENT. There being no objection to that request, the Chair lays the bill before the Senate.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

The VICE-PRESIDENT. The pending question is on the amendment proposed by the Senator from Utah [Mr. CANNON], which has been read.

Mr. WALTHALL. Let the amendment be again read.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. On page 70, after line 22, it is proposed to insert, as paragraph 233½, the following:

And from and after sixty days from the passage of this act there shall be paid, out of any moneys in the Treasury of the United States not otherwise appropriated, to any exporter of wheat or wheat flour, rye or rye flour; corn, ground or unground; cotton, hops, or tobacco, produced wholly in the United States and exported by sea from any port in the United States to any port of any other country, the following export bounty, by way of an equalization to agriculture of the benefits of this act to encourage the industries of the United States, to wit: Ten cents per bushel on wheat; 50 cents per barrel on wheat flour; 10 cents per bushel on rye; 50 cents per barrel on rye flour; 5 cents per bushel on corn; 10 cents per cental on corn, ground; 1 cent per pound on cotton; 2 cents per pound on hops; 2 cents per pound on tobacco. And all payments of bounty under this act shall be made upon negotiable vouchers, issued by the collector of customs at the port of clearance, upon presentation at the Treasury or any subtreasury of the United States; and the Secretary of the Treasury is hereby charged with making and enforcing such regulations as may be necessary for the full protection of the exporters and of the Government according to the true intent and meaning of this law.

The VICE-PRESIDENT. The question is on agreeing to the amendment. Is the Senate ready for the question?

Mr. TILLMAN. Mr. President, it is my intention to discuss this matter at some length, but before doing so, if there is to be anyone in opposition, if any Senator on either side desires to maintain that this is not a proper, just, and righteous provision to insert in this proposed tariff law, I would prefer to let him speak before I do.

Mr. CULLOM. If you have a speech to make, go ahead and make it.

Mr. TILLMAN. If the discussion is to go on in this one-sided manner, I would prefer to have all my colleagues here, and I note the absence of a quorum.

The VICE-PRESIDENT. The absence of a quorum is suggested by the Senator from South Carolina. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Allison,	Faulkner,	McBride,	Proctor,
Bate,	Foraker,	McMillan,	Quay,
Berry,	Gallinger,	Mallory,	Rawlins,
Burrows,	Gear,	Mitchell,	Sewell,
Caffery,	Gorman,	Morgan,	Shoup,
Cannon,	Gray,	Morrill,	Spooner,
Chandler,	Hale,	Nelson,	Tillman,
Clark,	Hanna,	Penrose,	Vest.
Clay,	Hansbrough,	Perkins,	Walthall,
Cockrell,	Harris, Kans.	Pettigrew,	Warren,
Cullom,	Hawley,	Pettus,	Wellington,
Davis,	Hoar,	Platt, Conn.	Wetmore,
Deboe,	Kenney,	Platt, N. Y.	Wilson.
Fairbanks,	Lindsay,	Pritchard,	

The VICE-PRESIDENT. Fifty-five Senators have answered to their names. A quorum is present. The Senator from South Carolina will proceed.

Mr. TILLMAN. Mr. President, the discussion of the tariff bill which has been proceeding here, or progressing, in a one-sided way, for some ten days, presents a remarkable condition of political feeling and a nebulous state of mind on the part of many men on both sides of the Chamber. The Republicans by common consent, under stress of party orders, I suppose, given by the caucus, sit quietly by and vote. They say nothing. They seem afraid to say anything. The iniquities they are perpetrating upon the American people are so outrageous that they prefer not to discuss them even, but they press relentlessly forward with the intention of carrying out their compact with the trusts and monopolies; and every schedule prepared by the party caucus is voted for by them unanimously.

The Democrats are in a condition of transition. They do not know exactly where they are. The older, more renowned, more experienced leaders of the party stand up and proclaim their allegiance to the old doctrines, time-honored, ancient. We had an exhibition yesterday of an impassioned speech based upon the Walker tariff, brought forward at this late day as true Democratic doctrine. Secession, nullification, and other issues which have been settled and have passed out of the minds of men as living questions had just as well be brought in here.

The tariff is not a principle unless it be that it rests on principle. It is merely a question of policy as to how the Government shall derive its revenue. It has been talked about so much and so long and so ably that I can not expect to present any new phase of it; but I propose, as one humble representative of a State on this floor, to give some views that may be mine only, but which appear to me to be those which should obtain in governing men who come here to frame tariffs.

What is the true doctrine of tariff taxation, the American doctrine, the patriotic doctrine, the statesman's doctrine? I for one stand ready to confess and announce my faith in the belief that it is to the best interests of the American people as a whole that everything consumed by our people should be produced by our people, if it is possible. If that be Republican doctrine, then I am a Republican. If it is not Democratic doctrine, it ought to be Democratic doctrine.

It is not necessary for me to state, because it is known to all students of history, that those nations which confine all their labors to one product, or to agriculture only, are pauper nations. They do not progress; they do not achieve any place in history that amounts to anything. They do not gather wealth; they do not produce culture; they have not advanced civilization. Therefore, I announce as a sound policy that we ought to diversify our industries as far as we can and give employment to as many men of as many occupations as can get work at a profitable figure.

We do not want all farmers in this country. We want to have manufactures. And why do we not want any more farmers just now? Because we are to-day producing more of the staple crops of export raised on the farm than we can get a living or decent price for; and why, in God's name, should we undertake by a tariff policy to drive from the factories and from the cities to the farm more competitors to produce cotton and wheat to export at a loss? We do not want any more farmers. What we want is a tariff so levied that the farmer shall not be robbed for the benefit of the laborer in the cities and that he shall have an equal chance in life to get that for his family and for his comfort that the Declaration of Independence declares is the inalienable right of every freeman.

There is a reciprocity of interests here. The farmer wants a market for that which he produces; the manufacturer wants a market for that which he produces. There is no conflict of interest between these two when their interests are weighed in an equal balance by honest legislators. It is only when you throw into the scale in favor of manufacturers your laws which give them undue advantage, when you rob the producing farmer for the benefit of the manufacturer, that any man has a right to complain.

From the foundation of the Government there have been those who contended that the manufacturers should be protected and a home interest built up which would supply the American market with all the manufactured articles necessary. On the other hand, those engaged in agriculture have declared that they were unjustly dealt with and were forced to buy from these men at a higher price than they could buy in Europe. The tariff discussion has gone on along those lines from the beginning of the Government until to-day.

Now, for the first time in our history, when this protective policy has borne its fruit and the pauperized farmer stands here with his skinny, bony hands begging justice and equality, and the opportunity is given you, by a bounty on his exports, to give him some compensation for the robbery that he has undergone for half a century, you sit in stony silence, you sneer, you elevate your eyebrows, you refuse to discuss the proposition as unworthy of debate, and you expect to see this idiotic farmer not know that you had the opportunity to give him some meed of justice and you refused it.

But I pledge you my word and honor, gentlemen, you are face to face with an issue that you can not shirk or dodge, and both

parties will have to face it in the near future; because the 9,000,000 men in this country who are engaged in agriculture and who are face to face with pauperism and bankruptcy, whose farms are slipping from beneath them and are being absorbed by loan and trust companies that loan them money, will settle with you at the ballot box, as to whether you shall continue to take from their pockets their hard-earned dollars to give to the manufacturing industries, and give them nothing in return.

How has the tariff policy of protection, which has been the governing principle ever since the war, and even before the war to a limited degree, worked? It was intended by domestic competition to reduce prices; but instead it has been the means and instrument of building up domestic monopoly to raise prices, and the wealth that has poured into the coffers of a few thousand men, or 10,000, or 50,000, or 100,000 engaged in and who own manufactures, has been taken from the hard earnings of the masses of the people, and you have got to settle with these farmers if you now refuse them redress.

Trusts and monopolies could not exist if the products of those trusts were admitted free of duty; but when you erect barriers between us and the foreign market and allow no opportunity for the import of these things, you put it in the power of the domestic manufacturers, by forming combinations among themselves, to fix the price that they choose to charge in the home market, and the farmers must pay a bounty to these men and can not help themselves.

You Republicans proclaim the doctrine a cardinal one, of "America for the Americans." To that I say amen, for I am an American. But I want you to include in that charmed circle of America for Americans the farmer along with the rest, and give us an equal showing. As I am a farmer pure and simple, as I never had any other occupation and never had any other means of income but from the farm, I can stand here with more propriety, possibly, than any other man and demand equality and justice. I can not hope to do more than supplement the able, masterly, unanswerable argument presented yesterday by the Senator from Utah [Mr. CANNON], but I am prepared to advance some arguments that will stagger some of you to answer.

The cry is, "Protect American labor against the pauper labor of Europe." It is your sole reliance in appealing to the voters to say, "We do not want the prices which we pay you for your work to sink to the level of your European competitors."

Who competes with the American farmer? Where are you driving him? Take the producer of wheat. Who are his competitors? The people of India, Argentina, and Russia. Take the cotton grower. Who compete with him? The people of Egypt and India. You are driving the producers of those staple crops, which are largely exported, to the level of the paupers who work in Egypt, in India, in Argentina, and in Russia. You can not deny the proposition.

As long as we had a monetary system which gave us fair prices for our exports, we could stand the competition by reason of our rich virgin soil and our improved machinery and the superior industry and intelligence of the American farmer. But we have reached a point, since the repeal of the Sherman law and the final annihilation of silver as money, where we are face to face with a crisis in agricultural affairs in this country; and you gentlemen who are pressing madly onward, imagining that you can hold your farmer vote, that you can hold the wheat grower to your standard by pretending that he will be benefited indirectly while you can not give him a bounty and can not compensate him, will find when this question is presented to him, as it will be presented in the next two years, that you must explain why you refuse to give the farmer equality and justice in this scheme of protection. If you can hold his vote after he shall be made to clearly understand the class favoritism involved in the refusal to vote this bounty, then he will deserve his fate, and will be a fit "mudsill" to serve as a basis of the plutocracy which now controls in this country.

I have too much respect for the descendants of the New Englanders and citizens of the Middle States, who have moved to the West and who are to-day producing wheat at a loss, to believe that you Republicans can hold them in your party if you refuse to do them justice. And as for my friends on this side who elevate their brows and sneer at the idea of a bounty as not being Democratic, I will, before I get through, show to you that you are clinging to the letter and not the spirit of Democracy, and that if you refuse to do justice to your own fellow-citizens by your votes here, they will hold you to a strict accountability.

I said a moment ago that the American farmer furnishes the exports with which you pay your foreign exchanges. I will give the exact figures. All the exports sent abroad by this country in 1896 amounted to $863,000,000. Of that sum, the farmers dug out of the ground and shipped, because the home market would not take it, $593,000,000 worth, or nearly three-fourths. You are not able to consume the farmer's surplus, and he is forced to sell wherever he can find a buyer. You force him to buy at home in a market the prices of which have been raised from "20 per cent ad valorem," which is the true Democratic proposition, I believe, to somewhere between 100 and 150 per cent on many articles, and an average of over 50 per cent on all.

Then you turn around and in this tariff bill you offer him "all the protection possible" by giving him 25 cents a bushel on wheat, 15 cents a bushel on corn, 30 cents a bushel on barley, and so on through the agricultural schedule. And while the taxgatherer comes around yearly and while the mortgage eats and gnaws day and night upon his home, the one that this Government may have given him, feeling that it is slipping from beneath his feet by these unjust conditions, you expect him to vote the Republican ticket because, forsooth, you have given him "protection" in this scheme by a tariff on these articles.

It is an insult to his intelligence, and if the man who framed it—I do not know who did it—has an agricultural constituency that is worth a fillip, he would never see the light of this Chamber any more after they got a chance to vote upon it. You know it is an insult to proclaim that the farmer gets any benefit from these tariff duties.

But, Mr. President, who and what are some of these men who are thus discriminated against? Let us consider for a moment, if we please, two brothers born in Germany, who, feeling that they could better their condition by emigrating to America, set out from there twenty years ago and came to our shores. One of them stopped somewhere eastward of here, in New York, or Massachusetts, or Pennsylvania, or some one of those manufacturing States, and went into manufacturing. The other one moved westward, pressing on beyond the Mississippi into the virgin fields of Iowa, Kansas, or Nebraska, and by the bounty of the Government was given 160 acres of land, upon which he settled and began to farm.

Let us follow them on and see how they are treated. They both became American citizens, and they are both American laborers, so to speak. They came to this "land of the free and home of the brave," its Government founded upon the immortal declaration that "all men are born free and equal, and have an inalienable right to life, liberty, and the pursuit of happiness." From the day when the farmer settled in Nebraska on his quarter section he has been mulcted and pinched and some of his substance taken by tariff taxation for the benefit of the brother who went to manufacturing under the protective tariff.

How many of the farmers are foreigners? They are as clever and as good men as we have, many of them—I mean the intelligent portion of them. But to give you a little insight as to the situation, I will take the nine States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania. The total of foreign-born citizens 10 years of age and upward engaged in gainful occupations there is 2,199,120. How many of these are engaged in farming? Two hundred and forty-six thousand eight hundred and seventy-five. How many are engaged in manufacturing? Eight hundred and ninety-nine thousand nine hundred and forty-six. That is all very well. It seems very well to some men to have the 246,000 farmers mulcted and taxed on what they buy for the benefit of 899,000 who went into manufacturing.

But let us go further. Take the twelve wheat-growing States known as the Middle West—Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas. The total number of foreign-born citizens engaged in gainful occupations was 2,173,693; the number engaged in agriculture was 837,357. The number engaged in manufacturing industries was 534,831. You make the 837,000 farmers pay tribute to their brethren who are engaged in manufacturing industries in their own States as well as in the Eastern States, and when they go to sell their own products of wheat, beef, cheese, butter, and other things, after they have given to this country all it can consume, they have to send the surplus abroad, where they compete with their brethren in Europe on an equality, while the foreign-born American manufacturer competes with his brethren in Europe with the protective tariff thrown around him, by which he is enabled to rob the same brother who came with him, and to rob the native-born American who is fool enough to farm under these conditions.

Now we come to the Ishmaelite section, which has no rights, which never has had any rights since the war that anybody is bound to respect. I give the ten cotton States, North Carolina, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Louisiana, Texas, and Arkansas. The total foreign population of those States in gainful occupations is 172,505, of whom 58,142 are engaged in agriculture and 36,429 are engaged in manufacturing. It does not matter, of course, that the South to-day furnishes a larger proportion and possesses a larger proportion of native-born Americans, descendants of those who fought the battles of the Revolution, than any other portion of the country. But though we are laboring under the ban of secession and the effort to disrupt the Government, and have paid our thousands of millions for seceding, we are still face to face with the demand of the daughters of the horse-leech to give, give, give.

I ask leave to insert a table here from the census of 1890, giving the figures more in detail:

Total number of white foreign-born citizens, over 10 years of age, engaged in gainful occupations in several divisions of States.

State.	All occupations.	Agriculture, mining, and fishing.	Manufacturing, mechanical, and industrial.
Maine	42,897	7,213	19,302
New Hampshire	42,587	4,199	28,411
Vermont	23,390	7,941	7,241
Massachusetts	381,000	24,835	193,337
Rhode Island	62,381	2,935	36,062
Connecticut	105,618	11,086	51,701
New York	878,306	76,908	332,919
New Jersey	183,491	13,750	78,633
Pennsylvania	478,330	98,008	154,340
Total	2,199,120	246,875	809,946
Ohio	220,985	51,277	81,789
Indiana	78,369	27,236	21,827
Illinois	457,202	103,705	146,846
Michigan	285,314	107,658	68,419
Wisconsin	266,092	119,077	61,519
Minnesota	257,119	130,143	45,848
Iowa	172,918	99,822	24,821
Missouri	135,040	34,805	40,915
North Dakota	43,018	30,463	2,789
South Dakota	48,513	34,410	3,717
Nebraska	110,967	59,046	15,948
Kansas	79,006	49,715	10,393
Total	2,173,603	837,357	524,831
North Carolina	2,232	640	561
South Carolina	3,779	617	958
Georgia	7,495	800	2,354
Florida	10,520	2,254	4,551
Tennessee	12,074	2,512	3,592
Alabama	8,867	2,678	2,493
Mississippi	5,208	1,341	1,260
Louisiana	28,492	5,399	7,044
Texas	84,933	36,329	11,799
Arkansas	8,865	3,572	1,817
Total	172,505	58,142	36,429

The cry is: Meet your competitors in India and in Egypt and fight it out. And if an effort is made here, through a bounty on exports, to give those men a scintilla of the amount taken from them by unjust tariff taxation, the representatives of those cotton States will stand here and vote against the proposition, no doubt upon the ground that it is not Democratic doctrine.

Mr. ALLEN. Will the Senator permit me to call his attention to the fact that this country, on August 10, 1790, passed a tariff act which contained an export bounty?

Mr. TILLMAN. Oh, my dear sir, I recall and recollect the fact that, in order to seduce a certain lot of people in Louisiana into the support of a certain party, they gave a bounty on sugar, which was a bounty on production and not on export.

Mr. ALLEN. I am talking about the export bounty in 1790, and not in 1890—one hundred and seven years ago.

Mr. TILLMAN. I was unaware of that.

Mr. ALLEN. With the Senator's permission, I shall read a short section of that act.

Mr. TILLMAN. I shall be glad to hear it.

Mr. ALLEN. Section 4 of the act provided:

And be it further enacted, That there shall be allowed and paid on dried and pickled fish of the fisheries of the United States, and on other provisions salted within the said States, which, after the said last day of December next, shall be exported therefrom to any foreign port or place, in lieu of a drawback of the duty on salt which shall have been expended thereupon, according to the following rates, namely: Dried fish, per quintal, 10 cents; pickled fish and other salted provisions, per barrel, 10 cents.

Laying down expressly the doctrine of an export bounty.

Mr. HOAR. Was that not in lieu of an import duty?

Mr. ALLEN. It does not make any difference what it was in lieu of; it was taking money out of the Treasury of the United States to pay it to the producers of these articles in consequence of their exportation.

Mr. HOAR. But was not the export bounty regulated in substance by the amount of the import tax?

Mr. ALLEN. How is that?

Mr. HOAR. My question is whether that was not a bounty—though that phrase is not used—but in fact was it not the refunding of the import tax? They made a rude calculation of what the duty had been on the imported salt and paid it back to the salt user.

Mr. ALLEN. If the Senator from South Carolina will permit me, that is neither here nor there. No matter what the specific thing is, it recognizes the doctrine that in this country we have the power under our Constitution to pay an export bounty, and that one hundred and seven years ago we did adopt that policy, whether it was in a large or a small degree.

Mr. TILLMAN. If the Senator from Nebraska will allow me, he will realize that that bounty or rebate, or whatever you may term it, was put in that tariff for the benefit of New England.

Mr. ALLEN. Yes.

Mr. TILLMAN. Just as anything and everything connected with the tariff in the way of protection has had its genesis and ablest champions from that section of the country.

When interrupted, Mr. President, I had just given the figures showing the immigration here and how unfairly the immigrant from Europe who had gone to the West and settled there as a farmer had been treated in comparison with his brother who had settled in the East and began manufacturing.

The Senator from Minnesota [Mr. NELSON], whose State has upward of 150,000 of these foreign-born citizens, nearly all of them farmers, may explain to them when he gets home where they come in under these tariff schedules, and what good protection does them unless this bounty feature is incorporated in the bill; and the Senators from those other Western States will have an opportunity to explain why they will vote here against this proposition to give compensation to the American producer on the farm when we hear so much about compensatory duties for the woolen manufacturer by reason of the tax that is given in these schedules here to the wool producer.

Why are these men to be left out in the cold? Why are they ignored in this scheme of tariff taxation? Why is no compensation given to them? Why is there no equality, no equity, no justice to them? Gentlemen, when you meet your constituents and they ask you why, I hope you will have your answers ready, because I tell you they are going to ask you.

You may drag this juggernaut-car policy with its double team of protection and gold monometallism over the prostrate forms of the farmers, you may mash them deeper into the mire of poverty than they are already, but a day is coming when they will turn and say, "Your party of Republicanism to-day is a byword and a hissing. We inherited the principles of Abraham Lincoln: we fought for those principles during the war, and one of those principles, which was dearer to us than any other, was the equality of men, even the black man with the white. We shed our blood to emancipate the negroes of the South, and you have in turn placed us in a condition of slavery that is as hopeless as that of the slaves who were held as chattels."

We have it here boldly proclaimed that there is an alliance between the Eastern manufacturers and the woolgrowers of the West by means of which alone this tariff bill can go through. The two sections in alliance against the balance of the country boldly march up here through their representatives, join forces, and say, "Give us wool duties and take your compensation on the woolen manufactures." Then they join in and give the sugar trust and every other trust all it asks for. Will there be no day of reckoning? If there be none, then the spirit of liberty in America is dead and the farmers of the West are hopelessly enslaved already.

Here is a quotation from Albert Gallatin, in a memorial to Congress in 1831, in which this very danger is pointed out, and the danger which always confronts a legislative assembly which comes here composed of men who do not rise to the dignity of American Senators, who come here as the representatives of States only. Mr. Gallatin said:

The true problem to be solved in the United States is not whether the people can govern themselves, of which not the slightest doubt can be entertained, but whether that government can be successfully applied to an extensive territory embracing interests which must occasionally be in collision with each other; whether majorities formed by combinations of sectional interests will be so governed by a sense of justice and a spirit of conciliation as not to oppress those parts of the country whose rights, though they may be in a minority, ought nevertheless to be respected.

What is the wool clip of the United States worth? Thirty million dollars, while the aggregate value of our farm products is $2,000,000,000 annually, and yet there is a combination between the Senators representing the States largely interested in woolgrowing, who make that a condition upon which their votes shall be given, with the States interested in manufacturing, while both through this tariff bill, which is higher in many respects than any we have had, utterly ignore the rights and interests of the great masses of people engaged in farming. Boldly you ally yourselves together, the extreme sectional West and the East. Dare you oppress the Middle States and the South engaged in the production of agricultural exports? You are offered an opportunity to give them compensatory duties by a bounty. Will you do it? Dare you refuse it? There is very little you will not dare, but there is a day of reckoning for you Republicans, as there has been for the Democratic party when it was false to the people and recognized not that there was a day of judgment coming.

Democrats here proclaim that "tariff for revenue only" is alone true Democratic doctrine. It has already been pointed out that this word "only" was stricken out in the last Democratic convention. I could give the history of it, but it is not necessary, except that we saw after the passage of the Wilson bill, which was a protective tariff, that any contention along those lines was simply

a waste of time and would put the party in a false position. The Senator from Missouri [Mr. VEST] says he voted for the Wilson bill under protest, but he stood by his party. Is it Democracy to do wrong because the party says so? Is it Republicanism to do wrong because the party says so?

Mr. VEST. Mr. President——

The VICE-PRESIDENT. Does the Senator from South Carolina consent to be interrupted?

Mr. TILLMAN. Yes, sir.

Mr. VEST. I was unfortunate if I was understood by the Senator to say that.

Mr. TILLMAN. I do not want to do you an injustice, and if I misquoted you I should like to have you set yourself straight.

Mr. VEST. I did not use the word "straight." I stated the fact.

Mr. TILLMAN. "Correct," then.

Mr. VEST. I voted in the Chicago convention, amidst great confusion and uproar, for a long, rather intricate, and, in parts, nebulous platform. I sat by the side of the Senator from Mississippi [Mr. WALTHALL], the chairman of his delegation, and he knows that both of us were in doubt as to the meaning of some portions of that platform.

I want to state now, frankly, that I never knew until it was stated in this Chamber that that word "only" was left out of that platform. The issue in the campaign was the money question; the tariff was not discussed in my campaign in Missouri at all; and I state now, frankly, that I did not know that that change had been made.

If I had known it, I should have risen in my place and moved to insert that word "only," because I believe that it is the creed of the Democratic party. I never would have supported that platform with that word taken out of it. I may have been guilty of great neglect and inattention, but that is the truth, and I do not believe that the great majority of that convention knew that that change had been made. All our attention was concentrated upon the money issue, and very little was said about the tariff.

Mr. TILLMAN. Mr. President, it is not worth while for us to discuss here how the word "only" came to be left out of the platform, or why. I will say this, however, that the reason it was stricken out was because we wished to confine the attention of the country and fight the battle on the money question only. We did not care to have the tariff brought into it as an issue at all; and after the passage of the Wilson bill, those of us who were perhaps more advanced than the Senator from Missouri in our ideas on this question did not feel that we could consistently contend about the word "only" when the Wilson bill from one end to the other had recognized the protective principle, and that the party stood committed to the acknowledgment that it was right and proper—or expedient, if you choose—to protect American industries.

The tariff was not an issue in the last campaign, except as it was made such in those States where we did not fight, where there was no contention by the followers of Mr. Bryan at all against the onslaught of the other side. We surrendered the northeastern section of the country as committed wholly and irrevocably to the gold monomania, and we made our fight in the West and South. It is not the issue now, and it can not be made the issue; and the way we vote here will not affect the next election one way or the other, except that those of you who have fooled your constituents by proclaiming that we must "open the mills instead of opening the mints" have to show prosperity in the next eighteen months or you will stand condemned and the thousands of workmen who voted your ticket on that pledge will vote for somebody else. You have to show how you can give prosperity under the gold standard by increasing taxes, and without any effort—or rather with only a futile effort—to increase the prices to the farmer on export products; and if you give him none of this money which you propose to wring from the people by this tariff bill, he will settle with you the sooner and the more effectually.

Somebody will ask, and all of you are asking in your minds now, what right have you to take money out of the Treasury and pay a bounty to anybody; what right have you to raise money by taxation and pay it out in bounties? You Republicans can answer that when you explain by what right you took money out of the Treasury and paid a bounty to the sugar planters of Louisiana, not on exports, but on what they produced. But I want to ask you who dispute the right to take money out of the Treasury and pay it out in bounties, what right have you to levy taxes which take money out of the pockets of the people and pay bounties to the manufacturer? You may call it a tariff, but it is a bounty on manufacturing, and the farmer has to pay one-half of it. What I mean is that the agricultural population of this country being about one-half of it, therefore, in proportion to consumption, they pay one-half of the tariff duties of this country, and they get nothing in return. What right, if we come to the question of right and wrong, have you to take money from these people and give it as a bounty to manufacturers?

I believe that it has been asserted here by almost every Democrat who has had anything to say about the iniquities of this bill that it proposes a scheme of robbery by which the people are to be mulcted, robbed, not so much to put money into the Treasury, but indirectly by raising the price of all that is consumed in the country. I think the Senator from Texas [Mr. MILLS] calculated yesterday that the bounty to the manufacturing industries would be something like twelve hundred million dollars. The figures were staggering. To take the most conservative estimate, if the benefits to the protected industries by means of the tariff amount to $3 to the manufacturers and their employees as compared to $1 received by the Government, it would still be an enormous amount.

Is it not robbery? Will some Democrat dare say that he does not think it is robbery? How many of you have stated that it is robbery? Well, my colleagues, my fellow-Senators, my brethren of this party, who stand up and proclaim the doctrine of equal rights for all and special privileges to none as the cardinal principle of Democracy, if it be robbery in this bill to take from the masses of the people these hundreds of millions of dollars and pay them into the coffers of the manufacturers and into the coffers of the Government, how will you face your farmer constituents and vote against a provision in this same bill which will restore a minimum amount, a very small proportion of the amount that they have been robbed of?

It is not a question of whether it is Democratic policy or not to pay bounties, because you are not responsible for this measure. You have to take it whether you like it or not, and you have an opportunity by this amendment, with the help of a few Republicans over there who are not lost to all sense of shame and decency and patriotism, to put the farmer on some basis, however small, on an equality with the balance of the country; and you can not be accused of having deserted your party policy or your party platform or anything else if you try to amend the bill so as to do justice to your own States, to your own constituents, and to the farmers throughout the country, without regard to politics or section.

You can not get around the proposition that if it is robbery to take it away, it would be honesty and patriotism and Democracy to restore it. It is not a question of party policy. It is not a question of whether you would favor bounties per se as a party policy if you had the framing of the bill, but it is simply a question as to whether you will endeavor to amend this bill in a way to do justice to your people.

This may be "a new Democracy, which seeks to lead some of us into the camp of the enemy," as the Senator from Texas twitted us with yesterday. It may be "a new evangel of Democracy" to ask you to amend this iniquitous tariff measure or vote to amend it so as to restore to your people that which you say they have been robbed of; but to my mind it is the essence of Democracy to proclaim equality, the cardinal doctrine of our party, rather than to offer your constituents the dry husks and the Sodom apples of old party platforms for "revenue only."

It is not a question of how you are going to get the money. The money will be there. They proclaim that they expect a surplus; they are proclaiming that they want to increase the gold reserve to $150,000,000, so as to absorb some of this prospective surplus. They have proclaimed a desire to retire the greenbacks by locking up this money in the Treasury. You have the opportunity to force them to show their hands by voting to pay out $47,000,000 to the farmers who make wheat and cotton, who have been robbed in every schedule of this bill, and you say, "No; I will not do it because it is not Democratic; it is not for revenue only." Great God, such Democracy! They ask you for bread and you offer them a stone; they ask you for an adherence to your principles and instead of the Goddess of Liberty you put up a mummy labeled "Tariff for revenue only." The question is with you gentlemen. No doubt you will vote in accordance with what you believe is your duty.

I say this as a farmer who has felt the iron enter his soul by reason of the injustice and iniquities practiced by the protective tariff; and in the name of the cotton and the wheat growers, I say here that if it is not Democratic to vote for this, then I am no Democrat. You have got the telescope with the big end close to your eye, the little end away off yonder, and at the other end you see, "Tariff for revenue only." Turn it around and you will see "Equality" as the cardinal doctrine of Democracy; "Equal rights for all, special privileges to none;" "The greatest good to the greatest number." These are the fundamental principles of Democracy as I understand the word, and I propose to stand by them. You will not accept it, you will not support it, you will not vote for it because you put party platforms above party principles, and party policy above the principles of Jefferson and of Jackson. Well, explain it if you can when you come to face your constituents.

For my part, I believe in getting everything out of this tariff business that we can get, for if the policy of the Government is to be one of robbery or to be one of special classes and privileges,

while I know it is impossible for the Southern States to get anything like their share, then when I can put anything into the bill which will give us only a small proportion of what is our due, I shall vote to put it there. A tariff tax on cotton will do us no good. There are very few planters out of the millions who raise cotton who grow sea-island or long-staple cotton or anything of that kind. The tax on wheat, the tax on corn, will do the Western farmers no good, and you know it. Do you think we are idiots and fools, that you can cram that down our throats and get us to vote with you on that proposition? Do you not know that this country can not absorb our surplus and that we must export it? Do you not know that the surplus is lowered in price by reason of the destruction of one of the money metals of the world? Do you not know the only way in which you can raise the price of agricultural exports is to restore silver and thereby increase the volume of the money of the world?

You do know it; and yet you say, "We can not relieve the American farmer because we must have international bimetallism." You erect a barrier between us and Europe, your tariff, and then you say, "We can not allow English free traders to dictate our tariff policy;" but we allow the English bondholders to come in and buy our Government and control our Senate and dictate our policy in everything, to keep these men down as though they were under the dastardly heel of the Spanish butcher, Weyler. You do these things, and yet you stand here claiming that you are the apostles of Lincoln, when you are unworthy to untie the shoe latchets of that great man, if he were living; and you, my Democratic friends, stand here and proclaim that you are the followers of Jefferson, when you refuse to undo this iniquity so far as you can, to restore to the people a small proportion that you say this bill robs them of.

I take my stand for "equality of benefit and equality of burden" as the highest and noblest principle of Democracy, and will fight for it here and elsewhere as long as I have breath. I may be alone now, but the time will come speedily when that principle will triumph in this Government or liberty will cease to claim America as her home.

Mr. ALLEN. Mr. President, I shall occupy the time of the Senate for a moment only, to express my approval of the amendment offered by the Senator from Utah [Mr. CANNON]. While I have refused, and still refuse, to commit myself to the dangers of a high-protective policy, yet fully realizing that the pending bill is shortly to become a law, I deem it highly just under the circumstances that the agriculturists of our country should derive some benefit from it, and that all its benefits should not be permitted to go to a few thousand manufacturers. While we will, by the bill, impose duties on imported cereals, ostensibly for the purpose of protecting our farmers and planters, there is not a child in the United States who does not know that any duty, however high or in whatever form laid, will not protect them in the slightest degree, for they are exporters of wheat, corn, cotton, tobacco, and other farm products and are compelled to sell in the open and sharply competitive markets of the world, where trade is unrestricted and unhampered by tariff taxation.

The farmer, then, will be placed in the peculiar attitude of being forced to purchase everything his family may consume in a noncompetitive and scarce market, made so by laws which have a tendency to create a monopoly in the hands of the American manufacturers, while he is compelled to sell the products of his farm and obtain the money with which he shall make purchases in a competitive market. He will therefore obtain no benefit from a protective tariff, either direct or indirect, and to the end that he may share in some measure in the benefit to be derived from the policy of protection, if benefit is to follow its adoption and enforcement, I am in favor of the amendment which will operate in the nature of a rebate and will return some of the millions the farmers are compelled to pay to advance the interests of the American manufacturers.

It would be useless to argue the subject at length. It is all stated in the simple proposition that under the law as now proposed the entire benefit will go to a few thousand, while under the amendment proposed by the Senator from Utah some benefit would be derived by the millions of our agriculturists; and I take it no man can justify himself in voting special benefits to a few and excluding the many. The farmer is as worthy of protection by the laws of his country as the manufacturer or any other class of citizens, and for this reason, and realizing this truth, I shall cast my vote for this amendment.

Mr. President, I ask to make a part of my remarks certain papers from the pen of Mr. David Lubin, of California.

The VICE-PRESIDENT. Is there objection to the request of the Senator from Nebraska? The Chair hears none, and the papers will be printed in the RECORD.

The papers referred to are as follows:

"The San Francisco Argonaut once gave the definition of a Populist as 'a man who does not know what he wants, but that he wants it d—d bad.' Permit me to add this definition of a Democrat: As a man who does not know what he wants, but damns the Republican party for not getting it.

"We all know what a Republican wants. He wants protection, and manages to get it; but can anyone tell us just what a Democrat wants, apart from wanting an office? Does he want free trade? Well, sometimes, and on certain occasions. Does he want protection? For himself, as a rule, yes; but for others, no.

"But does he not have much to say about 'tariff reform?' Yes; very much, and often quite a good deal on a 'tariff for revenue.' What does he mean by 'tariff reform?' As a rule, he does not know what he means, but he talks about it anyway, because the term sounds well, especially the word 'reform.'

'Who, in this sinful world of ours, is not in need of reform? No one. Hence 'reform' must be in general demand, and so our Democratic brother is trying to supply the demand.

"Whenever he is forced into a definition he begins to flounder. Sometimes he works himself up to a great pitch of enthusiasm, but you seek in vain for the cause of the elation. You can not find it; and, in truth, there is no cause.

"After a thorough analysis and much mental effort you will conclude that 'tariff reform' means a low tariff on suspenders and a high tariff on peanuts; that is, provided this particular Democrat grows peanuts. But if he manufactures suspenders he wants a high tariff on these, and 'reform' for peanuts.

"We may now inquire what he means by a 'tariff for revenue.' This seems clear enough, so it does to everyone but an average Democrat. The question is not what it means; but what does a Democrat say it means? Ask him, and the chances are you will get a great talk with the word 'reform' plentifully thrown in.

"Analyze carefully all that he says and you will find that he means a lowering of the tariff for everyone excepting for himself.

"But are there not some free-trade Democrats? Yes; but so few in number as to be no political factor.

"It is clearly a fact, then, that the people want protection, and in the opinion of the writer protection is the best policy for this nation. Why is it the best policy? Because it will best serve to maintain and perpetuate the Republic.

"The uniform history of free-trade countries, from Phœnicia to Carthage down to England, shows in these an intensified eagerness for foreign markets. With foreign markets obtained, there is as great an eagerness for foreign colonization. After foreign colonization comes the same eagerness for foreign conquests; and then good-bye to a liberal form of government. Commercialism has conquered, and liberty is sold for a mess of pottage.

"Shall we then always live under the irksome and restraining system of protection, rather than in the free and ethical atmosphere of free trade? By no means. There is perhaps no intelligent protectionist to be found who holds to such an opinion.

"Free trade will come as soon as the social and political conditions of competing races and nations will permit it to come without loss to our social and political standard.

"Will not the leveling influence which free trade exerts tend to speed the time of progress? For some races, some nations, yes; for the American people, no. At this time in the world's history it is perhaps best for this nation to preserve that state of semi-isolation which protection permits, and which international commercialism would tend to destroy.

"But because we grant protection let it not be understood that we favor an unjust or one-sided protection. Protection is only defensible as a policy whenever it is just and equitable. It would be far more expedient to have free trade than an injury-working system of protection.

"Any injury through free trade would press upon us from without, but the injury of an unjust and inequitable protection system would generate trouble from within. As it is easier for this nation to withstand outside pressure rather than internal disorder, it would therefore be preferable to adopt free trade rather than continue a protective system which in its operation produces inequity and injustice in our midst.

"We may now properly inquire, Is our present protective system just? And the answer is 'no.'

"Wherein is it unjust? In failing to protect the producers of agricultural staples. But are these not protected as manufactures are, by a tariff on imports? They are on the tariff schedule, but this can not protect them like manufactures, because they are exports and not imports. But are not some manufactures also exported? Yes; but manufactures are sold at local prices at private sale; the staples of agriculture are sold at the world's international prices for the exports. But what about the greater quantity for home use? These bring no more than the exports do, for the price is the same to home or export buyers, both buying in the same place, time, and quotation.

"But are not the agricultural staples protected indirectly? No; for before our higher wage rate through protection by its increased consumption can raise the price it must first of all raise the world's price, and which gives the foreign competitor an advantage whereby he can increase the area under cultivation, and

thus lower the world's price. Besides, what equity is there in compelling the farmer to pay a 47 per cent tariff, with profits of middlemen added to it, and giving him in return a probable advance in the world's price of perhaps 1 per cent, and which 1 per cent goes to his competitor, who has not been compelled to pay the 47 per cent with middlemen's profits added?

"But must we not tax some industry to build up manufactures? Are not manufactures already built up? But how can our manufacturers compete with the pauper labor of France, Italy, Germany, Austria, or England? Well, how can the American farmer compete with the pauper labor of eastern Europe, North Africa, and South America?

"Does the drift of all this mean that we must have free trade? No; not necessarily. Protection as it is now is one-sided, unjust, and inequitable, because it is limited to a tariff on imports. To be just and equitable it should be as Alexander Hamilton wanted it to be, by a tariff on imports, on manufactures, and by a bounty on exports for the staples of agriculture.

"'Would not the exporter get the bounty?' 'Yes.' 'Of what benefit, then, would that be to the farmer?' 'The farmer would receive the world's price, with the addition of the bounty, whether the product be exported or for home use.' 'What would prevent some speculators from combining and pocketing the bounty?' 'Other speculators in various markets of the world.' 'Would this not enhance the price of agricultural staples to the poor man?' 'Yes; and to the rich man, too.' 'Would this be desirable to the poor man?' 'Yes; for it would increase the purchasing power of the primary industry, which would create the demand for labor.' To illustrate: The Sierra Nevada Mountains, when covered with a plentiful supply of snow, supply moisture to the fruit lands of the valleys in California. A deficiency of snow on the mountains would cause drought in the valleys.

"Now, what the snow is to the Sierra Nevada Mountains for the fruit plains of California, that is the purchasing power of the primary industry, agriculture, to the workingmen in manufacturing centers. Then why would it not be wise to have free trade on manufactures and protection by an export bounty for agriculture? Because it would be as unjust as to protect manufactures at the expense of agriculture. Does it not seem that this proposition of protecting manufactures at the expense of agriculture by a tariff on imports, and, again, to protect agriculture by a bounty on exports at the expense of the manufacturers—does this not seem like trying to lift ourselves up by boot straps? Is it not an attempt to tax ourselves rich? Not at all. It is simply providing a means to conserve that political semi-isolation which would best tend to maintain our institutions.

"Protection as a national policy is as defensible as any other means of national preservation. But what is the use of this additional mode of protection for agriculture when its need was not felt in the past, when there was prosperity without it? There was prosperity so long as farmers of this nation had almost a monopoly of prices in the production of staples.

"That time has gone, gone for good, as hundreds of European factories for the manufacture of agricultural machinery for the cheap land and labor countries will show.

"So, then, this question narrows itself down to this: The time has come when we must adopt one of two plans, free trade or a twofold protection by a tariff on imports for manufactures and a bounty on exports of agriculture? Yes.

"Right here is where our Democratic brother should line up. He should drop his hypocritical, unmeaning mumbling and murmurings about 'tariff reform.' He should take the stand of a man for free trade or for equitable protection. For free trade pure and simple, with no ifs, ands, or buts, or he should take the stand for equitable protection, for protection by a bounty on exports for agriculture so long as manufactures are protected by a tariff on imports. By taking either of these stands his demand will be grounded on a principle of justice and equity, and it is an unalterable and eternal law of God that justice and equity must in the end prevail.

"To form conclusive opinions for present guidance derived almost exclusively from generalizations of passed marked events is conservatism; to do so from the present is radicalism.

"There is, as a rule, an element of truth and of error in conservatism and in radicalism, and it is the function of the critic to point out 'the happy medium,' the path we should go.

"In the affairs of government the critic performs an important function. The more so in a republic, in which the power of determination is vested in the individual citizen.

"The citizen critics of the United States are confronted by a most serious problem—a problem, it is true, which not alone clamors for solution in the United States, but also in the important countries of western and central Europe. The problem referred to is in the adoption of proper means for the removal of the disturbance in the economic conditions. That such a problem is here, no one can truthfully deny, but its cause and remedy is not so clearly manifest. Schemes and plans are offered in abundance, but the question still remains, Which of the schemes and plans shall be adopted? 'Adopt mine,' says the conservative gold man. 'No, but adopt mine,' says the radical silver man. 'Adopt mine,' says the conservative protectionist. 'No, but adopt mine,' says the radical free trader.

"Before we adopt any it is the duty of the citizen critic to analyze and synthesize all the important factors which caused the disturbance, with the aim in view of more accurately arriving at a conclusion which should remove it.

"In the endeavor to do this we may find it advantageous to first understand what we mean when we say that 'agriculture is the foundation industry.' Do we simply mean that it is so because agricultural products come from the earth, and as the earth is the foundation, therefore its cultivation is a foundation industry? Clearly such a definition would be of little practical value. We really mean that agriculture is the primary industry, and that all the other industries are secondary. If this is a truth, it is an important one, for the secondary industries are therefore and necessarily dependent upon the primary industry for their prosperity.

"Not to be misunderstood in this, we may draw our inference from an illustration. A carpenter, for instance, has a twofold economic cycle, one his wages for carpentering, the other in the expenditure of his wages in his home by his wife. The 'primary' is his wage-earning power and the 'secondary' is his expenditure cycle. Every reasonable person can see that the carpenter's 'secondary' cycle is governed by his 'primary' wage-earning power.

"As with the carpenter, the individual, so with a nation. Every nation has a 'primary' and a 'secondary' industry, and its prosperity, like that of the carpenter, depends upon the prosperity of its 'primary' industry.

"When we admit, therefore, that in the United States the foundation or primary industry is agriculture, we admit as a phase an element which becomes a most important factor in our investigation and in our conclusions.

"And is not agriculture a primary industry? It certainly is, and in no country more so than in the United States. In England, for instance, the primary industry is manufactures; under free trade she sells her manufactures to all parts of the world, with the profits of which she buys food. In the United States, and under the protective system, we can find no general market for our protected manufactures abroad; these are almost altogether sold to ourselves; whereas agricultural products are not alone produced for home consumption, but these besides form from 66 to 76 per cent of our exports. Therefore agriculture in the United States is not alone the foundation industry, but is substantially the primary industry.

"Any cause, therefore, which in its operation affects adversely the agricultural industry in the United States must in a corresponding degree affect the other or secondary industries.

"Has, then, agriculture been adversely affected? Certainly, and to a marked degree; to a degree so radically adverse and so generally acknowledged that it is not deemed necessary at this time to occupy space with facts and figures so generally admitted. It is a recognized fact that agricultural products and agricultural land values have seriously declined in the past few years.

"It is, therefore, in order for us to ask, 'What has caused the adverse condition of agriculture in the United States?' Here three general answers are given: One, demonetization of silver; another, the lowering of the protective tariff; and the third, to the inequality in the ratio of values caused by the protective tariff.

"It now becomes the duty of the citizen critic to examine these answers with care; the more so because the interest involved is not alone that of the primary industry, agriculture, but, as we have before seen, through it, all the other and secondary industries.

"That demonetization, by diminishing the volume of the money metals, may have caused a general decline in prices to some extent is admitted by many able economists. That this cause should have operated in the United States most adversely on the agricultural interest is problematic. A general decline, while adverse in some minor directions, is not nearly so damaging and destructive as a special decline. And agriculture in the United States has suffered a special decline.

"Why special? The reasons are these: Agricultural staples, being exports, are sold at the world's price. The world's price having declined, all these agricultural products in the United States have correspondingly declined, but manufactures were not permitted to decline by this rule; for these there is protection, which is but another name for bounty to the protected. How this protective bounty affected the free-trade prices of agricultural staples in the United States can be made evident by an example. Given a protective-tariff rate of 40 per cent when wheat is, say, $1 per bushel on the farm. In the event the operation of protection caused the free-trade-selling wheat farmer to pay an average bounty for protection buying of 25 per cent, it would, without any additional raise of the protective tariff, cause him to double

the ratio of the protection bounty whenever the farm price of wheat should have fallen to 50 cents per bushel.

"The claim that the adverse condition of agriculture was caused by any lowering of the protective tariff is therefore false.

"We may now safely conclude that the cause of the adverse condition was in the decline of the world's price of the staples on the one hand and the destructive operation of the protective tariff on this decline on the other.

"What, then, is the remedy? Shall it be remonetization? Can remonetization remove the artificial bounty which protection affords to manufactures at the expense of the free-trade staples of agriculture? Certainly not. Hence it offers no remedy, so far as this inequality is concerned. But will not remonetization enhance the world's price of the staples? This is by no means so certain. Cheap silver may have been one of the causes of agricultural development in the cheap land and labor countries, but this development is now a fact and is on the increase, and which remonetization can no longer prevent or arrest. Were this development in countries of dear land and labor, any temporary advantage removed would remove the adverse competition. But the facts prove the contrary; our new competitors have cheap land and cheap labor, with ample transportation facilities, and have, in addition, revolutionized their mode of production by employing our agricultural machinery.

"Do the people of the United States realize the bearing upon our economic condition of this new factor? Have the leading journals and magazines given it consideration? Has the Department of Agriculture inquired into it?

"The writer of this in 1894 drew the attention of the Secretary of Agriculture to this matter and requested an investigation of the subject. A reply was received that the foreign consuls were too busy to spare the time for the purpose, but that the request would remain on file for future action. Up to the present date no action has yet been taken by the Government to ascertain the fact.

"The statistics, indeed, show the exports from the United States, and which are about $5,000,000 a year, consisting largely of harvesters, reapers, mowers, seeders, and gang plows and cultivators. But this amount is insignificant when compared with the very much greater amount now produced by European manufacturers. It was the significance of this fact, observed by the writer during several trips to Europe, which induced him to advocate a modification of the protective system, in order to avert that economic disturbance which he saw must come through it.

"The result of the information in Europe on this head was repeatedly submitted by the writer of this article in public addresses and in pamphlets. But it seems to be a difficult task to impress upon the mind of the people the importance and the direct bearing of this factor upon our economic condition.

"Not alone is it difficult to make it plain to the average citizen, but it is likewise difficult to make it plain to our national lawmakers, as the following illustration will show: Senate Document 157, page 11, contains a portion of the remarks made before the Committee on Ways and Means of the present Congress. At that session of the committee some 25 pounds of catalogues of European manufacturers of agricultural machinery and modern implements were exhibited. The committee was informed in precise and emphatic terms that a new industry had grown up in Europe which had a direct adverse effect on American agriculture; that agricultural machinery was being manufactured in Europe, and was being applied in the cheapest land and labor countries of the world in the production of agricultural staples; that this was the main cause of the decline in the world's prices of agricultural staples, and was the cause of the adverse economic conditions in the United States.

"The catalogues were shown as evidence, but Congressman DOLLIVER, a member of the committee, after seeing these catalogues and hearing the explanations, seemed to misunderstand the bearing and importance of these catalogues, for he said, 'What is the object in submitting these books?' Again the explanation was made, and it is manifest from the first portion and continuation of the document, in the clearest manner possible. And with what result? Seemingly none; for neither Congressman DOLLIVER nor any other of the Committee on Ways and Means took any notice of the matter.

"Were they right in ignoring this evidence? We will leave the conclusion to the intelligence of the reader, the American citizen critic.

"That Congressman DOLLIVER and the committee were wrong is evident; evident from the fact that the catalogues were submitted; evident from the fact that this is a recognized factor in the economic disturbance in western and central Europe, and to which cause is mainly attributed the decline in the world's prices of agricultural staples.

"To overlook the importance and bearing of this factor upon the adverse economic condition of the people of the United States by a carpenter, by an average or unenlightened citizen critic, would have been excusable, but its neglect by a national lawmaker, a Congressman, was inexcusable. Much more so was it by its neglect on the part of the entire Committee on Ways and Means.

"The time has come when the importance of this factor can no longer be safely ignored; when we must recognize as a factor in our adverse economic condition the general employment of agricultural machinery in the cheap land and labor countries of the world.

"What, then, is to be done? Can we not by some means withdraw these machines, and thus restore former conditions?

"No; this is an impossibility. On the contrary, the increase in the European manufacture of agricultural machinery is going on, and is expanding in an almost geometric ratio, over which we have no voice or control.

"There is but one thing that we can do, and that should be done promptly; as promptly as we wish to restore prosperity to all industries. We must either entirely abolish the protective system or we must extend protection to the staples of agriculture in a form which will be as effective in enhancing its home-market price as protection by a tariff on imports is effective in enhancing the home price of manufactures. And this can only be done by a bounty on exports of the staples of agriculture.

"Many objections have been raised against this, especially by interested protectionists, but not a single objection is valid.

"There is just as much necessity for the protection of agriculture by an export bounty as there is for that of manufactures by a tariff on imports. More so, in fact, for under the present economic conditions protection for manufactures at the expense of agriculture means a continuation of adverse conditions, not alone for agriculture directly, but for all other industries indirectly.

"The opponents of this proposition refer to it contemptuously as an attempt to foist a 'bounty system' upon the people, in the meantime designating their own bounty-receiving system 'protection.' This gives them an apparent advantage, for the word 'protection' is a more acceptable term than the word 'bounty.' But what are the facts? Can any honest and capable political economist deny the fact that protection by a tariff on imports is really and fully as much a 'bounty' as an export bounty is 'protection'?

"The American Protective Tariff League was asked just this very question by several State granges, but up to the present time it has significantly persisted in a reticence on this subject wholly out of keeping with its eagerness to impart 'literature' on protection.

"Signs are not wanting which indicate that the people are at last beginning to examine into this matter with open eyes and willing ears. It was predicted that this proposition would only find favor 'in the wild and woolly West.' This prediction was wrong. The writer, on invitation, has addressed many meetings in the Eastern States. At every meeting a vote was taken for or against this proposition. While there were altogether but six votes against, the rest, numbering thousands, were in favor.

"When this was seen, the sneering remark was made that only 'hayseeds' and Eastern Populists would favor it. This also was an error, for the Central Labor Union of Chicago and New York indorsed it by a large majority.

"Last, but by no means least, in point of influence, is the indorsement and cooperation of the clergymen of various denominations, fifty-two of whom in Philadelphia are pledged to promote this measure of equity from their pulpits. Ten of these clergymen have delivered sermons memorializing Congress for the adoption of this proposition. These are in print, and may be had free of charge from Senator FRANK J. CANNON, under the title Senate Document No. 60, Fifty-fifth Congress, first session.

"In conclusion, it may be said that this proposition is intended not merely as a means of economic equity, but likewise as a means of political expediency.

"There is no greater factor in the maintenance of a liberal form of government than equity, and there is no swifter road to decay and anarchy than through inequity. Especially hazardous is it when the inequity is of a kind which, in its operation, tends to convert the conservative farmers of the United States into bands of discontented radicals.

"A continuation of such a condition must in the end produce national disorders as destructive to our Republic as similar disorders were to nations which have ceased to be.

"The time is now at hand when we must act, and in a manner which will be in harmony with industrial and economic equity, to the end that not alone shall prosperity come to agriculture, our primary industry, but through it the prosperity of all other industries.

"And this can be had by the removal from agriculture of its unjust and inequitable protection system, either by granting it protection by an export bounty or by the total abolition of tariff protection.

"Ordinarily protectionists oppose free trade on the ground of closed factories, paralyzed industries, etc., which seems conclusive. In the presentation of this proposition I have always taken a different stand. Free trade would no doubt close down factories, but only for a time. Eventually the hungry workingman would go to work, if not at high, then at low wages. In time our factories would not alone supply our home needs, but would also enter the world's market as an international competitor.

"Witness the effect in the lowering of the tariff even in a limited degree. In 1893 our exports of manufactures were $158,023,118, or 19.02 per cent of our entire exports, which under the operation of a lower tariff gradually rose until in 1896 it was $228,571,178, or 26.48 per cent. This indicates clearly what free trade would do. It would not close up factories; on the contrary, it would keep them going. Objections to free trade, therefore, on that score are not valid. We may go even further and safely assert that so far as national wealth is concerned, nothing is more calculated to augment it than free trade. But is national wealth the chief end to be sought in our national life? Is it not rather in the further development of our peculiar American institutions? Are not these institutions of much more importance to the perpetuity of this Republic than any mere increase of wealth? What, then, are these institutions of which we speak? They are those which seek to maintain, perpetuate, and develop to the fullest those principles of government which have made this nation peculiar among the nations of the earth.

"Not least in beneficent results is this influence operating upon the other nations, thereby placing us in position of the teacher, the prophet nation of the world.

"Is not this position preferable as a choice rather than one of increased national wealth? If one or the other must be chosen, which shall we take? Every true and loyal American must unhesitatingly answer that our stand should be for that which shall most conserve, develop, and perpetuate the true trend of this Republic—American liberty.

"To do this we must preserve that certain measure of commercial isolation which protection makes possible. Commercial intercourse with foreign nations when nearly limited to the sale of agricultural staples is best calculated to promote commercial isolation to the desirable degree. This is so because these products, being sold at international prices at the world's auction rooms, commonly called exchanges, offer less temptation for commercial or political entanglements with other nations. Not so with manufactures.

"Manufactures being sold at local prices and at fluctuating profits when having the world for a market invites local energy to be directed in foreign quarters, and in its endeavor to set aside foreign obstructions it seeks to overcome them by various means, chief among which are these two:

"First. Through foreign alliances, treaties, and political entanglements.

"Secondly. Through conquests.

"It is a historic fact that foreign conquests by a commercial nation, as a rule, are rooted in the endeavor by merchants to find distant markets. This was the case with Phœnicia and Carthage in ancient times. Modern examples are those of Russia and England. Northern Asia was first invaded, not by Russian soldiers, but by Russian traders, and England's invasion of India was also first begun by British traders.

"Conquests and foreign political alliances may aid to augment the national wealth, but it would surely give the deathblow to American liberty. It would be retrogression for this nation, and through it to the world. It is because we object to this that we object to free trade, and when we object to free trade on this ground it places us as protectionists on the solidest ground possible for the advocacy of protection. This declaration, once for all, is sufficient to establish in the minds of all reasonable and logical people that we are not here merely masquerading (as some say) in the guise of protectionists, and that we are free traders in reality; we have shown that we are protectionists in every sense of the word, and have given our reasons for our stand.

"Are we, then, inculcating and living under these principles of liberty which we enjoy? Are these, then, exclusively our own, not shared by others? Not so. The fates have decreed otherwise. If not by our own inclination, then in spite of it do the themes we teach become public property to all the world in the higher walks of life, but even greater in the lower.

"Witness the departure of a great ocean steamer to a foreign country. About the last thing to be done is the storing away in the hold of the vessel of the many mail sacks for hundreds of thousands of foreign homes. Millions of these annually go to the poor in the slums of the different foreign nations, and what a potent teacher these millions of letters are. Though written by rude, unlettered hands, though directed by crude, unpolished minds, there is yet in them an educating potency of infinite grandeur, enlightening, civilizing, uplifting, teaching the poor of the world in kindergarten fashion the great object lesson of liberty. Such is the lesson of the United States mail bags going to foreign countries.

"Have we, then, anything to fear from foreign nations so long as this educator freely goes abroad, and in the spirit in which it does? Certainly not, so long as these very letters tend to paralyze any effort of the foreign soldiers which may be directed against us, and so long as these soldiers have been converted by our principles and to our principles of liberty; converted to a degree which makes the Stars and Stripes a holier and grander emblem in the mind's eye of the foreign soldier than the flag of his fatherland.

"Let it be conceded that the mission of this Republic is a sacred one, not alone to be a light to itself, but to be a lamp for the whole earth. Let it be conceded that it is the peculiar mission of this people how to gain, maintain, and perpetuate liberty. And it must be conceded that this may be best attained by commercial isolation, and when we so declare we have declared in most emphatic terms, in terms irrefutable, that we are protectionists. But no sooner have we made this declaration clear then we wish this to be connected with one more proposition, which we shall make equally clear; and that is, protection shall be not alone for manufactures, but also for agriculture. It shall be effective for agriculture as it now is for manufacture. It shall not be a reality for one and a seeming reality for the other. It shall be actually real for both. It must be actually real for both, for unless it be we can have no liberty, for liberty is first of all justice, and there is no liberty where there is injustice.

"Within the past few years the question of the annexation of foreign lands has been submitted and rejected. Samoa, the Sandwich Islands, Lower California, and Cuba have been more or less prominently before the American people for annexation, and have been rejected. Would these lands have been rejected under free trade? In all probabilities, no. For free trade would make of us eager seekers of foreign markets and cause us to follow closely in the footsteps of Great Britain, and in time we would lose all relish for our peculiar institutions in the eager chase after foreign markets and in the acquisition of foreign territory.

"Under free trade commercialism would devour patriotism, and in the end would itself be devoured by anarchy. The getting of free trade as a means of supremacy would be equivalent to the sale of our birthright for a mess of pottage. To preserve the Republic, and the spirit for which it stands, we must maintain commercial relations with foreign countries as they now are, and this would not be the case under free trade.

"Some may criticise this as a farmer's cry. And does not the farmer require some attention? Must all our energies and efforts be directed in the interests of manufactures and to the exclusion of the just claims of agriculture? Would such a policy be in the best interests of the Republic?

"But let us not be misunderstood. We are not seeking to obtain any special advantage or privilege for agriculture. We are consistent protectionists, and we ask for the adoption of a plan which when adopted will as effectually enhance the home market prices of agriculture as protection by a tariff on imports now enhances the home market price of manufactures by the exclusion of the cheaper foreign price.

"To do this would be no injustice to manufacture, nor would it be conferring a special privilege on agriculture. It would simply give the same privilege to agriculture that is now and has been enjoyed by manufacture.

"To do less would be class legislation pure and simple. Who can deny it? Can we, then, justly have class legislation? No; not justly; and the time has come when we may not even have it unjustly.

"And what is to prevent it? A new economic world condition! A condition which we can not and dare not ignore, unless we invite destruction. A condition as permanent as progress and as exacting as time. It is here to stay, and we must meet it.

"What, then, is this new economic world condition?

"It is this: In the past we were the almost exclusive users of agricultural machinery. This gave us a world advantage in the production and profitable disposition of agricultural staples. This advantage is now gone, never to be regained.

"Agricultural machinery is now being introduced into the cheapest land and labor countries of the world. The United States statistics show that we export $5,000,000 a year of these machines to foreign countries. But this is insignificant when compared with the much greater amount now manufactured in Europe, as these catalogues will show.

"All this was submitted to the Ways and Means Committee of this present Congress, as is evidenced in the printed report of the tariff hearings. But what cognizance did the Committee on Ways and Means take of this matter? Can anyone tell? Certainly. They ignored it. Why did they ignore it? Was it because it was irrelevant or untrue?

"That it is not irrelevant is evident, because even the dullest mind can comprehend that the employment of agricultural machinery is a potent factor in the production of agricultural staples.

"That it is true is evident, because it is true that we export $5,000,000 worth of agricultural machinery a year, which fact is verified by the United States statistics. It is also evident that it is true from the fact that we submit here the catalogues of the European manufacturers of and dealers in these agricultural machines. Here are illustrations of combined harvesters, self-binders, mowers, reapers, seeders, cultivators, gang plows, engines, pumps—everything which we have, and of which we until recent times were the almost exclusive users. (Here see page 3, Senate Document No. 157.) It is evident, therefore, that the facts submitted to the Ways and Means Committee were relevant and true.

"Being both relevant and true, it is important. Being so, it becomes the solemn duty of the Senate to consider it. And it devolves upon this Senate not merely to assent to the fact, but likewise to point out a method of modification of the adverse state which the new economic world condition has brought about."

Mr. PERKINS. I desire to offer an amendment to the amendment.

The VICE-PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. It is proposed to amend the amendment by inserting after the word "tobacco," in line 15:

Provided, Such export bounties shall be paid only on such of the products named above as shall be exported in American ships built in the United States and duly documented in the custom-houses under the navigation laws of the United States.

Mr. PERKINS. The amendment is self-explanatory. While we all admit that the agricultural interests of our country are greatly depressed, the same can be said about our marine commerce. Surely if agriculture is the mother of other industries, commerce is her handmaiden, and there is no reason why, if we are to pay export bounties, they should be given to foreign-built vessels, vessels built in other countries, and operated and manned by foreigners, and paying their taxes to other governments. Therefore if we are to help the great agriculturists of our country, let us at the same time extend a helping hand to the commerce of our country. The country that builds ships owns those ships, and the trade of the world follows the flag.

I will not weary the Senate by enlarging upon this proposition, which in the main was so ably dwelt upon at length by the distinguished Senator from West Virginia [Mr. ELKINS] when he advocated in his speech discriminating duties upon imports. The same arguments, the same line of reasoning, apply to exports from our country. To-day we are paying out to foreign-built vessels more than $150,000,000 annually for the carriage of freight exported from this country and the transportation of people who are traveling. Let us, therefore, at the same time that we extend this helping hand to the agriculturists, extend our other hand to the commerce of our country.

Mr. CANNON. I desire to submit a proposition to the Senator from California as to which perhaps we may all agree. I have a very strong feeling in favor of the shipping interest of the United States, not only that it shall be maintained, but built up, so far as possible, by the extension of just governmental aid. If this shall become a part of the amendment, will the Senator vote for the amendment then?

Mr. PERKINS. I am prepared to vote for the amendment provided the amendment to the amendment which I have proposed is adopted by the Senate. I believe then that whatever is given in the way of a subsidy or subvention will be given to our own people, and that we will build ships to transport the products of our soil, and that our own people will be the best market in the world for the product of the farmer.

Mr. BACON. I desire that the amendment of the Senator from California to the amendment may be read.

The VICE-PRESIDENT. The Secretary will again read the amendment to the amendment.

The amendment to the amendment was again read.

Mr. CANNON. If this informal way of holding a caucus does not offend against the dignity of the Senate, I should like to propound another inquiry to the Senator from California. Will it not be acceptable to him to have his amendment enlarged so that there shall be maintained upon the export of agricultural staples the precise figures given in the original amendment, and an additional export bounty of exactly half the amount upon all export staples sent abroad in American vessels? If the Senator from California is desirous of benefiting both of these great industries, let us have the proposition so segregated and so simplified that each particular industry or interest will know the exact amount of governmental aid extended to it.

Mr. CHILTON. Will the Senator from Utah permit me to ask him a question?

Mr. CANNON. Certainly.

Mr. CHILTON. I desire to ask the Senator if he does not think there ought to be a bounty also to the railroads that transport the goods to the seaports?

Mr. CANNON. I think the railroads have already had their bounty.

Mr. TILLMAN. If not, they have the pooling bill here ready to get it.

Mr. CANNON. So far as I am concerned, if the Senator from California will agree to the proposition which I advance——

Mr. CHILTON. I did not hear the observation of the Senator from South Carolina.

Mr. TILLMAN. I said if the railroads have not a bounty, it is proposed to give it to them in the pooling bill.

Mr. CHILTON. I agree with the Senator from South Carolina on that.

Everybody understands my position on the pooling bill. I have been contesting it strenuously. While I am on the floor, I will say that, individually, of course I do not wish to give the railroads a bounty for the transportation of freight, and my suggestion on that point was merely in the line of demonstrating the impracticability of applying the amendment.

Mr. CANNON. My reading of history on this subject has not brought me to the view that it is impracticable to pay a bounty upon domestic exports sent in American vessels, but such examination as I have been able to give the subject has demonstrated to me and convinced me that we should separate absolutely the two bounties. I submit my proposition to the Senator from California, and hope that he will reply affirmatively, that we may have a modified or enlarged amendment which we can both support. I yield for the answer.

Mr. PERKINS. The amendment proposed by my friend the Senator from Utah is so simple that he who runs may read. It proposes to pay so many cents a pound as an export duty upon wheat, cotton, tobacco, and other articles enumerated; and I am prepared to vote with him upon his proposition provided he will confine it to American vessels, vessels built in the United States, flying the American flag, and documented in the custom-houses of our country.

Mr. ALLEN. Will the Senator from California permit me?

Mr. PERKINS. Certainly.

Mr. ALLEN. What is there to prohibit American-built vessels, under the amendment proposed by the Senator from California, from absorbing all the benefits of the amendment of the Senator from Utah, and taking the bounty which the farmer himself should receive?

Mr. CANNON. If the Senator from California will allow me to interpose here, I will state that my proposition to that Senator was to guard against any absorption of the farmers' bounty by shipowners, and to give to the shipowner a sufficient bounty to justify the Senator and his friends in supporting the original amendment on the floor. I submit this distinct proposition to the Senator from California: That we shall amend the amendment by adding thereto a clause which shall give an additional export bounty of 50 per cent of the original proposition upon all staples sent from the United States in American vessels.

Mr. PERKINS. Inasmuch as the expenditures of our Government for the last four years have exceeded its receipts by about $40,000,000 per annum and we have increased our national indebtedness $262,000,000, I think we should stop and see what will be the revenue to be derived from the bill under consideration, whether it will pay the running expenses of our Government, and then after we have demonstrated that fact, two years later, we can perhaps afford to be more liberal to the commerce of our country.

In the meantime, I join hands with my friend in supporting his amendment if he will join hands with me by saying, "We will not give this export bounty to foreign vessels; we are paying quite enough to them to-day."

Mr. ALLEN. With the permission of the Senator from Utah, I call the attention of the distinguished Senator from California to the fact that the author of this bill, whose name it bears, has said that it will produce $125,000,000 surplus revenue a year.

Mr. CANNON. I hope the Senator from Nebraska will not pursue that line of argument for the moment, because my friend the Senator from California and I are going to get together on this proposition if he means what he says and any justice at all will answer the requirement of the shipowner.

It would be unfair to the Treasury of the United States to grant any additional bounty to that proposed. Will the Senator from California vote for the proposition as it stands if we take down 20 per cent of the bounty proposed for the farmer in the original amendment and give it to the American shipowner? I will agree with him if he will consent to that, that we shall modify the whole proposition as it now stands before the Senate, my amendment and his amendment thereto, so that there shall be paid on all exports of staples of the United States from any port of this country to any foreign port 80 per cent of the bounty proposed in

the original amendment, but if shipped in American vessels there shall be added thereto the remaining 20 per cent; and I take it the Senator from California would not contend that more than 20 per cent of this bounty, ostensibly for the farmer, should go to the shipowner.

Mr. PERKINS. My friend presents a mathematical proposition which I presume we could all solve if we took the time. The shipowner takes nothing directly by this plan. The shipowner receives no subsidy, no subvention. The shipowner and shipbuilder are contributing money to pay the bounty to the farmer. I simply ask and propose in my amendment to the amendment that this bounty, which the mechanics, the laboring man, the farmer will pay, shall not be given to the foreign shipowner. It is to me the simplest proposition imaginable, and if my friend the Senator from Utah accepts my amendment, he gets one vote for his amendment as amended.

Mr. PETTIGREW. Will the Senator from Utah allow me to make a suggestion?

Mr. CANNON. Certainly.

Mr. PETTIGREW. As I understand the amendment offered by the Senator from California, it would take $4,500,000 out of the Treasury. An amount equal to 50 per cent of the bounty given the American farmer would give to the shipowner $25,000,000. It seems to me that the Senator from Utah will get the worst of the trade, for if the amendment offered by the Senator from California is not adopted, he will not vote for the amendment of the Senator from Utah. Therefore the Senator from Utah is trading with the Senator from California to receive nothing in return, as the amendment of the Senator from California is sure not to be adopted.

Mr. PERKINS. It ought to be.

Mr. TILLMAN. I do hope, if the Senator from Utah will permit me, that he will not belittle this question by any trafficking of that kind. Let it stand on its broad merits—9,000,000 farmers and only about 100,000 men engaged in transportation on the sea. We do not want to traffic away the rights of the 9,000,000 with those fellows. I do not say that in any invidious sense.

Mr. CANNON. The distinguished Senator from South Carolina has demonstrated to us to-day that this is all a traffic. Unseemly as this traffic may be on the floor of the Senate, there are some of us who unfortunately have no other way of caucusing with those who think partly as we do; and I am compelled to have my personal conference with the Senator from California upon the floor of the Senate.

The Senator from California will not, I think, escape the logic of this proposition. If the American farmer may ship his staple surplus to any country of the world where there exists a market, in any vessel flying any flag, he will receive an enhancement of price equal to that bounty. I do not think the Senator from California will contend against that declaration. If, on the other hand, the farmer of the United States, the producer of export staples, is required, before he can have any benefit of this bounty, to ship his wheat or cotton or corn or tobacco in ships flying the American flag, it is simply adding to the burden of protection which he must carry in behalf of other interests than his own. He will get no benefit from it for years to come. We will build up a great merchant marine, perhaps, in the United States for the United States, as one was built up for Great Britain under her export-bounty law, but I call the attention of the Senator from California to the fact that the great origin of this proposition of the shipmasters of the United States was in England, where the export-bounty law was passed purely for the benefit of the shipowners, to build up a merchant marine and not for the benefit of agriculture.

I do not believe, under circumstances which would be created by the adoption of the amendment proposed by the Senator from California, the farmer, in whose behalf this appeal has been made, would receive the benefit intended by the original amendment, but I am willing, although the proposition may be denominated as trafficking, to come to some arrangement with the Senator from California. Surely, with his intimate knowledge of the needs of agriculture and his great experience with shipping, he can decide what proportion of a proposed bounty of this character ought to go and would go to the American shipmaster. Either American shipping would receive an additional benefit in the rates to be paid for transportation, or else there is no object in the amendment proposed by the Senator from California.

Once more I renew the request. If 20 per cent of the entire bounty is not satisfactory to the shipowners of America, if that will not be sufficient to build up our merchant marine, then I will make it 25 per cent. I shall be willing, sir, in order to obtain the votes of the Senator from California and his friends upon the floor, to consent that 75 per cent of the original proposed bounty on agricultural export staples shall be a bounty absolutely to the producer of the staples, and that 25 per cent of it shall be added if the exports be sent abroad in American ships. The 25 per cent will go directly to the shipping interests of America, and the 75 per cent will go directly to the agricultural interests. We will accomplish this great object, and we will know the exact amount of governmental aid extended to the two great interests. I ask the Senator from California if he will consent to that arrangement, and will then vote for the measure?

Mr. PERKINS. Only one word in reply. My friend insists upon placing me in a false light. I am asking nothing in the shape of a subsidy for American ships. I am asking no subvention and no aid. I simply say that this aid to be given by our people to the farmer in the form of a subsidy shall not be granted unless he ships in American vessels. I care not to modify my amendment. If the Senator does not accept it, it shows that he is in favor of one interest in the country and does not favor the other.

Mr. TILLMAN. Will the Senator from Utah allow me?

Mr. CANNON. Certainly.

Mr. TILLMAN. I call the attention of the Senator from California to the difference between the American shipowner and the American farmer. There are no taxes on the shipowner.

Mr. PERKINS. The Senator is mistaken.

Mr. TILLMAN. The tariff does not fall on him.

Mr. PERKINS. The Senator is mistaken.

Mr. TILLMAN. But the farmers are to-day being stripped of their hard earnings on everything they buy by reason of the tariff protection given to the manufacturers, and we are trying simply to get compensation or equality or equity.

Mr. CANNON. The question can not remain justly in the attitude in which it was placed by the last remark of the Senator from California, who says that if I do not accept his amendment I demonstrate thereby that I am in favor of one interest as against another. I do not desire to be offensive to the Senator from California, but surely his remark reflects more seriously upon him than upon me. He says he is willing to vote for the export bounty, notwithstanding the great burden which it will lay upon the Treasury of the United States, if only the shipping interests are taken care of, and if the shipping interests can not have a bounty, I am left to infer that he will not vote for the amendment, nor will he vote for it if I make the proposition now that the shipping interests shall be insured 25 per cent of the bounty.

Mr. President, I am in favor of treating all classes of American citizens alike under this bill, and that is the reason why I proposed this export bounty. I will not accept the amendment under the circumstances. I will leave this question in its present simple attitude, so far as I am concerned, to be fought out before the people of the United States if it shall fail in Congress, as doubtless it will. I would not consent to have the amendment to the amendment added in its present form. The farmer already has too much dealing with the complication of tariff bills, and he would never know whether he was to receive—and I doubt very much whether he would ever know that he had received—any of the export bounty if I were to accept the amendment of the Senator from California.

Therefore I shall resist it, and I trust that all those who favor the proposition of an export bounty in behalf of the farmer will vote against the amendment to the amendment, and not only that, but that all those people who do not believe in granting subsidies and subventions to the shipping interests will vote against it. The Senator from California will have opportunity on many occasions to present his proposition. What I have said is not in antagonism necessarily to the shipping interests of the United States.

Mr. PERKINS. It is evident that the friends of the amendment proposed by the Senator from Utah do not look with favor upon shipping the product of our farms in American ships, but by implication would rather give it to foreign countries. The Japanese Government to-day is paying a larger subsidy to its line of steamers plying the Pacific Ocean than was ever given to any steamship line before with vessels of the same tonnage and capacity. The Japanese operate their ships for from 40 to 50 per cent less than we Americans operate our vessels. But enough of this. As the friends of the amendment do not seem disposed to accept the amendment to the amendment, indeed, they say they will resist it, I withdraw it.

The VICE-PRESIDENT. The amendment to the amendment is withdrawn.

Mr. GRAY. I should like to ask the Senator from Utah how he proposes to get the 10 cents a bushel on wheat, 50 cents a barrel on wheat flour, and so on, into the hands of the farmer. I observe here that it is to be paid to the exporter of the articles, that is, the person who is engaged in the export trade, I presume. Is there any assurance that the bounty, which will come out of the taxes of the people to go to the farmers, will not be waylaid, so to speak, by the exporter, and, after all, the honest farmer be deprived of what belongs to him under it?

Mr. CANNON. Mr. President, there is the assurance of experience and common sense that the farmer will receive this bounty; and yet there is no absolute assurance that anything which is on

its way to the farmer for his benefit will not be waylaid somewhere and captured by brigandage. Many things have started toward the farmer that never arrived, and it is barely possible that under some manifestation of cunning, which I can not now conceive, some one else would get this; but as some one else gets everything else anyhow, and he will only be retaining that which he has already, let us make the attempt to reach the farmer with it.

Mr. LINDSAY. I suggest to the Senator, with his permission, that the guaranty to the farmer here is equally as good as the guaranty to the laborer that he will get the benefit of tariff taxation. Is it not?

Mr. CANNON. It is even better, because we have had demonstrated to us that the laborer does not get the benefit in the other case. We may have a doubt as to the extent, but the weight of the argument is on my side in the comparison of the two cases. There is not any doubt in the other case. That has gone into the past. We know that the laborer in many cases did not receive the benefit of protection.

Mr. LINDSAY. With the permission of the Senator, I will ask him what he has to say in answer to the intimation of the Senator from California [Mr. PERKINS], that it is only a question between the foreign shipowner and the American shipowner as to which will get the benefit of this bounty?

Mr. CANNON. I thought that the Senator from California was a little unfair in intimating that the friends of this amendment had given inferential approval to the idea of shipping these American products in foreign vessels rather than in American vessels. There is no such idea; and there can not be maintained here or elsewhere a declaration that the foreign shipmaster would receive this bounty in lieu of the American shipmaster if we had free access to a ship flying any flag in any port of the United States with which to send out these exports.

But I call the attention of the Senator from California to one weak point, to which I had not intended to allude had it not been for the remark of the Senator from Kentucky. The moment the Senator from California says that with free trade in the shipment of these exports the foreign shipowner will get the bounty, just that moment he proves that if his amendment were adopted the domestic shipowner would get every cent of it. He disproved his own case. The only proper thing to do, after making that admission, by which he gave his case away, was to withdraw the plea.

Mr. PERKINS. Admitting the statement of the Senator from Utah to be true, it would be the people of the United States who were receiving the money instead of the people of Japan, England, and other foreign countries. The money would be in our own country, among our own people.

Mr. ALLEN. Will the Senator from California permit a question, with the permission of the Senator from Utah? Is it not true and has it not been announced repeatedly in this Chamber that 90 per cent of the men who are manning our ships are foreigners, and therefore the argument that is usually used by protectionists does not apply to the seamen?

Mr. PERKINS. I think the Senator from Nebraska is mistaken. That applied to only one line of vessels plying upon the Atlantic. It is not true that there are 90 per cent of foreigners in our vessels. In the coasting trade of the United States 90 per cent are American citizens, and as to those engaged in the foreign trade, no one can have a license as an officer of a vessel unless he is an American citizen.

Mr. ALLEN. I am talking about the foreign trade and the men who are to get the benefit of this bounty, as the Senator proposes.

Mr. PERKINS. It would be sailing ships principally, and we would build up a great shipping industry in our State. We voted the other day to place a $2 duty upon lumber. My friend from South Carolina thought we would buy the pitch pine from the Carolinas and put it into our vessels, and our mechanics would be working and patronizing the farmer and using the product of the soil.

Mr. ALLEN. I understand all that.

Mr. PERKINS. No one industry in this country can be protected without kindred interests being benefited thereby.

Mr. ALLEN. What I call the attention of the Senator from California to (and I hope he will not run away from the point or amplify it by argument) is to the fact that the large majority of seamen who man the American vessels carrying the foreign trade are of foreign birth and owe allegiance to some other country——

Mr. PERKINS. I think that applies only to the American line of steamships plying between New York and Great Britain.

Mr. ALLEN. And so much has that been the case that we have been compelled to take foreigners into our Navy.

Mr. PERKINS. I think that on all other American ships, and I speak advisedly as to the coasting trade, 90 per cent of them are American citizens.

Mr. ALLEN. But the coasting trade is not at all affected by this bounty.

Mr. PETTIGREW. Will the Senator allow me?

Mr. STEWART. Mr. President——

The VICE-PRESIDENT. The Senator from Utah is entitled to the floor. Does he yield further?

Mr. CANNON. I will yield to the Senator from Nevada [Mr. STEWART] for an inquiry.

Mr. STEWART. I want to make an observation. I want to set the gentlemen right.

Mr. CANNON. I yield for an observation, then.

Mr. STEWART. I will make an observation to set them right. It is proposed to mix up another question with the amendment under consideration, and that is the shipping interests. I am in favor of reaching that, but the direct way to do it is to do it generally and to do it as it was done by the first act of Congress, by a less duty on articles brought in American ships, and make it apply all around. Such a provision belongs to the whole tariff system. But do not make an exception here and attempt to hitch it on this particular branch. It ought to be made to apply to the whole measure if we are going to do anything with it.

Then one word as to the absurdity of the claim that some one else would get the bounty and not the farmer. It will be so much paid on wheat, and the farmer will understand that there is so much more on his wheat, and he will not be likely to sell it without taking that fact into consideration. If wheat is worth 50 cents a bushel, he will look out for that 50 cents. If there is a bounty on it, making it 55 or 60 cents, he will look after that. He can look after one part of it as well as the other.

Mr. TILLMAN. Will the Senator from Utah allow me a word?

Mr. CANNON. Certainly.

Mr. TILLMAN. I call the attention of the Senator from California to the fact that the poverty of the American shipping interest, the diminutiveness of it, the disgraceful condition, so to speak, in which it now exists, was emphasized the other day by the fact that when we wanted to send a shipload of corn, wheat, and other charitable contributions to the starving people of India we did not have an American vessel carrying the American flag which could transport it. Your proposition amounts to this, that you must wait five, ten, or twenty years until a certain lot of capitalists, who are now wealthy and have grown wealthy by all the stealings which they have gotten from the farmers, shall go into another industry and build up a carrying trade to transport the product before any benefit is to be derived from a bounty.

Mr. PERKINS. I simply want to correct the history of my friend. The *City of Everett* sailed from San Francisco, carrying some 3,000 tons of wheat and other cereals to the people of India, which were contributed by the charitable people of this country.

Mr. TILLMAN. I am only speaking of the resolution which passed the Senate. You do not deny the authenticity of it? Now, another word.

Mr. CHANDLER. Will the Senator from South Carolina allow me a word?

Mr. TILLMAN. Certainly; but this is a crisscross kind of a debate.

Mr. CHANDLER. It has some reference to the remark of the Senator. As almost everything has been discussed in this debate, I want to state to the Senate that the ship which we authorized to be employed in New York to take the New York contributions to India is not to be hired. The money is to be saved. The grain that has been contributed is to be sold in New York, and the money has already been sent by telegraphic transfer to India.

Mr. TILLMAN. Do they eat money in India?

Mr. CHANDLER. This is a slight contribution of mine to the debate, and it is quite as pertinent as many things that have been said.

Mr. TILLMAN. One more word in answer to the question of the Senator from Delaware [Mr. GRAY]. He asks you what assurance you have or how you would go about proving that the farmer would get the benefit of this bounty? I am going to tell you a very simple fact that he will acknowledge, and which will demonstrate that you can not keep the farmer from getting it. This is the reason: There can not be two prices of wheat upon the market; you can not have a price for export and a price for home consumption. The amount that will be paid for wheat in the market will depend upon the amount of the bounty. After the export price has been fixed in Europe, then that plus the bounty will be the domestic price; and it will be 10 cents more a bushel here minus the transportation charge.

The VICE-PRESIDENT. The Senator from Utah will proceed.

Mr. CANNON. Mr. President, I have been holding the floor purely for the purpose of answering the Senator from Delaware, if I were able, and I was only led into a slight digression because of his use of the word "waylaid," which struck me as being a matter for very grave consideration at this time, in view of the fact that here was a very grave avowal of an attempt absolutely to waylay and completely to confiscate the whole of the bounty.

I leave the question of the shipping interest entirely upon the

final admission of the Senator from California, who admits the logic of my contention as deduced from his remarks and his proposition.

The Senator from Delaware doubtless will admit it to be a fact that when we send abroad wheat or cotton to be sold at the world's market price, the exporter, by this bounty, if the amendment shall become a part of the law, will receive from the Treasury of the United States the amount of money specified in the amendment. I do not mean now necessarily that the farmer will receive it, but in order to assert an indisputable proposition I maintain, and ask the Senator from Delaware if it be not correct, that the exporter of an American staple, if the amendment shall become a part of the law, will receive for that staple the world's market price plus the amount which he draws out of the Treasury of the United States.

If it were possible, and I do not admit that it would be, for the exporters of our agricultural staple, as contradistinguished from the producers of our agricultural staple which goes abroad, to waylay every dollar of the bounty and confiscate it to their own use and their own aggrandizement, still the farmer would receive all the enhancement of price within the domestic market, which is very much larger than that abroad, because the men who deal in wheat and the men who deal in cotton or the other staples would not allow an ounce of any one of the commodities to be sold in the American market except at the international price plus the bounty. They certainly would not sell it at one cent less than they could get, and as by exporting they could get the world's price plus the Government bounty, those things would be sold in the domestic market at the international price plus the Government bounty.

The quotations of wheat, therefore, in Chicago, which govern the prices to the commission houses in the agricultural districts, the quotations of cotton on the New York exchange, which govern the prices in the Southern commission houses, would regulate the price which the farmer and planter would receive for his products. I do not think it possible, under any circumstances, that any considerable portion of this bounty shall be waylaid unless under some more mysterious form, unless some other proposition of brigandage shall be introduced here which we can not expose so readily as the one recently offered and just withdrawn.

Mr. GRAY. I am as loath as anyone to continue this debate, and I will say only a word in answer to what the Senator from Utah has just stated. An ounce of experience is worth a good deal of theory to the pound. Unless I have been misinformed, the whole effect of the export bounty on sugar given by European governments for the export of beet sugar goes to the exporters and not to the farmers and producers.

The VICE-PRESIDENT. The question is on agreeing to the amendment of the Senator from Utah [Mr. CANNON].

Mr. CHANDLER. On that I ask for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CLAY (when his name was called). I am paired with the junior Senator from Massachusetts [Mr. LODGE]. I am informed that he would vote "nay" if present. I will therefore vote. I vote "nay."

Mr. TILLMAN (when Mr. MCLAURIN's name was called). My colleague [Mr. MCLAURIN] is absent, and is paired with the Senator from North Carolina [Mr. PRITCHARD]. My colleague authorized me to state that if he were here, he would vote "yea."

Mr. PRITCHARD (when his name was called). I am paired with the junior Senator from South Carolina [Mr. MCLAURIN]. If he were present, I should vote "nay."

Mr. SHOUP (when his name was called). I have a standing pair with the senior Senator from California [Mr. WHITE]. Not knowing how he would vote, I will withhold my vote.

Mr. TILLMAN (when his name was called). I am paired with the Senator from Nebraska [Mr. THURSTON]. I do not know how he would vote. If he were present, I should vote "yea."

Mr. WARREN (when his name was called). I am paired with the junior Senator from Washington [Mr. TURNER]. Not knowing how that Senator would vote if present, I withhold my vote.

Mr. WILSON (when his name was called). I am paired with the Senator from Florida [Mr. PASCO]. I am not advised how he would vote on this question, but I think he would vote "nay." However, I will withhold my vote.

The roll call was concluded.

Mr. GALLINGER. I inquire if the senior Senator from Texas [Mr. MILLS] has voted?

The VICE-PRESIDENT. He has not voted.

Mr. GALLINGER. I am paired with that Senator. I suggest to the Senator from South Carolina [Mr. TILLMAN] that the Senator from Nebraska [Mr. THURSTON] may stand paired with the senior Senator from Texas [Mr. MILLS], so as to enable us both to vote.

Mr. TILLMAN. All right, sir.

Mr. GALLINGER. I vote "nay."

Mr. TILLMAN. I vote "yea."

Mr. CHANDLER (after having voted in the negative). I am informed that if the senior Senator from Colorado [Mr. TELLER] were present he would vote "yea." Therefore I will pair with him, and withdraw my vote.

The result was announced—yeas 10, nays 59; as follows:

YEAS—10.

Allen,	Harris, Kans.	Pettigrew,	Tillman.
Butler,	Heitfeld,	Roach,	
Cannon,	Mantle,	Stewart,	

NAYS—59.

Allison,	Elkins,	Kyle,	Pettus,
Bacon,	Fairbanks,	Lindsay,	Platt, Conn.
Baker,	Faulkner,	McBride,	Platt, N. Y.
Bate,	Foraker,	McEnery,	Proctor,
Berry,	Frye,	McMillan,	Quay,
Burrows,	Gallinger,	Mallory,	Rawlins,
Caffery,	Gear,	Martin,	Sewell,
Carter,	Gray,	Mason,	Smith,
Chilton,	Hale,	Mitchell,	Spooner,
Clark,	Hanna,	Morgan,	Turpie,
Clay,	Harris, Tenn.	Morrill,	Vest,
Cockrell,	Hawley,	Murphy,	Walthall,
Cullom,	Hoar,	Nelson,	Wellington,
Davis,	Jones, Ark.	Penrose,	Wetmore.
Deboe,	Kenney,	Perkins,	

NOT VOTING—30.

Aldrich,	Hansbrough,	Pasco,	Turner,
Chandler,	Jones, Nev.	Pritchard,	Warren,
Daniel,	Lodge,	Shoup,	White,
George,	McLaurin,	Teller,	Wilson,
Gorman,	Mills,	Thurston,	Wolcott.

So Mr. CANNON's amendment was rejected.

Mr. ALLISON. In accordance with the understanding day before yesterday, I ask that we now return to the sugar schedule—Schedule E.

The VICE-PRESIDENT. The Secretary will read.

The SECRETARY. Schedule E.—Sugar, molasses, and manufactures of. The Committee on Finance report to strike out paragraph 206, in the following words:

206. Sugars not above No. 16 Dutch standard in color, tank bottoms, sirups of cane juice, melada, concentrated melada, concrete and concentrated molasses, testing by the polariscope not above 75 degrees, 1 cent per pound, and for every additional degree shown by the polariscopic test three one-hundredths of 1 cent per pound additional, and fractions of a degree in proportion; and on sugar above No. 16 Dutch standard in color, and on all sugar which has gone through a process of refining, 1 cent and eight hundred and seventy-five one-thousandths of 1 cent per pound; molasses testing above 40 degrees and not above 56 degrees, 3 cents per gallon; testing 56 degrees and above, 6 cents per gallon; sugar drainings and sugar sweepings shall be subject to duty as molasses or sugar, as the case may be, according to polariscopic test; sugars, tank bottoms, sirups, cane juice or beet juice, melada, concentrated melada, and concrete and concentrated molasses, the product of any country which pays, directly or indirectly, a bounty on the export thereof, whether imported directly and in condition as exported therefrom, or otherwise, shall pay, in addition to the foregoing rates, a duty equal to such bounty, or so much thereof as may be in excess of any tax collected by such country upon such exported article, or upon the beet or cane from which it was produced: *Provided*, That nothing herein contained shall be so construed as to abrogate or in any manner impair or affect the provisions of the treaty of commercial reciprocity concluded between the United States and the King of the Hawaiian Islands on the 30th day of January, 1875, or the provisions of any act of Congress heretofore passed for the execution of the same.

And in lieu thereof to insert:

206. Sugars not above No. 16 Dutch standard in color, tank bottoms, sirups of cane juice and of beet juice, melada, concentrated melada, concrete and concentrated molasses testing by the polariscope above 87 and not above 88 degrees, seventy-nine thousandths of 1 cent per pound, and for every additional degree shown by the polariscopic test, two hundredths of 1 cent per pound, and fractions of a degree in proportion. Sugar above No. 16 Dutch standard in color, and sugar that has gone through a process of refining, one and sixteen hundredths of one cent per pound; and in addition thereto, on all the foregoing, 35 per cent ad valorem.

Sugars not above No. 16 Dutch standard in color, tank bottoms, sirups of cane juice and beet juice, melada, concentrated melada, concrete and concentrated molasses testing by the polariscope not more than 87 degrees, 75 per cent ad valorem. Molasses testing above 40 and not more than 56 degrees, 4 cents per gallon; testing 56 degrees and not above 70 degrees, 8 cents per gallon.

Machinery purchased abroad, imported and erected in any beet-sugar factory and actually used in the production of sugar in the United States from beets produced therein within two years from the 1st day of July, 1897, shall be admitted free of duty under such regulations as the Secretary of the Treasury may prescribe.

Mr. PETTIGREW. Mr. President——

Mr. ALLISON. Will the Senator from South Dakota allow me?

Mr. PETTIGREW. I wish simply to make an announcement very briefly.

At the end of line 15, on page 66—that is, at the end of the sugar schedule—I shall offer and ask to have considered the amendment which has already been presented, providing that all articles in this bill which are the subject of a trust shall be admitted free of duty. I simply wish to give that notice now at the beginning of the consideration of the schedule.

Mr. ALLISON. In accordance with the notice given a day or

two since, I ask that the Senate may vote negatively or that the committee may be permitted to withdraw its amendment, printed in italics, beginning on line 20, on page 64, and ending with line 20, on page 65, and originally proposed as a substitute for paragraph 206.

The VICE-PRESIDENT. Is there any objection to the withdrawal of the amendment proposed by the committee as a substitute for paragraph 206, and the offering of a new one?

Mr. JONES of Arkansas. There is no objection.

Mr. ALLISON. That can be done by unanimous consent.

The VICE-PRESIDENT. No objection being made, the amendment of the committee is withdrawn. The committee proposes an amendment to the paragraph, which will be read.

The SECRETARY. The Committee on Finance propose, on page 63, line 22, paragraph 206, to strike out "eight hundred and seventy-five one-thousandths" and insert "ninety-five one-hundredths;" so as to make the paragraph read:

206. Sugars not above No. 16 Dutch standard in color, tank bottoms, sirups of cane juice, melada, concentrated melada, concrete and concentrated molasses, testing by the polariscope not above 75 degrees, 1 cent per pound, and for every additional degree shown by the polariscopic test, three one hundredths of 1 cent per pound additional, and fractions of a degree in proportion; and on sugar above No. 16 Dutch standard in color, and on all sugar which has gone through a process of refining, 1 cent and ninety-five one-hundredths of 1 cent per pound; molasses testing above 40 degrees and not above 56 degrees, 3 cents per gallon; testing 56 degrees and above, 6 cents per gallon; sugar drainings and sugar sweepings shall be subject to duty as molasses or sugar, as the case may be, according to polariscopic test; sugars, tank bottoms, sirups, cane juice or beet juice, melada, concentrated melada, and concrete and concentrated molasses, the product of any country which pays, directly or indirectly, a bounty on the export thereof, whether imported directly and in condition as exported therefrom, or otherwise, shall pay, in addition to the foregoing rates, a duty equal to such bounty, or so much thereof as may be in excess of any tax collected by such country upon such exported article, or upon the beet or cane from which it was produced: *Provided*, That nothing herein contained shall be so construed as to abrogate or in any manner impair or affect the provisions of the treaty of commercial reciprocity concluded between the United States and the King of the Hawaiian Islands on the 30th day of January, 1875, or the provisions of any act of Congress heretofore passed for the execution of the same.

Mr. ALLISON. Before we proceed to consider that amendment, I desire to say that, on page 64, after the word "test," in line 3, down to and including the word "produced," in line 12, the committee recommend that these lines be stricken from the bill, the same paragraph in substance being inserted on page 195, section 3, making this countervailing duty apply to all articles instead of to this article alone. I ask that that may be done.

Mr. JONES of Arkansas. Does the Senator from Iowa propose to take that amendment up now? I prefer that it should be passed over. I should like an opportunity to examine it.

Mr. ALLISON. Very well. I also desire to give notice that I shall ask at a later period in the consideration of the bill that the last proviso, beginning in line 12, on page 64, be passed over and not considered at this time, that being the question relating to Hawaiian sugar.

I desire to say in this connection, that although it has often been repeated that the Committee on Finance, or a majority of the committee, recommended that a duty should be imposed upon Hawaiian sugar by the operation of this bill, the committee never made such a declaration and never had such a purpose. That question was not considered by the committee to the extent of proposing a provision, intending that, when reported, it should be passed over until the matter should be fully considered. At a later day it may be that the committee will offer an amendment to this clause; but for the present we ask unanimous consent that it may be passed over.

Mr. JONES of Arkansas. I think that this provision ought to be considered while we are considering the sugar schedule. I do not object to the Senator's proposition that a vote on it shall not be pressed now.

Mr. ALLISON. I mean that we shall not vote on it to-day.

Mr. JONES of Arkansas. I have no objection to that.

Mr. ALLISON. I have asked that it shall be passed over temporarily.

Mr. JONES of Arkansas. I think it pertinent that it should be considered in connection with the rest of this schedule.

Mr. ALLISON. It is a pertinent matter of debate, of course, in the general consideration of the subject. I ask that we pass over for the present all that portion of the bill that is found between line 3 and line 19, on page 64.

Mr. CAFFERY. Am I to understand from the Senator from Iowa that the provision of the bill relating to the abrogation of the Hawaiian treaty is to be passed over? Is that it?

Mr. ALLISON. Both of the provisions to which I have called attention are to be passed over for the present.

Mr. CAFFERY. There was so much confusion and noise in the Chamber that I could not hear what the Senator said.

Mr. ALLISON. That was my request.

Mr. CAFFERY. What is the other provision?

Mr. ALLISON. The other provision is that relating to the countervailing duties, the committee having inserted a new provision covering that same subject. It is found on page 195 of the bill as section 3.

Mr. JONES of Arkansas. Mr. President, it seems to me that the first amendment which ought to be offered to this paragraph is to strike out the words "and on all sugar," in line 10, page 63, and I hope the committee will be willing to accept that amendment. The purpose is clear. Beginning at the semicolon above, in line 19, the language reads:

And on sugar above No. 16 Dutch standard in color, and on all sugar which has gone through a process of refining, 1 cent and eight hundred and seventy-five one-thousandths of 1 cent per pound.

If the committee amendment should be adopted, it would be 1 cent and ninety-five one-hundredths of a cent per pound. The effect of striking out the four words I have indicated would be to limit this tax of 1 cent and ninety-five one-hundredths of a cent per pound, if the Senate should adopt the amendment of the Senate committee—which I hope it will not do—to such sugar as is above No. 16 Dutch standard in color, and it will not apply to classes of sugars which are under 16 Dutch standard in color or which have gone through a process of refining.

As is well known to the Senator in charge of this bill, there are sugars imported in great quantities into this country and largely used which test about 88 degrees in saccharine strength, which are below 16 Dutch standard in color, and which have gone through a process of refining; and these low-grade, cheap sugars, which would not sell for but very little more and which have very little more value in the market than raw sugars, testing 88 degrees, ought not to pay the higher specific tax, which is intended to keep the high-grade sugars out of the American market.

Without regard to the contention which exists between the two sides of the Chamber on this general sugar schedule, I think no Senator who examines this proposition can fail to see the justice of striking these words out, so that the tax of $1.95 per hundred pounds, which is now proposed by the committee, shall not be applied to sugar which is practically raw sugar.

I have samples here of sugar. This sugar [exhibiting] tests 87 degrees. It is a refined sugar. It has but little more value than raw sugar testing about the same. It is not right that that sugar should bear the same specific tax that that sugar should [exhibiting]; it is not just; and I hope the members of the Senate will not agree to such a provision, and I hope the Senate committee will not insist upon it.

I propose, Mr. President—and I may as well give notice of it now—to strike out also, in lines 21 and 22, on page 63, these words, "one cent and eight hundred and seventy-five one-thousandths of one cent" and insert "twelve and a half one-hundredths of a cent."

The effect of this proposed amendment, if it should be adopted, will be to apply the rate of taxation now proposed by the committee to the low-grade sugar, and apply the same rate of taxation to the high-grade sugar in proportion to its saccharine strength, and that on refined sugar there shall be a tax of twelve and a half one-hundredths of a cent in addition to the tax levied by the general provisions of the bill.

Under the bill as it stands at present the proposition is to levy a tax on low-grade sugar of 1 cent per pound on sugar not above 75 degrees in saccharine strength and three one-hundredths of a cent per pound additional for each degree above that. If that is applied to raw sugar, why not let it go through refined sugar as well, and then put a clear, distinct difference between the tax on raw and refined sugar stated explicitly, so that the members of the Senate and the people of the country can know exactly the difference we propose to give between refined and raw sugar? As it is, we have this provision applying to raw sugar, and instead of applying the same provision to raw sugar and then adding one-eighth of a cent more, which the present law allows, and under which the refining interests have lived, we propose to put a specific tax on refined sugar of $1.95 on a hundred pounds.

Mr. President, in a new country, such as ours was a century ago, where there was no accumulation of wealth, it was doubtless necessary for each member of the community to contribute from the proceeds of his daily labor toward the support of the Government under which he lived; but when there has been an accumulation of wealth, when the community has grown rich, then it would seem just and fair that the entire burden of taxation of all sorts ought to fall on the wealth of the community rather than upon the daily labor of its citizens. It is especially improper in a Government like ours that there should be any tax on the homes of the people. We exempt churches and schools from taxation for obvious reasons, and I believe that when there is a sufficient accumulation of surplus wealth, of hoarded wealth, to justify it, that the homes of the people, and all the things that go to make up a home, as well as the persons composing the community, should be exempt from the exactions of the taxgatherer.

The home is the nursery of manhood, virtue, and patriotism.

Without the foundations laid by the mothers and fathers and homes, the churches and the schools would accomplish little. The home is the very foundation of the Republic, and ought not to be taxed, directly or indirectly. The system of taxation prevailing in this country at this time is, however, the exact reverse of this. It began in the infancy and poverty of the Republic, and has been continuously kept up to this time. It is not surprising that reforms intended to shift the burdens of the Government from the poor to the rich and powerful are very difficult of accomplishment, for obvious reasons.

There has never been any serious effort to take a substantial step in this direction but once, and this effort was promptly suppressed by the Supreme Court when it declared the income-tax provision of the Wilson bill unconstitutional. No more just, fair, or equitable tax has ever been laid; but wealth is always unwilling to do even its fair share toward the support of the Government. In the administration of the present system of laying taxes upon homes and men rather than upon wealth, of taxing people according to consumption rather than according to ability to pay, the Democratic and Republican parties have differed materially.

Democrats have always insisted, and yet insist, that there is no power given to the Government to collect taxes except for public purposes, and this only, while the Republicans have exercised the right to levy taxes to provide for private benefit. For the reason that almost all the tax possible of collection on sugar goes into the public Treasury, sugar has always been regarded by Democrats as a desirable subject of taxation, so long as the present system continues. Four-fifths, perhaps nine-tenths, of the sugar consumed in the country is imported. Hence when the cost of sugar is increased to consumers by tariff taxes, four-fifths or nine-tenths of this added cost or tax goes into the Treasury. Republicans have never liked a sugar tax for this reason. A tax on woolen goods, on the contrary, is their ideal tax, because four-fifths to nine-tenths of the woolen goods consumed in the country are made here, and whatever increase in cost of woolens may come from taxation goes, four-fifths to nine-tenths, to the woolen manufacturer, and one-fifth to one-tenth to the Government. Hence the woolen tax is the ideal Republican tax, while the sugar tax has been the ideal Democratic tax.

The present President was reported some years since to have said, upon taking the chair to preside over some Republican meeting, that as between tariff for revenue with incidental protection, or a tariff for protection with incidental revenue, he was decidedly in favor of the latter. This clearly illustrates the difference in Republican and Democratic ideas of administering this present system of taxation. As long as the present system of raising revenue by taxation upon consumption and not upon wealth is allowed to exist, I am in favor of a tax on sugar rather than a tax on woolen goods, and for these reasons.

I believe, however, the time has come when the people of the country should insist on the burdens of taxation being placed upon the wealth of the country, and that manhood and home, like churches and schools, should go untaxed.

The Senator from Rhode Island in charge of this bill, who I regret is not physically able to be present now, in his speech at the beginning of the consideration of the bill stated to the Senate that the proposed Senate schedule, then reported from the committee, gave less protection to the sugar refiners than was given by the original bill as it came from the House—the Dingley bill. I will read it, so that there may be no mistake about what the Senator from Rhode Island said:

> This table shows that the differential between raw and refined sugars by the Senate proposition varies from 9.77 to 15.40 cents per 100 pounds, while the differential in the House bill varies from 12.20 to 17.35 cents per 100 pounds.

The majority of the Senate Finance Committee have abandoned this proposition of giving the sugar refiners a smaller margin than they had in the House bill, and they have returned to all that was given them by the House bill, and have increased the margin of difference in favor of the sugar refiners from what it was in the bill as it came from the House. There was an understanding around the Senate Chamber that there would be difficulty in having this provision as reported by the Senate Committee adopted by the Senate, because of the feeling of antagonism to the disposition to give the sugar refiners a larger margin of profit than was given by that bill, though, according to the statement of the Senator from Rhode Island, it gave a smaller margin of profit than was given by the Dingley bill. This has been abandoned, to the astonishment of all of us who believed in the good faith of those criticisms.

The present proposition coming from the Finance Committee gives the sugar refiners a higher margin than even the House gave. It proposes to increase the profit of the sugar refiners in every single point from top to bottom.

The House provided that the tax should be 1 cent per pound on raw sugar not above 75 degrees, and three one-hundredths of a cent per pound for each additional degree. Then, instead of taking the House rate of 1 cent and eight hundred and seventy-five one-thousandths of a cent on refined sugars, which, according to the calculation of Mr. DINGLEY, the chairman of the Ways and Means Committee of the House, would amount to twelve and one-half one-hundredths of a cent, the Senate committee increased the tax on refined sugar from 1 cent and eight hundred and seventy-five one-thousandths of a cent a pound to 1 cent and ninety-five one-hundredths, increasing the margin of difference between the raw sugar and the refined seven and one-half one-hundredths of a cent in addition to all that had been allowed by the House bill, and which was declared by the Senator from Rhode Island to be greater than the amount allowed by the original proposition of the Senate committee.

If such was the purpose of the managers of this bill, it would be well enough for them to avow it and let it be known, let it be understood.

I stated a few minutes ago that I am in favor of a tax on sugar as long as we resort to the present system of raising the revenue of the country, because the overwhelming majority of the money raised in this way goes into the Treasury, and because it is not a means of legislating money out of the masses of the people generally and into the hands of the few, except in an exceedingly limited way. But, while I am in favor of a sugar tax, I believe the sugar tax should be so laid as to bear as lightly as possible upon those who consume sugar, and that there should be no especial benefit given to anybody by the way the sugar tax is arranged.

There is another gross injustice in the method of comparison which the committee has given out to the world. The Senator from Rhode Island in his opening speech stated that the comparisons ought to be made between what is called the first-marks German sugar and raw sugar. It is not fair to institute a comparison between first-marks German sugar and raw sugar for the reason that the first-marks German sugar does not compare with the American product made from the raw sugar; and when you are figuring up the difference between the amount of money which ought to go to the manufacturers of refined sugar, you ought to take into consideration the grade of German sugar which is equal to the American sugar.

Mr. President, there is nothing that so well establishes a fact such as an object lesson. Here in this vial [exhibiting] is a sample of the first-marks German sugar. This is the kind of sugar with which these gentlemen insist the comparison ought to be made. Here is a sample of the sugar made by the sugar refiners of the United States. [Exhibiting.] This came from the refinery of Havemeyer & Elder. The two speak for themselves. No man can doubt the difference between the two. When we are talking about the difference in the margin of price between the two, we ought not to measure the difference by the difference between this sugar and raw sugar, but between this sugar [exhibiting] and raw sugar, because this is the American product, and this is the article the American refiners propose to sell, and the price of this sugar in the market is the value that ought to determine the difference between the raw sugar and the refined. The Senator from Rhode Island said the proper estimate was to be made with this sugar at $2.30 a hundred pounds.

Mr. ALLISON. The Senator from Rhode Island, as I understood him, simply gave the price of the granulated sugar at Hamburg on a particular day. I did not understand him to make a contention on the matter about which the Senator speaks now—namely, as respects the character of the sugar which he is exhibiting here. There is a difference in price as between that and the first-class refined sugar from Germany.

Mr. JONES of Arkansas. I propose that there shall be some contention—it may not be a great contention, but I propose that there shall be some contention—before the Senate adopts as the proper basis of estimate of value between these sugars, this first-marks German sugar and the kind I have just exhibited to the Senate. I will read what the Senator from Rhode Island said.

Mr. ALLISON. I have no doubt that the Senator from Rhode Island stated what he understood to be the fact.

Mr. JONES of Arkansas. I have no doubt about that. I will read to you the remarks of the Senator from Rhode Island, as reported in the RECORD, and I assume that they are correct. He said:

> I have taken first-marks German granulated for the comparison, as this is the sugar that competes with our refiners and furnishes the proper basis for comparison. If I had taken fine German granulated, which costs thirteen-hundredths of a cent per pound more, as a basis, the differential would be 15.30 cents per 100 pounds on 96 degrees test, and if I had taken Dutch cane granulated, that costs thirty-hundredths of a cent per pound more, the differential would be 21.3 cents per 100 pounds.

Now, Mr. President, we have the Senator from Rhode Island fixing the differences between these three grades of sugars. He takes the first-marks German granulated at 2.30 cents. He says that the finer grades of sugar would be thirteen one-hundredths of a cent a pound more than the other, that the Dutch sugar would be thirty one-hundredths of a cent more; and in making this

calculation, instead of counting sugar worth $2.30 a hundred pounds, if you compare it with the Dutch or English sugar, it would be $2.63 a hundred pounds.

I sent to the New York custom-house for samples of Dutch granulated sugar and samples of English sugar, and here they are [exhibiting], and here is the Havemeyer sugar made in this country. [Exhibiting.] Any man can see by looking at the two that there is no difference between them at all. The sugar we are talking about giving protection to in this bill is the Havemeyer sugar. It is sugar made by the American refiners, and it stands equal to the Dutch standard or the English sugar. It is made from cane.

So that, when you institute comparisons between the margin of profits of the refiners, you must take the value of the sugar that is made in this country in competition with all the balance of the sugar before you can determine the profits they get. Instead of making the calculation on sugar at $2.30 a hundred pounds, we have the right to make it at $2.66, because that is the value of the refined sugar. I took the Senator's prices as given in one of his tables, and have had a careful statement made, by giving the total amount of the sugar, and I shall subsequently put this in the RECORD, so that Senators may have the opportunity of criticising it.

Take sugar at 87. The line of demarcation between muscovados and granulated sugar on the price given is $1.88 a hundred pounds. The duty on that under the present proposed schedule is $1.36. The duty and the price added together amount to $3.24. The custom-house makes an allowance for drawbacks on it. It takes 124.27 pounds of sugar, testing 87 degrees, to make 100 pounds of granulated sugar. Accepting that as correct, and making the calculations on this basis, we have the duty and the cost of this raw sugar enough to make 100 pounds of granulated coming to $4.27 a hundred pounds.

Now take $2.30 as the basis. I am not making any comparison of $2.63, as I think I have a right to do, or taking $2.43, as I have a right to do, but I am making the comparison on the basis proposed by the Senator from Rhode Island, at $2.30. Add the tax, according to this statement, as I have it made, of $1.95, and then adding the German bounty of 38.3 cents, we get a total cost of refined sugar at $4.633, as against $4.27, leaving a margin of fifty-three one-hundredths of a cent between the cost of the amount of sugar testing 87 necessary to make 100 pounds and 100 pounds of this $2.30 granulated sugar. I have not made the calculation to ascertain how much wider the difference would be if we had taken $2.43 or $2.63 as the proper sugar with which this is to be compared. It makes the difference fifty-three one-hundredths of a cent, more than half a cent difference on the grade of 87, adding the taxes on the raw and comparing that with $2.30 as the price of the refined sugar, which, as I have already stated, is lower than it ought to be taken at.

Now take 88, and the difference is fifty one-hundredths of a cent; 89, and it is five hundred and two one-thousandths of a cent. 90, forty-six one-hundredths of a cent; 91, forty-four one-hundredths of a cent; 92, forty-two one-hundredths of a cent; 93, forty-three one-hundredths of a cent; 94, four hundred and thirty-three one-thousandths of a cent; 95, four hundred and thirty-eight one-thousandths of a cent; 96, four hundred and forty-one one-thousandths of a cent; 97, forty-three and one-half one-hundredths of a cent. Here we have, taking the Senator from Rhode Island at his estimate of $2.30 for granulated sugar, a difference ranging from forty-three one-hundredths of a cent to fifty-three one-hundredths of a cent as the margin of difference, the profit to the sugar refiners in the manufacture of this product.

It may be that the intention of the Senate is to make this difference, but I confess I have doubts about it. The argument made by the chairman of the Ways and Means Committee in the House was that the difference allowed under his bill was only twelve and one-half one-hundredths of a cent. If he believes twelve and one-half one-hundredths of a cent is the fair difference between raw and refined, if twelve and one-half one-hundredths of a cent is fair profit to be allowed to the sugar refiners, if he made a mistake in making his schedule so as to give more than that, he certainly ought to be willing to make his schedule conform to it.

If the Finance Committee of the Senate intended to make a schedule which would give a smaller margin to the refiners than was given in the House—and I have shown them that so far from making it smaller they have made it larger—but if they are willing to make a schedule that is smaller than was intended in the House, I ask them so to frame this schedule as to carry out their intention. The figures will show in a way that can not be denied, that no man can gainsay or get away from, that the profit to the sugar refiners by this provision is away beyond the profit that would be gained by them if the Dingley bill had been adopted pure and simple, and a long ways above what is professed by both of the committees as being the margin they intended to give.

Mr. President, there are so many things in the bill that ought to be considered that I scarcely know what to take up first. I have pointed out briefly that the Senate committee, while leaving the Senate and the country to understand that their intention is to leave the profit of the sugar trust at something like they now have, have increased it. I am in favor of treating the sugar refiners as fairly as anybody else. But they have lived under one-eighth of a cent differential. We were told four years ago, when we were proposing to pass the Wilson bill, that if that measure were passed with no more margin to the sugar refiner, he would leave the United States; that he could not live in this country; that he could not exist. I confess an impression was made upon me that there might be danger that that was true.

For one I gave the most careful scrutiny and attention to the question. I looked into it conscientiously. I have no prejudice against anybody engaged in any branch of this industry, but I only felt that justice and fairness ought to be done. After I looked into it to the best of my ability, I was satisfied that a clear differential of one-eighth of a cent was all that ought to be allowed. That was adopted. It passed the Senate and became a law. The sugar refiners have gone on; they are engaged in manufacturing sugar now, and the sugar industry has been increasing under the present law.

Now, I ask, where is the excuse? What is the reason for increasing the margin given to the sugar refiners over what it is under the present law? How can it be justified? What is the occasion for it? What is the excuse for it? It certainly will result in levying taxes upon the people of the country by making the cost of sugar higher and higher to the people who consume it, and simply for the purpose of increasing the profits of people who are engaged in a business already profitable. If the Senate committee desire to make the sugar schedule mean what they say it means, then I ask Senators carefully to consider the amendment which I propose to offer, and which I conscientiously think ought to receive the votes of gentlemen on both sides of this Chamber. I am not proposing the amendment in a captious spirit; I am not proposing it to find fault with the schedule as proposed by the Senate committee. I am proposing it because I believe, as God is my judge, that it presents a fair difference between the refined and the raw and gives the refiners all the margin they are entitled to.

The bill as you propose will put on raw sugar of 75 degrees a duty of 1 cent a pound and three one-hundredths of a cent additional on every degree above that. That is, on all raw sugar. Now, why should not the same rate be applied to raw and refined, and then say that, in addition to this tax, on all refined sugar there shall be levied and collected one-eighth of 1 cent a pound additional? That plainly gives the difference. That lets the people of the country and the men in the Senate understand the amount of margin that is being given to the sugar refiners, and there can be no mistake about it. There is no juggling in it. The way it is done here now it provides that there shall be 1 cent a pound on 75-degree sugar and three one-hundredths of a cent additional for each additional degree, and upon the refined sugar $1.95 on the 100 pounds.

If raw sugar goes down in price, the margin of the trust becomes larger and larger. As I have read from the figures here, taking Mr. ALDRICH'S own figures, it shows a margin ranging from forty-three one-hundredths of a cent to fifty-three one-hundredths of a cent, instead of twelve and one-half one-hundredths of a cent, which the refiners get at present prices, and, as I say, I take his own figures. But when you institute a comparison between the raw German sugar, the first-marks German sugar, and the Havemeyer & Elder sugar, take that at its value in the market, instead of taking the price of $2.30, which the Senator from Rhode Island took—when you take it at $2.63, which the market fixes it at, you have a margin to the sugar refiner nearer a cent a pound than a half a cent. Why should intelligent people, men who mean to do right, men who intend to do what is fair, advocate a schedule here which will allow such a margin to the refiner, when they are proposing to give one-eighth of a cent a pound difference?

I am inclined to believe that the sugar-refining business would succeed on a margin less than one-eighth of 1 cent per pound. I am led to that belief by a number of facts which have developed here and there from time to time in my investigation of the sugar question. It is a question which perhaps requires expert knowledge to understand all the facts. No man not familiar with all the ins and outs of the sugar trade, no man not familiar with the details of sugar manufacture, can tell exactly what is right and what ought to be done. I have no disposition to strike down any interest, even one with the name of sugar trust. I would not legislate unfairly against anybody, even if he were in a trust.

I do believe that the general law ought to be enforced, and that whenever there is a combination in restraint of trade or for the purpose of putting up prices it should feel the heavy hand of the law; but when we are framing a tariff bill, although it may be charged that the sugar refiners or a large number of them are in

a trust, still I believe in looking at these things fairly and dispassionately, and I would not object to one-eighth of a cent margin between refined and raw if it were confined religiously and safely to that one-eighth. I am inclined to believe it is more than is necessary to make the business profitable, but still, as I am not sufficiently familiar to be able to say that that is true, I should be disposed to let that matter go.

There is another feature about these tariff taxes which I do not like. I know it is frequently charged that the sugar refiners want an ad valorem tax and that the sugar trade want a specific tax. I know that the committee of the sugar trade sent from New York which appeared before the Ways and Means Committee was strongly in favor of a specific tax. I had one of the papers written by one of the men who constituted the committee printed in the RECORD, so that Senators may see it. I read the argument carefully. I have considered the reasons which they presented in favor of a specific tax and as against an ad valorem tax.

I confess that my strong predilections in favor of an ad valorem tax have not been shaken by anything I have read in any of those arguments. It seems to me to be a just and fair method. Whenever a tax is to be levied, if an ad valorem tax can be honestly and fairly levied there can be no doubt it is the ideal method of levying taxes. An article worth 1 cent a pound ought to pay half as much tax as one worth 2 cents a pound, and no more and no less. It is unjust and it is unfair to provide a method of taxation which puts the same taxation on an article costing 2 cents as on one costing 1 cent. It is putting the double rate of taxation on the low article and one-half on the high grade.

I know perfectly well that the practice of the Republicans has always been to levy the highest taxes on the lowest grades and the cheapest articles, and to levy the lowest taxes on the highest grades and the most expensive articles. It has been a part of their financial system from the beginning. It is so now, and I can understand why they can believe that the levying of a specific tax is better than an ad valorem tax, because the people who use cheap sugar will be compelled to pay a higher rate of taxes than the people who use high-grade sugar. But I have no sympathy with that system of taxation. I believe that taxation ought to be equal; that it ought to be ad valorem; that it ought to be levied according to the value of the article to be taxed.

The one argument made against an ad valorem tax which seems to have force, and which I confess has force with me, is the charge of undervaluation, the charge of dishonesty in the administration of the law. In framing a tariff law we must assume in the first place that the Government is capable of getting honest men to administer the laws. If men can be hired to do wrong under an ad valorem tax, they can be as easily hired to do wrong under a specific tax. If we have honest and competent administrators of the law, then it eliminates that part of the trouble. Is it any easier to carry out frauds of this character under an ad valorem than under a specific tax, assuming that the officers of the law are equally competent under each?

We have been living under an ad valorem tax on the sugar schedule since the last law was passed. While complaints come from sugar traders and sugar growers and sugar dealers as to the difficulty of enforcing the law, I have not heard one single complaint from the Treasury Department that there is any difficulty in carrying it out. On the contrary, they report that it is easily enforced. I remember that when we talked about putting on an ad valorem tax four years ago, there were questions as to whether the difficulties of administration would not be so great as to make it practically nugatory. I talked with Treasury officials at the time. Some of them believed it could be done; some thought there was doubt about its being done; but all agreed that if you would provide competent and honest men, it ought to be worked out. We put it in the law, it has been tried, and the Treasury Department has not complained of its operation.

So I believe, Mr. President, that the just and fair way to levy a tax is to levy an ad valorem tax on sugar, and if I were proposing a sugar schedule and intended to propose the same rate that this schedule seeks to levy, I should put it in the form of an ad valorem tax and not in the form of a specific tax. I do not know that I shall make any motion in this direction, but I call attention to this as one of the difficulties which has to be considered. I think before I get through I will present some of the arguments which have been presented by those who are in favor of a specific tax, and compare them with the practical experience under the existing situation.

The sugar dealers, the sugar refiners, and the sugar growers have all been here in force and in numbers presenting their peculiar views on each member of the committee and each member of the Senate and House. Senator MILLS's forgotten man, the consumer, the seventy-odd millions who have to buy and consume sugar, have not been here. They have been waiting, hoping, believing that the members of the Senate would listen to reason, would find out what the truth is, and among themselves would do right. That class of men can not come here to present their views, but it is none the less our duty to look after them than it is our duty to look after what is presented so ably and shrewdly by men who have private and pecuniary interests in having their peculiar views adopted.

I have a letter from a sugar maker in California which is full of information, and the few Senators who do me the honor to listen to what I am saying will, I think, be edified by hearing the letter read. It is not a long one, but it is as full of information as an egg is of meat. It is from the Alameda Sugar Company, 132 Market street, San Francisco, Cal., and is as follows:

Hon. JAMES K. JONES,
Senate Chamber, Washington, D. C.

DEAR SIR: The Alameda Sugar Company, an association of 65 American stockholders, with a paid-up capital of $600,000, begs to present the following plea:

Last year we manufactured 4,700 tons refined sugar, from 3,500 acres, grown by 228 different farmers. This year we expect 9,000 tons refined sugar, from 6,600 acres, grown by 430 different farmers.

From the Hawaiian Islands, under the falsely called reciprocity treaty, there came in free of duty last year 227,000 tons of sugar.

This equals the product of twenty-five such factories as ours. These 227,000 tons displaced the most profitable product of 165,000 acres of land, and robbed 10,750 American farmers of their most profitable crop.

The manual labor which these 10,750 American farmers would have employed in the intensive farming which the cultivation of the sugar beet requires is still another consideration; the factory labor yet another.

Now, Senators, mark this:

To refine a ton of duty-free Hawaiian sugar requires the labor of one man for one and one-third days.

Yet we are asked to put a tax in this bill amounting practically to one-half of 1 cent a pound profit to the sugar refiners to compensate them, according to the Republican theory, for the difference in labor cost of refining sugar on this side of the water and on the other, and here is an American producer himself who states that a ton of sugar requires the labor of one man for one and one-third days.

Mr. BACON. If the Senator from Arkansas does not object to an interruption, I should like to ask him a question.

Mr. JONES of Arkansas. I do not object at all.

Mr. BACON. I am very much in accord with the Senator as to the propriety of an ad valorem duty. I wish to ask the Senator, before I put the question which I wish to propound, to state again the amendment which he suggests as the one that ought to be accepted.

Mr. JONES of Arkansas. Instead of having in the bill a tax of $1.95 on 100 pounds of refined sugar, I propose that the rate levied on raw sugar of 1 cent a pound on 75 degrees, and three-tenths of a cent additional on each degree above that, shall apply to refined as well as raw, and then that there shall be a difference of twelve and one-half one-hundredths of a cent specific between raw and refined sugar.

Mr. BACON. The question I wish to ask the Senator is this: For what purpose would the Senator consent to a higher rate of duty upon refined sugar than he would upon raw sugar?

Mr. JONES of Arkansas. Because the refining of sugar involves labor and expense. It has been the practice to allow something like a half cent difference between raw and refined sugar on account of the difference in labor, as it is called.

Mr. BACON. If I understand the Senator correctly, then, he wants this difference in rate between raw and refined sugar for the benefit of the refiner?

Mr. JONES of Arkansas. Certainly; of course.

Mr. BACON. It is not for revenue, then, but for the benefit of the refiner?

Mr. JONES of Arkansas. That is the practical effect of it. We all know that that is what it means. I do not believe that any part of it ought to be sustained; but as between fifty one-hundredths of a cent for the refiners and twelve and one-half one-hundredths of a cent, I would rather submit to twelve and one-half one-hundredths.

Mr. BACON. I thoroughly agree with the Senator that the proposition to allow the refiners this great profit is not justifiable, and I am going to vote with him, but I want to know the particular ground on which the Senator justifies any difference.

Mr. JONES of Arkansas. I do not justify any difference. There is a difference between submission and justification.

Mr. BACON. Why is the Senator willing to have any difference?

Mr. JONES of Arkansas. There is a difference between submission and justification. When a man can not help himself, he has to submit.

Mr. BACON. The Senator does not propose that as his particular view?

Mr. JONES of Arkansas. No, sir; I do not. I propose it as fully meeting what is the pretended view on the other side; as meeting exactly what they pretend they want to do; as accomplishing what they profess to have in view. It fully meets it, and

it does it at one-quarter cost, and perhaps at one-eighth cost, of what their own proposed scheme would do.

Mr. BACON. Does not the Senator think that in proposing an amendment here it is better to propose an amendment which would be exactly in accord with his view, and as to which, I am frank to say, I would be glad to vote with him? I believe in a uniform rate on sugar, without distinction between raw and refined sugar.

Mr. JONES of Arkansas. I will vote for any proposition of that sort which the Senator may offer.

Mr. BACON. I am not offering one.

Mr. JONES of Arkansas. I am undertaking to deal now with conditions as we find them. We know the majority on the other side of the Chamber can do as they please with this proposition. When I undertake to show these gentlemen that what I have offered here carries out what the committees in both Houses have said they wanted to do, and will accomplish it clearly and distinctly, and there can be no doubt about it, but that it allows no hidden advantage to the refiners, I do have hopes that men on the other side of the Chamber will vote for the proposition because it does what they say they want to do. That is the reason why I offer it. That is the reason why I propose it, not because I believe it is a proper schedule as within itself, but it is a better schedule than the one they propose, and it is one that will result in enormous saving to the people of the country.

Mr. BACON. I will vote with the Senator on it.

Mr. JONES of Arkansas. I hope that a good many others will.

Mr. BACON. I am going to vote for one uniform rate.

Mr. JONES of Arkansas. I will vote for the proposition of a uniform rate which the Senator suggests. I have no hope of a perfect tariff bill under existing conditions. If we can get rid of some of the worst features of the bill as we go along, we will be doing amazingly well. I have no hope of changing its worst features, but when I offer a proposition which does what these gentlemen propose to do and clearly does it, and I show that their own proposition does not do it, but gives the refiner an advantage absolutely unjustifiable, I do hope that we will have support from the other side and that the committee will agree to accept this modification.

But to go on with this letter. I will read the last line again. There may be some Senator who did not hear it:

To refine a ton of duty-free Hawaiian sugar requires the labor of one man for one and one-third days.

This comes from a sugar grower, from a sugar refiner, from the Alameda Sugar Company of San Francisco.

To grow from the soil up and manufacture one ton of refined sugar requires the labor of one man for 38 days.

This 227,000 tons of Hawaiian duty-free sugar yearly displaces in money value—

Factory labor	$1,135,000	Coal	$1,500,000
Farm labor and rentals	9,000,000	Other supplies	650,000
Limestone	400,000		

The labor of allied industries, foundries, jute and cotton mills, etc., remain still to be reckoned on, and all this native labor displaced that a coolie-made contract-labor product may thrive in a foreign island.

The three localities in California where the three beet-sugar factories are already established are the only really prosperous agricultural communities in that State to-day.

Domestic exports to Hawaii in 1895 were not so large as in 1883; less by nearly $1,000,000 than in 1890, and less by over a million and a quarter than in 1891.

1883	$3,683,000	1892	$3,781,000
1890	4,606,000	1895	3,648,000
1891	4,935,000		

In this connection, before I forget it, I wish to make a suggestion about the importation of sugar from Hawaii. I have statements in my possession from reputable men, men of business, who state that the standard, fixed price by which the sugar of the Hawaiian Islands is sold to the refiners on the Pacific Coast is one-quarter of 1 cent less than the New York price for the same grade of sugar. What is the effect of it? The effect of it is that where, as we supposed, we were reducing the cost of sugar for the American consumer, by remitting the tariff on the Hawaiian sugar, the Hawaiian sugar growers get all of their profit except the one-quarter of 1 cent, and the sugar refiners get that, leaving nothing as the result to the consumers of this country.

Mr. MILLS. I will state, if the Senator will allow me, that according to the census report of 1890 the labor cost of refining $100 worth of sugar was $2.29.

Mr. JONES of Arkansas. Yes; and yet we are asked by this bill to give an average of 50 cents on the 100 pounds to compensate for the difference in labor cost between this country and Europe, where they refine sugar by pauper labor.

I will go on with the letter:

In 1895-96 the value of Hawaiian sugar imported was over $19,000,000, upon which the duty at 40 per cent would have been $7,600,000.

For the sake of maintaining a foreign commerce of $3,648,000, and in order that a few shipping houses of San Francisco may benefit by the trade and keep control of the large cash balances of Hawaiian planters, the nation at large must give up $7,600,000 of revenue.

This is reciprocal trade with a vengeance. This is a high price to induce the Hawaiian people to buy products from the American people.

For the sake that coolies may work in a foreign climate which white labor can not stand, and where the white and dominant race forms about 3 per cent only of the population, the laboring men of San Francisco now parade its streets calling for work, and a charitable fund aggregating $25,000 is daily published in its newspapers and is now being disbursed to an idle crowd who clamor for the tickets doled out to them in the order of application and which entitle each to a day's work at $1 per day upon an unnecessary boulevard.

That prosperity we heard about having arrived at Omaha the other day does not seem to have reached San Francisco. It seems to have been confined to rather a limited location. It has not spread around very generally.

Should a Coxey army again march on Washington and class ever be arrayed against class in our fair country, it will be because home labor is denied a right to work for its own market, in order that foreign coolie labor may add to the wealth of a class now actively at work to influence national legislation in a perpetuation of their privileges.

The local agents of Hawaiian planters, without any possible accruing benefit to themselves and as mere retaliation against the producer of native sugar, are to-day so unpatriotic as to be collecting figures—

I shall be glad to have Senators listen to this, because there is a sequel to it. These gentlemen go on, giving us valuable information:

The local agents of Hawaiian planters, without any possible accruing benefit to themselves and as mere retaliation against the producer of native sugar, are to-day so unpatriotic as to be collecting figures from native California sugar factories, in order to produce them at Washington and support their claim that native sugar needs no protection—

I have heard that when a certain class of men fall out honest men get their due—

whereas up to January 1, 1897, they knew that the Alameda Sugar Company—

That is, this company—

had, since 1880, paid out in dividends $130,000 and received in bounty $236,744.93, showing a loss without bounty of $96,744.93.

Conditioned upon favorable legislation, within two years the 75,000 tons of sugar needed on the Pacific Coast would be entirely made from the native product, and not a pound of this Hawaiian sugar would be required to supply the coast consumption.

The opposition to tariff legislation has always contended that tariffs were designed to aid manufacturers, trusts, and the moneyed class generally.

The abrogation of the Hawaiian treaty is respectfully asked in the interest of the agricultural class and of native labor.

For the purpose of diverting attention from the main question of protecting the California farmer and the investments of American capital in an American industry, the advocates of the continuance of Hawaiian reciprocity have recently begun the use of part of the California press in appealing to the prejudices of the people on the ground of an admission that Claus Spreckels had sold a minority interest in his two beet-sugar factories to the American sugar trust. While this fact may be regarded by many as a misfortune, the facts remain that there are other sugaries uncontrolled by the sugar trust and the development of the industry on so large a scale will tend to the permanent benefit of the depressed agricultural interests of the State.

Let the example of California in the matter of beet sugar be imitated by the different States along the northern and temperate belt of our country, and the multiplicity of factories would make the control of the industry by any concentrated power a commercial impossibility.

Very respectfully,

JAMES COFFIN.

James Coffin is the secretary of this company.

Now, I call the attention of Senators, as I read this letter, to the charge made by this man that—

Local agents of the Hawaiian planters, without any possible accruing benefit to themselves and as mere retaliation against the producer of native sugar, are to-day so unpatriotic as to be collecting figures from native California sugar factories in order to produce them at Washington and support their claim that native sugar needs no protection.

The charge is true, I presume. Whether these things have been procured by the Hawaiian sugar planters for the purpose of showing that the sugar business needs no protection, I do not know, but I hold in my hand a letter sent to me by a reputable citizen, a gentleman in whose personal integrity I have entire confidence, inclosing to me an affidavit, which I will read to the Senate as connected directly with the statement of the Alameda Sugar Company which I have just read in the hearing of the Senate. It is as follows:

[Norman McLaren, public accountant, 307 Sansome street. Member of the American Association of Public Accountants, New York.]

SAN FRANCISCO, CAL., *April 21, 1897.*

OSCAR T. SEWALL, Esq.,
202 Market Street, San Francisco.

DEAR SIR: I beg to report that I have examined the books of the Alameda Sugar Company, and find that the net earnings of the company for the year, April 1, 1896, to April 1, 1897, (exclusive of bounty), were $99,231.16, being 39.692 per cent on the capitalization of $250,000.

Yet here we have the company writing this strong and eloquent appeal showing the crookedness of the other side of the sugar interest, pleading the baby act for themselves, that their infant industry must be protected and provision made under the law by which they can live, and here an accountant, who seems to be a reputable man, states that the percentage of profit made last year, down to the 1st day of last April, was more than 39 per cent. He signs it:

I am, dear sir, yours, faithfully,

NORMAN McLAREN.

Subscribed and sworn to before me this 21st day of April, A. D. 1897.
[SEAL.] G. W. T. KNOX, *Notary Public.*
(In and for the city and county of San Francisco, State of California.)

Mr. PERKINS. What is the name of the man who made the affidavit?

Mr. JONES of Arkansas. His name is Norman McLaren, of 307 Sansome street, San Francisco, Cal. He says he is a member of the American Association of Public Accountants of New York. The letter is addressed to Oscar T. Sewall, 202 Market street, San Francisco. He states that after an examination of the books the profit they have made is over 39 per cent, and then he swears to it before a notary public—G. W. T. Knox, notary public, San Francisco.

Mr. ALLISON. Was that of the crop of last year?

Mr. JONES of Arkansas. The examination was made of the books of the company for the year from April 1, 1896, to April 1, 1897, exclusive of bounty, he states.

Mr. ALLISON. There was no bounty then.

Mr. JONES of Arkansas. I suppose it is a State bounty; I do not know.

Mr. PERKINS. We have no State bounty.

Mr. JONES of Arkansas. I do not know, but he says "exclusive of any bounty." I do not know how that comes in, but that is in the letter. I have read it as it is. The letter is dated April 21, 1897, and the jurat is of the same date.

Mr. President, I do not know whether the statement made by either of these people is true or not, but one thing that I do know is that in making the argument in favor of one branch of the sugar business they make statements about another part of it that I believe to be literally true, and I am inclined to think that they are both true.

I have a copy of a statement by Professor Wiley, chief of a division in the Agricultural Department here, who makes a statement about the figure that ash cuts in beet sugar compared to what it did some years ago. Members of the Senate will remember that in former discussions here great importance was given to the amount of ash that was involved in beet sugar. It was said that the outturn was very much less on account of ash and the sugar that will not crystallize. I do not remember the technical name.

Mr. ALLISON. Invert sugar.

Mr. JONES of Arkansas. Yes; invert sugar. The statement is that this amounts to very much less now than it did formerly. I will read only a few words of it, and let the whole of it go into the RECORD.

By modern methods of manufacture, however, the influence of ash has been very greatly lessened in respect of its molasses-forming properties; in fact, molasses has almost disappeared as a product of beet-sugar factories, it being possible, by the best modern improved methods, to extract almost the entire quantity of sugar.

The statement referred to is as follows:

It gives me pleasure to comply with your request to express my views in regard to the influence of ash upon the rendement of sugar during the process of refining. In the older methods of manufacture the influence of the ash was felt to a more or less extent in the refining of sugar. The ash of the sugar cane, being less molassigenic than that of the sugar beet, was regarded as of less importance. In former times it was the custom to estimate the ash in raw beet sugars and to multiply the contents by 3 or 4 and deduct the product from the polarization in computing rendement. By modern methods of manufacture, however, the influence of the ash has been very greatly lessened in respect of its molasses-forming properties. In fact, molasses has almost disappeared as a product of beet-sugar factories, it being possible, by the best modern improved methods, to extract almost the entire quantity of sugar, even from the lowest grade molasses.

While it is true that the ash content of a raw sugar has doubtless a disturbing effect in the refining of sugar, it is no longer just to magnify it, as was done in former days. There is no reason whatever for discriminating between the raw cane and beet sugars in this respect; in point of fact, the raw beet sugars which are imported into this country have so little ash as to make any discrimination in their favor unnecessary. Raw beet sugars imported into this country polarize from 92 to 96 per cent, and the quantity of ash they contain is of little consequence, in view of the improvements in refining which have been lately introduced. It is not necessary for me to call your attention here to the fact that the sugar is completely separated from the lowest grade molasses, even in the case of sugar beets, by precipitation with lime. The lime compound is afterwards broken up with carbonic acid, and the sugar obtained in almost a pure state. In this way a complete separation of the sugar, even from the most alkaline salts, is easily obtained.

H. W. WILEY,
Chief of Division of Chemistry.

Mr. JONES of Arkansas. I read what I did only to lay a predicate for another letter, which I wish now to present to the Senate, if I can put my hands on it.

Mr. CAFFERY. Before the Senator gets on that point, I will state to him that I was absent from the Chamber while he made his preliminary statement, and I desire to know to what degree of saccharine strength you run raw sugar before you commence adding a differential upon refined. Is it 96 test?

Mr. JONES of Arkansas. In the comparisons that I made, I took, first, sugar testing 87 with its price, as given in the table submitted by the Senator from Rhode Island [Mr. ALDRICH], at $1.88 a hundred pounds. I then took the tax under this bill, which would be $1.36 on a hundred pounds. The cost of that sugar, $1.88, and the tax, $1.36, added together makes $3.24, which would be the cost of 100 pounds of 87 sugar. The Treasury Department holds that it takes 124.27 of 87 sugar to make 100 pounds of granulated. I multiply $3.24 by 1.24 and get $4.02 as the total amount of cost of 87 sugar to make 100 pounds of granulated sugar.

I then took granulated sugar at the rate stated by the Senator from Rhode Island, at $2.30 a hundred pounds. I called the attention of the Senate before I began to the fact that this is German sugar, costing $2.30 [exhibiting]; that this is American sugar [exhibiting]. The difference between the two is very apparent. The Senator from Rhode Island stated that the better class of German sugar, instead of $2.30, would cost 13 points more, making $2.43, and he stated that Dutch sugar and English sugar would cost 33 points more, making it cost $2.63 instead of $2.30. Here is Dutch sugar [exhibiting], here is German sugar [exhibiting], and here is American sugar [exhibiting]. I defy any man living to show the difference between them.

I stated that the fair way to make these estimates would be to compare the cost of the raw sugar with the value of the American refined that was made out of it, and that $2.63 would be a proper basis on which to institute this comparison. But for the purpose of conservatism and to be sure that it would give the other side all it was entitled to, I made the calculation not at $2.63, but at $2.30, which would make the difference between the cost of the two fifty-seven one-hundredths of a cent. The margin will be greater if you take the actual value of the American sugar and compare it with a certain class of German sugar. If you compare it with German sugar, it will make a wide margin; but taking it at the lowest price, getting rid of all the difficulties they get rid of by taking a price to suit themselves, it makes a difference of more than half a cent a pound.

Following that down, I stated what the margin would be on each degree from 87 to 97. The whole statement will appear in the RECORD, and it will show just what the margin would be to the trust. Before the debate closes, I think it is due to the Senate and due to the public, for the sake of gaining a knowledge of this question, that they shall know what the margin is between these figures as stated here and the figures if the price were put down at $2.63 instead of $2.30.

Mr. LINDSAY. Mr. President——

The PRESIDING OFFICER (Mr. FAULKNER in the chair). Does the Senator from Arkansas yield to the Senator from Kentucky?

Mr. JONES of Arkansas. With pleasure.

Mr. LINDSAY. I ask for explanation. I understand in ascertaining the saccharine matter in sugar by the polariscopic test 100 is the unit.

Mr. JONES of Arkansas. Yes, sir; it is purity.

Mr. LINDSAY. How close to the unit of purity does American refined sugar or any refined sugar approximate?

Mr. JONES of Arkansas. I think all such sugar as this [exhibiting]—Havemeyer, Dutch, Austrian—goes above 99, some above 99½. Some of it goes to 99.8. But I do not suppose that there is any sugar that is absolutely free from some foreign matter, usually water.

Mr. LINDSAY. Then, if no sugar above 87 can be refined under this bill without any differential, the refiners will get the advantage of the difference allowed between 99 and 87 to cover the expense of refining?

Mr. JONES of Arkansas. Necessarily.

Mr. ALLISON. Do I understand the Senator from Arkansas to contend that there are no sugars refined below 87 degrees?

Mr. JONES of Arkansas. Not at all. I was making this calculation on the basis of 87.

Mr. ALLISON. That was the inference drawn by the Senator from Kentucky.

Mr. JONES of Arkansas. The great bulk of sugar is really from 92 to 96.

Mr. LINDSAY. Then the sugar refiner gets the difference under this bill of the tariff between 92 or 96 and pure sugar, 99 and 100?

Mr. JONES of Arkansas. Whatever of pure sugar fails to come up to 96 will be a practical benefit to the refiners, because this calculation is made on the basis of refined sugar. But the advantage to the sugar refiners, after all, comes from the difference between the cost of the raw sugar and the cost of the refined with the tariff added. When you take a sufficient amount of sugar of any grade to make 100 pounds of refined sugar and figure up the entire cost, and then take 100 pounds of foreign refined sugar and add the tariff, taking one from the other, you get the margin of protection that the refiners have in their business.

Mr. CAFFERY. Then I understand the Senator from Arkansas to say that at 87 degrees the differential in favor of the fine sugar is fifty-seven one-hundredths of a cent a pound.

Mr. JONES of Arkansas. I believe I read it fifty-seven. I think it is fifty-three.

Mr. CAFFERY. I will state to the Senator from Arkansas that the 96-test sugars, which are the base of all raw sugar, are nearly purity itself. There is only 4 per cent left of moisture, or dirt, or whatever substance there may be in pure sugar. The Louisiana centrifugals will very frequently come up to 100 per cent purity. After having washed all the coloring matter out of it centrifugal sugar will polarize by the polariscope just about

98 per cent of the sugar on an average, and I think the sugar of the American refining institution or the trust will more often than otherwise approach 100 per cent pure sugar.

Mr. JONES of Arkansas. I have been looking anxiously for a letter which I have from Mr. Farr. I had it among my papers. I find two letters from him, but not the one I want. I can state the substance of the letter, but not half so well as the writer himself states it. I regret exceedingly that I have it not. His statement is pertinent to this particular question. Instead of being necessary to take 107 pounds of 96 sugar to make 100 pounds of granulated, while it may be true that something approaching 107 pounds of 96 sugar are necessary to make 100 pounds of granulated, and while something approaching 112 pounds of 92 sugar may be necessary to make 100 pounds of granulated, this man, who is a member of the committee sent by the New York sugar trade to the Ways and Means Committee to present the schedule that was adopted by the committee, states positively in his letter to me over his own signature that they make 100 pounds of sugar actually out of every 100 pounds of sugar melted; that instead of this calculation being proper which adds one-fifth, as it did, thereby decreasing the apparent difference between the value of sugar and decreasing the price to the sugar refiners, they get absolutely 100 pounds of sugar out of every 100 pounds of sugar melted. He told me that personally at first. I said, "Mr. Farr, that must be an impossibility; there are but 96 pounds of sugar in 100 pounds of 96 sugar. How is it possible to get 100 pounds of sugar out of it?" He said, "It is as simple as A B C. If you made every ounce of your 100 pounds of sugar of centrifugal like that, it would take 107 pounds to do it. But that," he said, "is never done." He told me that the very week before he was talking to me a sugar refiner told him that they were then making but 60 per cent of refined, granulated sugar out of the sugar they refined.

Mr. Farr inclosed to me, which I wanted to present to the Senate (I am sorry I can not find it; I will put it in the RECORD), a certificate from a New York firm giving the saccharine contents of what he says are the fourteen varieties of sugar made by the American Sugar Refining Company. They certainly understand how to manage sugar. They know what they are doing. They make, as he says, on an average 75 per cent of dry granulated sugar out of the sugar they melt. Then they make 25 pounds of soft sugar; that is, refined sugar. They make sugar going through all grades. Here is a sugar [exhibiting] that only tests 87½.

That sugar is 12½ per cent water, and it is white. I have in my possession samples of sugar testing only 84 degrees, and they are very white, but they are soft. There is 4 per cent of water in 100 pounds of 96 sugar, and there is 96 pounds of sugar in it. If they take 75 pounds of granulated sugar, and if they have only 4 pounds of water in the 25 pounds remaining, they would have a grade of sugar that would show less of water than this sample does. [Exhibiting.] This is a sample of white sugar [exhibiting] which has more than 10 per cent of water in it; yet in making up the calculations of the profits to sugar refiners no account is taken of this fact, and we make the calculation as though the whole of it was brought down to fine granulated sugar. Such is not the case. Such is never the case.

How can any member of the Senate who will look these facts in the face as I have presented them have any doubt that this sugar schedule, as it has been brought into the Senate, gives an unconscionable advantage to the sugar refiners and gives them a margin of profit which can not be justified on any ground in the world?

I have already stated that I propose to offer an amendment to this bill which will bring the margin of profit down to what they say it is, 12½ cents on the hundred pounds. I stated, while I was willing to do that, that I did not believe even that was necessary to make their business a profitable one.

I told you what Mr. Farr said in his letter, and I presented a letter of a New York chemist, showing that there is absolutely no loss on account of impurities in the sugar, because, after all, the sugar that is below the 100 standard is made up of saccharine matter and water. There is the smallest possible amount of coloring matter and other stuff of that sort in sugar; it is infinitesimal in weight and amounts to practically nothing when refining takes place. When all these advantages are considered, I do not see how any man can hesitate for a moment to admit that the change I propose in this schedule would give the sugar refiners more than they are fairly entitled to.

Mr. CAFFERY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from Louisiana?

Mr. JONES of Arkansas. With pleasure.

Mr. CAFFERY. I did not hear all the Senator from Arkansas said, and I will ask him to tell me what will be the difference between this bill and the Wilson law in the margin allowed to the refiner?

Mr. ALLISON. On the 87-degree test?

Mr. CAFFERY. No, sir; on the basis of the 96 test, the basis on which the refiner calculates the cost.

Mr. ALLISON. Why not give the 87 test, as now stated by the Senator, instead of the 96 test?

Mr. CAFFERY. Because the basis of the 96 test of sugar is the basis from which the refiner calculates the cost of all raw sugars under that test.

Mr. ALLISON. Yes; but the Senator from Arkansas is now making the comparison with the 87 test. I hope he will answer the question of the Senator from Louisiana and give us the differential upon that test in the present law as compared with the proposed schedule in the bill, and then I shall be very glad also to have the 96 test.

Mr. JONES of Arkansas. I shall answer the question of the Senator from Louisiana to the best of my ability, and then I shall endeavor to answer any question the Senator from Iowa may desire to ask.

Mr. ALLISON. I have no question to ask. I only wanted to get the scope of the question of the Senator from Louisiana.

Mr. JONES of Arkansas. I thought I had the figures here. I have them somewhere among my papers, but I came here somewhat hastily this morning and have mislaid some of them.

My impression is that under the Wilson law on sugars testing 96 degrees the refiners get a margin of twenty-one one-hundredths of a cent a pound. I have the exact figures in relation to this matter, but I can not put my hand on them now; but it is about twenty-one one-hundredths of a cent under the present law, as compared with fifty-three one-hundredths as proposed by the Senator from Iowa. That is about the difference, I take it.

Mr. ALLISON. Now, I will venture to ask the Senator a question, if he will allow me; but I do not wish to interrupt him. The Senator draws the differential as respects this bill and the cost of the sugar upon the 87-degree polariscope test, and makes the difference fifty-three one-hundredths. Then he takes the differential, in answer to the question of the Senator from Louisiana as respects the present law, and makes a difference of twenty-one one-hundredths on the test of 96 degrees. I merely want to call attention to that.

Mr. JONES of Arkansas. I think, since the Senator has called my attention to it, that the margin on 96 sugar is only about 13 or 14 under the Wilson law, and the margin on 88 sugar would be about 20. With the comparison between the two under the amendment as the Senator proposes it, the difference on 96 sugar, as I make it, is about 43, and the difference on 87 or 88 sugar is about 53 now. As this is a mere matter of impression, I will make the figures and present them later; but I think under the Wilson law that the difference on 96 sugar is about 13 or 14, and the difference on 87 sugar would be about 20 or 21.

Mr. ALLISON. I should be very glad to see this expert whose tabulation the Senator has produced give the difference on each scale of sugar between the present law and the proposed amendment.

Mr. JONES of Arkansas. What is the proposition?

Mr. ALLISON. I wish whoever makes these tables—of course the Senator does not make them himself——

Mr. JONES of Arkansas. I do.

Mr. ALLISON. Very well. Then I hope the Senator will draw the distinction all along the line of these different grades of tests, showing the difference between each degree of sugar between our amendment and the present law.

Mr. JONES of Arkansas. I shall endeavor to get an expert familiar with that to do that for me. The figures from which I have been quoting to-day and which I quoted some few moments ago were made by an expert and furnished to me, but every one of them I had made before and had them in pencil. I took his because they were typewritten and because I could more readily read them; but I have made every one of the figures I have given, and I believe they are absolutely correct.

Mr. ALLISON. Are they in that table?

Mr. JONES of Arkansas. A part of them are. I will endeavor to put all of them in as well as I can.

Mr. President, there are one or two other points in connection with this subject that I should like to present if I can find the data that I had, but I am afraid I have mislaid them or left them at my room.

There have been some very remarkable arguments presented to maintain the Hawaiian treaty, and they are sending here newspaper clippings and letters and arguments of one sort or another which are very striking.

Mr. WHITE. Will the Senator permit me?

Mr. JONES of Arkansas. Certainly.

Mr. WHITE. As I was necessarily absent during the first few hours of the session to-day, I should like to inquire whether the Senator from Iowa presented any amendment with reference to the provision relating to the Hawaiian treaty?

Mr. JONES of Arkansas. He did not; but he asked that the portion of the bill referring to that treaty should go over.

Mr. WHITE. Is it understood that some amendment will be presented? I presume there will be an amendment offered later on.

Mr. ALLISON. I have no doubt the whole question will be fully discussed, and it is possible that the majority of the committee may present an amendment and it is possible they may not.

Mr. WHITE. I am inclined to agree with the Senator in that. [Laughter.]

Mr. CAFFERY. I will inquire of the Senator from Iowa whether we will know, after that very unequivocal statement, what the committee propose to do?

Mr. ALLISON. The provision respecting Hawaii is in the bill and it can not be got out of the bill without an amendment, and therefore the question is already before the Senate, whether the committee propose an amendment or not. If the committee can agree upon a plan or a scheme of their own, they may possibly present it, and if they do not agree, they will not present it, but leave it to the Foreign Relations Committee, which deals with these subjects, to present such amendment as it may think proper.

Mr. WHITE. I will ask the Senator from Iowa if it is possible that this bill is to get into the Committee on Foreign Relations?

Mr. ALLISON. No one knows into what committee it may get before it is completed. But the question is before the Senate, and if the committee choose to make no amendment, the subject must be considered by the Senate. The Senator from California certainly understands that.

Mr. WHITE. Mr. President, I will say to the Senator from Iowa that of course I understand that; but as we have been informed two or three times that there was an amendment in process of construction somewhere and by somebody, I merely desired to know whether that amendment was of a practical character, whether it really had some essence, and would perhaps appear, but the Senator not being able to tell more definitely as to the matter, I shall not press it. I do not wish to intrude upon the secrets of the caucus chamber at all.

Mr. JONES of Arkansas. Mr. President, while I have not found the letter from Mr. Farr, I have found the chemist's certificate, which he sends, and which gives the different grades of sugar, and I call the attention of the Senate to the saccharine strength of the various grades he gives as being made by the sugar refineries. His statement is as follows:

SUGAR CERTIFICATE.

[Duplicate.]

A. WEICHERT LABORATORY,
101 Wall Street, New York, December 22, 1896.

Messrs. NEVERS & CALLAGHAN:

I hereby certify that I have examined the samples of sugar marked as below and find them to contain as follows:

Marked.	Cane sugar.	Marked.	Cane sugar.
Ex-refinery:	*Per cent.*	Ex-refinery—Continued.	*Per cent.*
1	94.4	11	85.4
2	93	12	86
3	91.9	13	85.6
4	90.4	14	85.6
5	87.6	15	85.4
6	87	Yellow Scotch	89
7	86.1	Dutch granulated	99.7
8	85.8	German granulated	99.7
9	84.6	American granulated	99.8
10	84.5		

A. WEICHERT CHEMICAL LABORATORY,
101 Wall Street, New York.

This shows the grades of sugar made by the refineries, and it goes at least to the extent to sustain the statement made by Mr. Farr, that the sugar refineries make 100 pounds of sugar out of every 100 pounds of sugar melted.

Mr. CHILTON. Do they make it from the German sugar?

Mr. JONES of Arkansas. I do not know as to that, but I presume there is some German sugar used. The great bulk, however, of the sugar of this country is the cane sugar.

Mr. CHILTON. I understand that; but I want to know what is the per cent of adulteration.

Mr. JONES of Arkansas. I think there is more adulteration of German sugar than of cane sugar. I know two or three years ago there was a much larger per cent of ash in German sugar; and it was to show that improved methods had got rid to a great extent of those difficulties that I read the statement of Professor Weichert.

Mr. CHILTON. I understand that this which is called the refined sugar is supposed to test 100 degrees, that there is such an amount of water poured into it that it does not test 100 degrees, and all I want to get at is whether the German refined sugar that is brought here is subject to the same difficulty or trouble.

Mr. JONES of Arkansas. There is, of course, water present in all sugar below 100 degrees. In sugar testing 100 degrees there is no water; it is perfectly dry; but the sugar below 100 degrees, as a rule, has no deleterious substances present; it has no foreign matter except water. Sugar testing 96 degrees, as a rule, means 96 pounds of sugar and 4 pounds of water. There is no special harm in it.

There are some crudities and impurities that are taken out, but they are infinitesimal in point of weight, and this, of course, is less and less the case as the sugar is higher and higher in test. In the lower grades of sugar there is more molasses. Of course these impurities and ingredients are less in the higher grades of sugar, but even where there is a considerable amount of molasses present it is saccharine matter—sugar that has not been crystallized.

Mr. President, I have a sort of circular which was sent to me from San Francisco in favor of maintaining the Hawaiian treaty. It is a remarkable paper in many respects, and I will ask the indulgence of the Senate to read it as a specimen of the sort of arguments that are used for the purpose of maintaining that treaty. The circular says:

DEAR SIR: Your attention is directed to the following article published in the San Francisco Examiner of Monday, May 24, 1897:

"THE PROFITS OF HAWAIIAN TRADE.

"The sugar trust is weakening in its efforts to smash the Hawaiian reciprocity treaty. According to the reports from Washington, it is now ready to compromise by providing for a levy on Hawaiian products of but one-third their ordinary duties.

"This is, as a matter of course, to be preferred to the proposition to put Hawaii on the same footing as foreign countries and tax her products at full rates. But the proposition should none the less be resisted by the California delegation in Congress and beaten out of the tariff bill. It is but the change from a proposition to kill our trade with the islands to a proposition to take away part of the trade. California has no trade that she is willing to spare, and the effort to deprive her of any part of it should meet with strenuous resistance.

"The efforts to prove that our trade with Hawaii is a losing business for the United States still continue, in spite of the demonstration offered that it is the most profitable part of our local commerce. The fact that we bought $15,244,977 from Hawaii in the last calendar year, and sold Hawaii only $4,184,351 worth of goods in exchange is advanced as a proof that the trade is costing more than it brings.

"The absurdity of this view has already been explained by the Examiner. So far from showing a loss, the figures show a profit. We received $15,244,977 in goods. We sent only $4,184,351 in exchange. On any system of bookkeeping in private business these figures would show that we made a profit of $11,060,626. The prevalent theory that this is a 'balance of trade' against us is probably founded on the idea that this difference between exports and imports is a 'due bill' that must be settled in coin. The customs figures show that this is a gross error. We sent to Hawaii in the calendar year 1896 $1,065,278 in gold and $73,000 in silver. This is the total shipment in settlement of the 'balance.' The other $9,221,448 was profit. We swapped off $5,323,529 of merchandise and cash for goods worth $15,244,977."

Mr. President, I shall not read the remainder of this statement, but the idea of anybody solemnly sending a document of that sort, printing it, and undertaking to make men of sense believe that we have made a profit of over $9,000,000 in a transaction of that kind, because it did not show how they were paid for, is such an absurdity that there is no use of anyone stopping to discuss it. If the profits were made by the people of San Francisco out of the investment, it makes no difference. Suppose you admit, for the sake of argument, that these absurd claims are true, who would get the benefit? The individuals who bought the goods at one-third the value have obtained the profit.

It has been of no benefit to the American public, no benefit to the Treasury, no benefit to any taxpayer in the United States, and even if the absurd statement were true, it would be no reason for maintaining a condition of things such as is existing now. The statement made by this sugar company that we are giving up more than $7,000,000 of tariff a year for the purpose of inducing the Hawaiian people to buy $4,000,000 worth of goods from us is a plain statement of the common sense of the situation; and if the American people refuse to continue to remit this amount of $7,000,000 of tariff taxes, the statement made by me a few minutes ago that the standing agreement between the sugar refiners and the sugar producers was that the sugar producers of Hawaii should have for their sugar what the sugar was worth in New York, less one-fourth of a cent, shows where the profit goes.

What is the value of the sugar in New York? It is the value of the outside article obtained in Cuba, the Philippine Islands, or anywhere abroad, and the tariff paid to lay it down in New York. Now, as to the foreign cost of sugar in the Hawaiian or the Philippine Islands, or the West India Islands, or in South America, they sell this sugar higher than any Cuban can sell his sugar, and by so much higher as the American tariff, less one-fourth of a cent a pound, which goes to the trust.

It seems to me, Mr. President, that that statement ought to make it impossible for the American Senate to continue a system which takes out of the Treasury practically $7,000,000 a year which is all to go into the hands of the Hawaiian sugar producers except one-quarter of a cent a pound that is to go to the refiners of New York.

Mr. LINDSAY. Where do the persons live who make the Hawaiian sugar?

Mr. JONES of Arkansas. In San Francisco, I suppose—that is, I suppose most of the men who own the plantations live there. I understood that at least a great many of them live there. The labor that produces that sugar is cooly labor, and there is only 3 per cent of the population in the Sandwich Islands white people.

If this profit went to the labor of the Sandwich Islands—as all the other taxes that we levy here are for the benefit of labor—it would not be for the benefit of the white laborer, but it would go to coolies; it would not go to Americans or people speaking the language of our country. It may be possible that a lot of San Francisco or California people may own the plantations in Hawaii, and it may be of enormous value to them to be allowed to bring their sugar in and sell it at the same price it would sell for duty paid; but is there any justice in levying a tax upon the masses of the people to enable those who happen to own plantations in Hawaii to sell their sugar to the American people at a higher price than they would sell it but for this law?

Mr. LINDSAY. I will ask the Senator if the sugar planters live in the United States and pocket the profits whether that does not account for the fact that we do not send the money out to Hawaii?

Mr. JONES of Arkansas. That is precisely the way I account for it.

Mr. President, there are many other facts in connection with this matter that I should like to present to the Senate, but I have already been on my feet so long that I feel that I ought not to trespass any longer on the time or patience of the Senate; but before the debate is closed I shall attempt to elucidate some other points on the question to the best of my ability.

Mr. MILLS. I want to state that on the vote taken this morning I was paired with the Senator from Nebraska [Mr. THURSTON] on the amendment offered to the bill by the Senator from Utah [Mr. CANNON]. Had I been present, I should have voted "nay."

Mr. VEST. Mr. President, it is not my purpose to attempt any elaborate address on this important schedule. There has been a vast amount of irritation exhibited whenever the schedule has come up for discussion in any tariff bill. In 1894 it was the Cape Hatteras of debate, and caused investigation, vituperation, libel, and slander until the character of individual Senators and the character of the Senate at large became involved in the discussion.

The sugar trust is a plain, palpable, bald, admitted trust. It controls, according to statements of its own members, 70 per cent of the consumption of sugar in the United States; and it is stated by experts who are not in the trust that the amount it controls is 96 per cent, leaving only 4 per cent outside of its cormorant grasp. I know that the decision made by the circuit court of the United States and affirmed by the Supreme Court, involving the effect of the antitrust law, misnamed the Sherman Act—with which Mr. Sherman had no more to do than the inhabitant of another planet—the antitrust law, which was framed by the Judiciary Committee, chiefly by Mr. Edmunds, then Senator from Vermont, and reported to the Senate and passed by both Houses, and construed by the Supreme Court of the United States, first by the circuit court in New Jersey, in a case where the sugar trust was a party—it was not pretended that it was not a trust, but that case went off upon the question whether the product of the trust had entered into interstate commerce so as to bring it and bring the trust within the sphere of the operation of that law. That was the only point virtually decided.

As to its being a trust, as to its controlling the sugar consumption in the United States, there was no pretense of denial. It is not only an open and undisguised and palpable and admitted trust, but its operations have been flagrant, bold, and its managers have been men of the greatest financial and economic ability; and it has proceeded with a confidence that arose from a sense of ability and from the consciousness of great financial resources. It has been estimated that this trust has invested in the refining of sugar some $25,000,000. It has bought up all the rival refineries that were of sufficient importance to interfere with the general design of monopoly.

In the city of St. Louis the old Belcher refinery, which at one time was considered a marvel of prosperity and production in the way of refined sugar, was bought by the trust and closed; and the same thing happened with the large refinery finished in 1895 in the city of Baltimore. Its doors were suddenly closed and its chimneys have been smokeless from that time. When the facts came out, it developed that this refinery, like the Belcher refinery and the refinery in San Francisco, had passed into the control of this giant monopoly, and for its purposes had gone out of practical operation.

To show the enormous profits of this business, it is only necessary to refer to the testimony of Mr. Searles in the Lexow investigation. Mr. Searles made no phenomenal revelations, because the reports of the company and what can be read by any man in regard to its stock and its dividends show its enormous profits. With $24,000,000 of capital invested, or $35,000,000 at the largest estimate, the trust has $37,500,000 of preferred stock and $37,500,000 of common stock, making $75,000,000. Upon the $37,500,000 of common stock it pays 3 per cent every three months, or 12 per cent a year, equivalent to 13 per cent.

Mr. PLATT of Connecticut. My understanding is that it pays 6 per cent on its preferred stock and 12 per cent on the common.

Mr. VEST. It pays 7 per cent on the preferred and it pays 12 per cent upon the common, which is equivalent to 21 per cent, because when a dividend is payable every three months the calculation is that 1 per cent is added to its annual value. That would make it 13 per cent upon the common stock and 8 per cent upon the preferred—in the aggregate 21 per cent on the common and preferred.

Mr. BATE. I will ask the Senator from Missouri if the stock has been watered? I just came into the Chamber, and I did not hear the Senator's statement. If it has been watered, to what extent has it been watered?

Mr. VEST. As a matter of course it has been watered. I yield to the Senator from Louisiana [Mr. CAFFERY] to make a statement.

Mr. CAFFERY. I simply desire to read the quotations of the stock of the American Sugar Refining Company for a number of years.

For the year 1892: Common, 115⅛; lowest, 78⅛; closing, 111½. Preferred, 107⅛; lowest, 90; closing, 99½. Sales, 4,514,617 shares of common.

For the year 1893 the highest quotation of common was 134⅛; lowest, 61½; closing, 81⅞. I will not read the whole of the table.

For the year 1894: Common, 134⅛; lowest, 75⅛; closing, 89½. For the year 1895, 121½; lowest, 90½; closing, 102½. The figures all run above par both for common and preferred for 1892, 1893, 1894, and 1895.

Mr. WHITE. While the Senator from Louisiana is upon his feet, I should like to inquire whether the introduction of this reform sugar schedule by the other side of the Chamber has had any effect on the stock market in reference to sugar stock?

Mr. VEST. It went up five points.

Mr. JONES of Arkansas. In one day, and it has gone up since then.

Mr. CAFFERY. This is a report for the period from 1892 to 1895, and the proposed bill would have no effect on that term. I simply read the figures to show the amount of premium the stock is carrying.

Mr. WHITE. My question was addressed to the effect of the bill upon stock at a recent date.

Mr. VEST. Some of us may be mistaken with regard to the sugar schedule, but there are certain people who are never mistaken, and those people are in Wall street. The speculators of Wall street understand immediately and almost instinctively the effect of legislation here. There is no question in regard to the correctness of their conclusion. When our friends in caucus the other day decided upon the present and pending schedule, sugar stock went up five points in thirty minutes, and it has continued to go up ever since. I am told that to-day it is as high as 124, having started immediately on the adjournment of the caucus from 118. There is no question about the correctness of their conclusion. They know whether this schedule is more favorable to them than the existing law, or than the Dingley bill, or than what is called the Aldrich amendment, and the result is shown in the stock board, and it is now predicted, as I understand from a gentleman in speculation, I believe, to some extent, that sugar will go to 150. The trust has all it wants.

But I have not contented myself with conjecture in regard to this matter, and with the assistance of the best expert in the United States, in my opinion. I have arrived mathematically at the effect of the caucus amendment, and I have here tables showing all the different phases of the sugar question, worked out with absolute certainty, and they put the question beyond doubt. Of course I shall not undertake to go through this labyrinth or wilderness of calculation upon an occasion like the present, and I will content myself with results. I take it for granted the Senate wants to know the difference of protection given to the trust under these different measures, commencing with the existing law and winding up with the proposed amendments or schedule of the caucus which we are now considering.

One question which has to be determined is upon what grade of sugar shall we make the calculation. Of course Senators know, and it is an elementary fact in regard to the sugar schedule, that there are two systems upon which to treat this question. One is that of color, and the other is that of saccharine strength. When you speak of 16 Dutch standard, you mean a color about like that of coffee. When you speak of the polariscopic test, you mean its saccharine strength, running from 75 to 99 degrees, making altogether twenty-six grades or degrees, according to the polariscopic test.

Governor DINGLEY, in framing his bill in the House, took 92-degree sugar as the test upon which he based his bill and sent it to the Senate. He assumed, and I think correctly, that 92 is about the mean or medium degree, going up from 92 to 99 and from 92 down to 75. The sugar dealers of New York, and conspicuously the great house of Willett & Gray, took 96 as the grade upon which the sugar schedule should be determined and argued. As was said by my colleague upon the Committee on Finance, the Senator

from Arkansas [Mr. JONES], the lower grades of sugar are full of impurities, with large quantities of water, and they are not the favorites of the trust, but the higher grades of sugar produce the article which competes with the granulated sugar of Germany, which is refined sugar, coming into this market in large quantities, and there is the battlefield between the foreigner and the domestic refiner in the United States.

I repeat, that the 96 polariscopic grade is that upon which this question must be argued and determined, because that is the grade in which the trust is more interested than in any other, and not in the lower or muscovado sugars, which are full of impurities and which the refiners never buy if they can help it. As a matter of course, there has been a vast change in the sugar market of the world produced by the Cuban revolution or war. If Senators would go to the official reports, they would find that from importations of a billion and half pounds of sugar brought to us from Cuba and the Philippine Islands it has fallen off to some 200,000,000 pounds, and if the war continues it is safe to assume that the cane sugar of Cuba will practically disappear from the American market.

The trust, compelled to have its raw material in spite of war, was forced to go to the beet sugar of Germany, and the result was that the beet sugar of Germany, as shown by official reports, increased in importation in 1896, or in the nine months preceding July of this year, from 400,000,000 to 900,000,000 pounds. So there has been a revolution. In 1896, 2,230,000,000 pounds of cane sugar were brought into this country and refined, but that has fallen off to a billion and a half, and the place of the Cuban cane sugar has been taken by the beet sugar from Germany.

Mr. President, I come to the real question in which every Senator is interested, and in which the people particularly are interested. What is the protection given to the trust by existing law? What is the result of this amendment? Have the speculators of Wall street been mistaken in regard to its effect when they put sugar up from 118 to 124 inside of the past two days? I assert that this calculation is mathematically correct. I have gone over it carefully, deliberately, and am responsible for it, because I know that it was made by a man, in my judgment, the most competent that can be found for such work.

We will take, in the first place, 96-degree sugar, which is the test sugar. Under the Wilson Act the protection is thirty-four and a fraction cents on the hundred pounds to the trust; under the Dingley bill instead of 34 it is 59 cents on the hundred pounds; under the Aldrich amendment it is 61 cents; under the present schedule proposed by the caucus it is 66, an increase over the Aldrich amendment, which was itself an increase over the Dingley bill, which was itself an increase over the Wilson Act; and the difference between the Aldrich amendment and the caucus schedule is over 5 cents on the hundred pounds.

Mr. President, this calculation is made upon the prices given by the Senator from Rhode Island [Mr. ALDRICH] in his speech. I believe those prices are too low, but for purposes of fair, legitimate argument I took his own prices and made this calculation upon them.

There are 26 grades of sugar, running from 75 to 99 degrees, inclusive. On 17 of those grades the caucus amendment is a slight decrease from the Aldrich schedule. Upon 9 of them it is a very considerable increase, and I come now to the salient point in this discussion, to which I challenge the attention of the opposite side and their contradiction. It is most significant that all these reductions in the protection given are upon the muscovados or lower degrees of sugar, below 87. Upon all the higher grades, which constitute the favorite raw material of the trust, there is a very marked and significant increase of protection.

Take, for instance, 75, the lowest grade. Under the Aldrich amendment the protection is $2.87; under the caucus amendment it is $2.29, a reduction. On 76 it is $2.68 under the Aldrich amendment and $2.16 under the caucus amendment. On the next grade it is $2.50 under the Aldrich amendment and $2.04 under the caucus amendment. On the next grade it is $2.34 under the Aldrich amendment and $1.91 under the caucus amendment. On the next grade it is $2.19 under the Aldrich amendment and $1.81 under the caucus amendment. I leave off the thousands in the shape of fractions.

On the next grade it is $1.87 under the Aldrich amendment and $1.58 under the Senate amendment, and so on with a small decrease of from 1 to 3 cents until you reach the fated grade of 87, when a new section, an amendment of our friends upon the other side, takes effect, and from that time on, above 87 and up to 99, there is a most significant and marked increase of protection given to the trust.

We will take, for instance, 93, and you find the protection given to the trust is 77 cents under the Aldrich amendment, 78 in the Senate amendment; in the next grade it is 68 under the Aldrich amendment and 71 in the Senate amendment; on the next it is 62 cents in the Aldrich amendment and 67 in the caucus amendment; on the next it is 61 under the Aldrich amendment and 66 under the Senate amendment; on the next it is 59 under the Aldrich amendment and 64 under the Senate amendment; in the next, 59 under the Aldrich amendment and 64 under the caucus amendment, and on the next it is 60 under the Aldrich amendment and 66 under the caucus.

Then follow in the calculations the price of refined sugar under the different bills. Under the Wilson Act it is $3.44; under the Dingley bill, $4.55; under the Aldrich amendment, $4.64; under the Senate amendment it would be $4.63.

These are the rates of protection, and the hand that constructed and the intellect that devised that schedule understood exactly what was wanted. It is ingenious, artistic, and calculated to hide the increase so effectually from all except experts that it is almost impossible to make the detection. The men in Wall street understood it, and in five minutes after the lightning had flashed the news that our friends in caucus had decided upon this schedule prices jumped from 118 to 123¼, and now it is 124 and possibly more.

I will ask that these tables for the use of the Senate may be inserted in my remarks, and I challenge criticism upon them. I have taken the prices of the Senator from Rhode Island [Mr. ALDRICH] himself. I have dealt fairly with every one of these measures, and I assert that this is an enormous bounty to the sugar trust upon the grades of sugar which they always desire to use, while for the purpose of deluding the people at large, and those who have given no special attention to the sugar duty, they have decreased with great clamor and ostentation the protection upon the lower grades of sugar least desired by this giant monopoly.

In fixing any rates of duty and attempting in advance to announce their effects on the revenue, on the interested industries, and as burdens to the taxpayers, it is necessary to note the conditions abroad and the probable tendencies of markets for the future.

The false encouragement given in bounties by continental countries has resulted in overproduction abroad, and in so depressing the world's sugar markets that since the enactment of the present law prices of sugar have so declined that our revenues have fallen away more than a third below what was computed these rates would yield at the time the law was passed, and has so cheapened sugars to the consumers that they have hardly noticed the burden which 40 per cent on this necessary of life has imposed.

It does not seem possible that prices can go much lower than now; but our consul-general at Frankfort, in the February Consular Report (page 167), shows that new legislation in Germany, instead of reducing the trouble, as anticipated, by reason of the same tendencies of greed-grasping benefits that prevail there as here, has exaggerated the embarrassments and encouraged still more burdensome overproduction in Germany, and France retaliates with like legislation.

The result is that while the Germans can only afford 12 or 15 pounds of sugar per capita annually for home consumption, they help England and the United States pay for the 50 or 60 pounds per capita consumed in these countries.

It seems a foolish policy, as anyone must admit who reads Consul-General Mason's letter, but it is continuing and progressive just now, and will probably result in still lower prices, which will set at naught any calculations offered at this time on the effects of the duties proposed in this bill.

The amount of protection afforded by any system of rates on sugar, especially when these are partly or entirely ad valorem, depends, of course, in great measure upon the relative invoice prices of the raw and refined sugars, and these are just the elements which the layman has no means of determining, and which the parties most interested decline to furnish.

If the latter were quite ingenuous, the matter would still be complicated and uncertain by reason of fluctuations, of differences in different markets, at different ports, and in different seasons. When the present law was enacted sugar was more than a cent higher than at the present time, and the 40 per cent rate fixed was calculated and realized, a half cent more per pound on our tremendous importations.

In criticising the estimates made by Hon. William L. Wilson on the rates proposed by the Senate bill, Senator ALDRICH (RECORD, page 1557) says:

> German granulated, the price of which I have already shown, in the month of March was 2.8 cents per pound.

And on page 1559 of the RECORD, in a table given to show how irregularly and unfairly the proposed rates of the Dingley bill affect the various grades of raw sugars, the import price for each grade of such raw sugars is given by Senator ALDRICH.

Taking these prices as a basis, and using the drawback allowance of pounds of each grade established by the Government—from 101 pounds of 99-degree sugar to nearly 147 pounds of 75-degree test to make 100 pounds of granulated—the margins found in the following tables show the differences of the duties paid on the raw and refined sugars, usually accepted as the measure of protection.

These are of course misleading, since in the 114.94 pounds of 92-degree sugar there is not only realized 100 pounds of hard refined sugar, but several pounds of valuable soft sugars and molasses.

Before the Ways and Means Committee, Mr. W. J. McCahan, of Philadelphia, a refiner, stated that he had calculated the cost of refining in his refinery for a year.

In that time, running on from one-half to two-thirds time, using 96-degree centrifugals, it cost him 56 cents per 100 pounds to refine the sugar; but he added, "There is 26 cents waste to come out of 56 cents."

This is on 96-degree sugar, and there is but 7 pounds out of which to realize the 26 cents. It ought not to be less on lower grade sugars, where the allowance runs as high as 46 pounds, and this adds a quarter of a cent per pound protection to any calculation which makes the Government drawback allowance the basis for computing the margin of profit to the refiner.

It is assumed in all these calculations that the refiners turn out no white sugar except of 100 degrees test. Yet centrifugals of 96 to 97 degrees may be used and 94-degree refined white sugar result, in which case, instead of a waste, more pounds of refined sugar come out than went in of raw sugar.

This condition can not, ought not to have any bearing upon any calculation as to margins, but ought to be an answer to the brazen and the foolish, who alone claim that the protection in the rate on refined sugar is limited to what is left after subtracting the duties paid on 115 pounds of 92-degree or 122 pounds of 88-degree sugar.

To show how entirely these calculations rest upon the values of the sugars, it is only necessary to compare page 636 of the Ways and Means testimony, where Mr. PAYNE, of the committee, suggests, and Mr. McCahan, the refiner, does not dissent, that the rates established by the committee do not vary 5 per cent on any grade, and Senator ALDRICH's table (RECORD, page 1559), which shows these rates range from 78 per cent on 99-degree sugar to 144 per cent ad valorem on that of 75 degrees test.

* Senator ALDRICH (RECORD, page 1557) gives the value of German granulated sugar as 2.3 cents per pound. Under the Wilson Act the duty on this would be 40 per cent=0.92 and ½ cent, is 0.125, or together 1.045; with 0.10 differential against bounty-fed sugar makes the total duty 1.145.

Table showing protection under rates of Senate bill on prices furnished by New York committee of the raw-sugar dealers.

Degrees, polariscopic test.	Price given by sugar dealers	35 per cent Senate bill.	Senate specific rate.	Total rate per pound.	Government drawback allowance.	Duty on raw sugar in 1 pound refined.	Differential under Senate rates.

Duty on refined	1.145	2.2583	2.3483	2.334

The tables are made to show the differentials under the different bills, and it should be remembered that the calculations are based on a valuation of 2.3 cents per pound, which must be an undervaluation, since the last crop in Germany realized an average price of 2.43 for the year, and no refined sugar of any great quantity has come in yet at that figure, though it may go below in time, for the survival of the cheapest is as inexorably a commercial tendency as that death follows birth. It must not be forgotten that this sharp decline in price of sugar is in spite of the temporary cutting off of a part of the sugar supply of Cuba, though we received more Cuban sugar in March, 1897 (78,029,093 pounds), than in the corresponding month of 1896 (73,294,680).

The refined sugars which came in in 1896 were valued at 2.8 cents per pound; for the first nine months of the present fiscal year the little refined sugar imported was valued at 2.55 cents, and for the month of March last at 2.42 cents. Any of these would give a somewhat higher margin to the refiners than the 2.3 cents on which the tables were computed. If refined sugar was entered as for all the year 1896 at 2.8 cents, then the margin would be 17.50 cents per hundred pounds higher; and if to this be added what is realized from the softer sugars and molasses, the by-product in refining, admitted in one case to be 26 cents per hundred pounds, then the margin would be 43.50 points higher.

The House committee assumed, as has long been admitted, that the average of raw sugars imported into the United States was of 92 degrees polariscopic test. This does not mean that any great proportion of the sugars below 16 Dutch standard was of that grade, but that Cuban centrifugals and continental beet sugars were about as great in volume as the lower-grade cane sugars of the Southern republics, the islands, and the Indies. The champions of the Senate schedule at one fell swoop wiped out the cane sugars of the world. The two and three-quarter billion pounds which came in in 1896 of cane sugars disappeared like the smoke from the fisherman's jar, and in its stead the horrible Afrite rose, labeled German beet. German refined could come in at 2.3 cents per pound, and if on this the retaliatory duty of 38.33 cents should be counted as part of the protection, then, too, the 27 cents bounty on the raw sugars of Germany must be counted as part of the duties against all raw sugars.

No matter that the German raw sugars do not grade below 90 degrees, or at any rate carry no bounty below that figure. No matter that our share of the cane sugar of the world, between two and three thousand million pounds, carry no such bounty. Germany is hereafter to furnish our sugar. She will wipe out our refiners as she has done those of England. Our cane fields of the South which the flood has spared shall be neglected; our beet farms in the West shall once more be waste places. But be it remembered, when all this is done the Tropics will still raise some cane, and the trust will be found doing business at the old stand.

No account is to be taken of the fact that Europe produced 886,744,320 less pounds of raw beet sugar last year than the year before. No matter that Germany cultivated 160,051 less acres of beets in 1896 than in 1895, or that she produced 499,013,760 less pounds of beet sugar, or that she exported 239,926,400 pounds less. All these facts are ignored in the cry, "Beware the bogie man from Germany!" As has been said, the preceding tables are not a measure of profit of the refiner, but only intended to show the differential of duties which would result on the prices as quoted, for which no guaranty is given.

If the margin of profit is to be calculated, a different method is necessary, for in that case it must be borne in mind that the refiner pays also for the extra pounds of sugar which he buys to make his hundred pounds of refined. As an instance, take the raw sugar of 92 degrees, the average point, worth, as Senator ALDRICH has said, 1.8272 cents. On this, under the Senate schedule, the specific rate is 0.89 cent, and the 35 per cent ad valorem is 0.63952, or together, 1.52952 cents. If the sugar cost 1.8272, and the duty is 1.52952, the duty-paid value of each pound of that grade of sugar would be 3.35645.

To this add the 0.27 cent of the German export bounty on raw sugar and we have the total duty-paid cost of the sugar, 3.62645. On the export of this sugar of 92 degrees when refined, our Government allows a drawback on 114.94 pounds, estimating it takes that much of this grade to make 100 pounds of hard refined sugar. Multiplying the cost of 1 pound by this drawback allowance of 114.94, and we have for the actual duty-paid cost of enough raw sugar to make 1 pound of refined, 4.1682 cents.

Now, the price of the refined sugar is 2.3 cents, according to Mr. ALDRICH, and on this the duty is 2.3483, or together the duty-paid price of such sugar is 4.6483 cents, and the margin of profit is therefore the difference between these two prices, or 0.4801, to which should be added 0.26 cent admitted as realized out of the soft sugars which result in the process of refining, which together make 0.7401, or nearly three-quarters of a cent protective margin within which it may be sold under the German sugar.

The point is made against all the estimates on the sugar schedule that if the retaliatory duties on bounty-fed sugars of 38.33 cents be counted on the refined sugar, 27 cents should be added to the price of the raw sugars and reduce the nominal protection by that amount.

When it is suggested that these bounties do not apply to cane sugars, but only to beet sugars from two or three continental countries, hands are thrown up and one is asked in surprise where these cane sugars are to come from. Cuban sugar is gone. "Seventy-seven per cent of our raw sugar comes from Germany."

This is arrant nonsense. Admit Cuba ships no sugar to-day. It is a convenient moment to make a tariff that will add a quarter of a cent of profits to Cuban sugar to-morrow. Because Cuba ships no sugar this 4th of July, do friends of the trust claim that she will ship none in the future? Do they think because they "are virtuous there shall be no more cakes and ale?"

In 1896 we imported 2,752,012,512 pounds of cane sugar without counting the Hawaiian, on which there was no bounty. Shall all this be ignored in calculating probable profits under this bill?

Besides, Germany under the new law gives no bounty on any sugar under 90 degrees. (See letter from Treasury Department to Senator CAFFERY.) Her bounties are granted on an analysis of 84 per cent, equivalent to 90 degrees polariscopic test, and on all the sugars under this there are no countervailing (German) duties to be added.

France, whose bounty system has just been remodeled in retaliation on Germany, sent us only $488,000 worth of beet sugar in 1896, and none for the nine months of the present year.

German sugars will perhaps be imported in progressively increasing quantities. As long as that Government pursues the policy of taxing their own people to furnish England and the United States cheap sugar, both countries are likely to continue to profit by such generosity.

Germans pay 12 cents per pound for the sugars they eat, while we get it for half the price. They have an import duty of above 4 cents per pound, and an internal-revenue tax of 2.16 cents on each pound consumed at home.

While we may continue to increase our purchases from that country, the 750,000,000 already taken in this fiscal year must be left out of the calculation.

That was abnormal, and only in response to a quick demand to anticipate the new tariff.

When the new law becomes effective, prices will be readjusted, and if German raw sugar, with the compensatory duty of 27 cents per 100 pounds, can be secured at a price more profitable to refiners than cane sugars without such additional burdens, the former will be preferred, and may gradually crowd out the cane sugars, though the operation will be slow, for the latter would soon fall—without demand—to a profitable figure. Besides, there is a limit to the amount on which Germany or any country can pay these bounties, and the burden is likely to become heavy enough to overthrow the whole system.

Until then, under this proposed law, such raw sugars as come from Germany will pay the additional impost of 27 cents on sugars of 90 degrees and above. In taking this off the probable margin of protection or profit, it should not be forgotten to add 26 cents realized from the by-products of soft sugars, where the Government drawback allowance is used as the basis of the estimates, as in the following tables:

Duty-paid cost foreign refined	3.445	4.559	4.649	4.634

Mr. CAFFERY obtained the floor.

Mr. LINDSAY. Before the Senator from Louisiana commences to speak, will he give way to allow me to offer an amendment?

Mr. CAFFERY. Certainly.

Mr. LINDSAY. I will read the amendment and send it to the desk. I ask the attention of the learned gentleman in charge of the bill to it, so that he may explain to me, after the amendment has been read, whether it reaches the object which I propose to attain. A gentleman very high in authority in the Government discussed this schedule with me the other day, and when I expressed the difficulty I had in comprehending it, he not only concurred in my statement, but said the explanations he had received always darkened the mystery of the schedule.

My object is to amend section 206 by striking out of lines 13 and 14 the words "not above 16 Dutch standard in color," and also all of the said section between the words "proportion," in line 19, and the word "molasses," in line 23.

The PRESIDING OFFICER. The amendment proposed by the Senator from Kentucky will be stated.

The SECRETARY. It is proposed to amend section 206 by striking out of lines 13 and 14 the words "not above 16 Dutch standard in color;" and also all of said section between the word "proportion," in line 19, and the word "molasses," in line 23.

Mr. LINDSAY. I ask that the amendment may be printed.

The PRESIDING OFFICER. The amendment will be printed and lie on the table.

Mr. MORGAN. Will the Senator from Louisiana allow me to send to the desk and have read an amendment to the pending schedule which I propose to offer at the proper time?

Mr. CAFFERY. Certainly.

Mr. MORGAN. I offer an amendment, which I ask may be read.

The Secretary read as follows:

A tax of 1 cent per pound is hereby levied and shall be assessed and collected on sugar that is the product of any refinery of sugar in the United States; but the persons or corporations engaged in the business of refining sugar, in whose business there is employed less than $100,000 of cash capital, and who are not connected in business by agreement with any other person or corporation engaged in refining sugar, are exempt from such tax. The laws for the collection of the tax on tobacco, so far as they are applicable to the subject of this enactment, shall apply to the collection of the tax imposed by this act upon refined sugar. And no person or corporation shall be exempt from the tax on sugar refined at any sugar refinery who shall not clearly establish the right to such exemption under the rules and regulations to be prescribed by the Secretary of the Treasury for the execution of this law.

Mr. MORGAN. I ask that the amendment may be printed.

The PRESIDING OFFICER. It will be printed and lie on the table.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the House had passed a joint resolution (H. Res. 64) relating to the payment of salaries in the consular service; in which it requested the concurrence of the Senate.

The message also announced that the House had agreed to the concurrent resolution of the Senate calling upon the Secretary of War for such information as he may have in his possession with reference to the present condition of the harbor of Cumberland Sound.

ENROLLED BILLS SIGNED.

The message further announced that the Speaker of the House had signed the following enrolled bills and joint resolution; and they were thereupon signed by the Vice-President:

A bill (S. 956) to amend an act entitled "An act to authorize the construction of a steel bridge over the St. Louis River between the States of Wisconsin and Minnesota," approved April 24, 1894, as amended by an act approved August 4, 1894, entitled "An act to amend an act to authorize the construction of a bridge over the St. Louis River between the States of Minnesota and Wisconsin;"

A bill (S. 1979) to authorize the construction of a bridge across Pearl River, in the State of Mississippi; and

A joint resolution (S. R. 40) authorizing the Secretary of War to receive for instruction at West Point Cárlos Gutierrez, of Salvador.

CONSULAR SERVICE SALARIES.

Mr. HALE. Will the Senator from Louisiana yield to me?

Mr. CAFFERY. Yes, sir.

Mr. HALE. I ask that the joint resolution which has come from the House of Representatives may be laid before the Senate.

The VICE-PRESIDENT. The Senator from Maine asks unanimous consent that House joint resolution No. 64 may be laid before the Senate. Is there objection? The Chair hears none, and the joint resolution will be read by its title.

The joint resolution (H. Res. 64) relating to the payment of salaries in the consular service was read the first time by its title.

Mr. HALE. I now ask that the joint resolution may be read at length.

The joint resolution was read the second time at length, as follows:

Resolved by the Senate and House of Representatives, etc., That the salaries appropriated by the act making appropriations for the diplomatic and consular service for the fiscal year ending June 30, 1898, approved February 20, 1897, for consuls-general and consuls at certain places hereinafter named, may be paid to the consuls-general and consuls heretofore appointed at certain other places until consuls-general or consuls are appointed, qualify, and enter upon their duties at the places named in said act of February 20, 1897, as follows, namely: The salary of the consul-general at Apia and Wuknalofa, Tonga, to the consul-general at Apia; the consul-general at Yokohama to the consul-general at Kanagawa; the consul-general at Monterey to the consul-general at Nuevo Laredo; the consul at Elberfeld to the consul at Barmen; the consul at Edinburgh to the consul at Leith; the consul at Ciudad Juarez to the consul at Paso del Norte; the consul at Ciudad Porfirio Diaz to the consul at Piedras Negras; the consul at Sydney to the consul at Pictou; the consul at Progreso to the consul at Merida; the consul at St. Michaels to the consul at Fayal; the consul at Valencia to the consul at Denia; the consul at Utilla and Truxillo to the consul at Ruatan and Truxillo; the consul at Lourenco Marques to the consul at Mozambique, and all allowances for office rent, clerk hire, and transit salary are also continued at the above-named offices as now established until the contemplated changes have been fully effected.

Mr. HALE. Mr. President, I think there will be no objection to the passage of this joint resolution, and it ought to be passed at once. It is to avoid the accounts of consuls being held up by the Comptroller. In the last diplomatic and consular appropriation act the names of about a dozen consulates were changed, and in some cases the location of the consulate was removed, another consulate being created by a new name. For instance, the old consulate at Leith was removed and changed to the consulate at Edinburgh, and we appropriated for the next fiscal year for the consul at Edinburgh. Now, unless a new appointment is made by the 1st day of July, the consul at Leith, who is now commissioned as such consul, can get no pay. This joint resolution simply provides that in such a case the accounts may be allowed and that the consuls may receive their pay. There is no objection to the joint resolution, and I hope it may be at once put on its passage.

The VICE-PRESIDENT. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

THE TARIFF BILL.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. CAFFERY. Mr. President, although I come from a section of our country where sugar is more largely raised than in any other part of it, I am yet unfamiliar with the intricacies of polariscopic tests and differentials and all the other technical terms which are embraced in this schedule, either in the amendment of the Senator from Rhode Island to the schedules of the Dingley bill or the bill itself as it came from the House.

The American Sugar Refining Company, commonly called a trust, has, as said by the Senator from Missouri [Mr. VEST], some of the ablest and most efficient business men and experts in the sugar industry in the world. They know all the ins and outs and all the advantages and disadvantages of any schedule proposed by Congress as affecting their interests.

The old fight between the producer and the manufacturer, which crops out in a number of instances, is on hand in this sugar schedule. The old fight between the amount of revenue to be derived from an article and the amount of compensating duty to be given the manufacturer using the article for the manufacture of a finished product is now on hand.

The American sugar refiner has an unenviable reputation for the facility with which it is said he has molded legislation in his favor. I do not suppose anyone has forgotten the amount of scandal that ensued upon the report of the Wilson bill, and the same scandal, to a somewhat less degree, has fallen upon the formation of the schedule of the pending bill in regard to sugar. I have no animosity against the American Sugar Refining Company, and I would not care to visit animosity, if I had any, in my capacity as a legislator.

But the article of sugar presents a case where beneficial or harmful legislation can very materially affect the interests of the largest sugar-refining company in the world. Before the cultivation of the beet in Europe, the cane of the Tropics supplied the civilized world with sugar, and after the artificial product of beet was largely developed in Europe the beet slowly made its way in Europe to the command of the markets there, and now, under the peculiar condition of the bounty and tariff laws of Germany and other European countries, beet sugar monopolizes the European markets.

The consumption of sugar in the world is enormous, and the consumption of sugar in the United States is larger than that of any other country except England. The consumption of sugar in the United States, according to the Statistical Abstract, embracing the home production and imported sugar, from 1883 to 1895, is as follows:

Quantity in tons of sugar consumed in the United States, 1883 to 1895.

[Data furnished by Messrs. Willett & Gray, New York.]

Calendar year.	Refined product of imported sugar.*	Domestic product.					Total.	Consumption per capita.
		Manufactured from imported molasses.*	Of cane.	Of maple.	Of beet.	Of sorghum and other.		
	Tons.	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Pounds.*

1890	1,257,292	53,282	136,503	25,000	2,800	1,500	1,476,377	52.8
1891	1,614,580	31,320	221,951	15,000	5,400	570	1,888,851	66.1
1892	1,597,306	30,000	204,064	9,500	12,000	500	1,853,370	63.5
1893	1,623,872	20,000	235,886	10,500	16,000	500	1,906,758	63.9
1894	1,700,635	15,000	271,338	5,000	20,443	300	2,012,714	66
1895	1,572,498	15,000	324,506	7,500	30,000	300	1,949,744	62.6

*Leading refiners state that little or no sugar is manufactured from domestic molasses; also that in refining there is only about 2 per cent waste of original weight. Messrs. Willett & Gray, New York, state that of the sugar consumed in 1895 only about 182,984 tons were unrefined.

From this table it appears that the consumption in 1883 was 51.1 pounds per head; in 1895 it was 62.6 pounds per capita. It shows an enormous quantity of a necessary article of food imported

into the United States. The rise or fall of a half a cent a pound makes an enormous amount of money. In round numbers the amount of sugar consumed in the United States is 4,000,000,000 pounds annually; with half a cent a pound in favor of the trust, which melts all our sugar, it amounts to $20,000,000. So it is easily perceived what is the animus, the impelling cause, that brings the American Sugar Refining Company to the doors of Congress at every session demanding a tariff in its behalf.

The American Sugar Refining Company practically monopolizes the purchase and sale of cane sugar. It monopolizes the sale of not only the cane sugars of Louisiana and the beet sugars of Nebraska and California, but the cane sugars of the world.

As I stated, the production of beet sugars in Germany, France, Russia, Sweden, Belgium, of the whole of continental Europe, supplies the European demand. Up to last year there was but a small amount of beet sugar imported into the United States, and that was only on account of the war in Cuba, which forced the sugar trust to import some raw beet sugar, and some refined sugars came in on account of the very low price to which refined sugars had been driven by the excessive production in Germany, stimulated both by a prohibitive tariff and by an export bounty.

There was some very interesting testimony given before the special committee to investigate attempts at bribery in 1894, contained in Senate Document No. 606, in regard to the monopolistic character of the American sugar-refining interests. Mr. H. O. Havemeyer is the witness whom I propose to quote. He appeared before that committee to testify in regard to the question then under consideration, which was whether United States Senators had been speculating in sugar stocks. The Senator from Nebraska [Mr. ALLEN] asked Mr. Havemeyer the following questions:

Senator ALLEN. And when you sell in this country you control the price?
Mr. HAVEMEYER. Yes, sir.
Senator ALLEN. And it was organized, Mr. Havemeyer, as I understand it, with the view of controlling the price and output to the people of this country.
Mr. HAVEMEYER. That was one of the objects of the consolidation.
Senator ALLEN. And you have succeeded in doing it?
Mr. HAVEMEYER. Yes, sir.
Senator ALLEN. That was the principal object in organizing the American Sugar Refining Company?
Mr. HAVEMEYER. It may be said that that was the principal object.

Mr. Havemeyer is exceedingly frank. He does not equivocate a particle. The object of organizing the American Sugar Refining Company was to control the price of sugar in the United States, and he succeeded in his object. He controls the price, or his company does. Here it is, plain, unequivocal, unambiguous:

Senator ALLEN. And making money, incident to that control?
Mr. HAVEMEYER. Yes, sir.
Senator ALLEN. At the time of your organization, in 1891, I understand you were capitalized for $50,000,000?
Mr. HAVEMEYER. At the time of the reorganization the capital was $50,000,000.

I will read again where this monopolist, this confessed monopolist, says that he controls the price in America, and he runs up the price precisely to the importing point.

Senator ALLEN. The American Sugar Refining Company is able to control the prices of the sugar sold in the United States, is it not?
Mr. HAVEMEYER. Up to the importing point, it is.

I will read further from this witness. He goes on in his testimony and states that after the formation of this trust they bought up nearly all outside companies. After stating that purchase, Senator ALLEN asked him this question:

Before that—

That is, before the consolidation—

you had not been able to control the price of sugar absolutely? There was competition between the American Sugar Refining Company and these outside factories?
Mr. HAVEMEYER. Yes, sir.
Senator ALLEN. That competition you succeeded in destroying by bringing them into the trust, did you?
Mr. HAVEMEYER. Yes, sir.
Senator ALLEN. And made the price of sugar to the American Sugar Refining Company much more favorable than it had been before that time?
Mr. HAVEMEYER. Precisely.

So they not only control the price, they not only hold up the price to the importing point, but they advanced the price immediately after the consolidation of the companies.

Mr. Havemeyer testifies again as to what he had been making. The Senator from Nebraska [Mr. ALLEN] asked to know how much was the price additional to what it would have been had there been no consolidation. Mr. Havemeyer answers with great frankness.

Senator ALLEN. And what difference does it make for the consumers in this country in a year, in your judgment?

That is, the additional price asked over and above the competing price before the consolidation.

Mr. HAVEMEYER. It has been in three years past three-eighths of a cent more on every pound they ate, as against doing business at a loss.

A half a cent a pound would be about $20,000,000; three-eighths would be $15,000,000 that the American Sugar Refining Company here say that they placed upon the people of the United States in excess of the price that was charged for sugar prior to the formation of this trust. Then Senator ALLEN asked him the following question:

And that would be about how much, in round numbers?
Mr. HAVEMEYER. It is a large sum in the aggregate.
Senator ALLEN. How many millions?
Mr. HAVEMEYER. I should say it was close to $25,000,000 in three years.

It would be a little closer to $45,000,000 in three years. I suppose he thought, as he was dealing in millions, that $25,000,000 was close enough to get to $45,000,000.

In his testimony somewhere, which I read a little hurriedly this morning, not expecting to take the floor, Mr. Havemeyer makes the further statement that the profit he makes upon every pound of sugar refined is a quarter of a cent a pound. He says he made that profit. That was under the operation of the McKinley law. This was before the Wilson Act took effect. He acknowledged to a profit of a quarter of a cent a pound.

I propose to show, Mr. President, that under all tariffs, under the Wilson Act, under the McKinley Act, under the act of 1883, the profits of the sugar trust, while somewhat irregular before the formation and consolidation of these companies, was very extensive.

The Senator from Missouri [Mr. VEST] has taken the proper predicate on which to base any calculation on as to the price of the different degrees of sugar. Of late years the old-time methods of making sugar have been very much improved on. The centrifugal has been introduced in lieu of the open-kettle process, as was explained by the Senator from Rhode Island.

The centrifugal is nothing more nor less than a machine with a centrifugal force, a vessel into which the sirup, after being boiled to the point of crystallization, is placed, and the action of the centrifugal force throws the molasses from the center, and thereby dries the molasses and refines the sugar to a state of almost purity. When the sugar comes from the centrifugal, it will polarize 96 per cent of saccharine matter; and this being the mode of making sugar in the Tropics or in the semitropical countries, the sugar is of 96 test. Saccharine matter is naturally the basis of the calculation for the price of all sugars below and above that price.

I am told by gentlemen who know about this subject and who are perfectly familiar with sugar that the price is ranged up or down from 96 test. If sugar is 95 test, the seller gets one-sixteenth of a cent less than the basis of the price agreed on at 96 test, and if the test is above 96, he gets about one thirty-second in excess of the price at 96 test. So any differential between 96-test sugar and the price of the standard granulated sugar in the New York markets will show very accurately the amount of profit that the trust is making.

From Willett & Gray's Sugar Journal, a publication entirely in the interest of the sugar trust—I am told owned by them, but about which, however, I do not make any positive assertion—the following figures are gathered:

In 1883, prior to the formation of the sugar trust, which was in 1887, the price of 96-test centrifugal in the New York market was 7.50; the price of the standard granulated was 8.44; differential, ninety-four one-hundredths of a cent. In 1884 the price of standard granulated was 6.87 cents, and the price of 96-test centrifugal 6.19; differential, sixty-eight one-hundredths of a cent, competition getting sharper. In 1885 the price of granulated was 6.50, the price of centrifugals 5.87; differential, sixty-three one-hundredths. In 1886 the price of granulated sugar was 6.37, and the price of 96 centrifugals 5.69; differential, sixty-eight one-hundredths of a cent. In 1887, the year of the formation of this trust, granulated sugar was 6.01, centrifugals 5.24; differential, seventy-seven one-hundredths of a cent.

Now, mark the jump, Mr. President; mark the effect of the consolidation of all these independent refineries into this gigantic trust. In 1888 the price of standard granulated was 7.01, and the price of 96 centrifugal, 5.75, differential, 1.26, double the differential when there was competition in 1884, 1885, and 1886. In 1890 the differential was seventy-three one-hundredths of a cent per pound; in 1891 it was seventy-eight one-hundredths of a cent per pound; in 1892 it was 1.04 cents per pound; in 1893, it was 1.12 cents per pound; in 1894 it was eighty-eight one-hundredths of a cent per pound; in 1895 it was eighty-eight one-hundredths, and in 1896, ninety-one one-hundredths of a cent per pound.

I will not read any further, but will insert the table in my remarks.

Average annual quotations in New York of granulated sugar and 96-degree centrifugal sugar for each calendar year, 1883 to 1896.

[Compiled from circulars of Messrs. Willett & Gray, sugar brokers, 91 Wall street, New York.]

	1883.	1884.	1885.	1886.	1887.	1888.	1889.
Granulated sugar	8.44	6.87	6.50	6.37	6.01	7.01	7.64
96-degree centrifugal sugar	7.50	6.19	5.87	5.69	5.24	5.75	6.43
Difference	.94	.68	.63	.68	.77	1.26	1.21

Average annual quotations in New York of granulated sugar, etc.—Continued.

	1890.	1891.	1892.	1893.	1894.	1895.	1896.
Granulated sugar	6.17	4.64	4.35	4.81	4.12	4.15	4.53
96-degree centrifugal sugar	5.44	3.86	3.31	3.69	3.24	3.27	3.62
Difference	.73	.78	1.04	1.12	.88	.88	.91

Mr. President, it will be seen that notwithstanding the sugar trust said that the tariff of 1894 would ruin them, they have made about as much differential in the prices between the raws and the refined at 96 test as they enjoyed under the McKinley Act of 1894, and more than they enjoyed under the very high tariffs prevailing from 1883 to 1890. So all they want is enough tariff to keep out the German or any other granulated sugar, and then they would work their sweet will as to the prices of cane sugar.

Another remarkable fact appears from the statement in the investigation of the trust before the Lexow committee. It was claimed in behalf of the trust that they had reduced the price of sugar to the American consumer, and after they showed that the price of sugar had been reduced to the consumer, some of the New York newspapers based leading editorials upon the beneficence of trusts in general, stating that while aggregations of capital to control trade were generally improper and illegitimate, sometimes they were an unalloyed benefit to the people; and it was strongly intimated that the sugar trust was one of these angelic benefactors.

How have they reduced the price of sugar to the consumer? By hammering down the prices to the producer. Their differential has been as great under low prices as under high prices. Whoever loses, they win; and the lower price of sugar to the American consumer is on account of competition between the German sugars and the cane sugars, and not on account of the illegitimate formation of this trust to control prices and to restrain trade.

Here were the prices of Cuban centrifugals in 1896: 3.62.

Mr. ALLISON. What test?

Mr. CAFFERY. The 96 test.

In 1883 they were 7.50; and yet in 1883 there were only three points of difference between the profit the trust made out of refining then and the profit they made in 1896.

Look again. In 1885, for instance, the price of centrifugals was 5.87, the price of granulated 6.50. That is more than the difference between 3.62 and 4.53, and the differential in favor of the trust in 1885 was sixty-three one-hundredths of a cent, while in 1890 it was ninety-one one-hundredths of a cent.

This very peculiar institution sets up extravagant claims for the admiration and applause of the American people. It never loses. All it wants is differential enough and a tariff wall high enough to keep out the importer of the foreign article, and then it has the American consumer at its mercy.

But, as I said, in regulating a tariff the legislator ought not to be animated with vindictive feelings toward an institution which avails itself of the opportunities that these high tariffs give of fleecing the American people; for if the legislator proceeded upon those lines there would be found very few manufacturing interests that did not take advantage of their opportunities to charge the American consumer the highest price allowed by the duty upon the imported competing article.

Mr. President, it was said by the sugar trust that they would be ruined, slaughtered, by any differential less than a clean quarter of a cent. Under the differential of one-eighth of a cent given under the Wilson law, the ad valorem bringing it up some, they prospered.

Mr. GEAR. How much protection did the ad valorem afford?

Mr. CAFFERY. I do not understand the Senator's question.

Mr. GEAR. The Senator from Louisiana stated that the Wilson law gave an eighth specific duty, and he stated that the ad valorem brought that protection up somewhat. Will he kindly state how much?

Mr. CAFFERY. Here is what the protection was under the Wilson law: For sugars testing 96, thirty-four one-hundredths.

Mr. GEAR. And an eighth of a cent added to that?

Mr. CAFFERY. No, sir; that is all; that is the differential; that is the concealed benefit in the ad valorem; and that is the countervailing duty to offset the benefit, and all added together make thirty-four one-hundredths of a cent.

Mr. ALLISON. Under what law?

Mr. CAFFERY. Under the Wilson law.

Mr. GEAR. I am glad to know that.

Mr. CAFFERY. Thirty-four one-hundredths of a cent per pound. Under this present amendment it is sixty-seven one-hundredths.

Mr. ALLISON. Does the Senator include in that thirty-eight one-hundredths countervailing duty on account of imported German sugars?

Mr. CAFFERY. This includes that.

Mr. ALLISON. Very well.

Mr. VEST. That is the German export bounty.

Mr. CAFFERY. That is the German export bounty added, of course, to the duty, and it makes sixty-seven one-hundredths of a cent. Under the original Senate amendment it is 62 cents a hundred, and under the Dingley bill it was 59 cents a hundred.

I will refer to the prices given by the Senator from Rhode Island [Mr. ALDRICH], though I do not believe them to be correct, for, figuring upon the compound specific and ad valorem rate with the proposed amendment, it was clear that, in order to get the lower differential, the prices of raw and refined sugars must be brought close together. The Senator from Rhode Island took the prices for March, 1897. Why did he take the prices of one month? Why did he not take the prices of a year? Was it possible that the ingenious Senator from Rhode Island discovered that in taking the prices for March, 1897, when the prices of raw and German granulated sugars were very close together, the cloven foot of the benefit in the ad valorem would not appear? The prices of a year, taken by Mr. Wilson—and that was the correct way to take the prices—made the differential substantially 0.48.

The distinguished Senator from Rhode Island, in criticising the calculation made by the Hon. William L. Wilson, stated that he had made a mistake in not giving enough pounds of raw on the basis of 87 or 75 pounds, I do not remember which, to make a hundred pounds of refined, but when Mr. Wilson's statement is carried down and predicated upon the price of 96-test sugars, where it takes 107 pounds of raw to make 100 pounds of refined, the calculation is substantially correct. So, therefore, we would have this difference: Forty-eight one-hundredths of a cent, under the calculation of Mr. Wilson, taking the basis of the calculation the same as the Senator from Rhode Island took.

Now, I submit to my distinguished friend from Iowa that if the sugar trust flourished and made money and commanded the markets of the United States under a differential of thirty-four one-hundredths of a cent under the Wilson law, how has he the face to submit, much less the cruelty to submit, to a differential of sixty-seven one-hundredths of a cent per pound?

I remember what hot shot was poured over on this side of the Chamber when the sugar schedule of the Wilson bill was up for consideration. My learned brother from Massachusetts [Mr. HOAR], whom I now see before me, waxed eloquent on sugar. He was not trying to put me in a hole, which has been his amusement here for a day or two past, but he was attempting to throw obloquy upon the whole Wilson tariff.

Mr. HOAR. If the Senator will pardon me, I never attempted to put him into a hole. I called attention to the fact that he was in one. [Laughter.]

Mr. CAFFERY. Oh, yes. The Senator from Massachusetts has got so purblind that he can not see the difference between a man being out of a hole and his attempt to put him into one. He thinks everybody is in a hole. Sometimes we think over here that he has hardly crawled out of his hole. [Laughter.]

I remember the hot shot which was poured on this side of the Chamber on the sugar schedule of the Wilson bill. I remember how some of my weak-kneed brethren on this side took to the woods when you shelled them so fiercely they could not stand the fire. Grape, canister, shrapnel, slugs, chain, every projectile that could be cast was slung over here.

Then came on the heels of that the investigating committee. We were investigated; we were solemnly sworn to say whether we had not speculated in sugar stock, and every mother's son of us said "nay," Republicans as well as Democrats; nobody had speculated in sugar stock. I do not believe they had. But the enormous amount of noise you made about this thing cast obloquy around that part of the Wilson bill. Have you taught instructions which, being taught, return to plague the inventor?

Are you not now partaking of the poisoned ingredients of your own chalice? You thought it was an outrage upon the American people to propose to put thirty-four one-hundredths of a cent differential between raws and refined. You proclaimed that from every house top. There was not a newspaper in the United States that was not lashing the Democratic majority on account of this enormous bounty in favor of this hated institution; and now you come forward with a differential of sixty-seven one-hundredths of a cent per pound, when we only gave thirty-four one-hundredths of a cent per pound.

Mr. ALLISON. May I ask the Senator from Louisiana if he is in favor of striking out the thirty-eight one-hundredths provided for here as the countervailing duty to the German bounty?

Mr. CAFFERY. Do you think that that countervailing duty makes up the difference between the Wilson law and this bill?

Mr. ALLISON. I will answer the Senator if he will answer my question.

Mr. CAFFERY. Well, Mr. President, as a general proposition, I am in favor of taking the good that other nations give us, whether by reason of violating the economic law, or whether from any

other reason. I think that the bounty system of Germany is built upon vicious principles. I believe that ordinarily a nation does not protect itself against an export bounty which makes a product cheap when imported into its borders by placing a countervailing duty against it.

Mr. ALLISON. Then I understand the Senator favors the striking out of the bounty provision?

Mr. CAFFERY. No; you do not understand me in that way.

Mr. ALLISON. Very well. What I want to understand is whether those who are making these calculations respecting differentials are in favor of striking out the thirty-eight one-hundredths of a cent which is involved in all these computations?

Mr. CAFFERY. I will tell the Senator what I am in favor of. There will be about 30 points left after you take out the countervailing duties, and I am in favor of reducing those 30 points to 12½.

Mr. ALLISON. In other words, then, the Senator does agree that we ought to retain this thirty-eight one-hundredths of a cent a pound, or 38 cents upon the hundred pounds, as a countervailing duty to the German bounty on sugar.

Mr. CAFFERY. I do in this instance; but I do not subscribe to the principle generally, and I will tell the Senator why.

Mr. ALLISON. I understand that.

Mr. CAFFERY. And I propose to read what an American consul says on that subject.

That brings me, Mr. President, to the question of the raising of sugar in Germany. The production of sugar in Germany is wholly artificial. In my opinion it is a signal instance of the failure to bring up by artificial legislation an unnatural and unadapted product. The whole German system is toppling to its fall. This whole vast sugar superstructure that rests upon the basis of a prohibitive tariff and an export bounty must fall in ruins and crush everybody engaged in it. I will now read what the American consul-general at Frankfort says on that subject.

This is from the United States Consular Reports, volume 51, Nos. 188 to 191 of 1896, page 510. I beg Senators to listen to this statement of the American consul-general in regard to the sugar-beet industry in Germany. It teaches an object lesson which in the United States ought to bear good fruit and prevent, if possible, the application of bounties to unnatural productions.

THE NEW SUGAR EXPORT BOUNTIES IN GERMANY.

The sugar tax amendment law, over which has been waged in the German Parliament one of the longest and most determined battles of recent years, was finally enacted as a concession to the agrarian interest, and went into effect on Monday of the present week.

That is about equivalent to our protection interest over here.

Mr. CHILTON. What is the date of the report?

Mr. CAFFERY. It is dated Frankfort, May 28, 1896.

Its influence will be to increase the sugar production of Germany, and to that extent exert a depressing effect upon the general market and the interests of producers in other beet-growing countries.

The circumstances which have led to the present situation are, briefly, these: From the time when the Prussian Government began the systematic encouragement of the beet-sugar industry down to 1887 the tax on sugar for home consumption was calculated upon the quantity of beets worked up by each separate factory, it being assumed that the quantity of roots required to produce a given weight of sugar would be uniform and invariable. The proportion adopted was 20 units of raw beet root to 1 unit of sugar, which, at the time when the law was enacted, was approximately correct.

But, under the stimulus of the export bounties provided by the same law, the German beet growers and sugar makers worked hard and intelligently to improve and increase their product. By careful selection and cultivation the beets were so improved that from 12 to 14 tons of roots would yield a ton of sugar. Great advance was also made in the machinery and processes employed in the sugar factories, so that, as a final result, the German Government, which paid nearly 12 cents per hundredweight bounty on all sugar exported and charged a tax of the same amount on all sugar for home consumption that could be made from 20 hundredweight of beets, found that the export bounties completely absorbed the revenue derived from the sugar tax.

This tendency of the system had become apparent as early as 1869, and an attempt was made at that time to revise the law, but the sugar-producing interest was powerful enough to resist this effort, and during the sugar season of 1886-87 the Government was paying about $1.17 bounty on each 100 kilograms (220.46 pounds) of sugar exported to foreign countries. This was more than the imperial treasury could well withstand, and the export bounty was reduced to 2.50 marks (59.5 cents) per 100 kilograms—a little more than one-fourth of a cent per pound.

Sugar growing still continued to be the most profitable form of culture for German farmers, the area of cultivation and number of sugar factories continued to increase, loud complaints were heard against a system that favored one class of farmers at the expense of the entire population, and in 1891 the Imperial Diet reduced the sugar export bounty by half, that is, to 29.7 cents per 100 kilograms, and decreed that such bounty should entirely cease on the 31st of July, 1897, provided that, in the meantime, Austria, France, and other bounty-paying countries should likewise reduce their bounties on exported sugar.

Several attempts have been made to reach such an international agreement, but without successful result, and under cover of this failure to secure a general reduction or abolition of bounties the German agrarians have rallied and secured the adoption of the present law, which restores the export bounty of 1887 (59.5 cents per 220.46 pounds) and raises the tax on sugar for home consumption from 18 marks ($4.28) to 21 marks ($4.99) per 100 kilograms, or about 2.2 cents per pound. This increased tax will, of course, be added to the retail price of sugar, already very high, and tend to still further retard the increase of sugar consumption in Germany, which is now only 29.8 pounds per capita, against 73.68 pounds per capita in England and 77 pounds in the United States.

This low rate of consumption will not appear unnatural when it is remembered how large a percentage of the working classes in Germany must live with the utmost economy, and that sugar, which sells in the United States at 4 and 5 cents per pound, costs at retail 7½ cents per pound in Germany.

From the statistics that were brought out in the recent debate, it appears that the whole system of beet culture and sugar manufacture in Germany has reached a higher standard of scientific perfection than has been attained in any other European country. Every step, from the preparation and fertilization of the land to the smallest detail in the factory process, has been reduced as nearly as possible to exact scientific methods. Comparing the results attained in this country with those in France, the country probably next in rank in respect to the perfection of its beet-sugar industry, the following statistics of the campaign of 1895-96 are presented:

	Germany.	France.
Factories operated.....number..	397	355
Area of beets planted.....hectares..	374,174	200,693
Beets harvested.....tons..	11,672,000	5,411,000
Sugar obtained.....per cent..	13.25	12
Beets required for unit of sugar.....units..	7.25	8.08

All these statistics were cited to prove that the German sugar producers are safe from all European competition and do not need the protection of an increased export bounty; but nothing could withstand the demand of the Agrarians, and their victory is one of the most significant events in recent German legislation.

Whether Austria and France will follow this lead by increasing their export bounties remains to be seen; but, in any event, the new law of Germany can not fail to increase its future sugar product, and thereby exert a more or less tangible effect upon the general market.

To this complexion has the highest protection ever accorded brought the German people. What does it amount to? The per capita consumption of sugar in Germany is about a third of what it is in the United States. They pay 3 cents a pound for sugar more per capita than we do in the United States, and more than they do in England. For the same sugar that we buy for 4 to 5 cents they pay 7½ cents. With the German population at 60,000,000, with 3 cents per capita extra, there is $18,000,000 a year for the benefit of an agrarian interest that is never satisfied.

German beet culture had its origin, I believe, in the Napoleonic wars, when England would not permit vessels loaded with sugar to be carried from the West Indies to France, and from that time on this industry has been stimulated by government subsidy and by prohibitive taxes until it has arrived at what point? At the point where the demand for bounty never ceases, at the point where the German consumer has to pay 3 cents more for his sugar than his civilized brethren in America and in England pay. Is it the end of this kind of a policy that the people in whose behalf it is made should, upon an indispensable, necessary article like sugar, pay a double price? Does the amount of money that the Germans have to pay in order to keep this industry alive compensate them for the benefit of a few agrarian sugar planters who ship their surplus product, under the stimulus of a bounty, to the United States?

I answered the Senator from Iowa that in this particular instance, even at the expense of the people of the United States, I believe the agrarian idea ought to be rebuked. It is true that they are sending their surplus here and selling it at a very small price, and in order to correct that evil our people have to be deprived of the benefit of the cheapness of that sugar. Otherwise suppose this case: Suppose the ideal condition of free trade. I have heard some Senators say here that nobody believes in free trade and nobody dares to advocate free trade. I am one of those hardy individuals who believe in it and who will advocate it at the proper time. But suppose the ideal condition of free trade, where there is a free interchange of products, where what one nation raises with greater efficiency than another is exchanged for the products of that other nation, in turn raised with greater efficiency.

Now, suppose there was in the United States or Germany or the Tropics conditions not varying much in their natural equality or varying none, and one of those nations should interpose such an obstacle to the free interchange of the product as to give an export bounty on one of its products. That would violate the cardinal principle of free trade, and as the Democratic party, in my opinion, is tending inevitably in that direction, I believe we ought to put the brakes upon this German agrarian, bounty-fed, tariff-built sugar and not permit them to come into the United States with their artificial product to run out the natural product, if so it be that we have it.

I think the lesson taught from the communication of Mr. Mason is full of interest and significance to our people. Commence your artificial industry and it never ceases its clamors. Germany wants an international agreement to take off the export bounty. The other nations will not consent. The agrarians besiege the German Reichstag. They get what they want, as the protected interests generally do, whenever there is a monopolistic tendency in the character of the government or in the genius of the people. Suppose we built up your beet industry. Suppose it is built up under a highly protective tariff or one prohibitive of the introduction of the natural product of the Tropics, and you get your industry to the perfection that the Germans have theirs. Is there a time when you can take down the wall? Is there not some justice in the demand of the people whom you have induced to go into a business of this sort, that the governmental prop should not be taken from under them? As you placed it there, you induced them to go into the business; they have invested their capital and their

energies and their labor in an enterprise of this sort, and is there not some justice in the demand, conceding that the enterprise or business is built upon a wrong basis, that the Government or the people who induced the entrance into the enterprise should not take away the prop by which it raised it into being? And if the prop has to be removed, it must be removed so as not to entirely destroy the protected business.

That is the problem which confronts the Germans. The German sugar raisers own large factories. The beets are cultivated under the direction of the factories, down to the very minutest detail, I am told—the time to prepare the land, how to prepare it, how to fertilize it, all being prescribed with great minuteness. The culture employs a large number of women and boys. It is a very tedious and laborious culture. Now they claim that it must be protected by the Government in order to keep the industry going which experience has demonstrated to them can not stand on its own legs, and if our people by high tariff, or by bounties, or by Government subsidies in any direction are induced to go into this business it will share the fate of the Germans, and, in my opinion, this wall will have to come down, this artificial prop will sooner or later be removed.

The German people pay a bounty of $18,000,000 a year or thereabouts, and besides that starve their people in the consumption of sugar for the benefit of a few large factory owners. That is the condition of the German sugar interests. That is precisely what it is. It is artificial. It is against the laws of trade. It is against that natural freedom of trade and of intercourse among men that ought to prevail as against these highly protective tariffs and this artificial restrictive policy.

I will advert somewhat to my own country. The sugar belt of Louisiana lies in the delta of the Mississippi River. It is one of the most favored regions in the world, both for soil and climate. The water transportation and the rail facilities are abundant. The enterprise and thrift of the people are acknowledged by all who have ever visited them. Since I have been in the Senate the sugar growers of that State have, until this session, besieged me with clamorous demands to place the highest protective tariff upon the article of sugar that the Congress of the United States would stand.

In the formation of the Wilson bill I did vote for and sustain a 40 per cent ad valorem tariff plus an eighth plus a tenth, solely upon the ground that as sugar had been a revenue-producing article for one hundred years, as it had formed the foundation of all tariffs made by either party for revenue, it was not improper, it was not un-Democratic, to ask for a tariff of 40 per cent, especially in view of the fact that under the pernicious workings of the bounty system those people had been induced to incur great expense and to contract debts which under a healthier and better régime they would not have entered into or contracted.

Prior to 1890 sugar had always been on the list of dutiable articles. It was never questioned that it was a revenue-producing article. Nobody ever doubted that it came within the lines of the strictest construction of the Democratic principle of tariff for revenue only. I have adverted to the fact that we consume about 4,000,000,000 pounds of sugar and the domestic production is hardly in excess of 600,000,000 pounds. In 1865 it was only 10,000,000 pounds of sugar, or thereabouts. So, therefore, under any construction and under any party principle, sugar is justly entitled, if revenue is sought, to be put upon the dutiable list. A very great many erroneous impressions have been circulated in regard to sugar.

It was said that sugar could not live unless there was a tariff of 3 or 3½ cents a pound, or thereabouts. This was afterwards reduced to 1½ cents per pound as a living basis.

I propose to read some statistics to show that under the 24 per cent ad valorem the domestic production of sugar was about half the consumption of sugar in the United States at the opening of the war. Now it is not more than one-seventh. I will read the production of sugar under the tariff of 1846, which was a 30 per cent tariff, and under the tariff of 1857, which was a 24 per cent tariff.

In 1850–51 the crop was 231,200,000 pounds of sugar, all made in Louisiana. In 1851–52 the crop was 257,100,000 pounds. In 1852–53 the crop was 368,100,000 pounds of sugar; in 1853–54 it was 495,200,000 pounds. That shows a very good advance under a 30 per cent ad valorem tariff—231,000,000 pounds in 1850; 495,000,000 in 1853. I do not see any backward movement there. In 1854–55 it was 385,200,000 pounds; in 1855–56 it was 254,600,000 pounds; in 1856–57 it was 81,400,000 pounds of sugar.

Why was that dropping off? It was not on account of the operation of any tariff or any artificial means.

Mr. GEAR. It was a bad season.

Mr. CAFFERY. It was because of the total failure of the crop, from a drought, grievous and hard to be borne. I remember it distinctly, for I was making sugar at the time. These figures are from the census returns.

For 1857–58 it was 307,700,000 pounds; in 1858–59 it was 414,800,000 pounds; in 1859–60 it was 255,100,000 pounds; in 1860–61, 263,100,000 pounds, and in 1861–62, 528,300,000 pounds. Now, how much was imported? In 1861–62 there were 557,738,382 pounds of sugar imported into the United States, as against a production of 528,300,000 pounds. We produce about one-seventh of our sugar consumption. In 1861–62 we produced about one-half, and that under a 24 per cent ad valorem tariff, and the prices of the sugar in Cuba were not much higher at that period than the Cuban centrifugal prices in New York last year. All sugars made at that period were open-kettle sugars; we had no centrifugal process. The brown sugars went directly into consumption.

Refined sugar or granulated sugar was considered an article of luxury. It was only the rich who could use it as a general thing, and it was the brown sugar, the ordinary kettle product of Louisiana, that largely supplied the home consumption of the United States. This shows that Louisiana was rapidly advancing toward supplying the home demand when war broke out. The industry there appeared to be on a solid basis under a low tariff. Her people need not despair of being able to hold their own under normal conditions. The pernicious policy of beet-growing Europe is their great danger.

I submit the following letter from the Statistician of the Agricultural Department:

UNITED STATES DEPARTMENT OF AGRICULTURE,
DIVISION OF STATISTICS,
Washington, D. C., June 5, 1897.

SIR: In answer to your telephone message and letter of yesterday, I have the honor to communicate the information contained in the accompanying table. The production is that of Louisiana only, and the authority is said to be M. Champoiner for the years prior to 1861 and L. Boucherau since that date. For the years since 1871, see Statistical Abstract, page 286, where it appears that Louisiana produced on the average 94 per cent or more of the product of the United States. Substantially the same ratio is given by the census figures for 1850-1880. The addition for the production of other States to the figures here furnished must therefore be about 6 per cent, making, say, 3,230,000,000 pounds of cane sugar for the decade 1850-1860, 1,360,000,000 pounds for 1860-1870, or 4,590,000,000 for the twenty years.

The amount of beet-sugar production during this period may be neglected. The maple-sugar reported in 1850 was 34,300,000 pounds; in 1860 was 40,100,000 pounds, and in 1870 it was 24,400,000 pounds. We may therefore add 370,000,000 pounds for maple sugar to the total for the first decade, and 340,000,000 for the second decade, to allow for maple. This gives sums of 3,600,000,000 and 1,700,000,000 pounds, respectively; 5,300,000,000 pounds in all.

The first column of prices is from the Senate report on wholesale prices, etc. (the Aldrich report), part 2, page 112, where the figures are said to have been furnished by Messrs. Hitchcock, Darling & Co., of New York City, and to belong to "fair refining sugar." The quotation is that for January of each year. The second column is that supplied by the Treasury figures, equal to total value divided by total quantity of imported sugar for the fiscal year, the values being those at the points whence exported. All these figures, except those here supplied for the first two years, are copied from the Abstract, page 285. The same may be said of the figures in the column following, showing amounts imported.

I greatly regret my inability to give full particulars or satisfactory information as to the product of refined sugar. For the years of your inquiry I can find no authority except the census, and the library of this Department is unfortunately without the Seventh and Eighth Census volumes relating to manufactures. The Ninth Census (Compendium, page 326) gives as the material consumed by 59 establishments in the country (33 of which were in New York and Pennsylvania) 804,408,427 pounds of sugar, besides 23,952,131 gallons of molasses; and as the product therefrom 754,010,951 pounds refined sugar, along with 18,168,279 gallons sirup, and some other products. These figures apply to the year ending May 31, 1870. Doubtless similar particulars could readily be found in the volumes for 1860 and 1850, and an estimate covering the intervening years be made from them.

I hope these facts may be of assistance to you.

Respectfully,

HENRY A. ROBINSON, *Statistician.*

Hon. DONELSON CAFFERY,
United States Senate.

Mr. PETTIGREW. About four weeks ago I introduced and the Senate passed a resolution authorizing the Committee on Pacific Railroads to investigate the issue of land patents to those roads. I have heard nothing from it since, and I desire to ask the chairman of the Committee on Pacific Railroads what has been done in that connection by the committee?

Mr. GEAR. In reply I beg to state, as chairman of the committee, that the gentleman will hear in due time what action the committee has taken and will take.

Mr. PETTIGREW. Mr. President——

Mr. GEAR. I should like to state, further, that there have been a good many important matters pending, and I ordered the clerk of the committee to call a meeting for Saturday. If it is agreeable to the other gentlemen, a meeting will be held on Saturday, and when the committee comes to report, the Senator will be the first to hear it, if he is here.

Mr. PETTIGREW. It appears, then, that the committee have not had a meeting since the resolution was referred?

Mr. GEAR. We have not had a meeting.

Mr. PETTIGREW. I said at the time the resolution was sent to the committee that I thought it would be a graveyard of the resolution, and it looks very much like it.

Mr. GEAR. The Senator is simply mistaken. There is no intention to graveyard the resolution, as he calls it. Recollect that the Senator's resolution asked for a special committee, a junketing committee, if you please, to go around and gather information which I stated then, and believe now, can be obtained from the proper Department by asking for it in a proper manner. It is true I have not called a meeting of the committee before this time, because I have been exceptionally busy on other matters, as almost every other gentleman has.

Mr. PETTIGREW. Mr. President——

Mr. WHITE. It seems to me rather late in the evening for a funeral, and if the Senator from Iowa has no objection, I will move an adjournment.

Mr. QUAY. I should be glad to have an executive session.

The PRESIDING OFFICER (Mr. CHANDLER in the chair). The Senator from South Dakota has the floor.

Mr. PETTIGREW. I desire to know from the chairman of the Committee on Pacific Railroads whether the meeting which has been called for Saturday has been called to consider the resolution.

Mr. GEAR. I do not know that that is any of the business of the gentleman. It is for the purpose of considering such business as may be brought before the committee.

Mr. PETTIGREW. I wish to state that if at the next meeting the resolution is not taken up I shall move the Senate to discharge the committee from its further consideration.

Mr. GEAR. That is the gentleman's right.

Mr. PETTIGREW. The chairman said that no investigation was necessary, and yet he was anxious to have the resolution referred to his committee. I call the attention of the country to the fact that the chairman takes that position.

Mr. GEAR. I beg the gentleman's pardon. I said I did not believe that an investigation of the character the gentleman wanted was necessary. I still adhere to that view. What the committee does the gentleman will be advised of. If he possesses his soul in patience, he will be advised as to what will be the action of the committee when it meets.

The PRESIDING OFFICER. The question is on the adoption of the amendment proposed by the Committee on Finance to paragraph 206 of the pending bill. Is the Senate ready for the question?

Mr. ALLISON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 5 o'clock and 10 minutes p. m.) the Senate adjourned until to-morrow, Friday, June 11, 1897, at 12 o'clock meridian.

NOMINATIONS.

Executive nominations received by the Senate June 10, 1897.

SOLICITOR OF THE TREASURY.

Maurice D. O'Connell, of Iowa, to be Solicitor of the Treasury, vice Felix A. Reeve, to be removed.

MARSHAL.

William M. Griffith, of Arizona Territory, to be marshal of the United States for the Territory of Arizona, vice William K. Meade, to be removed.

HOUSE OF REPRESENTATIVES.

THURSDAY, *June 10, 1897.*

The House met at 12 o'clock noon, and was called to order by the Speaker.

Prayer by the Chaplain, Rev. HENRY N. COUDEN.

The Journal of the proceedings of Monday, June 7, 1897, was read and approved.

SWEARING IN OF A MEMBER.

The SPEAKER. The Chair has notice of the presence of a new member, and the Clerk will read the certificate of his election.

The certificate of election of Hon. James T. Lloyd, Representative-elect from the First Congressional district of Missouri, was read.

Mr. Lloyd, accompanied by Mr. CLARK of Missouri, appeared at the bar of the House, and the oath of office was administered to him by the Speaker.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed the following joint and concurrent resolutions; in which the concurrence of the House of Representatives was requested:

Joint resolution (S. R. 50) authorizing foreign exhibitors at the Transmississippi and International Exposition, to be held in the city of Omaha, in the State of Nebraska, during the year 1898, to bring to the United States foreign laborers from their countries, respectively, for the purpose of preparing for and making exhibits.

Concurrent resolution (Senate Con. Res. No. 11) as follows:

Resolved by the Senate (the House of Representatives concurring), That the President of the United States be, and he is hereby, requested to invite, by proclamation or otherwise, as he may deem most proper, foreign nations to make exhibits at the Transmississippi and International Exposition to be held at the city of Omaha, in the State of Nebraska, from the 1st day of June to the 1st day of November, A. D. 1898.

SALARIES OF CONSULS, ETC.

Mr. HITT. Mr. Speaker, I ask unanimous consent for the present consideration of a joint resolution which I send to the Clerk's desk.

The SPEAKER. The gentleman from Illinois [Mr. HITT] asks unanimous consent for the present consideration of a resolution which the Clerk will report.

The Clerk read as follows:

Resolved by the Senate and House of Representatives of the United States in Congress assembled, That the salaries appropriated by the act making appropriations for the diplomatic and consular service for the fiscal year ending June 30, 1898, approved February 20, 1897, for consuls-general and consuls at certain places hereinafter named, may be paid to the consuls-general and consuls heretofore appointed at certain other places until consuls-general or consuls are appointed, qualify, and enter upon their duties at the places named in said act of February 20, 1897, as follows, viz: The salary of the consul-general at Apia and Nukualofa, Tonga, to the consul-general at Apia; the consul-general at Yokohama, to the consul-general at Kanagawa; the consul-general at Monterey, to the consul-general at Nuevo Laredo; the consul at Elberfeld, to the consul at Barmen; the consul at Edinburgh, to the consul at Leith; the consul at Ciudad Juares, to the consul at Paso del Norte; the consul at Ciudad Porfirio Diaz, to the consul at Piedras Negras; the consul at Sydney, to the consul at Picton; the consul at Progreso, to the consul at Merida; the consul at St. Michaels, to the consul at Fayal; the consul at Valencia, to the consul at Denia; the consul at Utilla and Truxillo, to the consul at Ruatan and Truxillo; the consul at Lourenzo Marquez, to the consul at Mozambique; and all allowances for office rent, clerk hire, and transit salary are also continued at the above-named offices, as now established, until the contemplated changes have been fully effected.

Mr. HITT. Mr. Speaker——

Mr. BAILEY. Pending the request for unanimous consent, I am very free to say that I know absolutely nothing about this matter, and I reserve the right to object until the gentleman from Arkansas [Mr. DINSMORE], who I am sure is familiar with the subject, can tell the House whether this is proper or not.

Mr. DINSMORE. Mr. Speaker, the gentleman from Illinois [Mr. HITT] was about to make a statement concerning the matter. I am acquainted with the conditions making this legislation necessary; but I should like to have the gentleman from Illinois [Mr. HITT] make his statement. If it is necessary, I will make a subsequent statement, but I should not like to interrupt the gentleman from Illinois. The resolution is wholly unobjectionable, and its only purpose is to make the appropriation of money available as compensation to the persons for whom it was intended in the appropriation bill.

Mr. BAILEY. I did not notice that the gentleman from Illinois was about to address the House.

Mr. HITT. Mr. Speaker, in the appropriation bill which was passed by the last Congress to provide for the consular and diplomatic service provision was made for eight consulates, the designations of which were more or less changed upon the recommendation of the Secretary of State. None of these are important matters, but the Comptroller holds that the new designations in these cases will make it requisite to have new appointments, or the consuls can get no pay after the 30th of June. That is, the consul who is now the incumbent can not draw any pay, if he remains incumbent after the 30th of June, without a reappointment. The

Comptroller so states in the communication which I hold in my hand.

Mr. SAYERS. Mr. Speaker, I should like to ask the gentleman from Illinois [Mr. HITT] if this resolution be adopted, would it have the effect to establish additional consulates to those which were authorized in the appropriation bill?

Mr. HITT. No. This resolution which the Comptroller has drawn enables the Government to pay the same person who is now serving at the post under the old name, to be paid under the new name without a new appointment. For example, the city of Leith is the port of the city of Edinburgh. There is a consul at Leith. At the suggestion of the Secretary of State, the designation was changed so as to make the consul there consul at Edinburgh, and there is no appropriation for the consul at Leith after the 30th of June. So this consul will get no pay unless he is appointed anew to Edinburgh.

Mr. SAYERS. Then this resolution can not be construed as authorizing the establishment of any new consuls?

Mr. HITT. It can not.

Mr. SAYERS. Or affecting the pay of those now existing?

Mr. HITT. In nothing does it affect the pay except to authorize payments to be made as they were manifestly intended to be made in the appropriation bill.

The SPEAKER. Is there objection to the present consideration of the resolution? [After a pause.] The Chair hears none.

The joint resolution was ordered to a third reading; and it was accordingly read the third time, and passed.

On motion of Mr. HITT, a motion to reconsider the vote by which the joint resolution was passed was laid on the table.

HARBOR OF CUMBERLAND SOUND.

Mr. DAVIS. Mr. Speaker, I ask unanimous consent for the immediate consideration of Senate concurrent resolution No. 9, that I send to the Clerk's desk.

The Clerk read as follows:

Resolved by the Senate (the House of Representatives concurring). That the Secretary of War be requested to furnish the Senate with such information as he may have in his possession with reference to the present condition of the harbor at Cumberland Sound, and to inform the Senate whether any immediate action is necessary to protect the entrance from being closed against the commerce usually entering the port of Fernandina.

The SPEAKER. Is there objection to the present consideration of the resolution? [After a pause.] The Chair hears none.

Mr. DAVIS. Mr. Speaker, I wish to offer the amendment which I send to the Clerk's desk.

The Clerk read as follows:

Strike out the word "Senate," in the second and fifth lines, and substitute in lieu thereof in each of said lines the word "Congress."

The amendment was agreed to.

The concurrent resolution as amended was agreed to.

On motion of Mr. DAVIS, a motion to reconsider the vote by which the concurrent resolution was agreed to was laid on the table.

ORDER OF BUSINESS.

Mr. PAYNE. Mr. Speaker, I move that the House do now adjourn.

The question was taken; and the Speaker announced that the ayes seemed to have it.

Mr. BAILEY. Division, Mr. Speaker!

The House divided; and there were—ayes 87, noes 87. [Laughter and applause.]

The SPEAKER. The Chair votes in the affirmative, and the ayes have it. [Renewed laughter and applause.]

Mr. BAILEY. Mr. Speaker, I desire tellers.

The question was taken on ordering tellers.

Mr. DALZELL. Let us have the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 100, nays 88, answered "present" 11, not voting 154; as follows:

The following pairs were announced:

Until further notice:

Mr. WILSON of New York with Mr. YOUNG of Virginia.

Mr. WILLIAM A. STONE with Mr. MCCLELLAN.

Mr. MCCLEARY with Mr. TALBERT.

Mr. MITCHELL with Mr. TAYLOR of Alabama.

Mr. OTJEN with Mr. LESTER.

Mr. HOPKINS with Mr. MCALEER.

Mr. REEVES with Mr. BALL.

Mr. BELDEN with Mr. SULZER.

Mr. LOVERING with Mr. WHEELER of Alabama.

Mr. MCEWAN with Mr. VEHSLAGE.

Mr. STRODE of Nebraska with Mr. ALLEN.

Mr. JOY with Mr. MARSHALL.

Mr. JOHNSON of Indiana with Mr. MOON.

Mr. BROSIUS with Mr. ERMENTROUT.

Mr. LACEY with Mr. MCRAE.

Mr. PITNEY with Mr. CARMACK.

Mr. KERR with Mr. ROBB.

Mr. BRUMM with Mr. COX.

Mr. HICKS with Mr. OTEY.

Mr. STEVENS of Minnesota with Mr. JONES of Washington.

Mr. CLARKE of New Hampshire with Mr. KING.

Mr. PERKINS with Mr. COOPER of Texas.

Mr. HAGER with Mr. HANDY.

Mr. SPRAGUE with Mr. MCDOWELL.

Mr. HEATWOLE with Mr. DINSMORE.

Mr. STEWART of Wisconsin with Mr. LITTLE.

Mr. BARHAM with Mr. FITZGERALD.

Mr. MILLS with Mr. SULLIVAN.

Mr. SAUERHERING with Mr. STRAIT.

Mr. CHICKERING with Mr. BRADLEY.

Mr. WM. ALDEN SMITH with Mr. BRUCKER.

Mr. ACHESON with Mr. WILSON of South Carolina.

Mr. SMITH of Illinois with Mr. MCCULLOCH.
Mr. HENRY of Indiana with Mr. MIERS of Indiana.
Mr. FERRIS with Mr. ZENOR.
Mr. BELKNAP with Mr. MAGUIRE.
Mr. YOUNG of Pennsylvania with Mr. BENTON.
Mr. MCCALL with Mr. JONES of Virginia.
Mr. MINOR with Mr. SPARKMAN.
Mr. HULL with Mr. DOCKERY.
Mr. QUIGG with Mr. BLAND.
Mr. HEMINGWAY with Mr. ROBERTSON of Louisiana.
Mr. LANDIS with Mr. CRAWFORD.
Mr. KULP with Mr. STALLINGS.
Mr. DAVIDSON of Wisconsin with Mr. HOWARD of Georgia.
Mr. BABCOCK with Mr. DE ARMOND, for one week.
For this day:
Mr. BARNEY with Mr. TODD.
Mr. MARSH with Mr. COONEY.
Mr. ODELL with Mr. FITZPATRICK.
Mr. GROSVENOR with Mr. RIXEY.
Mr. FOSS with Mr. STARK.
Mr. WALKER of Massachusetts with Mr. PLOWMAN.

Mr. COOPER of Texas. Mr. Speaker, being paired, I withdraw my vote, and desire to be marked "present."

Mr. BRUCKER. Mr. Speaker, I am paired with the gentleman from Michigan, Mr. WM. ALDEN SMITH. I therefore withdraw my vote and ask to be marked "present."

Mr. GAINES. Mr. Speaker, I desire to know whether the gentleman from Vermont, Mr. POWERS, has voted?

The SPEAKER. The gentleman from Vermont has voted.

Mr. KING. Mr. Speaker, being paired with the gentleman from New Hampshire, Mr. CLARKE, I desire to withdraw my vote and to be marked as "present."

ENROLLED BILLS SIGNED.

Pending the announcement of the vote, the Speaker announced that he had signed the following enrolled bills:

A bill (S. 956) to amend an act entitled "An act to authorize the construction of a steel bridge over the St. Louis River between the States of Wisconsin and Minnesota," approved April 24, 1894, as amended by an act approved August 4, 1894, entitled "An act to amend an act to authorize the construction of a steel bridge over the St. Louis River between the States of Minnesota and Wisconsin;"

A bill (S. 1979) to authorize the construction of a bridge across Pearl River, in the State of Mississippi; and

Joint resolution (S. R. 40) authorizing the Secretary of War to receive for instruction at the Military Academy at West Point Cárlos Gutierrez, of Salvador.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. LINNEY, for one week, on account of important business.

To Mr. WHITE of Illinois, for ten days, on account of important business.

To Mr. BOTKIN, for three weeks, on account of sickness of relatives.

The SPEAKER (at 12 o'clock and 53 minutes p. m.). On this question the yeas are 100, the nays are 88, and 11 members are reported "present." The ayes have it, and accordingly the House stands adjourned until Monday next at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, the following executive communications were taken from the Speaker's table and referred as follows:

A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report of examination and survey of Lewis River, Washington—to the Committee on Rivers and Harbors, and ordered to be printed.

A letter from the Third Assistant Secretary of State, inclosing a copy of a letter from the Comptroller of the Treasury and a draft of a resolution for the payment of certain consular officers—to the Committee on Foreign Affairs, and ordered to be printed.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS INTRODUCED.

Under clause 3 of Rule XXII, bills, resolutions, and memorials of the following titles were introduced and severally referred as follows:

By Mr. MAXWELL: A bill (H. R. 3437) to create postal savings banks and provide for investing the money—to the Committee on the Post-Office and Post-Roads.

By Mr. BELL: A bill (H. R. 3438) withdrawing the right of the Secretary of the Treasury to issue bonds, and for other purposes—to the Committee on Ways and Means.

Also, a bill (H. R. 3439) to provide for the securing to the State of Colorado full title to all mineral lands, etc.—to the Committee on the Public Lands.

Also, a bill (H. R. 3440) to require the Secretary of the Treasury to pay the bonds issued under the contract of the Secretary of the Treasury with August Belmont & Co. and others, bearing date February 8, 1895, interest and principal, in not less than one-half in standard silver dollars—to the Committee on Ways and Means.

Also, a bill (H. R. 3441) to authorize the exploration and purchase of mines within the boundaries of private land claims—to the Committee on Mines and Mining.

By Mr. BINGHAM: A bill (H. R. 3442) making an appropriation toward the construction of a dry dock at the navy-yard, League Island, Pa.—to the Committee on Naval Affairs.

By Mr. BELL: A joint resolution (H. Res. 63) proposing an amendment to the Constitution of the United States providing for election of Senators by the votes of the qualified electors of the States—to the Committee on Election of President, Vice-President, and Representatives in Congress.

By Mr. ADAMS: A memorial of the legislature of the State of Pennsylvania, urging passage of Senate bill 1747, to reappoint and retire David McMurtrie Gregg—to the Committee on Military Affairs.

By Mr. BINGHAM: A memorial of the legislature of the State of Pennsylvania, urging passage of Senate bill 1747, relative to David McMurtrie Gregg—to the Committee on Military Affairs.

By Mr. DALZELL: A memorial of the legislature of the State of Pennsylvania, in favor of the reappointment and retirement of David McMurtrie Gregg as captain—to the Committee on Military Affairs.

By Mr. OLMSTED: A memorial of the Pennsylvania legislature, urging the passage of Senate bill 1747, for the reappointment and retirement of David McMurtrie Gregg as captain—to the Committee on Military Affairs.

PRIVATE BILLS AND RESOLUTIONS INTRODUCED.

Under clause 1 of Rule XXII, private bills and resolutions of the following titles were introduced and severally referred as follows:

By Mr. BARLOW: A bill (H. R. 3443) for the relief of Morgan Everts—to the Committee on Claims.

Also, a bill (H. R. 3444) to grant a pension to Louisa E. Linn—to the Committee on Invalid Pensions.

By Mr. BELL: A bill (H. R. 3445) granting a pension to George E. Tuttle—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3446) for the relief of Mrs. Julia A. Humphries—to the Committee on War Claims.

Also, a bill (H. R. 3447) granting a pension to Simon D. Kohl—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3448) granting a pension to Lemuel Kingsbury, of Denver, Colo., and late of Company A, Twelfth Regiment Michigan Volunteer Infantry—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3449) granting an increase of pension to Henry Logan, of Buenavista, Colo.—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3450) granting a pension to Thomas B. Roark—to the Committee on Pensions.

Also, a bill (H. R. 3451) for the relief of Irving W. Stanton—to the Committee on Claims.

By Mr. BOTKIN: A bill (H. R. 3452) granting a pension to D. O. Leary—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3453) granting an honorable discharge to Marion M. Barton—to the Committee on Military Affairs.

Also, a bill (H. R. 3454) granting a pension to William S. Hanna—to the Committee on Invalid Pensions.

By Mr. HAY: A bill (H. R. 3455) for the relief of Miss E. A. Lewis—to the Committee on Claims.

By Mr. MOODY: A bill (H. R. 3456) granting a pension to Julia C. Jenkins—to the Committee on Invalid Pensions.

By Mr. OSBORNE: A bill (H. R. 3457) for the relief of Louis Miller—to the Committee on Military Affairs.

By Mr. TAYLER of Ohio: A bill (H. R. 3458) granting a pension to L. Emma Boone—to the Committee on Invalid Pensions.

Also, a bill (H. R. 3459) granting an honorable discharge to James Smith—to the Committee on Military Affairs.

By Mr. VEHSLAGE: A bill (H. R. 3460) to correct the military record of James H. Tucker—to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, the following petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ACHESON: Petitions of T. D. Schuyler and other citizens of McKeesport; W. T. Sterling and others, of Carnot; Adam Behm and others, of Duquesne; J. O. Parkenson and others, of McDonald; C. G. Creel and others, of Point Marion, and J. W. Wright and others, of Cheathaven, in the State of Pennsylvania, praying for the passage of an act restricting immigration—to the Committee on Immigration and Naturalization.

By Mr. ADAMS: Resolution of the Grocers and Importers' Exchange of Philadelphia, urging the passage of the Torrey bankruptcy bill—to the Committee on the Judiciary.

Also, petition of Herman A. Cohen and other citizens of Philadelphia, favoring a more rigid restriction of immigration—to the Committee on Immigration and Naturalization.

By Mr. BARLOW: Resolution of the Council of Labor of Los Angeles, Cal., favoring the abrogation of the Hawaiian treaty—to the Committee on Foreign Affairs.

By Mr. BELL: Petitions of E. G. Cleverdon and others and A. B. Wilson and others, citizens of Cripple Creek, Colo., for a more rigid restriction of immigration—to the Committee on Immigration and Naturalization.

By Mr. BINGHAM: Resolution of the Sixth Ward Republican Club of Philadelphia, Pa., condemning the civil-service laws—to the Committee on Reform in the Civil Service.

By Mr. BURKE: Petition of various labor organizations of Dallas, Tex., in favor of restricting immigration—to the Committee on Immigration and Naturalization.

By Mr. DALZELL: Resolution of the Grocers and Importers' Exchange of Philadelphia, Pa., indorsing the Torrey bankruptcy bill—to the Committee on the Judiciary.

By Mr. FLETCHER: Petition of the Board of Trade of Minneapolis, Minn., urging the immediate passage of a tariff bill—to the Committee on Ways and Means.

By Mr. HARMER: Petitions of Edward Cushmore and others and Charles H. Davis and others, citizens of Philadelphia, Pa., in favor of further restricting immigration—to the Committee on Immigration and Naturalization.

By Mr. HENDERSON: Resolution of the Trades and Labor Congress, Dubuque, Iowa, remonstrating against an increase in the tariff on tobacco imported and used in the manufacture of cigars—to the Committee on Ways and Means.

By Mr. OLMSTED: Petition of Annie Pisle and numerous other residents of Steelton, Dauphin County, Pa., praying for the passage of a law to further restrict immigration—to the Committee on Immigration and Naturalization.

By Mr. SIMPKINS of Massachusetts: Resolution of the common council and board of aldermen of the city of Fall River, Mass., urging upon Congress the necessity of adopting the most comprehensive plan for the dredging and improvement of Mount Hope Bay and Fall River Harbor, adopted June 7, 1897—to the Committee on Rivers and Harbors.

SENATE.

FRIDAY, *June 11, 1897.*

The Senate met at 12 o'clock m.

Prayer by Rev. HUGH JOHNSTON, D. D., of the city of Washington.

The Vice-President being absent, the President pro tempore took the chair.

The Journal of yesterday's proceedings was read and approved.

PETITIONS AND MEMORIALS.

The PRESIDENT pro tempore presented the petition of C. J. Barker and sundry other citizens of Lewiston, Me., and the petition of Dennison Walker and sundry other citizens of Pittsfield, Me., praying for the early enactment of a protective-tariff law; which were ordered to lie on the table.

Mr. GALLINGER presented petitions of A. B. Lawrence and 45 other citizens of Bennington, of A. M. Frink and sundry other citizens of Gilsum, and of Edward E. Grimes and sundry other citizens of Piermont, all in the State of New Hampshire, praying for the early enactment of a protective-tariff law; which were ordered to lie on the table.

Mr. PLATT of New York presented a petition of sundry citizens of Buffalo, N. Y., praying for the early enactment of a protective-tariff law; which was ordered to lie on the table.

He also presented sundry memorials of citizens of New York City, Brooklyn, and Syracuse, all in the State of New York, remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

Mr. SEWELL presented the petition of George H. Wocke and 27 other citizens of Haledon, N. J., and the petition of Heinrich Bros., of Paterson, N. J., praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

He also presented the petition of J. H. Francisco and 51 other citizens of Little Falls, N. J., and the petition of Charles E. Thurston and 49 other citizens of Camden, N. J., praying for the enactment of legislation restricting immigration; which were ordered to lie on the table.

He also presented memorials of J. H. Stells and 49 other citizens of Jersey City, of August Genzel and 24 other citizens of Bayonne, and of Felix Graf and 24 other citizens of Newark, all in the State of New Jersey, remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

Mr. DANIEL presented a petition of the John L. Rober Lumber Company, of Norfolk, Va., and 13 other lumber manufacturing firms in the State of Virginia, praying for the imposition of a duty of $2 a thousand feet on rough lumber; which was ordered to lie on the table.

Mr. NELSON presented petitions of the Board of Trade of Minneapolis, of J. E. Muzzy and sundry other citizens of Mankato, and of E. C. Willard and sundry other citizens of Mankato, all in the State of Minnesota, praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

Mr. FAIRBANKS presented sundry petitions of citizens of Terre Haute, Warren, Evansville, and Goshen, all in the State of Indiana, praying for the enactment of protective-tariff legislation, at the earliest possible date, which will adequately secure American industrial products against the competition of foreign labor; which were ordered to lie on the table.

Mr. FAULKNER presented the petition of T. T. Bonar and 50 other citizens of Marshall County, W. Va., praying for the enactment of legislation restricting immigration; which was ordered to lie on the table.

He also presented a memorial of the National Association of Internal Revenue Officers, through L. J. Frazee, president, remonstrating against the removal of United States revenue collectors, storekeepers, and gaugers from the classified service; which was referred to the Committee on Civil Service and Retrenchment.

Mr. BURROWS presented the petition of William Saterlee and 19 other citizens of Birmingham, Mich., and the petition of Harry J. Nichols and 11 other citizens of Marion, Ohio, praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

Mr. McMILLAN presented a memorial of sundry citizens of Baraga County, Mich., remonstrating against the imposition of a duty on imported hides; which was ordered to lie on the table.

He also presented the petition of John B. Cahill and 20 other citizens of Hart, Mich., praying for the enactment of protective-tariff legislation, at the earliest possible date, which will adequately secure American industrial products against the competition of foreign labor; which was ordered to lie on the table.

He also presented a memorial of the American Medical Association, remonstrating against the passage of Senate bill No. 1063, for the further prevention of cruelty to animals in the District of Columbia; which was ordered to lie on the table.

He also presented the petition of George E. Thompson and 100 other citizens of Detroit, Mich., praying for the passage of Senate bill No. 1063, for the further prevention of cruelty to animals in the District of Columbia; which was ordered to lie on the table.

Mr. LINDSAY presented a petition of sundry wholesale liquor dealers of Louisville, Ky., praying that the tax on distilled spirits be fixed at the rate which will produce the greatest revenue, and that the bonded period be made not longer than three years on future production; which was ordered to lie on the table.

He also presented a communication from the Secretary of Agriculture, together with a letter from S. D. Goff, of Winchester, Ky., relative to the adulteration of Kentucky blue-grass seed; which were referred to the Committee on Agriculture and Forestry.

Mr. HOAR presented sundry petitions of citizens of Worcester, Mass., praying for the enactment of legislation for a more rigid restriction of immigration; which were ordered to lie on the table.

He also presented petitions of 36 citizens of Fitchburg and West Fitchburg, of 8 citizens of Athol, and of 28 citizens of Massachusetts, all in the State of Massachusetts, and a petition of 11 citizens of Philadelphia, Pa., praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

He also presented a memorial of the Massachusetts Dental Society, of Cambridge, Mass., remonstrating against the proposed duty on mineral teeth; which was ordered to lie on the table.

He also presented a petition of sundry citizens of Gainesville, Ga., praying for the enactment of protective-tariff legislation, at the earliest possible date, which will adequately secure American industrial products against the competition of foreign labor; which was ordered to lie on the table.

Mr. GRAY presented a petition of sundry citizens of St. Georges, Del., praying for the enactment of legislation for a more rigid restriction of immigration; which was ordered to lie on the table.

Mr. GEAR presented a petition of 37 citizens of Mount Ayr, Iowa, and a petition of 4 citizens of Mount Ayr, Iowa, praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

REPORTS OF A COMMITTEE.

Mr. STEWART, from the Committee on Claims, to whom were referred the following bills, reported them severally without amendment, and submitted reports thereon:

A bill (S. 743) for the relief of Thomas Guinean, of Oregon; and

A bill (S. 1149) for the relief of Avery D. Babcock and wife, of Oregon.

BILLS INTRODUCED.

Mr. COCKRELL introduced a bill (S. 3123) to carry out the findings of the Court of Claims in the case of Napoleon B. Allen; which was read twice by its title, and referred to the Committee on Claims.

Mr. DANIEL (by request) introduced a bill (S. 2124) for the relief of James T. Smith; which was read twice by its title, and referred to the Committee on Claims.

Mr. McBRIDE introduced a bill (S. 2125) for the relief of Clement Marciel, of Portland, Oreg.; which was read twice by its title, and referred to the Committee on Claims.

Mr. CULLOM introduced a bill (S. 2126) to recognize the gallant conduct and meritorious services of Francis M. Charles as a volunteer aid in the late war; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 2127) authorizing the Commissioner of Internal Revenue to prescribe regulations for storing, handling, transporting, and conveying distilled spirits, and fixing penalties for violations of the same; which was read twice by its title, and referred to the Committee on Finance.

AMENDMENTS TO DEFICIENCY APPROPRIATION BILL.

Mr. PETTUS submitted an amendment intended to be proposed by him to the deficiency appropriation bill; which was referred to the Committee on Appropriations, and ordered to be printed.

Mr. McBRIDE submitted an amendment intended to be proposed by him to the general deficiency appropriation bill; which was referred to the Committee on Appropriations, and ordered to be printed.

AMENDMENT TO THE TARIFF BILL.

Mr. PRITCHARD submitted an amendment intended to be proposed by him to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States; which was referred to the Committee on Finance, and ordered to be printed.

UNION PACIFIC RAILROAD COMPANY.

Mr. HARRIS of Kansas. I submit a resolution, and ask for its immediate consideration.

The resolution was read, as follows:

Whereas by an act of Congress entitled "An act authorizing an investigation of the books, accounts, and methods of railroads which have received aid from the United States, and for other purposes," approved March 3, 1897, it is provided:

"SEC. 4. That whenever, in the opinion of the President, it shall be deemed necessary to the protection of the interests and the preservation of the security of the United States in respect of its lien, mortgage, or other interest in any of the property of any or all of the several companies upon which a lien, mortgage, or other incumbrance paramount to the right, title, or interest of the United States for the same property, or any part of the same, may exist and be then lawfully liable to be enforced, the Secretary of the Treasury shall, under the direction of the President, redeem or otherwise clear off such paramount lien, mortgage, or other incumbrance by paying the sums lawfully due in respect thereof out of the Treasury; and the United States shall thereupon become and be subrogated to all rights and securities theretofore pertaining to the debt, mortgage, lien, or other incumbrance in respect of which such payment shall have been made. It shall be the duty of the Attorney-General, under the direction of the President, to take all such steps and proceedings, in the courts and otherwise, as shall be needful to redeem such lien, mortgage, or other incumbrance, and to protect and defend the rights and interests of the United States in respect of the matters in this section mentioned, and to take steps to foreclose any mortgages or liens of the United States on any such railroad property.

"SEC. 5. That the sinking funds which are or may be held in the Treasury for the security of the indebtedness of either or all of said railroad companies may, in addition to the investments now authorized by law, be invested in any bonds of the United States heretofore issued for the benefit of either or all of said companies, or in any of the first-mortgage bonds of either of said companies which have been issued under the authority of any law of the United States and secured by mortgages of their roads and franchises, which by any law of the United States have been made prior and paramount to the mortgage, lien, or other security of the United States in respect of its advances to either of said companies as provided by law."

And whereas certain first-mortgage bonds on the said Union Pacific Railroad Company have matured, and the holders thereof have instituted foreclosure proceedings in several of the United States circuit courts to foreclose the liens created thereby and sell said railroad and all other properties and rights belonging thereto, and said foreclosure proceedings may, unless prevented by the President, proceed to final decrees and a final sale of all said properties be made: Therefore,

Be it resolved by the Senate of the United States, That it is the sense of the Senate that the President should, in strict accordance with the above-quoted statute, direct the Secretary of the Treasury to carry out the provisions of said act by redeeming or otherwise clearing off the paramount liens, mortgages, and incumbrances on said railroad by paying the sums lawfully due in respect thereof out of the Treasury to the holders of prior liens, and direct the Secretary of the Treasury thereupon to take control and management of said railroad and all the property, real and personal, in any manner belonging thereto; or, if that shall not be deemed the wiser course to pursue, that the President should direct the Attorney-General to take such steps and proceedings in the courts and otherwise as shall be needful to redeem such property from any prior mortgage, lien, or incumbrance necessary and proper to defend the interests of the United States in respect to the matters in said act of Congress mentioned, and to take steps to foreclose any mortgage or lien of the United States on any of said railroad property.

And the President is hereby requested to inform the Senate what action, if any, has been taken under the provisions of this law to protect the interests of the United States.

The PRESIDENT pro tempore. Is there objection to the present consideration of the resolution?

Mr. PLATT of Connecticut. The preamble states a variety of alleged facts. It is long, and I do not think a resolution of this kind ought to be passed without the Senate having an opportunity to examine it in print. I ask, therefore, that it go over and be printed.

The PRESIDENT pro tempore. Objection being made, the resolution will go over and be printed for the information of the Senate.

PORT OF FERNANDINA, FLA.

The PRESIDENT pro tempore laid before the Senate the amendments of the House of Representatives to the concurrent resolution of the Senate passed May 26, 1897.

The amendments of the House of Representatives were, in line 2, to strike out the word "Senate" and insert the word "Congress;" and in line 5 to strike out the word "Senate" and insert the word "Congress."

Mr. PASCO. The amendments are proper, and I ask that they be concurred in.

The amendments were concurred in.

Mr. ALLEN. What is the resolution itself?

The PRESIDENT pro tempore. The concurrent resolution will be read as amended.

The Secretary read as follows:

Resolved by the Senate (the House of Representatives concurring), That the Secretary of War be requested to furnish the Congress with such information as he may have in his possession with reference to the present condition of the harbor at Cumberland Sound, and to inform the Congress whether any immediate action is necessary to protect the entrance from being closed against the commerce usually entering the port of Fernandina.

THE TARIFF BILL.

Mr. ALLISON. I move that the Senate proceed to the consideration of House bill 379.

The motion was agreed to; and the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States, the pending question being on the amendment of the Committee on Finance, in paragraph 206, page 63, line 22, after the words "one cent and," to strike out "eight hundred and seventy-five one-thousandths" and insert "ninety-five one-hundredths;" so as to make the paragraph read:

206. Sugars not above No. 16 Dutch standard in color, tank bottoms, sirups of cane juice, melada, concentrated melada, concrete and concentrated molasses, testing by the polariscope not above 75 degrees, 1 cent per pound, and for every additional degree shown by the polariscopic test, three one hundredths of 1 cent per pound additional, and fractions of a degree in proportion; and on sugar above No. 16 Dutch standard in color, and on all sugar which has gone through a process of refining, 1 cent and ninety-five one hundredths of 1 cent per pound; molasses testing above 40 degrees and not above 56 degrees, 3 cents per gallon; testing 56 degrees and above, 6 cents per gallon; sugar drainings and sugar sweepings shall be subject to duty as molasses or sugar, as the case may be, according to polariscopic test; sugars, tank bottoms, sirups, cane juice or beet juice, melada, concentrated melada, and concrete and concentrated molasses, the product of any country which pays, directly or indirectly, a bounty on the export thereof, whether imported directly and in condition as exported therefrom or otherwise, shall pay, in addition to the foregoing rates, a duty equal to such bounty, or so much thereof as may be in excess of any tax collected by such country upon such exported article, or upon the beet or cane from which it was produced: *Provided*, That nothing herein contained shall be so construed as to abrogate or in any manner impair or affect the provisions of the treaty of commercial reciprocity concluded between the United States and the King of the Hawaiian Islands on the 30th day of January, 1875, or the provisions of any act of Congress heretofore passed for the execution of the same.

Mr. JONES of Arkansas. Yesterday in submitting some remarks to the Senate I alluded to a letter which I had received from Mr. Farr, of New York, who insisted that the sugar refiners got 100 pounds of sugar of different grades out of every 100 pounds of sugar melted. I wanted to put the letter in the RECORD or have it read, but I did not find it until after the Senate had adjourned. I will let it be inserted in the Senate this morning, so that Senators may see the statement made by this member of the committee sent by the sugar trade from New York to present a schedule to the Ways and Means Committee of the House.

The letter referred to is as follows:

NEW YORK, *May 26, 1897.*

SIR: Referring to your letter of 25th instant to Mr. P. J. Smith, inclosing statement of Messrs. Willett & Gray, to which you ask a reply, I beg to say that many of their statements are misleading and not in accordance with the facts.

The average test of all raw sugars imported and melted by refiners at present is about 92 degrees polarization. It is the custom, however, for refiners to figure in their raw sugars on a basis of 96 degrees, and the difference in price between 96 degrees and 92 degrees test, at present five-sixteenths cent per pound, is sufficient to cover the additional loss by waste and cost of refining of the lower grade.

In the figures furnished by Messrs. Nash, Spalding & Co., proprietors of the Revere Refinery, of Boston, to the Ways and Means Committee, they state positively that it requires 105 pounds of 96-degree centrifugals cane sugar to make 100 pounds granulated, and in the testimony of Mr. W. J. McCahan, before the same committee, he claimed it required 112 pounds 88-degree analysis beets testing 94 degrees, or 110 pounds beets testing 96 degrees, to make 100 pounds granulated. Assuming that these figures are true, and that refiners use one-half of each grade, it would require 107½ pounds of 96-degree test sugars to make 100 pounds granulated, which were also the figures arrived at by the Treasury Department in their calculations for drawback.

Now, all these calculations are made on the assumption that granulated is the only product of the refineries, whereas, as a matter of fact, 75 per cent is the usual outturn of granulated and 25 per cent low grades on soft sugars, while at present one of the largest refineries in the country is not turning out more than 60 per cent granulated.

For your information I inclose chemists' certificates showing the polarizations of the sixteen grades of sugar manufactured by the American Sugar Refining Company, from which it will be seen that while granulated tests 99.8 degrees, the other fifteen run from 94.4 down to 84.5, balance being water.

It is perfectly evident, therefore, that the average test of the refined sugars manufactured by the refineries is less than the test of the raws melted, and this corresponds with the statement made to me not long ago by a prominent

refiner that no first-class refinery turned out less weight of refined sugar than was melted in the shape of raws. I therefore repeat without hesitation the statement made you as to this fact and trust I have made the point clear.

In regard to the other suggestion by Messrs. Willett & Gray, that the countervailing duty should only be assessed on German or other refined sugars and not on the raws, I beg most emphatically to deny both their premises and conclusions. The bounty paid to German manufacturers of sugars has been the curse of the whole sugar trade of the world, and is of great detriment not only to the domestic producers but to all other legitimate sugar-producing countries against which it discriminates.

If a German shipper of sugars pays the same rate of duty as other shippers and receives the bounty of 27.2 per pound on his shipment, he is manifestly getting an advantage equal to this bounty against the other foreign producers and our domestic producers; in other words, he is beating our tariff to this extent.

Messrs. Willett & Gray are acting as the agents of the refiners in this matter, and while I have every reason to desire that our refiners shall have ample protection, I can not understand why they should find it necessary to resort to misleading and confusing technical statements which seem to be made up with the idea of tangling people up instead of making the subject clear.

Yours, respectfully,

JOHN FARR.

Hon. JAMES K. JONES,
United States Senator, Washington, D. C.

Mr. JONES of Arkansas. The Senator from Iowa yesterday asked me to make or have made a table showing the difference, as I see it here—the margin, the differential, as it is usually called—between raw and refined sugar under the Wilson Act, and also under the present proposed amendment. I requested Mr. Schoenhof, who is a careful accountant and a man familiar with these things, to make a statement of the kind. I have gone over a considerable part of the figures, and I am satisfied that they are correct.

I asked him to make it somewhat wider than was requested by the Senator from Iowa. I will present and have printed in the RECORD a comparison showing the difference between raw and refined sugar under the Dingley bill as originally passed, under the bill as first reported by the Senate committee, and under the bill as it is now proposed to be amended, and then the difference between the amended bill as it is now proposed on molasses and the lower grades of sugar and the Wilson Act.

I will state briefly to the Senator from Iowa that I stated from memory yesterday what I thought the differences would be between the Wilson Act and the pending measure. Under the Wilson Act at 88 the difference was 16½. It is 58.7 under the pending schedule. At 96 under the Wilson Act it was 13.6. Under the pending proposition it is 52.1. These differences run through all the schedule. I will let the statement go into the RECORD so that Senators may see the figures as they are made, showing the differences between the various propositions. I will not detain the Senate by going over the figures in detail. I am willing to state, if any Senator desires me to do so, what the differences are between the different propositions on any degree of polariscopic test and to give the figures as I understand they are, so that Senators may see the methods by which these conclusions were reached.

I think the table is absolutely correct, and in connection with the table I will send to the desk and have printed the calculations by which these results were arrived at, showing the price at which the different grades of sugar is taken, the rate of taxation under each, the calculations as they are made step by step, so that each Senator may see for himself just how the conclusions are arrived at.

The PRESIDENT pro tempore. Does the Senator from Arkansas desire to have the papers printed as a document, or in the RECORD?

Mr. JONES of Arkansas. I presume they had better go into the RECORD.

The PRESIDENT pro tempore. The papers, if there be no objection, will be printed in the RECORD.

Mr. ALLISON. I take it for granted the Senator includes in that calculation the three-eighths countervailing duty and the 27 cents a hundred pounds countervailing duty on raw sugar.

Mr. JONES of Arkansas. I count the three-eighths countervailing duty on all refined sugar, but none on raw, because these are cane sugars and there is no bounty on them.

Mr. ALLISON. On all refined sugars?

Mr. JONES of Arkansas. The calculations I have made as to raw sugar have been on centrifugal; it is cane sugar, and on this there is no countervailing duty, because there is no bounty to this sugar.

Mr. ALLISON. Undoubtedly.

Mr. JONES of Arkansas. And I counted the one-tenth of a cent countervailing duty now levied in all calculations under the present law when refined or German sugar is considered.

Mr. ALLISON. That countervailing duty applies in the present law to both raw and refined.

Mr. JONES of Arkansas. To all shipments of it from Germany. Under the proposed schedule there is a difference between the countervailing duty on raw and refined sugar, one being about three hundred and eighty-three one-thousandths, the other twenty-seven one-hundredths. I ask that these tables be printed as a part of my remarks.

The PRESIDENT pro tempore. It will be so ordered, if there be no objection.

The tables referred to are as follows:

Difference between cost of duty-paid raw sugar contained in 100 pounds of refined sugar and cost of 100 pounds of German granulated, duty paid, including German bounty equivalent (based on $2.30 net dutiable value), under the provisions of the Dingley bill, the Senate bill, the amended Senate bill, and the present tariff law.

Degrees.	Difference under Dingley bill.	Difference under Senate bill.	Difference under amended Senate bill.	Difference under amended Senate bill—molasses, sugars, etc.	Difference under present tariff law.
75	$1.346	$1.593	$1.426	$1.713	$1.00

Mr. TURPIE. I am authorized by the minority of the Committee on Finance to submit an amendment to the pending bill. I ask that it be read and ordered printed, and I give notice also that when we reach that portion of the bill relating to internal revenue, I am authorized to offer the amendment for adoption. I shall ask at that time the courtesy of the Senate to make some remarks upon the subject-matter thereof.

The PRESIDENT pro tempore. The Senator from Indiana presents an amendment to the bill, and asks that it be read for the information of the Senate and printed. The Secretary will read the proposed amendment, offered on behalf of the minority of the committee, as the Chair understands, if there be no objection.

The Secretary read as follows:

Insert the following:

"SEC. —. That on and after the 1st day of January, 1898, and for five years thereafter, there shall be laid and levied a sum equal to the rate of 2 per cent of the value of every decedent's estate, as an inheritance, whether it be testate or intestate, which shall be paid by the executors, administrators, or trustees thereof, or by the heirs or distributees, devisees or legatees, when the value of such estate as an inheritance is $5,000 and upward, except where legacies or bequests are made to religious, charitable, educational, or other organizations which may by the laws of the State, Territory, or District in which the decedent was residing at the time of his death be exempt from taxation.

"SEC. —. That it shall be the duty of the collector of internal revenue of the district wherein the decedent resided at the time of his death, within one year from the time of such death, to ascertain the value of the estate as an inheritance at the time of such death, and to enter and record in a book to be provided for that purpose a list of all estates affected by the foregoing section, and to note therein the name of the decedent, the name of the executor, administrator, trustee, heir, or distributee, legatee, or devisee being in charge of or having an interest in the same, and to note in each case the value of the estate as an inheritance, and to record therein the amount of the impost levied according to the provisions of the foregoing section in each case.

"SEC. —. That as soon as the amount of the impost is ascertained and recorded as in the foregoing section provided the collector shall send, by mail, to the person or persons liable for the payment thereof notice in writing of the amount of the same, with a demand for its payment. Any person aggrieved by the amount of such levy in any such case may, within thirty days after the receipt of the notice aforesaid, bring suit, without regard to the amount in question, in the district court of the United States to have the said levy set aside or reduced. Such suit shall be tried and determined in like manner as other civil causes in said court, and the district attorney of the United States shall appear therein for the Government; and in such suit the court is empowered to enter a judgment against the person who may have brought the same for the amount, if any, of the sum levied against him as may be determined in said cause, together with the interest thereon and penalty thereon, as provided in the section next following.

"SEC. —. That if the amount of such levy be paid it shall be credited in the entry of the record aforesaid, and a receipt shall be given by the collector to the person making the payment. In case of the nonpayment of the same, unless the person liable for the same shall have brought suit to set aside or reduce the levy, the collector shall, within ninety days after the time of sending the notice by mail, as heretofore mentioned, notify the district attorney of the United States of the district, who shall, upon the receipt of such notice of nonpayment, bring suit on behalf of the United States in the district court of the United States, without regard to the amount of the same, for the payment thereof, against the person or persons liable under the foregoing provisions for the payment of the same, which suit shall be tried and determined as civil suits in other cases in said court; and upon recovery against the defendant 6 per cent interest shall be collected from the time of the commencement of such suit, together with 10 per cent in damages as a penalty for nonpayment. The lien of the judgment rendered in such case against the real estate of the defendant therein shall relate back to the time of the commencement of the suit, and take effect at such time.

"SEC. —. That the Secretary of the Treasury is hereby authorized to make such rules and regulations and prepare such books, forms, and papers as may be necessary to carry into effect the provisions in this enactment, and a sum

of money is hereby appropriated, out of any moneys in the Treasury, that may be sufficient to defray the expenses needed for that purpose, the said appropriation to be immediately available upon the passage of this act."

The PRESIDENT pro tempore. The proposed amendment will, without objection, be printed. The pending question is on the amendment of the Committee on Finance, in paragraph 206, page 63, line 22, to strike out "eight hundred and seventy-five one-thousandths" and insert "ninety-five one-hundredths."

Mr. JONES of Arkansas. I ask for the yeas and nays on the amendment.

The PRESIDENT pro tempore. The Chair would like to be informed as to the exact status of the amendment. Did the committee report a substitute for the sugar schedule?

Mr. ALLISON. It did not. In line 22, page 63, it proposes to strike out "eight hundred and seventy-five one-thousandths" and insert "ninety-five one-hundredths."

The PRESIDENT pro tempore. Is the question to be taken first on that amendment or the amendment offered by the Senator from Arkansas?

Mr. JONES of Arkansas. I did not offer an amendment. I stated to the Senate yesterday that I would offer an amendment. The amendment which I had in contemplation I do not care to offer. I am willing to take a vote on the amendment offered by the Senator from Iowa in behalf of the committee. There was an amendment that I contemplated offering just before that, but I can offer it later. I am willing to take a vote on the proposition as it stands.

The PRESIDENT pro tempore. The Chair will then submit the question once more on the amendment of the Senator from Iowa.

Mr. LINDSAY. Before the vote is taken, I inquire whether it will be in order, should the committee amendment be adopted, to press the amendment I offered?

Mr. ALLISON. Undoubtedly.

The PRESIDENT pro tempore. It undoubtedly will be in order.

Mr. ALLISON. I wish to state, in order that Senators may understand the situation, that the amendments which are found in the printed bill have been withdrawn, including the amendment striking out paragraph 206. Now the committee propose an amendment to the original text, which is the amendment pending.

Mr. CAFFERY. Mr. President, before the vote is taken on the amendment, I desire to add to the remarks I made yesterday by reading from the New York World of 1894, about the time the sugar schedule of the Wilson bill was pending in the Senate, a sketch giving the history of the sugar trust. I read as follows:

To fully understand the sugar trust and to appreciate its officials, it is necessary to go back a few years and to study the conditions out of which the trust grew.

It is evident from the prices of raw and refined sugars between 1880 and 1887, when the sugar trust was formally formed, that some kind of an "understanding" or pooling agreement existed between the leading refiners from 1880 to about 1884. The average difference between the prices of raw and refined sugars for 1880, 1881, 1882, and 1883 was 1.33 cents per pound.

Deducting the cost of refining, then estimated at five-eighths cent per pound, the total profits for refining imported sugar during these four years are seen to have been between $50,000,000 and $60,000,000—fully twice the amount of capital invested in the refining business. Such unusual profits attracted capital to this industry, and new refineries were soon competing with those in the pool, until the principals of the pool gradually lost their grip and were unable to limit production sufficiently to sustain prices and profits.

The average difference between prices of raw and refined sugars declined to nine hundred and twenty-three one-thousandths of a cent in 1884, and to seven hundred and twelve one-thousandths of a cent in 1885. In 1886 it was seven hundred and eighty-one one-thousandths and in 1887 seven hundred and sixty-eight one-thousandths of a cent, respectively. During these four years profits averaged about $6,000,000. Meanwhile the Havemeyers and others, who had tasted of the profits of monopoly and restriction in 1880 to 1884, were busy trying to induce refiners to "get together" to loot the country again.

During this period the same gentlemen who have lobbied the present sugar schedule through the Senate swindled our Government out of about $3,000,000 by means of false statements in regard to the number of pounds of refined that could be made from a certain number of pounds of raw sugar, a misrepresentation on which drawbacks were based. During the years 1885, 1886, and 1887 we exported 638,000,000 pounds of refined sugar, on which our refiners obtained a fraudulent export premium or bounty of nearly $3,000,000. During these years the average export price of refined sugar (after deducting drawback duties) was about 4.6 cents per pound, while the average price (in foreign ports) of foreign refined imported was over 5 cents.

These facts make it clear that our refiners were then not only able to hold their own in our markets without any special privileges, but that, with a slight export bounty—scarcely sufficient to pay expenses of transportation to Europe—they could and did sell refined sugar at the very doors of their foreign competitors. Our exports of refined sugar then went to fifty-nine different countries, but over half of all went direct to England, where it competed with the cheap-labor sugars from Cuba and the East Indies, as well as with those dumped into England because of the export bounties of France, Germany, and other European countries.

We shall see later that our refiners are now better able to compete with foreign competitors than ever before.

THE TRUST IS FORMED.

The sugar trust was formed in 1887, when eight of the leading refining corporations transferred their stocks to the Sugar Refineries Company. Twelve more companies "came in" a little later. This company paid for the stocks by the issue of trust certificates. The deed of agreement was dated August 6, 1887, but the trust was not in working order until November, 1887. According to Dr. E. B. Andrews (see Quarterly Journal of Economics, January, 1889) these eight establishments represented 85 per cent of the refining capacity this side of the Rocky Mountains. The alleged objects of the new organization were:

I think if Senators will pay attention to this historical sketch of the trust, it may not be uninstructive to them.

First. To promote economy of administration and to reduce the cost of refining, thus enabling the price of sugar to be kept as low as consistent with reasonable profit; second, to give each refinery the benefit of all appliances and processes known or used by the others, and useful to improve the quality and diminish the cost of refined sugar; third, to furnish protection against unlawful combinations of labor; fourth, to protest against inducements to lower the standard of refined sugars; fifth, generally to promote the interests of the parties in all lawful and suitable ways.

The trust authorized $50,000,000 in trust certificates, but only $42,500,000 were outstanding at the time of the Congressional inquiry in 1888. What these certificates represented, and what was the real value of the various refineries' properties at the time of their absorption by the trust, has been concealed by the officers of the trust. The senate committee of New York which investigated this trust in 1888 came to the conclusion that the face value of the certificates was about four times the total stock which had been replaced. One of the few facts drawn out by this committee was that $595,000 in certificates was paid for the North River Sugar Refinery Company, which had just before been sold for $325,000 in cash.

When the trust was undergoing reorganization in 1890 to escape the laws of New York State, the books of the company were overhauled, at the request of the trust, by Messrs. Deloitte, Dever, Griffiths & Co., London experts. They said in their report (see Financial Chronicle, November 1, 1890): "The statements furnished to us indicate that the original organization included no working capital, and that about $10,000,000 was subsequently borrowed to be used for that purpose."

Their statement shows that the entire working capital of each company was withdrawn when the different refineries went into the trust, and that they turned over to the trust only their bare plants. Based upon reliable authorities, James H. Maury estimates the total value of the eighteen plants mentioned in a suit brought by the Attorney-General (see Financial Chronicle, January 21, 1893, and New York World, January 8, 1894) at $8,900,000, their original capital stock being $15,650,000. Against these plants have been issued the $10,000,000 of bonds, to obtain working capital, and stock certificates with a face value of $75,000,000.

TYPICAL WATERED STOCK.

That the trust certificates represent little else than water in its most expanded form is shown in another way. The Havemeyer & Elder Sugar Refining Company was capitalized at $500,000. Its three properties in Brooklyn, the only ones turned over to the trust, were assessed in 1889 at $420,000 and in 1893 at $510,000. Now, $15,000,000 in trust certificates were issued to this Brooklyn company.

As some of the plants were old, others badly located, and others filled with antiquated machinery, it is safe to say that, based on their earning capacity as competitors, their total aggregate value did not much exceed $15,000,000. But the trust was preparing for the inordinate profits which it hoped to cover up by a big capitalization. As Dr. Andrews put it, "The certificates were apparently proportioned not to the old getting power but to the larger one which was in prospect." As its realizations have exceeded its fondest hopes, we now know that it was very conservative in its issue of certificates.

According to Willett & Gray, sugar statisticians, the trust made a net profit of five-eighths of a cent per pound, or $14 per ton, in 1888 and 1889, and one hundred and forty-four one-thousandths of a cent per pound, or $3.23 per ton, in 1890. This enabled it, after paying dividends of $5,000,000 each year (10 per cent) and $2,500,000 for January, 1891, to transfer a cash surplus of $11,743,654 to the American Sugar Refining Company, which began business January 12, 1891, regularly organized under the laws of New Jersey, whither it had fled to get a legal status and to stop "all this howl in the newspapers about trusts," as H. O. Havemeyer designated the persecution of the trust which made Wall street less eager to speculate in its certificates.

Soon after it was formed, in 1887, the trust, by dismantling some and annexing others, reduced the number of refineries in operation from 20, with a daily capacity of 32,300 barrels, to 10, with a daily capacity of 28,500 barrels. At this time there were 5 refineries, with a total daily capacity of 10,400 barrels, outside of the trust. Thus, having control of the market, the trust was not slow in inaugurating an era of high prices. The following table shows the average prices of raw and refined sugar for the years 1887, 1888, 1889, and 1890:

	Price per pound.		
	96-degree centrifugal.	Granulated.	Difference.
	Cents.	*Cents.*	*Cents.*
1887	5.245	6.013	0.786
1888	5.749	7.007	1.258
1889	6.433	7.640	1.207
1890	5.451	6.171	.720

SOME STARTLING FIGURES.

An idea of the enormous profits of this period can be obtained from what Willett & Gray said in their Analysis, 1888, 1889, and 1890, and February, 1891. They said:

"Summary, 1888: Total consumption of United States, 1,457,204 tons, or 10,200,848 barrels; sugar trust refined 987,570 tons, or 6,912,990 barrels, and the nontrust refined 371,866 tons, or 2,603,202 barrels; consumed without refining, 97,809 tons, or 634,656 barrels; sugar trust averaged 23,043 barrels daily, and the nontrust averaged 8,677 barrels daily.

* * * * * * *

"Sugar trust paid $5,000,000 dividends in 1888.

"Sugar trust's earnings, as above, from refining in 1888 equaled 27.5 per cent on the certificates.

"1889: Total consumption of United States, 1,412,813 tons, or 9,839,817 barrels; sugar trust refined 853,472 tons, or 5,974,304 barrels, and the nontrust refined 433,358 tons, or 3,033,506 barrels; consumed without refining, 126,001 tons, or 882,007 barrels; sugar trust averaged 19,915 barrels daily, and the nontrust averaged 10,111 barrels daily.

* * * * * * * *

"Sugar trust paid $5,000,000 cash dividends in 1889 and distributed 8 per cent in certificates.

"The sugar trust's earnings, as above, from refining in 1889 equaled 23.9 per cent on the certificates.

* * * * * * *

"1890: Total consumption of United States, 1,522,731 tons, or 10,659,117 barrels. sugar trust refined 974,937 tons, or 6,824,559 barrels; the nontrust refined 464,794 tons, or 3,253,558 barrels; consumed without refining, 83,000 tons, or 581,000 barrels; sugar trust averaged 22,748 barrels daily, and the nontrust averaged 10,845 barrels daily.

* * * * * * *

"Sugar trust paid $5,000,000 cash in dividends in 1890.

"The sugar trust's earnings, as above, from refining in 1890 equaled 6.4 per cent on the certificates.

* * * * * * *

"Estimate for 1891: Total meltings, 12.5 per cent over 1890, 1,620,000 tons; American Sugar Refining Company, 1,085,000 tons; other refineries, 535,000 tons; total, 1,620,000 tons.

"American Sugar Refining Company, 1,085,000 tons, at one-fifth cent per pound (profit, $4.43 per ton), $4,860,000; 7 per cent on preferred stock, 12.44 per cent on common stock.

* * * * * * *

"It is always encouraging to have a good 'send-off' for a new business in a new year, and the American Sugar Refining Company has this fortune in having at this time a profit as good as secured of, say, one-half cent per pound on at least 100,000 tons of raw sugar bought, which includes a large amount of the Sandwich Island sugars, say $1,120,000 profit on the import account."

During 1890 and 1891 there was competition between the trust and antitrust refineries. The trust could have maintained prices, but not without great future cost to itself, which it attempted to avert by reducing the price of sugar and making it easy for it to purchase the leading outside refineries at reasonable figures. This scheme was baffled mainly by the opposition of Claus Spreckels, a California refiner, who had made many millions out of our "reciprocity" agreement with Hawaii, and who was prepared to play a game of bluff with the great Havemeyers themselves.

CLAUS SPRECKELS'S BLUFF.

He built, at a cost of about $4,000,000, a model refinery in Philadelphia. This began operation in 1890, and at once became a thorn in the side of the sugar trust. Its capacity is 5,000 barrels a day. The trust made overtures to Spreckels, but the latter turned a deaf ear. He declared it to be his intention to fight to a finish. Columns of interviews were given out in which he posed as the advocate of cheap sugar for the people and as the inveterate enemy of dishonest competition. The trust carried the warfare to the Pacific; Spreckels carried it to the Atlantic Coast. For a time it looked to those who did not understand the game as if Goliath had met David, and the cheap sugar would be the outcome of Goliath's destruction.

It is noticeable, however, that at no time were prices low enough to prevent fair profits. The removal of the duty on raw and the reduction of the duty on refined sugar from 3 cents to one-half cent per pound on April 1, 1891, caused the consumption to increase nearly 20 pounds per capita. The increased demand made competition less intense in 1891 and prolonged the struggle. By 1892 the refineries in operation were more than able to supply the demand, and the trust was forced to capitulate and pay Spreckels his price.

Good authorities say that the price paid for his Philadelphia refinery was $10,000,000, and that the total sum paid for this and three other Philadelphia refineries—the Franklin, the Knight, and the Delaware Sugar House—was $18,500,000. This was probably more than twice their first cost.

The wily Claus Spreckels, chuckling over his bargain, returned to California to make presents of $1,000,000 to each of his two sons. His great sincerity as an enemy of the trust and a friend of the people is shown by the fact that his refinery and the Havemeyer refinery, both in San Francisco, have united under the title of The Western Sugar Refineries Company, and that, with Spreckels as manager of this end of the trust, prices of sugar west of Colorado have been even more exorbitant than Eastern prices.

In order to pay for the properties acquired in March, 1892, and to prepare to cover the enormous profits which could be easily extorted from the people during the two or three years which must intervene before important new refineries could be built and before the probable removal of the one-half cent per pound duty on refined sugar, the trust increased its capitalization by $25,000,000.

And right here is a good place to insert a few words about the methods employed by this almost omnipotent monopoly to obtain favorable legislation. In 1890, after hearing sugar refiners give testimony so perpendicular to facts that it would shock the nerves of a Baron Munchausen, the largest duty that Major McKinley's elastic conscience would permit him to leave on refined, after giving refiners free raw sugar, was four-tenths of a cent per pound. Apparently this was satisfactory to the refiners, though one of them had testified that "we consider ourselves to be public benefactors when we take raw sugars that cost us 5 cents per pound, containing 4 per cent of impurities, and give to the public refined sugar at 7 cents per pound."

CORRUPTING THE SENATE IN 1890.

But when the bill reached the Senate, unexpected opportunities opened up to the sugar magnates. Senator ALDRICH was chairman of the Committee on Finance. In the quiet hush of the Senate committee room an additional duty of one-tenth of a cent per pound, worth $3,000,000 to the trust, was added to McKinley rates. It has been openly charged by Col. A. K. McClure, of Philadelphia, that as a result of a bargain made with Senator ALDRICH the sugar men fought the battle in Rhode Island which reelected ALDRICH, and that they contributed a very large sum to the Republican campaign corruption fund.

The power of the trust is not limited to the Republican party. In 1892, when everybody was wondering why the Ways and Means Committee did not report the bill, which it had long been considering, to place refined sugar on the free list, the New York Daily Commercial Bulletin sent a special correspondent to Washington to learn the cause of the inaction. The correspondent, after interviewing various members, declared the committee dare not report the bill, because when it had reached the Republican Senate, it would not be passed, but would be held, "like the sword of Damocles, over the sugar trust, to force it to contribute an enormous campaign fund for the use of the Republican party during the coming campaign."

These are only incidents in the past history of this trust which help to establish the fact of the monopoly as well as the oppression and corruption due to it.

No clearer evidence of a monopoly can be obtained than that drawn from the prices of raw and refined sugar since the trust, in March, 1892, gained direct control of 90 per cent of the refineries in this country, and indirect control of a considerable portion of the remaining 10 per cent. Here are the prices for raw 96-degree centrifugal and granulated sugar for March, 1892:

Date.	Price per pound.		
	96-degree centrifugal.	Granulated.	Difference.
	Cents.	*Cents.*	*Cents.*
March 3	3.410	4.07	.660
March 10	3.370	4.19	.820
March 17	3.375	4.29	.915
March 24	3.250	4.29	1.040
March 31	3.125	4.28	1.155

Notwithstanding that the average difference between raw and granulated was less than one-half cent for January and February, 1892, the average difference for the whole year was 1.035 cents. In 1893 it was 1.153 cents. It thus appears that the trust made nearly $30,000,000 clear profits in 1892, and more than $30,000,000 in 1893.

ENORMOUS PROFITS IN RAW SUGAR.

Besides the profit on refined, the trust speculates in raw sugars. It buys large quantities when it is cheap, and is thus nearly always making far greater profits than the market quotations would indicate. Willett & Gray said in February, 1891: "We estimate that the American Sugar Refining Company will make more profit in 1891 from their import account of raw sugar than from their refining account. The total profits of refiners this year will require to be estimated from their purchases of raw sugars rather than from the correct market prices of raw and refined at time of melting the sugar. The latter may, and probably will, at times show less than a refining profit. The American Sugar Refining Company has this fortune in having at this time a profit as good as secured of, say, one-half cent per pound on at least 100,000 tons of raw sugar bought, which includes a large amount of the Sandwich Island sugars, say $1,120,000 profit on the import account."

In their Analysis for 1888, 1889, and 1890, Willett & Gray said: "In estimating the profits of 1890 we have given the refiners the benefit of the lower cost of melting larger quantities and the savings from improvements which have been introduced, and reduced our estimate of cost of refining to nine-sixteenths of a cent per pound instead of five-eighths of a cent per pound, as in 1888 and 1889. We expect that the cost of refining in 1891 will be still further reduced to one-half of a cent per pound by economies already being introduced and the saving in the interest account by the removal of duties."

In other paragraphs they stated that all excess of differences over these estimates represented "net profits from refining."

It must not be forgotten that Willett & Gray's interests are bound up with those of the trust and that they speak as agents of the trust. It is quite certain the cost of refining is much less than they stated. Reports of the census of 1890 have been issued for only three cities in which sugar refineries are mentioned. The two principal of these are Philadelphia and Brooklyn.

In Philadelphia the total cost of producing $46,598,524 worth of refined sugar was $2,032,002, $753,386 of which was for wages. In Brooklyn the total cost of producing $16,629,982 worth of sugar was $862,385, $530,558 of which went for wages. Thus the total cost was 4.36 per cent of the product in Philadelphia and 5.78 per cent in Brooklyn. The average price of refined sugar from May 31, 1889, to June 1, 1890, was 7.295 cents per pound. It thus appears the total cost of refining in 1890 was three hundred and seventeen one-thousandths of a cent per pound in Philadelphia and forty-two one-hundredths of a cent in Brooklyn.

While Porter's statistics may be very unreliable, it is probable they have not overestimated the cost of refining sugar. If the cost of refining in the great refineries was between three-tenths and four-tenths of a cent in 1890, it is probably between twenty-five one-hundredths and three-tenths of a cent in the still greater refineries of 1893 and 1894. Indeed, these are the estimates of many familiar with the conditions of the industry. Of course, no refiner in or out of the trust will state the facts. On the contrary, all data from which the cost of refining might be deduced are jealously withheld, not only from the public, but from importers, dealers, and all others in the trade.

AMERICAN REFINERIES THE BEST.

Our refineries are the largest, contain the most improved machinery, and are in every way superior to those of Europe. In fact, there are no modern refineries outside of the United States. This state of affairs comes not merely from the fact that Americans usually distance all competitors where machinery is the chief productive factor and where the labor cost is less than 2 per cent of the product, as in the case of sugar, but it is the result of conditions in Europe.

England has practically gone out of the refining business because she can obtain her supplies cheaper from continental countries, which pay their refiners a premium for dumping their sugars in England and in other foreign countries.

Small refineries have been hastily and poorly constructed in continental Europe to take advantage of these foolish export bounties while they last. But not only are our plants superior to all others; the labor cost of refining is lower here than elsewhere.

Few Americans now find employment in refineries. Nearly all employees are Huns and Poles. The work has become so slavish under trust management that even Italians refused to be stewed to death in the intensely heated rooms of the refineries at the low wages paid. Last summer the firemen in the Havemeyer refinery in Brooklyn refused to work twelve hours a day during the summer. During the previous summer several hundred were overcome with heat and had to be taken to hospitals, where many died. The men feared a repetition of this. They sent a committee to see Havemeyer.

That gentleman coolly did a little figuring to prove that such a move would cost the company several thousands, and it was therefore out of the question to grant the demand. He told them so in language more forcible than choice. This practically settled the strike, the trust being the only employer in this country of this kind of labor. Some of the strikers refused to go back and some reluctantly returned, to jump out of the refinery into the East River—as many do—when their existence was no longer endurable. Such is the kind and the condition of the workers who refine our sugar and who make the millions for the rich beggars who infest Washington and corrupt Congress.

The following table shows that nine of the trust's refineries were closed last year, that five more were connected with larger refineries, and that the remaining eight were working. It will be seen that the smallest refinery now operated by the trust has a capacity of 1,500 barrels a day—50 per cent more than the largest refinery in Germany, whence competition is most feared.

All of the small or badly located ones, in which the cost of refining was comparatively high, were promptly closed by the trust and the machinery removed or allowed to rust out. Of course labor was thrown out of employment by the closing of these plants. The process was necessary, however,

in order to restrict production, obtain higher prices, and receive the full benefit of McKinley protection. The following table also shows the composition and condition of the American Sugar Refining Company in July, 1893:

Refiners in the trust.

Companies.	Daily capacity.	Condition.
	Barrels.	
Hav. & E. S. R. Co., Brooklyn	8,000	Working.
Brooklyn S. R. Co., Brooklyn	4,000	Connected with H. & E. house.
De Castro & Donner S. R. Co., Brooklyn.	3,000	Closed since 1887.
Dick & Meyer Co., Brooklyn	3,000	Burned September, 1889; not rebuilt.
Havemeyer S. R. Co., Jersey City	500	Connected with F. O. M. & W. house.
F. O. Matthiessen & Wiechers Co., Jersey City.	4,500	Working.
Mollers & Sierck Co., Brooklyn	500	Dismantled.
North River S. R. Co., New York	500	Do.
Oxnard Bros. Co., Brooklyn	400	Do.
Standard S. R. Co., Boston	3,000	Working.
Bay State Co., Boston	500	Dismantled; machinery used in Standard house.
Continental S. R. Co., Boston	500	Connected with Standard.
Boston S. R. Co., Boston	1,500	Working.
Forest City S. R. Co., Portland	500	Closed since 1887.
St. Louis S. R. Co., St. Louis	1,000	Do.
Louisiana S. R. Co.		Working.
Planters' S. R. Co., New Orleans	6,000	Connected.
American S. R. Co., San Francisco	2,000	Under lease to Western S. R. Co., C. Spreckels, manager.
California S. R. Co., Spreckels, president, San Francisco.	1,600	Do.
Harrison Frazier Co. (Franklin), Philadelphia.	7,000	Working.
E. C. Knight & Co., Philadelphia	1,000	Connected with Franklin.
Spreckels S. R. Co., Philadelphia	5,000	Working.
Baltimore S. R. Co., Baltimore	1,500	Burned 1893.
Delaware S. R. Co., Philadelphia	500	Connected with Spreckels.
Total	56,000	
Deducting closed and dismantled plants.	10,900	
Total in operation	45,400	

The only refineries even ostensibly outside of the trust are the Revere Sugar Refinery (Nash, Spaulding & Co.), Boston, with a daily capacity of 1,000 barrels; Mollenhauer Sugar Refining Company, Brooklyn, built in 1892, with a capacity of 1,800 barrels; Cunningham Miller, Sugarland, Tex., completed in 1892, with a capacity of 500 barrels; Henderson's refinery, New Orleans, erected in 1891, with a capacity of 300 barrels; Howel's refinery, in Yonkers, finished last December, with a capacity of 1,000 barrels, and the McCahan, in Philadelphia, finished last October, with a capacity of 2,000 barrels.

These six refineries, with a total daily capacity of 6,600 barrels (10½ per cent of the total for all refineries in this country), are all running. If they were all entirely independent, and sharp competitors of the trust, they could not have a perceptible influence on the power of the trust to control production and prices. Practically, however, because of a common interest, and because many of the same men are interested as stockholders in both trust and anti-trust refineries, there is no real competition.

The question that naturally suggests itself here is, "Why, if profits are so unusually high, are there not more independent refineries?" It is because it takes a long time to construct a model refinery; because there are but few who understand the requirements of such a refinery and can command the requisite capital; because these few are now either large holders of sugar-trust certificates or are bribed by good positions—like that of Spreckels—to continue loyal to the trust; because of the uncertainties as to tariff and anti-trust legislation, which may at any time introduce competition and reduce profits to normal, and because of the fear of the wrath of the great and wealthy trust.

COST OF THE SUGAR LEECH.

The United States has probably squandered more money in various ways in connection with the sugar industry than with any other leech industry that has attached itself to the protection pap. The expensiveness of interfering with private business is well illustrated in this case. Here are some of the ways in which we have been bled by the sugar industry:

Mr. Lindqvist, in Tariff Reform of July 30, 1890, estimated the total net profits for refining imported sugar from 1880 to 1889, inclusive, at $101,316,443. This estimate was based upon statistics of Willett & Gray. Since 1890 they have published "corrected tables adjusted to net cash prices" which show much greater profits.

Thus the difference between the prices of raws and refined in 1881 is changed from 1.354 cents to 1.436; this changes the margin for profits from six hundred and twenty-nine one-thousandths to eighty one-hundredths of a cent per pound, and raises the total for the ten years to about $115,000,000. The tariff bounties to producers during this period were about $75,000,000, $3,000,000 more were paid to refiners, and $36,571,614 in bounties went to the sugar planters of the Sandwich Islands—a total of about $230,000,000 in ten years given as a bounty to those who produce and refine sugar! The profits of refining during the last four years will average fully $25,000,000 a year above honest returns for capital invested.

Based on Willett & Gray's circular, the profits of refiners are over $88,000,000 for these four years; but, as we have seen, the actual cost of refining has probably averaged between three and four tenths of a cent per pound, instead of over one-half cent.

Still further profits accrue to the trust from large quantities of raw sugar, bought often at one-quarter or even one-half cent below the prices quoted, when it sells its products. In fact, the quoted prices of raws, so far as the trust is concerned, are merely nominal. After it has purchased large supplies at low prices, and there are no large available supplies in sight, it usually causes the price of raws to rise one-quarter or one-half cent, to the great disadvantage of the independent refiners, who have not sufficient capital to take advantage of markets. As before stated by Willett & Gray, these profits may exceed the marginal profits on refined sugars.

Another source of profits comes from mixing large quantities of cheap beet sugar of 88 or 90 degrees test with cane sugar of 96 degrees test, and then estimating the margin of profits for refined as if it were all produced from 96 degrees cane sugar.

Putting together all these profits and including tariff and actual bounties paid to our producers, we have a total of fully $370,000,000 worse than wasted during the last fourteen years. It has been worse than wasted, because it has produced a monopoly that has thrown more men out of employment than it has found employment for in a protected and bounty fed industry.

THE GERMAN EXPORT BOUNTIES.

One of the slickest of bunco games was worked upon the present Ways and Means Committee. Without any apparent reason, either for revenue or protection purposes, a duty of one-fourth cent per pound was left on refined, while raw sugar remained free. But one rational explanation has been offered—the committee was duped by false statements in regard to German export bounties on refined sugar.

The Sugar Trade Journal of September 28, 1893, stated: "German refiners receive a discrimination or protection of 21½ cents per 100 pounds (nearly one-fourth cent per pound), because this is the amount of bounty which the German Government pays on the exportation of granulated sugar from August 1, 1892, to July 31, 1895." This statement was worked for all it was worth before the committee, and it saved, or promised to do so, $10,000,000 a year bonus to the $75,000,000 sugar infant.

As soon as the statement reached Germany, it was criticised and corrected by the Berlin Zuckerindustrie and the Prager Zuckermarket. These authorities stated there is an export premium on 111 pounds of raw sugar (the amount required to make 100 pounds of refined) of 15 cents. This acts like an interior tax on raw sugar, and has to be paid by the refiner. Hence, although he gets an export bounty of 21½ cents, his net export premium is only 6½ cents per 100 pounds. The Sugar Trade Journal gave space for this correction in its issue of October 26, 1893, but the trust probably took no pains to bring it to the attention of the Ways and Means Committee. It was the exposure of this and many other false claims in the House, by John De Witt Warner, that caused that body to refuse to accept the decision of its committee.

But it is unnecessary to protect our refiners even to the extent of 6½ cents per 100 pounds to prevent them from going to Germany, as it is declared by Willett & Gray they will do. Not only will this rate of export bounty end in 1895 (and all German export bounties cease in 1897), but while it lasts it is not equal to the cost of transporting sugar across the Atlantic. This cost seldom or never falls below 8 cents per 100 pounds.

Nearly all German refineries are in the interior of Germany, and the cost of carrying sugar to the coast is often greater than the ocean freight. Hence, notwithstanding the export bounty, our markets are well protected without any duty on imported sugar.

Since the Senate Committee has reported a bill placing a duty of 1 cent per pound on sugar testing 80 by the polariscope, adding one one-hundredth of a cent for each degree up to 90, and two one-hundredths of a cent for each degree from 90 to 96 test, and a duty of 1.4 cents on all above 96, the sugar-trust people have been pretending to be very much displeased at the result and have asserted not only that it would leave them no protection but that under it they would be worse off than with all sugars free.

The Sugar Journal of March 8 says: "The above schedule affords the refiners very little, if any, protection, and would be destructive to the sugar-refining industry in this country."

PROTECTION IN THE NEW SCHEDULE.

As usual, the facts are dead against this statement. It is not possible to state just what protection this complicated schedule would give to refiners, but it is impossible to deal with facts and not find considerable protection for them.

Able and reliable men who have been connected or acquainted with the sugar business for years assert that under the new conditions which such duties would bring about, the protection would be nearly one-third of a cent per pound. They claim the average test for cane sugar—which is now about 95—would fall to about 90, on which the duty would be 1.1 cents per pound, and that the loss in refining this sugar would be about offset by the gains from mixing with beet sugars and from securing free admission into a protected market for the by-products of refining—sirups and molasses.

It seems more probable, however, that the net protection will be rather less than one-half cent per pound. The average test of imported cane sugars now being about 95, the average duty as proposed would be 1.20 per pound. One hundred pounds of this sugar will make nearly 95 pounds of refined sugar, 4 pounds of sirup, and 1 pound of waste. The duty on 95 pounds of refined sugar would be $1.33, as against $1.20 on the 100 pounds from which it was made—a protection of about one-eighth of a cent per pound.

To this should be added the protection to the 4 pounds of sirup. This is probably very little, because we have ceased to be a molasses or sirup consuming nation, and we now export large quantities of sirups to Europe, where they are used in distilleries and as a substitute for linseed cakes in feeding stock.

On 90-degree sugar the protection would be about one hundred and twenty-four one-thousandths cent per pound; on 90-degree sugar, about seventeen one-hundredths cent. From 90-degree down to 80-degree sugar the protection declines somewhat, but as the amount and quality of the molasses yielded increases greatly, something should be added on this account.

It is not improbable that the sugar trust would be glad to get more protection. It is also not improbable that it is playing with loaded dice and that it lobbied the present rates through the Senate, intending later to show the injustice of such duties and to secure more protection. Here is one of the places in which the sugar schedule needs repairing:

Beet sugar, as now imported, actually tests 94 or above by the polariscope, but as it contains more ashes or salts than cane sugars, which injure the quality of the sugar and are hard to extract, it is customary to deduct from the actual test about 5 per cent for every 1 per cent of salts. The average test at which they are now sold is about 90 polariscope, though they are rated according to what is called "88 analysis." Even after making deductions, the price of beet sugars is about one-fourth of a cent per pound less than cane sugars of similar test. It is evident that duties based strictly upon polariscope tests would discriminate against beet sugars, which form about one-fifth of our imports.

PRICE OF SUGAR STOCKS.

The sugar-trust officials fully understand these facts, but they did not choose to point them out until after they had secured an admission from the Senate committee that there should be some protection left on refined sugar. They intend later to get in their fine work when the schedule is revised. Probably they will try to obtain ad valorem duties on all sugars as the only way to prevent complications and effects of this kind.

That our refining industry would not be destroyed by the proposed duties is evident from the fact that sugar stocks are now selling between 85 and 90. This shows what those who best understand the facts think of the prospects. When it looked as if we might have free trade in sugar, stock sunk to below 70.

It is unnecessary to enumerate in detail more of the many cases of trust lying. In spite of the fact that Willett & Gray, in 1891, estimated the total cost of refining at one-half cent per pound, they are now claiming that it costs five-eighths of a cent. The Journal of Commerce has repeatedly taken them to task for this absurd claim, but they continue to make it.

The trust is foxy in every way. When the New York State legislature was probing the trust and asked for its books, it was discovered they had disappeared from their accustomed places, and none of the officers appeared to know or care where the accounts were. The books were never produced before the legislature.

In January, when the House was discussing the proposed duties, the time arrived for the trust to meet and declare its usual quarterly dividends of 3 per cent on the $37,500,000 of common and of 1½ per cent on its equal amount of preferred stock. Strange to say, no quorum was present. A month later the tariff skies had not yet cleared, and not a single official saw fit to attend the meeting—a remarkable unanimity of forgetfulness. Last Saturday the officers met on the quiet and declared the dividend.

One of the trust's ways of concealing surplus profits is to pay large salaries to all connected with the business. The proprietor of the Forest City Refinery, at Portland, Me., is said to receive $12,000 a year, though his refinery has been closed since it entered the trust in 1887. Others are said to receive as much as $60,000 a year for equally onerous work. It is also quite probable that many refiners were induced to join the trust by giving them fat contracts for supplying barrels, tanks, bags, gas, etc., to the trust. It is certain that in many cases all of the allied industries of making barrels, bags, etc., were withheld from the trust.

The trust is now buying all sugar in sight and is chartering vessels to go to the West Indies and elsewhere, to return with cargoes of sugar before the new tax shall take effect.

Without reading it, I will ask that the remainder of the article be inserted in my remarks.

The PRESIDENT pro tempore. That order will be made, in the absence of objection.

The remainder of the article is as follows:

We have seen that the sugar trust can refine sugar more cheaply than it is refined anywhere else; that it has by far the largest and best equipped refineries in the world; that it pays less for labor per product than refiners in any other country; that it employs chiefly imported Huns and Poles, and treats them in a most degraded, slavish manner; that it is paying enormous dividends on highly watered capital; that there is no justification for protecting it because of export bounties in Europe, or for any other reason; that it has been a chief source of bribery and corruption in our legislative, executive, and judicial halls; that it has a complete monopoly in this country, and is most greedy and exacting in its demands, and that it is a constant violator of Federal and State antitrust laws.

MR. HAVEMEYER IS ON GUARD—IN CHARGE OF THE SUGAR FIGHT IN THE SENATE—WILL HILL ATTACK THE TRUST?

[Special to the World.]

WASHINGTON, *March 13.*

Henry O. Havemeyer, head of the sugar trust, has returned to his old quarters in the Arlington, and has resumed his conferences with Senators on the sugar schedule. Notwithstanding that the Senate has refused to investigate the charge that certain Senators have been speculating in sugar stock, his movements are as mysterious as before.

Mr. Havemeyer has discovered that while the sugar schedule is acceptable to the trust it will be hard to get it through the Senate, and it is his plan, if no investigation is ordered, to remain here and personally direct the campaign. The Louisiana cane-sugar men have made an alliance with him, and the combination is expected to insure the passage of the tax on refined sugar.

The sugar men understand that the sugar schedule will be fought by many Democrats who favor free sugar, but it is not this opposition that the trust fears most. It has been a liberal contributor to the campaign funds of both parties, and sugar profits have played no small part in the political fights in New York State. The trust has played a sharp game, but according to reports heard here to-day it dipped into the Democratic factional struggles in New York State, and it is this that promises to upset its plans in the Senate. Senator Hill has learned, it is said, that the trust contributed $25,000 to the antisnapper movement, and is awaiting an opportunity to expose it. He will not discuss this rumor.

Mr. Havemeyer has heard the rumor and he has arranged to stay here and await developments. There is a long and bitter fight ahead in the Senate first, then in the House, if the Senate passes the bill, and finally in conference. The opinion that sensational facts about the trust methods will be brought to light is expressed freely.

Mr. CAFFERY. Mr. President, a basis has been taken to ascertain the amount of raw sugar it requires to make a pound of the refined sugar from the Treasury statement, and that statement is challenged as to its correctness. I will ask the distinguished Senator from Iowa, who is in charge of this bill, upon what is based the statement from the Treasury as to the number of pounds of raw sugars it requires to make a pound of refined sugars at any degree? I am not aware of the basis of the statement made by the Treasury officials as to the number of pounds of raw sugars it requires to make a pound of refined.

Mr. ALLISON. I have not the Treasury circular before me, but I take it for granted that it is very well stated in the table inserted by the Senator from Missouri [Mr. VEST] on yesterday. I believe those figures are correct. It is also found on page 10.

Mr. CAFFERY. Does the Senator state that in his view these tables are correct?

Mr. ALLISON. They are taken from the Government circular and estimate.

Mr. CAFFERY. But I ask the Senator from Iowa upon what the Government officials base the statement? It is a well-known fact that all the secret processes of refining are known only to the sugar trust. It requires a first-class chemist to estimate the amount of raw sugar at any specific degree it takes to make a pound of refined sugar, and the statement of the Treasury officials is challenged as to its correctness by other experts.

Mr. ALLISON. I understand that these statements from the Treasury have been made up by experts of the Treasury Department from actual tests. Of course, I do not know what the processes are by which these experts reach their conclusions, but they are well settled, and are admitted to be correct, I believe, by those who have investigated them.

Mr. CAFFERY. I have the paper now containing another estimate made from statements by competent chemists and by Mr. B. W. Holt, a competent tariff expert. These statements show that the Treasury estimate is too high; that the Treasury estimate requires more pounds of raw sugars at a certain specific test to make a pound of refined sugars than is actually the case.

The sugar trust has evaded all inquiries into its business. It refused to give to the census takers the data necessary for them to have in order to make up the proper census returns of the sugar-refining business. That is well known to the Senator from Iowa. They referred Mr. Porter and his agents, when they were taking the census, to other persons than themselves for the desired information, and it is supposed that the Treasury officials, having no other means of ascertaining the number of pounds of raw sugar that were required to make a pound of refined sugar, obtained the information from the trust officials themselves.

I shall read what purports to be a true estimate of the number of pounds of raw sugar it takes to make a pound of refined sugar and compare this estimate with the estimate made by the Treasury officials. At 100 degrees of polariscopic test, of course there can be no difference; at 99 degrees, the Treasury report is 101.87. The corrected statement, or the statement which I introduce as correct, is 101.01 of a pound. At 98 degrees, the Treasury estimate is 103.73 of a pound; the corrected estimate is 102.04 of a pound. At 97 degrees, the Treasury estimate is 105.60; the corrected estimate is 103.09 of a pound. So it runs on down. At 87 degrees, I will take the Treasury estimate, which is 124.27 of a pound, and the corrected estimate is 114.94 of a pound.

Mr. President, it is easily seen that if there had been any juggling with figures or any incorrect estimate derived from the officials of the sugar trust in regard to the number of pounds of raw sugar it requires to make a pound of refined sugar, a calculation on the basis of the Treasury official statement must necessarily be erroneous and necessarily be in favor of the trust.

It will be further seen from an investigation of the amount of the differentials in favor of the trust upon raw sugars and refined under the proposed sugar schedule that the protection is much greater upon the lower grades of sugar; and how easy it is, if there were a market abroad for the export of our refined sugars, for the sugar trust to make an enormous amount of money in exporting sugars under a false estimate of the number of pounds it requires to make refined sugars from the low-degree polariscopic test of raw sugars.

Some years since there was a very large amount of money that the sugar trust obtained from the Treasury of the United States upon the drawback allowed them on the export of refined sugars by falsely estimating the number of pounds of raw sugar it required to make a pound of refined sugar. So the same thing can be done under this bill, were there an opportunity for the sugar trust to export its refined sugars. They practically hold the market for all cane sugars.

The only fear of competition they have is from the German granulated sugar, and I propose to show that that fear is overcome, if it exists, by reason of the differential allowed to them in this bill. If, then, they can import raw cane sugars and overestimate the number of pounds of raw cane sugar of a certain polariscopic test it requires to make 100 pounds of refined sugar, and can find a market for the export of whatever surplus they make beyond supplying the home market, there is a fine opportunity for them to reap a rich harvest abroad.

In connection with these figures, I will submit a statement prepared by Mr. Holt, the gentleman who kindly furnished me with the corrected statement as to the number of pounds of raw sugars it requires to make a pound of refined—the statement that I have just read. I will ask my friend from California to read this statement for me.

Mr. WHITE read as follows:

The amended Senate sugar schedule protects American sugar refiners in several ways:

First. By a direct bonus of 20 cents on every hundred pounds of refined. This amount is undeserved and indefensible from any other standpoint than that it is the business of the Government to help those who help themselves. As we consume annually over 4,000,000,000 pounds of refined sugar, this gratuity for the refiners amounts to over $8,000,000 per year. This is fully twice the amount of wages paid in refineries in this country, even when including the $250,000 salaries paid to five sugar-trust officers. Statistics obtained from the Census Office in 1894 show that only seventeen establishments were reported as engaged in the refining of sugar in the census year of 1890. These did not include the trust's largest refineries, in which the cost of refining is lowest.

The trust absolutely refused to comply with the census laws. The seventeen establishments reporting paid $1,728,417 in wages, other than salaries, to 3,854 employees. The value of their products was $110,492,163. The labor cost, therefore, was only 1.56 per cent in the smaller establishments, or, including salaries, 1.78 per cent. The average value of refined sugar in 1890 was about 6¼ cents per pound. Therefore the labor cost per pound was only twelve ten-thousandths of a cent. Why, then, even on protection grounds, should the refiner receive a direct and clear protection nearly double the total labor cost? As a matter of fact, the "difference of labor cost" between this and other countries is all in our favor. In no other country is sugar refined as cheaply as here.

Second. The refiners are protected by the difference between the present (40 per cent ad valorem) and the proposed duty on all of the sugars in the refiners' hands at the time the new bill becomes a law. About 2,050,000,000 pounds of sugar were imported during the months of March, April, and May, 1897. It will come in rapidly during June and July. According to Willett & Gray's Sugar Trade Journal of June 3 there was 616,880 long tons or 1,381,811,200 pounds of sugar in the hands of refiners and importers on June 3.

This amount will probably be increased to 2,000,000,000 pounds when the new tariff becomes a law. There is over one-half cent per pound difference between the present and the proposed rates of duty. The refiners, therefore, will profit by about $10,000,000 by their speculations in sugar and by their foresight in chartering so many sugar-carrying ships that it is at present difficult for outsiders to import sugar. Besides, the outsiders have not, as has the trust, constantly on hand $4,000,000 or $5,000,000 belonging to wholesale grocers—unpaid rebates—and millions of surplus profits awaiting just such opportunities for investment.

Third. The countervailing duty of 38 cents per hundred pounds on refined sugars from Germany is practically all protection for refiners. If our refiners should import and refine German beet-root sugar, they would have to pay on enough raw to make 100 pounds of refined sugar a countervailing duty of about 31 cents. Therefore this net protection against German refined sugars is about 7 cents per hundred pounds. As a matter of fact, our refiners are not at all dependent upon Germany for raw sugars, and under the new law they would practically cease to import German raw sugars. They would then enjoy almost the full protection of the 38 cents per hundred pounds on German refined sugars, these being the principal sugars which compete with our refined sugars in our markets.

These countervailing duties are virtually discriminations against German sugars as between our market and the markets of the rest of the world. Stated in another form, German sugars, because of the export bounty, have an advantage over competing sugars in all markets of the world except ours. Our countervailing duties would therefore result in excluding German sugars from our markets. This would be so because the markets of the world, outside of Germany and the United States, are so big that they afford ample opportunity both for our refiners to purchase raw sugars and for German refiners to dispose of refined sugars. This countervailing duty would therefore permit our refiners to elevate prices about 38 cents per hundred pounds higher than would otherwise be possible.

Fortunately for the refiners, they are in shape to pull together to take full advantage of such favorable conditions. It is an appreciation of all these facts which has caused Germany and Austria to protest strongly against such discriminations. Our consumers should also protest. If Germany has such friendly feelings toward the rest of the world that she pays her sugar makers to dump sugars in other markets, why should we object to having them dumped here and to giving our people the full benefit of cheap sugars? England has for years taken such gifts from Germany and France, and by so doing has not only given her people the cheapest sugar ever known, but has built up her canning and preserving industries so that she supplies the whole world with jellies, jams, and preserves.

Fourth. The sugar trust will get considerable protection and relief by the insertion of the provision which makes all refined sugars dutiable at $1.95 per hundred pounds. Heretofore only such refined sugars as were above No. 16 Dutch standard in color have had to pay the highest rates on refined. Small quantities of refined sugars, some above and some below No. 16 and testing from 87 to 93 degrees, are being imported. They are used by bakers and manufacturers of certain kinds. The American Biscuit Company uses large quantities of these sugars. While the quantity imported is comparatively insignificant, yet these sugars compete with several grades of the trust's "soft" sugars and prevent the trust from getting exorbitant prices for such sugars as can be consumed in an uncrystallized form.

Under the proposed duty, a pound of cheap refined sugar testing 87 would pay a duty of 1.95 cents, while a pound of raw sugar testing 86 would pay only nine-tenths of a cent. It is needless to say that with such unjust discriminations against these sugars, they would be excluded from our markets. The trust will then say to the users of these sugars: "Buy our hard refined sugars at our prices or take our 'softs' on the same terms." Without a possibility of producing revenue, this slyly inserted provision will put an occasional odd million into the trust's already fat pockets.

Fifth. The extra deduction of 10 cents per hundred pounds on raw sugars below 87 degrees gives so much additional profit on the low-grade sugar imported. These being the sugars which compete largely with the raw sugars produced in this country, the trust will not be likely to overpay our beet-sugar farmers for their products.

Sixth. There is much concealed protection in the proposed specific duty on raw sugars. These duties are apparently adjusted to the allowances for 100 pounds of hard refined sugar made by the Treasury Department in the payment of drawback duties. Even if these allowances were correct, the specific duties decline so rapidly that they slightly favor the importation of low-grade raw sugars. There is, however, good reason for believing that these allowances are unfair, and that they will operate to give export bounties to refiners whenever the refiners care to engage in the export business, which they will probably do as soon as the sugar duties are fixed for a few years.

They "gouged" our Treasury Department out of about $3,000,000 in this way in the early eighties, and can be expected to do so again when "all this howl about trusts" and tariffs is out of the way for awhile. They would probably be exporting now but for the heavy German export bounty. The following table has been prepared after consultation with numerous sugar brokers, importers, and chemists. It is believed that it makes liberal allowances. The profits shown in this way do not include those made on soft sugars and molasses, nor those from contravailing duties:

ACTUAL PROTECTION ON REFINED SUGAR WHEN MADE FROM EACH GRADE OF RAW SUGAR.

Statement showing the actual number of pounds of raw sugar of each grade needed to make 150 pounds of refined, compared with the present Treasury table of equivalents, and the actual net protection of refiners based on these equivalents.

Raw "test" degrees.	Pounds required.			Duty per pound.	Duty on actual amount.	Duty on 100 pounds refined.	Protection.
	Theoretical.	Treasury.	Actual.				
				Cents.			*Cents.*
100	100	100	100	1.75	$175.00	$1.95	20.00
99	101.01	101.87	101.2	1.72	174.06	1.95	20.94
98	102.04	103.73	102.4	1.69	173.05	1.95	21.95
97	103.09	105.60	103.7	1.66	172.14	1.95	22.86
96	104.17	107.47	105	1.63	171.15	1.95	23.85
95	105.26	109.34	106.4	1.60	170.24	1.95	24.76
94	106.38	111.20	107.8	1.57	169.25	1.95	25.76
93	107.53	113.07	109.3	1.54	168.32	1.95	26.68
92	108.69	114.94	110.8	1.51	167.31	1.95	27.69
91	109.89	116.81	112.3	1.48	166.20	1.95	28.80
90	111.11	118.67	113.9	1.45	165.15	1.95	29.85
89	112.35	120.54	115.5	1.42	164.01	1.95	30.99
88	113.64	122.41	117.1	1.39	162.77	1.95	32.23
87	114.94	124.27	118.7	1.36	161.45	1.95	33.55
86	116.28	126.14	120.3	1.33	150.00	1.95	45.00
85	117.65	128.01	122	1.30	148.60	1.95	46.40
84	119.05	129.88	123.7	1.27	145.83	1.95	49.17

Putting together the different kinds of protection to refiners under the proposed rate, we have, for 96-degree cane sugar, which includes more than half of all imported, the following protection on 100 pounds of refined sugar:

	Cents.
Differential (195-175)	20.00
Graded specific duty	3.85
Countervailing duty	38.00
	61.85

On 84-degree sugars, which include about 5 per cent of our imports, the protection on 100 pounds of refined is about as follows:

	Cents.
Differential	20.00
Extra differential	10.00
Graded specific duty	29.17
Countervailing duty	38.00
	97.17

Senator ALDRICH stated in his speech of May 25:

"As a basis for the calculation of the number of pounds of sugar of each polariscopic test required to make 100 pounds of refined sugar, I have taken the statement of the Treasury Department, promulgated June 25, 1896, Department Circular No. 102. I assume there will be no question as to its accuracy. The computations have been confirmed by various statements furnished by the appraiser's office in New York.

"For illustration, I will take an analysis of sugar tested 88 degrees, made by the chemist in charge of the sugar laboratory in New York. This sugar contained seventy-four one-hundredths per cent of ash, 4.13 per cent of invert sugar, and an out-turn of 81.85 per cent of crystallized sugar. Of this sugar it would take 122.17 pounds to make 100 pounds of refined sugar. The Treasury estimate is 122.41 for this test. It will be noticed that this sugar contained 4.13 per cent of invert sugar. This invert sugar becomes sirup in the process of refining, and is worth from one-half to three-fourths of a cent a pound. The result in this case would probably be a fair estimate of the average result of the value of the residuum of invert sugar contained in all cane sugars testing in the neighborhood of 89 degrees. The value of this sirup would not appreciably affect differentials."

This statement is lacking in several particulars. It leaves unaccounted for 6.15 pounds of crystallizable sugar. If his sample tested 88 degrees, it contained 88 per cent of crystallizable sugar. He says that it yielded 81.85 per cent. Where is the remaining 6.15 per cent? The invert sugar is not a part of this 6.15 per cent, because invert sugar does not materially affect a polariscope. As a matter of fact, 3.70 of the 6.15 per cent is crystallizable sugar held in chemical combination with the seventy-four one-hundredths per cent of ash or salts. The most of this 6.15 per cent is, in practice, either made into crystallizable sugar, or, with the invert sugar, into low-grade sugars and sirups. In either case, both are of considerable importance, and should be considered in making up a tariff schedule. Even with 6.15 per cent of crystallizable sugar unaccounted for, Senator ALDRICH finds that the Treasury Department allows twenty-four one-hundredths of a pound too much.

Mr. CAFFERY. Mr. President, there are several points in this statement which are very forcible. The percentage of labor cost in refining is a very material point. The percentage of labor cost of the product is 1.56 per cent, without including enormous salaries that this institution pays to its officials, and including those salaries it is only 1.78 per cent; second, the trust has already imported into the United States a very large amount of sugar; and it is estimated that before this bill can be enacted into a law about 2,000,000,000 pounds of sugar will have been imported. That is a half year's supply.

Mr. President, the sugar-trust managers are among the most astute of men. They would never have imported this sugar in anticipation of the enactment of this bill into a law were not the terms of this bill more favorable to them than the terms of the Wilson law.

Mr. GEAR. Would it disturb the Senator if I should ask him a question?

Mr. CAFFERY. Not at all.

Mr. GEAR. I understood the Senator to say that the sugar recently imported into this country has been very largely in excess of the ordinary importations?

Mr. CAFFERY. Yes, sir.

Mr. GEAR. What is the amount?

Mr. CAFFERY. I will read it from this statement. About 2,050,000,000 pounds of sugar were imported during the months of March and April.

Mr. GEAR. The report of Willett & Gray shows that the imports for those months were but 646,000,000 pounds, in round numbers, and that the amount in the hands of the refiners yesterday was 394,000,000 pounds, showing that the difference between 394,000,000 pounds and 646,000,000 pounds was held by these people. I will read from Willett & Gray. I have the statement here in my hand.

Mr. CAFFERY. According to Willett & Gray's Sugar Trade Journal of June 3, there were 616,800 long tons, or 1,381,811,200 pounds, of sugar in the hands of refiners and importers on June 3.

Mr. GEAR. That does not show, if I may be permitted to say it, that there is any very undue excess of importations this year. It is little more than usual, but not very much.

Mr. CAFFERY. It is more than double the amount.

Mr. GEAR. I beg pardon; because the consumption is 400,000 tons for four months. The consumption is 2,000,000 tons annually in this country, in round numbers.

Mr. CAFFERY. About that.

Mr. GEAR. About that, in round numbers.

Mr. CAFFERY. Yes.

Mr. GEAR. That shows that only one-third of the annual consumption in this country has been introduced into this country in four months. So there must be some mistake about the

importations being of an unusually large amount in view of the possible passage of this bill.

Mr. CAFFERY. I have seen it stated that the importations of this year are in excess of any previous year in the history of the importation.

Mr. GEAR. It can not be. The Senator can not make a statement here that will not pan out with the consumption.

Mr. CAFFERY. I propose to make this statement good.

Mr. GEAR. That is right.

Mr. CAFFERY. I propose to show that the importations of sugar into the United States this year are in excess of any year heretofore. If I am mistaken in the statement, of course I will acknowledge the error.

Mr. GEAR. I have no question that the Senator makes the statement in earnest, because he believes it.

Mr. CAFFERY. I do believe it.

Mr. GEAR. I call his attention to the fact that the annual consumption is only 2,000,000 tons, and that the importations from the 1st of January and for the first four months have not been in advance of the consumption of this country. The two must be reconciled.

Mr. CAFFERY. That may be true, but this is in excess. This is the stock on hand. This will last six months. That is what I say, and it is a larger amount of sugar imported than ever has been imported before.

Mr. GEAR. To make the statement perfectly correct, the Senator must add to the amount of importations the amount of sugar on hand on the 1st day of January. That will give the exact amount of the stock on hand and the amount imported. Then you can prove whether the importations and the stock on hand are equal to the consumption.

Mr. CAFFERY. All I desire to show is that there is a stock now on hand and prospectively to be imported six months in advance of the consumption. If I prove that, I prove my case. It is idle to inquire any further.

Another point made in this communication, which in my opinion is very forcible, is that the countervailing duty of 38 cents per 100 is quite a sufficient differential in favor of the trust. There is no other competitor than the Germans. The cane sugars used in the world are in the hollow of the hand of the sugar trust. The Germans occupy all other markets. If the Germans can be kept out, then the trust has the sole monopoly of the trade of the United States.

The differential of thirty-eight one-hundredths of a cent a pound looks to be sufficient to keep out the import of the German granulated. If that be true, then the trust has the markets of the United States in the grip of a monopoly which has never relaxed since there was a large differential imposed between the raws and the refined.

Mr. President, I will send to the desk and ask the Secretary to read both the letter written by Mr. Carroll D. Wright to the Hon. John De Witt Warner and the statement which the Commissioner sends with it.

The PRESIDING OFFICER (Mr. PERKINS in the chair). The Secretary will read as indicated.

The Secretary read as follows:

DEPARTMENT OF THE INTERIOR, CENSUS OFFICE,
Washington, April 11, 1894.

SIR: In reply to your letter of April 6, 1894, I take pleasure in handing you the inclosed statement presenting totals for 17 establishments located in the United States reported to this office as engaged in the refining of sugar during the census year ending May 31, 1890. These 17 establishments are included in the 300 establishments presented in the published reports of this office under the title of "Sugar and molasses refining."

Very respectfully,

CARROLL D. WRIGHT,
Commissioner of Labor, in Charge.

Hon. JOHN DE WITT WARNER,
House of Representatives, Washington, D. C.

ELEVENTH CENSUS OF THE UNITED STATES—STATISTICS OF MANUFACTURES.

Statement of the totals for 17 establishments in the United States reported as engaged in the refining of sugar during the census year ending May 31, 1890.

Items.	Total.	Louisiana.	Pennsylvania.	All other States.*
Number of establishments reporting	17	9	3	5
Capital, aggregate	$18,581,330	$1,684,806	$6,167,050	$10,729,474
Miscellaneous expenses	$5,515,567	$495,680	$508,490	$4,511,388
Average number of employees, aggregate	4,025	1,395	1,174	1,456
Total wages	$1,906,562	$372,556	$629,112	$904,894
Officers, firm members, and clerks—				
Average number	171	31	46	94
Total wages	$298,145	$30,316	$47,518	$164,311
All other employees—				
Average number	3,854	1,364	1,128	1,362
Total wages	$1,728,417	$346,240	$581,594	$800,583
Cost of materials used	$97,518,028	$11,053,911	$39,363,412	$47,100,705
Value of products	$110,492,163	$12,372,598	$43,838,548	$54,281,017

*Includes establishments distributed as follows: California, 2; Maine, 1; Massachusetts, 1; New York, 1.

Mr. CAFFERY. There is no speculation about that. It comes direct. It shows the correctness of the figures of Mr. Holt. There is the gross value of the output of these refineries; there is the gross amount of wages they pay; and the percentage is easily ascertained from those two factors. The percentage stated in the statement of Mr. Holt of 1.56 per cent, 1.78 per cent including the salaries of officials of the sugar trust, is well authenticated by the letter of Mr. Wright.

This information has been eked out, not by any particular statement of the sugar trust, but by investigations of Mr. Wright in all the refineries that he could reach, the sugar trust always on all occasions smothering up the real facts surrounding its business, and it was only by importunity and constant demands on the part of the census officials that what little information is put down in the census was obtained from them.

Here is an institution which under every bill that comes before Congress appears to be the recipient of peculiar favors. It is no answer to say from the other side that the Wilson Act gave a too great differential in favor of the sugar trust. The pending bill carries more than the Wilson Act, and the Wilson Act carried too much. As the Senator from Arkansas [Mr. JONES] said yesterday, he was at the time of opinion that the differential in favor of the trust of one-eighth with the countervailing tenth was deserved, that their business required it, but subsequent developments have opened his eyes in that regard and he does not think they ought to have any.

Here is an institution where the labor cost of the product is 1¼ per cent in the largest refineries in the world, making the cheapest output in the world, with the largest market in the world, selling more sugar than the combined factories of Europe or as much, and this institution, with its enormous plant, with its diminished labor cost, and with its market right at its hand, is constantly importuning the Congress of the United States for special privileges and favors.

The first report that came from the House was based upon specific duties. The Senator from Rhode Island [Mr. ALDRICH] in introducing his amendment stated that the bill gave the trust too much. He proposed to give them less. There has been no calculation made by any expert acquainted with the subject which has not shown that his differential is greater than that contained in the Dingley bill. Calculate it from any point you please, take even the statement of the Senator from Rhode Island, and you can not make the differential less than between forty and forty-eight one-hundredths of a cent per pound.

I propose now to have read a statement from the New York Staats-Zeitung of June 4 and 5, 1897. It was prepared evidently by an expert familiar with German sugar and familiar with polariscopes and with the whole subject of sugar. I send it to the desk, and ask that it be read.

The PRESIDING OFFICER. The Secretary will read as indicated.

The Secretary read as follows:

THE SUGAR TARIFF.

[From the New York Staats-Zeitung of June 4 and 5, 1897.]

When, less than three years ago, the Wilson tariff was being discussed in the Senate, the sugar trust exerted a powerful influence. It could, indeed, be seen that the trust decided in what form the sugar duty should be levied, and that no tariff bill was then possible which did not satisfy the wishes of the trust. It is now conceded that similar conditions exist, and we may assume that the sugar trust this time also approves of the schedule, if it has not actually dictated it.

That Senator ALDRICH's assertions that the trust has had nothing at all to do with the tariff bill can not be believed without further proof follows from the fact that in an entirely unnecessary manner a mixed duty—that is, both a specific and an ad valorem duty—has been laid upon sugar. It follows from this fact, not alone, as has already been explained, that the trust can bring in sugar bought in far-away markets cheaper than others who can not avail themselves of this important aid, but also makes it more difficult to determine in practice where and how heavily the tax would fall.

For this reason we have so far seen in no paper an exact calculation of the protection offered this trust by the Aldrich tariff, and it has been with much labor that we have collected, from the statements of experts, the following tables, which we consider correct.

The Senate tariff imposes the following taxes:

	Cents.
(1) Raw sugar, not over No. 16 Dutch standard of color, standard sugar polarization ("testing") at least 87 degrees but not over 88 degrees, per pound	0.79
For each additional per cent over 88 degrees in addition to the foregoing, per pound	.02
(2) Raw sugar over No. 16 and refined sugar and in addition 35 per cent ad valorem on all kinds, per pound	1.16

Upon the operations of this duty we consider in the first case European beet sugar, for the trust wishes protection against the importation of European, especially German and Dutch, refined sugar. The greatest part of the raw sugar imported from Germany consists of the so-called first products, which, upon the basis of 88 degrees analysis (not to be confounded with polarization or "test"), are sent to America, and the greater part of which is capable of a polarization of 94 to 95 degrees; the equally valuable imported so-called after products, the second, third, and even the fourth product—strontian and osmose sugar polarization apparently lower—are on the average reckoned at 90 to 91 degrees, but the importation is not considerable enough to reduce the average polarization of the beet sugar sent to America lower than 94 degrees, and for that reason we take this standard as the normal one in our calculation.

A 94-degree sugar would have to pay the following tariff:

		Cents.
Duty up to 88 degrees	per pound..	0.79
88-94 degrees—6 per cent, 0.02 cent	do....	.12
		.91

to which the ad valorem duty of 35 per cent is added. Following the estimates of the tax collector, we set the present value as 2.3 cents per pound for raw sugar and 2.9 cents per pound for refined sugar. This is not exact, for the present values are lower, but as long as the difference between the prices of raw and refined sugars is about six-tenths of a cent per pound this little variation is of no account.

	Cents.
We have now, as above stated	0.91
Add 35 per cent ad valorem on 2.3 cents, equals	.805
Making a total tax of	1.715

per pound, 94-degree raw sugar, which is almost 75 per cent of its actual selling price.

Now we come to the sugar over No. 16 Dutch standard, and refined sugar. (Really it relates almost entirely to "granulated.")

		Cents.
The tax thereon levied	per pound..	1.16
And the value of the goods, as already stated, being 2.9 cents, the 35 per cent ad valorem tax levied equals	per pound..	1.015
A total tax of	per pound..	2.175

or exactly 75 per cent of the value of the sugar. According to percentages, the raw and refined sugars are treated alike, and a difference arises in the duty of between 2.175 on refined sugar and 1.715 on raw sugar of forty-six one-hundredths of a cent per pound.

From Hamburg, for example, to New York it costs now, laid down (the freight need not be considered, as it is exactly the same in both cases):

	Cents.
1 pound granulated	2.90
Duty	2.175
Total	5.075

And further—

	Cents.
1 pound 94-degree raw sugar	2.30
Duty	1.715
Total	4.015

And also a great and puzzling difference of 1.06 cents between raw and refined sugar, about which we will have more to say to-morrow.

II.

As we showed yesterday, the difference in value between raw and refined sugar (we speak always of granulated) before the paying of the tax was six-tenths of a cent, but after payment amounts to 1.6 cents—the difference therefore cleverly raised to forty-six one-hundredths, which amount represents the actual protection which the trust enjoys. When it is taken into consideration that the trust, owing to its far-reaching connections and its great resources, seldom pays the full, and never the highest market price for its raw sugar, it can be plainly seen that under the Aldrich tariff it will not place itself in a worse position than it occupied under the McKinley bill, when raw sugar was free and refined sugar paid one-half cent per pound.

But probably the protection is still greater. To be able to calculate it accurately we must know the cost of refining, which is exactly what can not be discovered. That is a trade secret which any other refiner will betray as little as the trust. We can not expect that business men will give that information. Certainly, however, they must then be content if the public draws its own conclusions and acts upon them. We believe to-day, and we base our belief upon the testimony of experts as well as the statements of officials and intimate friends of the trust, that we can refine sugar cheaper here than in Germany. That has been so often clearly demonstrated that it is not necessary for us to refer to it again. Even if the refining would cost as much or more than in Europe, still the trust would not need protection, for it has many other advantages over European competition, as, for example, a better method of packing goods, which causes them to be preferred by their customers, of prompt delivery, and a greater facility in financial exchange. There is, therefore, at present not the least excuse for putting a higher duty on raw than on refined sugar.

In spite of these facts, Senator ALDRICH, who himself declared in his great tariff speech that the cost of refining, including everything (even including the loss of raw sugar), amounts to one-half cent per pound, has given the trust a protection of at least forty-six hundredths of a cent per pound. There is, indeed, no mention of an attempt to equalize the actual or at least supposed difference of labor cost of turning raw into refined sugar. In spite of all this, it may be that European refined sugar can and will be imported; but there are other reasons for this besides that of price, and so long as the trust can count on a half cent per pound more than it ought to have on about 95 per cent of the sugar consumed here, it can complacently allow some 4 per cent to be imported. It does in this way a better business than if it reduced the price so far as to entirely prohibit the importation of refined sugars.

At the same time the trust can always bring forward the importation as a proof that the duty is not unreasonably high. Therefore, in every way it pays the trust to hold its price so high that importation is impossible.

The cheek of those who advocate and support the sugar schedule is almost unbelievable. It is not possible to believe that Senator ALDRICH is misinformed. He knows exactly what he does and the amount of his gift to the sugar trust. The trust may count about half a cent more for every pound of sugar which it sells. As the yearly consumption amounts to about four thousand million pounds, this present is equal to about $20,000,000, which sum the people must pay and of which not one cent finds its way into the Treasury of the country.

Mr. CAFFERY. Mr. President, the calculation made by the writer in the Staats-Zeitung shows the difficulties of unraveling the schedule introduced as an amendment by the Senator from Rhode Island to the Dingley bill, which amendment he subsequently withdrew and adopted the Dingley bill to a great extent. The basis of the calculation makes the differential between the raw German sugars and the refined article at the start only 6 mills, and by applying the exceedingly intricate provision of the schedule as proposed by the Senator from Rhode Island the differential figures out forty-six one-hundredths of a cent.

By a calculation which to me appears to be entirely correct, and if there is any error in it I can not perceive it, forty-six one-hundredths of a cent is the outcome between the raw and the refined. Starting with 6 mills differential only between the raws and the refined, the outcome under the operation of the amendment proposed by the Senator from Rhode Island is 46 mills differential.

That schedule was a dazzling piece of business. Nobody could understand it hardly; nobody but an expert in the American Sugar Refining Company, outside of the Senator from Rhode Island, could understand it, and I suppose it was in deference to the protests of those who failed to understand the intricacies of the schedule that it was abandoned and the specific rates of the Dingley bill adopted in lieu.

This shows, Mr. President, the exceeding caution with which we ought to move with regard to any schedule containing a differential in favor of the sugar trust. Here are statements made that the Treasury estimate itself is erroneous; that the Treasury estimate is based upon information from the sugar trust as to the number of pounds of raw sugar it takes to make a pound of refined. All these calculations are based upon the Treasury estimate, and where could the Treasury get its estimate? Nobody knows exactly but a chemist, and I am told that a chemist will give no information to a private party. Why is this information concealed? What is there hidden about this thing, unless it is for the benefit of this enormous institution? This is the only gigantic trust in the world that rests entirely upon legislation for its support.

The ordinary battle between the producer and the manufacturer of the finished product in regard to a tariff upon the raw material pales into insignificance when it comes to the demand of the sugar trust for a difference between the tariff upon the raw sugar and the tariff upon the refined. It is by legislation that it controls the price of the cane sugar of the universe, and whenever that institution thrusts its presence into the legislative halls there is always a feeling that an evil genius is around.

There appears to be a kind of malodor arising from the efforts of the sugar trust to obtain legislation in its favor.

If it appears by reasonable showing, if it appears from the face of the papers and by intelligent and sufficient evidence that this institution ought not to desire or ought not to demand and ought not to receive the great differential that has been given it between the tariff on raw and refined, now is the time to refuse its demands.

The political play that was indulged in during the enactment of the Wilson bill does not influence me at all in the position I take upon this subject. I think that any political advantage to be derived by attempting to place obloquy upon one side or the other of this Chamber in framing a tariff bill has little weight with one who desires to frame a tariff bill in the interest of his country. It has no weight with me.

The animus that impelled the investigation during the pendency of the Wilson bill in the Senate was more political than otherwise. It was an attempt to smirch the reputation of Senators supposed to be Democratic. It was not an attempt to advance the interests of the country, because here is a bill that carries more differential than the Wilson bill, and the question is as to whether the consumers of this country are interested in this differential, and whether the Senate of the United States is going to accord to this giant industry, which overshadows the earth with its power, which goes to the Hawaiian Islands, to the West Indies, to Asia, to Egypt, and to every quarter of the globe to get its supplies, and wherever its ships go there the trust commands the price, a further lease of power to control the price of this indispensable article of food and raise it or lower it at its sweet will and caprice.

While I have no animosity against the trust because it has heretofore been playing a tyrannical part in the industrial rôle in this country, I desire that the consumers of sugar shall get it at the lowest price commensurable with an adequate tariff for revenue. But I oppose the differential to the degree that it has been allowed in this bill in favor of the sugar trust on the ground of unjustifiable favors.

On one occasion, before some committee of Congress, at some time in the past, one of the members of this sugar-trust organization, Mr. Theodore Havemeyer, who is now dead (whether the American Sugar Refining Company was then a trust or not I do not know; whether it was prior to the organization of the trust I am not certain), testified that his concern could make sugar cheaper than any other refinery in the world. The evidence, derived from the Commissioner of Labor, in regard to the small percentage of the labor cost of the refining process, more than corroborates Mr. Havemeyer's statement.

According to the figures of the experts who made the tables introduced by the Senator from Missouri [Mr. VEST], the differential in favor of the trust is about sixty-seven hundredths of a cent a pound upon that polariscopic degree of saccharine strength of the sugar that he has taken as a predicate, and that is too much. I am of opinion that a differential of thirty-eight hundredths of

a cent allowed as a countervailing duty is quite sufficient in behalf of the trust under the circumstances as they exist now in the United States. I am not in favor of giving them any more, although, as the Senator from Arkansas [Mr. JONES] well said yesterday, we can submit to some exactions in consideration of getting a rebate of a too great allowance.

Mr. PLATT of Connecticut. Will the Senator allow me a question?

Mr. CAFFERY. Certainly.

Mr. PLATT of Connecticut. Suppose that the differential, as it is called, was made exactly the thirty-eight one-hundredths of a cent, which is equivalent to the German bounty on refined sugars—that and no more—and then suppose that the Germans should repeal that bounty, what would become of the industry in the United States?

Mr. CAFFERY. The German Government repealing the bounty of thirty-eight one-hundredths?

Mr. PLATT of Connecticut. Yes.

Mr. CAFFERY. It would flourish much more; it would do it good.

Mr. PLATT of Connecticut. There would then be no protection to the sugar-refining industry here?

Mr. CAFFERY. It would be twenty-eight one-hundredths. Suppose the Germans should repeal the bounty; they would have twenty-eight one-hundredths more.

Mr. PLATT of Connecticut. The Senator has referred to the countervailing duty.

Mr. CAFFERY. I say the countervailing duty is now sufficient, in my opinion.

Mr. PLATT of Connecticut. But that only applies when the foreign country puts on an export bounty.

Mr. CAFFERY. Then they would stand on an even keel.

Mr. PLATT of Connecticut. Then, if they took off the export bounty, the countervailing duty would be taken off?

Mr. CAFFERY. Yes, sir. Then I say the trust can survive and do better than any other industry in the United States. I believe that from their processes of refining, from the minimized cost of their production, from the enormous market at command, the sugar trust could make more money under that condition of affairs than any other industry.

Mr. PLATT of Connecticut. Then what the Senator from Louisiana wants is a duty which will protect the production of sugar and free trade in refined sugar?

Mr. CAFFERY. The Senator from Connecticut is another instance, a sad and melancholy instance, of the fact that you can not attribute to anybody who argues for any kind of tariff any other view than having somebody in his mind to protect. I have repeated time and again in the Senate, and I now repeat, that a duty on sugar is the ideal duty of the Democratic party for revenue only, and upon that ground I sustain it. If it were for protection, I repeat, I would not support it.

Mr. PLATT of Connecticut. Mr. President——

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Connecticut?

Mr. CAFFERY. Yes, sir.

Mr. PLATT of Connecticut. Does the Senator think that no duty on sugar would be as beneficial to the sugar producers of Louisiana as the proposed duty on sugar?

Mr. CAFFERY. No, sir; I do not.

Mr. PLATT of Connecticut. Then how does he make it appear that a duty is not protective to them?

Mr. CAFFERY. I do not say that a duty levied will not under some circumstances protect. If the sugar were not raised at all in the United States, it would protect nobody. As it is raised only to a small extent, the amount of protection is insignificant compared with the amount of revenue. That is all there is about it.

Mr. PLATT of Connecticut. But it is a good protection to those who raise it.

Mr. CAFFERY. I am not considering protection. If my people are the beneficiaries of a tariff levied for revenue, well and good; but, so far as I am concerned, I have never advocated, and I shall never advocate, any duty for protection pure and simple. You took the tariff off of sugar. You did it in pursuance of a policy of Chinese protection. You succeeded in destroying the revenues of the United States. And now in your extremity, when you want a surplus revenue in order to tide over the financial troubles which stare you in the face, you go to the rejected article of sugar.

You are compelled to go to the Democratic sources of revenue in your distress. Then you fling into the face of a Democrat who is arguing for a tariff for revenue the insidious doctrine of protection. Neither in your distress nor in the time when you pile up the duties so high that nothing can get over it can you assail any of my motives or any of my principles by an attack upon a position that advocates a tariff for revenue only.

I yesterday read a paper which showed that the sugar industry of Louisiana under the ad valorem tariff of 24 per cent in the decade between 1850 and 1860 flourished to a greater extent than it ever did before. I read that statement to challenge the statement that the pernicious bounty had been the only incentive to increased production of sugar in Louisiana. I do not believe in my own mind that there is much difference between the semitropical country where I live and the tropics of the West Indies in regard to the production of sugar. While our part of the country does not produce as much sugar as the Tropics, there are advantages to compensate for the deficiency of production, advantages which I now need not advert to.

While I think of it, Mr. President, I will make a statement suggested to me by my honorable friend from Texas yesterday evening. In a colloquy between me and the Senator from New Hampshire [Mr. GALLINGER] he seemed to imply by his statement that I was personally very largely benefited by a tariff on sugar. That must have sprung from his idea that I was an owner or a shareholder in a large central factory in my State which is named after me. I never owned one single share of its stock; I never had the slightest pecuniary interest in that refinery; and I am but a very small sugar planter, a modest sugar planter. If every single interest that I have——

Mr. GEAR. May I ask the Senator how large a sugar plantation he owns?

Mr. CAFFERY. Yes, sir. I made last year about 700,000 pounds of sugar.

Mr. GEAR. Then the Senator is not a very small planter.

Mr. CAFFERY. I own 500 acres.

Mr. GEAR. The Senator's plantation is a good deal larger than the average in his own State?

Mr. CAFFERY. No, sir.

Mr. GEAR. I think so.

Mr. CAFFERY. I have one of the smallest in my parish.

Mr. GEAR. That may be true in regard to the parish, but not as to the State.

Mr. CAFFERY. I used a good deal of outside cane to make the 700,000 pounds. My friend from Iowa is trying to magnify my business. I wish it were so. He is trying to magnify my little modest business into one of these overgrown sugar plantations. He can not do it. My little farm is about 500 acres. I have but very indifferent works upon it. I bought a little outside cane, which, with my own, made the number of pounds stated. I am not quite sure that I stated the number accurately, but I made something like the amount stated.

I was going to state that if every single industry I have in the world were in sugar (and that is all the interest I have; that is the sum total of my private fortune), and if it were all involved in this bill, I would not sustain a tariff for anything else but revenue. A public man who can not get out of the narrow confines of a selfish interest is not fit to be in the Senate of the United States.

Mr. PLATT of Connecticut. May I ask the Senator one more question?

Mr. CAFFERY. Yes, sir.

Mr. PLATT of Connecticut. I understand this proposed specific duty on sugar averages somewhere from 75 to 80 per cent ad valorem?

Mr. CAFFERY. Yes, sir.

Mr. PLATT of Connecticut. How high a duty does the Senator think could be put on sugar which would be only a revenue duty? Would 100 per cent be a revenue duty?

Mr. CAFFERY. Any per cent you please.

Mr. PLATT of Connecticut. Would 200 per cent be a revenue duty?

Mr. CAFFERY. Any per cent you please.

Mr. PLATT of Connecticut. I am trying to get at what is the Senator's idea about a revenue duty.

Mr. CAFFERY. It can go just as high as you please. If a tariff is on consumption, as an import tariff must be, it makes very little difference to the consumer whether he pays all his taxes in a lump or whether the taxation is spread over a number of articles. If you put all your tariff on sugar, you take it off of other things and equalize the tax to the consumer. A tax too high might be prohibitive, thereby defeating the end to be obtained. What the consumer might pay on any one article, on the revenue basis, would relieve him from taxes on others.

Mr. PLATT of Connecticut. I should like to put in the RECORD at this point the report of the Bureau of Statistics of the importations of refined sugar during the calendar year 1896, for the first four months ending April, 1897, and for the month of May, 1897, showing a total importation in the calendar year 1896 of 197,000,000 pounds, not counting fractions; for the first four months ending April, 1897, of 64,000,000 pounds, and for May, 1897, of 30,000,000 pounds.

The PRESIDENT pro tempore. Without objection, the statement will be printed in the RECORD.

The statement referred to is as follows:

UNITED STATES.

Imports of sugar above No. 16 Dutch standard.

Countries from which imported.	Calendar year 1896.		Four months ending April, 1897.	
	Pounds.	Values.	Pounds.	Values.
Austria-Hungary	3,670,679	$88,415	4,953,363	$117,828
Belgium	10,120	311		
France	13,376,126	370,189	14,898	811
Germany	81,419,536	2,232,718	32,600,536	765,428
Netherlands	46,770,216	1,363,420	19,170,717	492,102
United Kingdom	22,157,025	598,407	4,533,424	92,185
Dominion of Canada	83,803	3,240	6,013	339
Mexico	308,247	4,618		
West Indies, Spanish: Cuba			1,529,176	28,486
Argentina	10,800	354		
Guiana: British	220	9		
China	22,299,413	675,103	613,079	15,395
Hongkong	6,498,900	204,435	1,184,188	31,555
Japan	849,298	23,833		
Hawaiian Islands			20,136	705
Total	197,454,443	5,595,052	64,625,530	1,544,834

Imported May, 1897 (countries not received), 30,285,831 pounds, $698,121.

WORTHINGTON C. FORD,
Chief of Bureau.

TREASURY DEPARTMENT,
Bureau of Statistics, June 10, 1897.

Hon. JOHN H. GEAR,
United States Senate.

Mr. WHITE. Mr. President, I wish to make a very few observations with reference to the pending sugar schedule, and will refer especially to the attitude of the other side of the Chamber upon this interesting matter.

Preliminarily, however, I will submit and have printed as a part of my remarks a computation made by General Appraiser Sharretts, a highly skilled and reliable expert and Government official, with reference to the protection given by the present law, the House bill, the original Senate bill, and the Senate committee amendment or caucus amendment of June 8.

The statement referred to is as follows:

The appraising department at the port of New York to-day (June 9) reports that the value of German granulated sugar, first marks, which is the kind imported, is 8s. 7d. per hundredweight, or $2.30 per hundred pounds. The value of the sugar testing 89 degrees, from the 1st of January to the present time, has fluctuated between $1.81 and $1.97 per hundredweight. The present value is $1.88 to $1.90.

It is further reported that little or no sugar testing less than 87 degrees is manufactured into granulated sugar, for the reason that the additional expense of using low-grade sugar for that purpose makes it unprofitable to do so.

For the purposes of a comparison, we shall confine ourselves to the raw sugar testing 89 degrees by the polariscope, and granulated sugar, which are the only kinds of sugar imported. The Treasury Department in a published circular has estimated that it takes 120.54 pounds of raw sugar testing 89 degrees to make 100 pounds of granulated. We shall accept this as the basis of calculation also.

The comparison of the present law, the House bill (No. 379), the Senate amendments thereto, and the amendments offered in the Senate yesterday (June 8) shows the following results, namely:

PRESENT LAW.

Value of 120.54 pounds of raw sugar required to make 100 pounds of granulated sugar	$2.29
Duty on the same at 40 per cent ad valorem	.916
Value of sugar, duty paid, required to make 100 pounds of granulated sugar	3.206
Value of 100 pounds of German granulated sugar	2.30
Duty on the same at 40 per cent ad valorem	.92
Value of the same, duty paid	3.22
Add for purposes of comparison (German bounty)	.3833
	3.6033
Deduct value of raw sugar	3.20
Difference	.40

HOUSE BILL.

Value, raw, of sugar required to make 100 pounds of granulated sugar, duty paid	4.00
Value of German sugar, granulated	4.175
Deduct the value of the raw sugar	4.00
Difference	.175
Add German bounty	.3833
	.5583

ORIGINAL SENATE AMENDMENT.

Value of 100 pounds of sugar, 89 degrees	1.90
Value of 120.54 pounds of raw sugar necessary to make 100 pounds of granulated sugar	2.29
Duty at 79 plus two one-hundredths on 120.54 pounds	$0.9764
Ad valorem duty on 2.29, at 35 per cent	.8015
	1.7779
Value of the 120.54 pounds of raw required	4.0679

GRANULATED FIRST MARKS.

Value of 100 pounds	$2.30
Duty at 1.16	$1.16
Duty at 35 per cent ad valorem on $2.30	.805
	1.965
Value of 100 pounds of granulated sugar, duty paid	4.265
Value of raw sugar, duty paid, required to make 100 pounds of granulated sugar	4.0679
Protection	.1971
Add German bounty	.3833
	.5904

NOTE.—Granulated sugar is not made from sugar testing less than 87 degrees.

AMENDMENTS OF JUNE 8.

Value of 100 pounds of 89-degree sugar	1.90
Value of 120.54 pounds required to make 100 pounds of granulated	2.29
Duty on same at $1 plus three one-hundredths above 79 degrees	1.71
Value of the same, duty paid	4.00
Value of 100 pounds of German granulated sugar	2.30
Duty on the same at $1.95	1.95
Value of the same, duty paid	4.25
Value of raw, 120.54, necessary to make the same	4.00
Protection	.25
Brought forward (protection)	.25
Add German bounty	.3833
Full amount of protection	.6333

RECAPITULATION.

Protection under the present law, with 38.33 (German bounty) added for purposes of comparison	per 100 pounds	.40
Protection under House bill	do	.5583
Protection under original Senate amendments	do	.5904
Protection under Senate committee amendments of June 8	do	.6333

Mr. WHITE. The conclusion thus reached is that the present committee amendment, the caucus amendment, or the reformed amendment is higher than the original Senate amendment, that that in turn is higher than the House bill, and that that in turn is higher than the Wilson Act. So we are climbing up. Thus has the trust continually profited by changes made.

Mr. ALLISON. I do not wish to interrupt the Senator from California, but the figures given on the other side seem to differ on this question. The table which was put in by the Senator from Missouri [Mr. VEST] yesterday shows that the caucus schedule, which seems to be the designation of the matter now before us, is a shade less than the schedule as originally reported from the Committee on Finance. The Senator from Missouri vouched for the accuracy of this gentleman as to the making of the figures. I merely wish to note that there seems to be a difference.

Mr. WHITE. I think an inspection of the table submitted by the Senator from Missouri will show that as to the sugars mainly imported there is a difference in favor of the caucus amendment. However, if there is any preponderance the other way, it is exceedingly slight.

Mr. President, I do not claim to be an expert as to sugar differentials. I have observed that there is some variance in the computations made by all of the experts. I have not yet observed any two expert calculations on this problem which agree absolutely. I might refer to the leading authority of the Senate, for such I consider the Senator from Rhode Island [Mr. ALDRICH] to be. I believe he is more familiar with these matters than either or any of his colleagues. He is authority on all tariff affairs.

He stated in effect that the Senate bill as then reported by his committee contained less protection than the House bill or the Wilson bill, and yet, after that authoritative statement the House bill was adopted by the Republican Senatorial caucus and its protective features increased as to the higher grades of sugar, which alone are extensively imported. Hence, if the proposition of the Senator from Rhode Island be correct, the amendment about to be voted on, except as to very low grades not imported, is all in favor of the larger differential, to wit, in favor of the trust. The trust has profited by each and all amendments and changes made by the Republican majority.

There is another point that we must keep in mind. Undoubtedly it is necessary to raise a large amount of revenue; but we must remember that the effect of this bill and of this particular item will be the imposition of an immense tax upon the American people. I believe sugar to be a proper subject for a revenue imposition, but I notice an entire change of view on the other side of the Chamber as contrasted with the sentiment expressed eloquently and often in this Chamber during the consideration of the Wilson bill.

As far as that measure is concerned, no one, I believe, will question that its provisions are less protective than the proposal before us. German refined sugar, it is conceded, is to be taken at 2.3. An ad valorem of 40 per cent means ninety-two one-hundredths. Then we add one-eighth for the tax on refined (one hundred and twenty-five one-thousandths); also the countervailing duty of one-tenth, and we have $3.445 per hundred pounds as the cost of German refined sugar coming into this country, duty paid, under the

so-called Wilson bill—the present law. It is well to keep these figures before us. Taking the present bill, we have $2.30, the same value of the German refined. Then the caucus amendment gives 1.95 as the duty on refined. The countervailing duty is three hundred and eighty-three one-thousandths, which brings the duty-paid cost up to $4.633, a difference of $1.188 as between the Wilson bill and the proposed caucus amendment, the latter containing the higher figure.

In other words, sugar will cost $1.188 more under this bill than under the present law, to wit, the Wilson Act. If it be true, as reported by the Agricultural Department of the United States, that the per capita consumption of last year was 62.6 pounds (less by nearly 4 pounds than the previous year's consumption), and if it be also true that we have 75,000,000 people within the limits of the United States, it is easy to ascertain the immense burden which the proposed legislation necessarily imposes upon the public, a burden to some extent required for essential revenue, but the imposition of which is absolutely inconsistent with the position which the Senators on the other side of the Chamber occupied in 1894.

I have looked over several of the eloquent speeches made during the progress of that debate, and I have been, I must say, somewhat appalled. I will make limited extracts from the suggestions of Senators, some of whom are not in the Chamber at this time, but they are entitled to be here. Perhaps the remarks which I design quoting are familiar to these distinguished legislators; if not, a perusal of the citations will refresh the memory.

My distinguished friend from Connecticut [Mr. PLATT], a member of the Finance Committee, made the following remark during the consideration of the Wilson bill while speaking of the sugar schedule. He said:

> It is clothed in language that it requires an expert to determine, but it was sufficient to put up the price of common sugar stock in New York $15 a share.

Mr. President, when I noticed in the newspapers of yesterday (my attention having been attracted to the fact by people who are better posted in stock matters than myself) that the introduction into this Chamber of the caucus-reform amendment forced up sugar quotations several points, and when I heard every Senator in private conversation and in public statement concede that of all tariff schedules this is the most technical and difficult to understand, and when I know that no one has denied or will deny that a schedule is peculiar when honest, intelligent gentlemen, experts in the business, are unable to reach coinciding results, I felt that the language of the Senator from Connecticut in criticism of the Wilson bill ought to be read as a comment on this bill. He proceeded:

> It is enough to prevent the introduction of refined sugar into this country, and anybody who has studied this matter knows it, whether he be Senator or whether he be speculator in Wall street in sugar-trust stock.

I quote from the CONGRESSIONAL RECORD, page 4706, volume 26, part 5, May 14, 1894. The same Senator continued on the same page:

> The bill has been changed, increasing the proposed duty upon refined sugar simply because it could not be passed unless that concession was made to the sugar trust.

Now, is it not a singular coincidence, is it not startling, that these strictures leveled at that bill at that time can be truly uttered with reference to this bill at this time? When reading at the present moment the language which I have quoted a person not familiar with the circumstances would assume that the criticism was justly made during the present debate.

Mr. President, we know that the Republican party was in 1890 and 1894 committed to a bounty on sugar. During the consideration of the Wilson bill, day by day, it was dinned into the public ear of this country that the only true method of bringing about a correct solution of this entire tariff subject regarding sugar, and the only way to build up the sugar industry, was to impose a bounty. Throughout the consideration of that bill, from the day the debate began until it concluded, we were informed by Senators on the other side of the Chamber that a tax on sugar was an outrage.

Let me read certain excerpts from our brethren of the opposition, then speaking the Republican language of the day, which, however, for reasons unknown to me, has become a lost tongue. The Senator from New Hampshire [Mr. GALLINGER] said:

> The advantage which the new tariff act—
>
> It was the McKinley Act of which he then spoke—
>
> gives to the country in the matter of sugar for one year can be seen at a glance:

Amount of duty taken off	$60,000,000
Amount paid for bounties	9,000,000
Amount saved to the people by the new reciprocity treaty alone	51,000,000

(Congressional Record, page 4972, volume 26, part 5, May 19, 1894.)

The then Senator from Ohio [Mr. Sherman], now the distinguished Secretary of State, elaborated upon this subject, and he laid down the proposition that it was absolutely unnecessary to give any differential to the refiners; that any allowance made to the refiners was not only injudicious, but was a contribution to the most oppressive monopoly of the day. During the entire course of that debate it was charged that we were under the influence of the trust, and that the ad valorem tariff of 40 per cent was placed in the bill especially for the benefit of that institution—so loyal to Democracy's opponents. Yet, Mr. President, these very Senators are here to-day ready to vote for a differential greater than that which they then denounced in unsparing terms and which they even insinuated challenged the honesty of the men who supported it.

But I am told that this is ancient literature. It is not so very old. It is new enough to be important and instructive.

The distinguished Senator from New Hampshire [Mr. CHANDLER], who, I regret, is not in his seat, commented upon the situation thus:

> I wish again to show (1) that duties on sugar have failed to develop the home industry, because cane sugar can not possibly be supplied in quantities to meet more than one-fifth of the American consumption; (2) that under the bounty system the growth of the cane-sugar and the beet industry is rapidly increasing our home production, and (3) that the abolition of the bounty and the return to the duty system, the duty to be 40 per cent ad valorem and one-eighth of a cent a pound in addition on refined sugar, will tend to check the American production of sugar and to stop the growth of the beet-sugar industry, while unnecessarily taxing the American consumers over $60,000,000 annually, and enriching the monopoly known as the sugar trust by devices which will enrich its owners nearly $75,000,000 profits during the next year and permanently fasten the trust upon the households of America at a cost of $70,000,000, one-half of which will go as an unfair profit to the trust and the other half into the Treasury as a tax, not needed, upon one of the necessaries of life.—*Congressional Record*, page 5719, volume 26, part 6, June 4, 1894.

This speech surely could not be made upon that side of the Chamber now, for our Republican friends tender us a direct proposition to impose the tax which they formerly repudiated. They now threaten to inflict it in a more obnoxious form and to an exaggerated extent.

The "American breakfast table" was a source of great solicitude on the other side of the Chamber during that debate. We were told that the poor man was entitled to have his sugar without any tariff mixture. Untaxed sugar was something that the Republican party guaranteed to every American consumer.

He must have sugar, and he must have it free from tax. Yet, Mr. President, the same distinguished gentlemen, I repeat, who at that time so roundly denounced the Democracy in this Chamber because of the imposition of a small sugar tariff are here to-day levying a greater tax, as the result of all their experience and in the face of their own advertised promises and record. Even the Senator from Iowa [Mr. ALLISON], whom we all know to be an extremely conservative man and an able Senator, made this remark:

> Mr. President, if I had my way, I should strike from this bill every vestige which provides a duty upon sugar, and I would continue the bounty as we are bound under our contract until 1905 by a moral obligation which is as binding on the United States as any contract that I may make can be binding upon me. And if additional revenue is required, I would look around among the luxuries that are consumed by our people and find that revenue.—*Congressional Record*, page 5703, volume 26, part 6, June 6, 1894.

Something was said recently, Mr. President, regarding a supposed contract with sugar producers under the bounty law. I think that my friend the Senator from Iowa [Mr. GEAR], in an interrogative way, remarked that that contract was binding, and that we did not do our duty when we ignored it. I say to him and his associates, here is your golden opportunity. You affirm that there was a contract so binding upon your consciences that it was with the greatest difficulty that you remained in your seats and saw it repudiated. The unfortunate expectant beneficiaries of that moral obligation stand outside of this Chamber. They can be found in various parts of the United States suffering by reason of the nonperformance of this obligation. Why do you not restore to them that which the Democracy sought to take away? Why do you not stand by the agreement thus violated? Why do you continue to repudiate it?

Mr. GEAR. If the Senator will allow me, I will state that, in my opinion, it should be paid now, as I said in 1894. If I had my way, I would permit the bounty to go on. The reason that we have resorted to these taxes on sugar is owing to the manner in which the Democratic party, of which the Senator is a member, administered the affairs of the Government for four years and caused the diminution of the revenue $200,000,000. So, under present conditions, we can not do otherwise than impose a tax on sugar.

Mr. WHITE. I understand, Mr. President, that there has been a Republican caucus; the newspapers have announced that there has been a caucus, and the statement the Senator from Iowa has just made is corroborative of another proposition—that that caucus bound its members to sacrifice their judgment and to vote according to programme upon this floor.

Mr. GEAR. I did not say that I sacrificed my individual judgment. I am just simply accepting the condition of affairs brought about by a Democratic administration of the national finances, which has caused this great deficit and which makes it necessary that this tax should be levied. The Senator knows that as well as I do.

Mr. WHITE. I trust the Senator will not leave the Chamber.

Mr. GEAR. I am not going to leave the Chamber.

Mr. WHITE. It is a notorious fact that the McKinley law was not as good a producer of revenue as the Wilson law, and that fact is proven by the statement of the Treasury Department, showing that in the last fiscal year of the McKinley law it yielded less revenue, the times being bad, than the first year of the Wilson law, the times being equally bad.

Mr. GEAR. That was owing to the fact that the Democratic party had come into power and announced its declaration of free trade or low tariff; and with that threat hanging over the people, of course the revenues fell off.

Mr. WHITE. But the statement made before the last Presidential election was that prosperity would come to us on the advent of the Republican party to power. The Senator from Iowa and all other eloquent and able champions of his party moved about the United States and absolutely seduced, and by reason of their persuasive eloquence induced, the American people to believe that prosperity would immediately follow the election of Mr. McKinley.

Mr. GEAR. I hope the Senator will possess his soul in patience, and that his party will do the same.

Mr. WHITE. My soul is being possessed in patience.

Mr. GEAR. The present Administration has only very recently come into power, and it has not yet had an opportunity to legislate. It is endeavoring to legislate and will legislate, God willing, in such a manner as to restore prosperity.

Mr. MASON. Give us a vote on the bill, Mr. Senator.

Mr. GEAR. Yes; I will agree to vote, and I am ready to vote now, and I suggest to my friend from California that we should promptly legislate so that prosperity can be brought about.

Mr. WHITE. If my friend from Iowa will preserve his soul in patience, I will say that it is a poor rule that does not work both ways. If the triumph of the Democratic party at the polls produced hard times because the people feared there would be unwise legislation, so should confidence, that great essential of prosperity and necessity of the hour, have followed the triumph of the Republican party. But confidence did not come; it has not appeared; it is not here. Why not?

The public knew and know that the party to which the distinguished Senator from Iowa belongs is in power; they knew and know that a tariff bill is going through just as the Republican members of the Finance Committee construct it—everyone knows that—and yet with this absolute certainty before them the people of this country do not seem to be overburdened with confidence, money coffers have not opened, industry has not awakened, enterprise remains fettered, poverty stares us in the face. These conditions are more emphatic than ever. The looked-for panacea fails to act. The real remedy will not, in my judgment, be found in this or any other tariff bill.

Mr. GEAR. The country knew just as well as the Senator from California knew that the Republican party had no majority in this Chamber, but they know now that we have got votes enough to pass this bill and that we are going to pass it and bring prosperity to the people.

Mr. WHITE. If the Senator from Iowa will look back a little, he will recollect that the statement was made by him and everyone of his party that the mere election of the Republican candidates would instantly produce prosperity. We came to this Chamber, after the extra session was called, to enact the promised remedy. It was publicly proclaimed by members of the Populist party and by Silver Republicans that they would interpose no objection to the passage of the tariff bill and that some of them would vote for it.

It was an assured fact from the very moment that this Congress was convened that this bill, or some bill formulated in that fountain of creative wisdom, the Republican caucus, would be enacted by the Congress of the United States; and yet we did not have and have not now prosperity. The people who were frightened because Mr. Cleveland was about to be President of the United States and who were scared out of prosperity have not rushed into happy lines since. They have not, as I said before, become confident. They still seem indisposed to prosperity. The promise of the opposition has not been verified.

Now, let us make a limited perusal of this literature (constructed by Republicans), which seems to be somewhat unpalatable. The Democratic party was censured for passing the Wilson bill upon the ground that that measure did not produce enough revenue. No doubt the argument "took" and had its effect. But are we to blame the Senators upon this side for their action when distinguished Republicans here cautioned us that we were raising too much revenue?

I was interested then, being unacquainted with the processes obtaining here, when I heard such authority as the Senator from Rhode Island [Mr. ALDRICH] announcing that the Wilson bill would yield a hundred millions of surplus, not including the income tax. I was alarmed lest we should have too much money, and I inquired of some of my more experienced associates whether there was not danger that we would be overcrowded with coin in the Treasury of the United States.

The Senator from Maine [Mr. HALE] said during the progress of the debate already alluded to on May 21, 1894, page 5020, volume 26, part 5, CONGRESSIONAL RECORD:

> The Senator from Missouri shall not escape by declaring that a duty of 40 cents a ton upon iron ores may be a revenue duty. The Senator knows that by the bill he has presented here, or that he and his associates have put before this body, that all the amendments that have been put upon us, without reckoning the income tax and the tax that they lay upon sugar, the two thus increasing the House bill over $30,000,000, there will not be a deficit obliging them to resort to protective duties in order to raise a revenue, but there will be a surplus. * * *

How could I, unsophisticated in the arts of legislation and not conversant with the intricacies of tariff computation, doubt the accuracy of such a statement emanating from such a source? The same Senator continued:

> They have got on these two propositions, one of which taxes the breakfast table of the American people and the other of which makes it next to a felony for any man to dare accumulate property. * * *

There is the breakfast table again. The supper table and the dinner table seemed to be rather immaterial, but the poor breakfast table! I sympathize with that breakfast table. It is forgotten in this bill. It is burdened now; not with untaxed sugar, but with taxes for sugar and on sugar. It is loaded with taxation. It groans under taxation. I assume that no one in this Chamber will deny that the tariff tax is paid by the consumer in this particular case. Of course the foreigner has been in the habit of paying all tariff taxes, even in cases where rates are prohibitive. I may be pardoned if I deny that where there are prohibitive tariff rates the foreigner pays the tax, because it is necessary to catch the foreigner before he can be made to pay.

But in the case of sugar there has never been any doubt that the consumer does pay the tax. Again I rested cheerfully and with the utmost confidence upon the other side of the Chamber. During the course of that discussion the same distinguished Senator, already quoted, RECORD, page 3063, volume 26, part 4, said:

> High duty on sugar puts up the price to the consumer.

That is right. It is correct. Then the Senator from Rhode Island [Mr. ALDRICH] made this comment, to be found on page 4670, volume 26, part 5 of the CONGRESSIONAL RECORD, May 12, 1894:

> If it is to be the principle of the Democratic party and of the majority of the committee in this Chamber that the duty upon luxuries is to be decreased for the purpose of furnishing an excuse to increase the duties upon necessaries of life like sugar, then we had better understand it at once.

If now we are to have a superlatively high duty upon sugar, we had better understand it at once.

The following colloquy occurred. It appears on page 4914, volume 26, part 5, of the CONGRESSIONAL RECORD, May 18, 1894. The Senator from Maine [Mr. HALE] said:

> The duty upon sugar will be paid by every man, woman, and child in the United States.

That is true; there is no doubt about it. I affirm it. Then the Senator from Rhode Island [Mr. ALDRICH] said:

> The increase of taxation and revenue from sugar will be at least $50,000,000.

We became most thoughtful in the presence of that proposition. The prospect of the imposition of $50,000,000 of taxation upon the American people was not cheerful. Then the Senator from Maine [Mr. HALE] said:

> So that a part of this scheme is to take off $38,000,000 upon imports which are pure luxuries and not used in everyday life, and to make up for that reduction the committee propose to add $50,000,000 to the sugar duties and tax the breakfast table of every man, woman, and child in the United States. Is that true?
>
> Mr. ALDRICH. That is true.

And it is true now; it is true of this bill; it is just as true now as it was then, and with this bill superlatively so—if I may use such an expression—in this, that the rates of duty are so much higher that every hundred pounds of sugar under the provisions of this bill will cost probably $1.18 or $1.20 more than it does under the prevailing Wilson bill.

I now refer to a statement made by the Senator from Connecticut [Mr. PLATT], whom I observe in the Chamber, which I wish to read—a very pertinent statement, to be found on page 4707, volume 26, part 5, of the CONGRESSIONAL RECORD, in the proceedings of May 14, 1894. He said:

> How are you who have denounced this duty upon refined sugar—this concession to the sugar trust—going to vote for it now? How great must be the compulsion which obliges Senators thus to swallow not only the words but the opinions of years and vote for a prohibitive duty on refined sugar.

I find a very interesting statement from the honorable Senator from Vermont [Mr. MORRILL] concerning the methods of preparing the Wilson bill, and especially the sugar schedule. It is singularly pertinent to the present proceedings, and will be found on page 3811, volume 26, part 4, of the CONGRESSIONAL RECORD, in the proceedings of April 18, 1894:

> Concerning the rates of duties reported in the tariff bill, it is no violation of the confidential relations of the Senate Committee on Finance to state now

that they were all fixed and determined without the votes of the Republican members, and even against the votes of any hesitating or divergent minority of Democratic members. Thus many of the most important questions may have been determined by the small fraction of three or four of a committee of eleven.

Sad to say, these comments apply with greater force to the situation which now surrounds us.

I also find the distinguished Senator from Massachusetts [Mr. LODGE] commenting graphically upon the outrages assumed to have been perpetrated by the Democratic majority of the Finance Committee upon their unfortunate brethren. On page 4350, volume 26, page 5, of the CONGRESSIONAL RECORD, in the proceedings of May 2, 1894, that Senator said:

It must be remembered that there have been practically no public hearings upon the bill. There have not been the usual opportunities to the persons affected by it to present their views before committees in regard to its provisions. No hearings have been given here.

The able senior Senator from Massachusetts [Mr. HOAR] added his significant criticism thus:

I never before heard of a financier who made up a budget and did not have some expectation of the amount he could depend upon from particular sources.—*Congressional Record*, volume 26, part 5, page 4483.

Well, since that day the distinguished Senator from Massachusetts has heard of such a financier. There are several such financiers. They are Republicans and can be found not far removed from the majority in charge of this peculiar scheme.

It has been intimated that there are various features of the present tariff bill which do not meet the individual approval of all of the Senators upon the other side; and that must be necessarily the case in the preparation of all tariff bills. For my part, I do not desire to criticise, and I do not for a moment criticise, the majority because they have kept together and have joined their forces in such a wonderfully cohesive manner that we have not been able to break through in any case, except in one instance, when, inadvertently, no doubt, we obtained a reduction, made upon a very small item.

Still such an agreement can not bind the parties to improper legislation. But while the Wilson bill was here, Democrats quite generally adhered to the committee, and the distinguished Senator from Rhode Island [Mr. ALDRICH] referred to the control exercised by the Senator from Arkansas [Mr. JONES], who had the floor at the time and was conducting the debate, as we all know, together with the Senator from Missouri [Mr. VEST], under great difficulties. The Senator from Rhode Island said (RECORD, volume 26, part 5, page 4823):

And I hope that in this particular case some of the Senators upon the other side, representing some of the Southern States, may break away from this iron-bound caucus rule and vote for one thing which they believe in and not submit their consciences entirely to the keeping of the Senator from Arkansas; but once a day at least, merely for a change, that they shall vote for amendments or suggestions which commend themselves to their judgment and which are in the interests of the people whom they represent.

Mr. President, I am not unfeeling enough to again read this article and substitute the names of the distinguished Senators on the other side in charge of the present bill for that of the Senator from Arkansas. The pertinency of the citation is manifest.

Who can doubt, Mr. President, that this revised caucus-reform schedule is not satisfactory to everyone upon the other side of the Chamber? It is absolutely impossible that the entire Republican Senatorial representation should have changed all at once and all the same way and all in a day. There was and is an agreement requiring the sacrifice of opinions and the yielding of convictions to the majority. I do not, as I have said, particularly complain; but I allude to the striking utterances made in 1894 in criticism of this side of the Chamber with reference to matters concerning which we have now very distinguished imitators.

When the Senator from Missouri [Mr. VEST] made his opening statement here regarding this bill, he remarked that the Senator from Rhode Island [Mr. ALDRICH] in the debate of 1894 had stated that the income from the Wilson bill would be $100,000,000, but the Senator from Missouri, desiring to be entirely fair, stated that no doubt this estimate included the income tax. Since that time we have examined the RECORD and find that the statement was even more elaborate than intimated. It was as follows, and can be found on page 4753, volume 26, part 5, of the CONGRESSIONAL RECORD, in the proceedings of May 15, 1894:

If, as I believe, it can be shown, and shown beyond the fear of contradiction upon the other side of the Chamber, that we are to have by this bill, if it become a law, $100,000,000 or more of surplus, then it is pertinent in every part of the bill and in every paragraph to ask as to what will be its effect upon the revenue, etc.

And on the same page, further down, this language was used:

And this estimate—

Referring to the above estimate—

does not include the income tax. It is based upon the revenue duties alone.

The entire discussion appears on the pages of the RECORD which I have given. I refer to this, as I said before, for the purpose of showing that it is not just to criticise the men who framed the Wilson bill and prepared it because it did not yield sufficient revenue, because the ablest Republican authority declared that it would yield a greater revenue than anyone upon this side of the Chamber had suggested was possible.

There are many expressions kindred to those which I have been quoting. The unanimous expression of the minority in 1894 was adverse to all sugar legislation and positive that the Wilson bill, without the income tax, would yield abundant revenue. The change of base now obvious disturbs me. My faith is shaken, and like the masses of the American people, I do not feel the coming of confidence.

First we had the House bill, then we had the Senate bill, which we were assured by the Senator in charge was an excellent measure, and now we have the caucus bill, which we find, as shown by the computations thus far introduced—and certainly such is the reasonable inference from the remarks of the Senator from Rhode Island—presents a case of maximum protection to the sugar trust.

Senators on the other side of the Chamber eloquently and forcibly and truthfully criticised the trust in the debate of 1894, and I, having entire confidence in their statements and believing that everything they uttered was bona fide, am now disturbed to find that they are legislating in favor of that oppressive creation, not of their imaginations, but of the corporate laws of this country—an institution against which they powerfully inveighed at that time. Then they attacked the trust; now they protect it. Why should there be any legislation at all in favor of the refiner if the theories enunciated by Senators on the other side of this Chamber three years ago were well founded?

If it be true that the sugar trust is an illegal combination—and it was so decided when an earlier organization made for the same purposes by the same people sought to do business in the State of New York; the dissolution then decreed led to incorporation under the laws of New Jersey—if it be true that we are legislating for the purpose of suppressing trusts, and sometimes criticise even courts, perhaps without reason, because they have not been able to suppress the trusts, is it not singular that we should be here endeavoring to find a so-called fair differential to promote and advance the very institution we profess to be desirous of blotting from the face of the earth? Republicans denounce the sugar trust as a public enemy and yet aid it to oppress.

Mr. President, when it is our duty to directly legislate against trusts and combines, will the omnipotent Republican caucus permit such legislation to become an accomplished fact? Will this duty be done? I imagine not. I think it will appear that the Republican party, as it is now organized, is paying its debts to the institutions whose grasping propensities and inordinate demands were so ably dwelt upon some time ago by the Senator from New Hampshire [Mr. CHANDLER]. I refer to his remarks and publications made before the last campaign had been fully organized. It would seem that all the intimations which he then made with reference to the influence of the monopolies of the United States upon legislation were well founded and that the present bill is prepared and is being passed in satisfaction of campaign services and contributions.

Again, recurring to the hope expressed by the Senator from Rhode Island, I trust that many Republican Senators before indorsing this most improper sugar schedule will reflect seriously upon the situation and will ask themselves whether they can not afford to break away even from the ironclad caucus to which they have in an unguarded moment submitted their convictions.

I do not desire to detain the Senate any further, Mr. President, at this time.

The PRESIDENT pro tempore. The question is on the adoption of the amendment proposed by the Senator from Iowa in behalf of the Committee on Finance.

Mr. BERRY. I think the yeas and nays were ordered on that amendment. If not, I intend to ask for them.

The PRESIDENT pro tempore. The Chair is informed that the yeas and nays were not ordered.

Mr. BERRY. Then I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. PETTIGREW. Let the amendment be stated from the desk.

The SECRETARY. In line 22, paragraph 206, page 63, it is proposed to strike out the words "eight hundred and seventy-five one-thousandths" and insert "ninety-five one-hundredths;" so as to read "1 cent and ninety-five one-hundredths of 1 cent per pound."

Mr. GORMAN. Mr. President, I wish to say only a few words before the vote is taken on the amendment.

I understand perfectly the difficulties our friends upon the other side of the Chamber have encountered in the construction of this particular provision in relation to the tax on sugar. I do not intend to enter into a discussion of the details of the provision, except to say that I have no doubt the conditions of the Treasury have forced our friends on the other side to abandon their theory of the past eight years of a free breakfast table. They have been

compelled, because of the conditions confronting them, with the extravagant appropriations, to levy a tax upon sugar. They have not been content to permit the present conditions to continue, with the only fair tax that can be laid upon this article, an ad valorem duty.

The provision as presented by the Senator from Iowa, with the specific duty upon all grades of sugar, is illogical, unfair, and destructive to the commercial interests of the country, and it grants too great protection to the refiner. If it were a mere matter of the number of points that they permitted the refiner to have the benefit of, the country could possibly submit to it for the time being. That it gives more than double the protection allowed by the Wilson Act is beyond question. I think it is even greater. I believe the figures presented by the Senator from Arkansas [Mr. JONES] are absolutely correct, as near as the calculation can be made.

But more than that, the Senate is asked now by the action of the Finance Committee, resulting from the united action of Senators on the other side, to adopt a plan of taxation which the distinguished Senator from Rhode Island [Mr. ALDRICH], in reporting the bill, informed the Senate would result in the destruction of our trade with all the countries south of us who produce these low-grade sugars. Not only will you by this provision increase the burden upon the consumer, but all the people of our country who trade with the southern countries understand perfectly that unless we can take the low-grade sugars from Java and other countries our trade with those countries is absolutely gone. It is not large now, but we all know that it is absolutely essential for us to extend our markets and not to restrict them. Yet the proposition pending now, and which I take it will be passed by a majority of the Senate, does both of those things to which the American people will object. It increases their taxes, and increases the cost of every pound of sugar that will be consumed, and gives to the refiner a greater amount of profit than he is entitled to. In addition, it will destroy whatever trade we have with the countries south of us.

That presents a very serious condition of affairs, I submit to our friends on the other side, and I regret that pride of opinion and because of their declarations against an ad valorem tax made three years ago in the consideration of the then revenue bill have led them to the destruction of our commercial interests. What reason there is for it I confess I do not know. I have heard none assigned. As the order has gone forth from the caucus chamber that we are not to have discussion upon this question, of course the country can not be enlightened nor can the Senate be informed before it votes. We have reached a point in legislation, it appears, under the control of our friends on the other side, where they seem to be afraid to come out in the open and discuss these questions here or elsewhere. In the body where the bill emanated it was not permitted to be discussed or dissected, and by this rule which you have adopted we can get no information even in the Senate of the United States.

But the result of this legislation is as certain, in my judgment, as that of the legislation of 1890, when the McKinley bill was passed. This is more extreme, more offensive, more destructive to our commercial interests than that measure was, which was rejected by the country; and I have no doubt that this will be rejected. By this manipulation, by this change of front, the bill, framed as to its sugar schedule by another body, when it came here was amended, not in the only fair line looking to the commercial interests of the country, but by caucus action this more offensive, more destructive, more unjustifiable measure is presented, and it is now accepted apparently without a murmur and certainly without much criticism by the press of the country.

Three years ago we were held up to ridicule and denunciation because a tax was levied (the only logical tax that can be imposed upon the sugar schedule) by which the manufacturer had only one-eighth of a cent a pound protection, a measure which in its operations proved most fair and just. It prevented an undue amount of profit on the part of those engaged in the manufacture, because it opened the ports of the country for the first time to active competition by the importer. It brought into the country and enabled the consumers to receive beet sugar to such an extent that it kept the price down to a minimum and lower than was ever known in the history of the country.

As I understand it, the one condition imposed by those who are in favor of reduction in taxation and as low taxation as is consistent with the condition of the country and the business interests, is that the scale of protection shall only be sufficient to protect our own industries and yet open the ports and the custom-houses to imports from abroad wherever there is extortion. But now, under this schedule, that has passed away. Under this schedule as it is framed it will give more revenue, it is true, but it will give it without regard to the interests of the people of the country. It will pile up money in the Treasury, but it will take it from the rich and the poor alike.

Therefore I shall vote against this proposition. I believe it is unfair and destructive, and I hope that before we shall have reached a conclusion on this bill our friends on the other side, who began their consideration of the measure as it came from the House evidently with the desire, while observing their protective lines, not to exclude and destroy trade, may be induced, in their own councils, in the interest of commerce and trade, to go back somewhat to the schedule, or at least to proceed upon the lines upon which they proposed the schedule when they first reported the bill. Forever the prediction of the Senator from Rhode Island will stand as correct. A specific duty all the way through, beginning upon the low-grade sugars, will destroy this trade of ours.

I know that the high rates of the pending bill will aid certain industries, that it will be a stimulant and will enable them to make greater profits out of small wares; but I say the bill as a whole, and speaking of this schedule particularly, as was once said by a distinguished leader of the Republican party of the bill of 1890, there is not a line or a provision of the measure as now constituted which will enable us to sell an additional bushel of wheat or grain or oats or a pound of cotton or any other product of the land. The only effect that it can have will be to induce other countries to retaliate and to restrict our trade, whereas our whole time and attention should be given to increasing it.

You can not overlook what is going on in the world. Our products of the soil and of the mines are going hence in greater volume than has occurred at any time in the history of the land, and yet the prices that are brought are not much more than one-half what they were ten years ago. The same conditions confront other nations engaged in the trade and commerce of the world. The English Government, with its system of subsidies and the establishment of banks in the very countries whose trade you propose to exclude by your action now—and you do it knowingly—is making desperate efforts to get that trade.

And now have come within the last ten years the Germans, who are outstripping all other nations on the face of the earth, not by restricting trade, but by subsidizing their steamers and placing them on the ocean to reach every port, and especially those in South America. They are educating by Government aid the young men who become attachés of their legations to introduce German manufactured articles and wares into every country with which they have diplomatic relations. Their steamships are subsidized to an equal extent, if not more so, than those of Great Britain, and they are establishing banks from Mexico down to the pole. They have entered China and Japan, as to which countries heretofore by our unwise legislation we have almost stripped ourselves of trade. They are reaching out to the southern countries, to which they send their wares and take in payment sugar and other crude products, which they refine at home, and thus the trade of these countries is going away from us.

It is being monopolized by the Germans to such an extent that it threatens even the English policy, and yet now in the Senate of the United States, with full knowledge of all these facts known to all men, the Committee on Finance of the Senate, with its able and intelligent membership, after receiving from another coordinate branch of the Government a bill which they have told us officially would destroy what little trade we have in this commodity with those southern countries, under the whip of party and at the dictation of men who have been carried away by party principle, as they call it, for specific taxation, have not been courageous enough to adhere to what they have told us is the truth, but have turned and destroyed this trade because of party caucus and party drill.

We have no power to stay you. In the Senate of the United States you have a clear, unquestioned majority for the protection idea—protection run to exclusion. You have it in your power to shape the details of this bill as you will. With the distress in the country, impoverishment among the people, with the want of labor for honest men who are begging for employment, with a demand from the merchant and manufacturer, the laborer, and the farmer for a better condition of affairs, for the prosperity that has been promised them over and over again from October last until now, it was not wise, it is not wise, for us to attempt to delay and discuss this bill as propositions of this sort should be discussed. It would give the country time to understand its enormity, but would delay business and delay the prosperity promised when you have passed this bill, and hence it is that we have contented ourselves with a mere statement of the effects and defects of the measure as we understand them.

But for this condition in the country I should have been in favor of doing precisely with the pending bill as was done with the McKinley bill of 1890—open it to the fullest and freest discussion and dissect every line and paragraph of the measure, as you did with the bill of 1894, and give the country an opportunity, even before its passage, to understand how bad it is. But the conditions are such that patriotism and feeling for the masses require a different course. The mistake, whatever it is, great as I think it is, must be borne by the party which has assumed the reins of government and now controls every branch of the Government. I would not have disturbed the present law, not because

of party reasons, not because we differ in our theories of tariff taxation, but I believe, and I do not hesitate to state it, that the wise thing for the party in power to do, looking alone at the prosperity of these great people who are now prostrate, would have been to permit the present law to stand, while placing taxes upon such articles on the free list as would give from forty to forty-five million dollars more to the Treasury to meet the expenditures. But that probably will not be. It can not be.

The only excuse for dealing with this question at all is that there has not been enough revenue to meet the expenses of the Government. In 1890 our friends on the other side brought forth a measure to reduce the revenue, known as the McKinley bill. It did reduce the revenue $50,000,000 per annum, and immediately in one item alone you increased the expenditures $50,000,000 and left the Treasury in a condition where it was embarrassed, and it was seriously embarrassed in 1893. There was not revenue enough under the measure. When the Wilson bill came to this body in 1894, it came here, as this one has come and as all bills of which I have had any knowledge since 1861 have come, imperfect in every provision, not carefully considered, and no account taken of the revenue as compared with the expenditures. We added $75,000,000 to it, and yet, owing to the decision of the Supreme Court, even with the $75,000,000 added, there has been a deficit in the Treasury every hour since the day of its passage until now.

I confess I would not have voted for the bill, even in the shape in which it passed, had I believed at that time that it would not produce revenue enough to meet all the extravagant expenses of the Government, for they have reached the point of $500,000,000 per annum practically, and can not for the next two or three years be materially reduced, although I have stood in my place on every proper occasion and advocated a reduction of those expenditures. It is possible that during the next fiscal year they may be reduced somewhat below those of last year, but only slightly.

Now comes this bill, which, when it reached here the Senator from Rhode Island [Mr. ALDRICH] claimed would produce a surplus of many million dollars; and yet the examination made by the Republicans on the Finance Committee showed conclusively that there would not be sufficient revenue to support the Government. You have undertaken to remodel it. You have undertaken to make it a revenue measure. I trust, Mr. President, that it may be a revenue measure. I trust it may produce revenue enough to meet the expenditures that are bound to come. But what a condition of affairs our friends on the other side are confronting! From the beginning of the Government until the war, and then after the war, the position of the Republican party, as that of the Democratic party, was that the revenue to support the Government, or the great bulk of the revenue, should come from tariff taxation and not from internal-revenue taxation.

We remember to what speeches we were treated by the distinguished Senator from Iowa [Mr. ALLISON] and others on the other side three years ago when, in order to produce revenue enough to pay the extravagant expenditures which you had forced the Government to make by your laws, we proposed to put on temporarily an income tax, and now the confession comes from you—how humiliating it must be to the older Republicans—that with your theory of taxation, that of raising money from imports, you by your extravagance have made it impossible, no matter how high you place the duties, to receive enough money to meet the expenditures of the Government. You propose to place a tax upon the man who takes a refreshing drink with his family on any day of the week. You intend to tax the poor fellow who can not drink champagne and who has not enough money to get a drink of whisky. You do that because of your extravagance and because you raise the rates in this bill so high that you have prohibited revenue from importations from abroad. The tobacco that he smokes or chews is to be added to.

In time of peace, thirty-odd years from the day when you first levied internal-revenue taxes to support the Government, you go back, confessing that your system is a failure, confessing that you have been so extravagant that it is impossible for you to support the Government unless you enter every household in the land and tax that which is produced in the man's own country.

So be it, Mr. President. The country will understand it. The country will understand perfectly that this great scheme of prosperity, this great measure of relief, adds tenfold to the taxation on the consumption of every man of moderate means in the land, while there is nothing here that attempts to approach the ideal—making men pay for the support of the Government in proportion to their wealth. The whole system is unequal and unjust. The people's verdict will be that of 1892.

Mr. STEWART. I should like to inquire of the Senator from Iowa, because I do not know, whether the protection to the manufacturers in the pending bill, if this amendment shall be adopted, will be greater or less than that under the Wilson Act?

Mr. ALLISON. I have no doubt that, exclusive of the countervailing duty, which is put in the bill for a special purpose, well known and understood, the pending bill, as it stands, does not give higher protection to the sugar-refining industry than does the Wilson Act.

Mr. BERRY. Does it give as much protection?

Mr. STEWART. Does the Senator from Iowa mean as it stands with the amendment?

Mr. ALLISON. As it stands now, with the amendment proposed by the committee. That is my belief.

Mr. President, after what has been said by the Senator from Maryland [Mr. GORMAN] and other Senators this morning, I think it is perhaps due to this side of the Chamber, and due especially to those who have been in a sense responsible for this schedule, that I should say a few words respecting it.

In the debate, so far as I have observed, upon the sugar schedule, we have been dealing with decimal figures, with cents and fractions of a cent, without apparently discussing what lies at the bottom of the sugar schedule as it lies at the bottom of other schedules in the bill.

We have been taunted by the Senator from Louisiana [Mr. CAFFERY] with the bounty of 1890 and with the statement that so far as that portion of our country is concerned the schedule is supported and sustained upon the theory that it is a tax for revenue only. I wish for myself to declare in my place here in the Senate that if that were the only object involved in the schedule I should not give it my vote. I do not believe that if we were establishing a system of revenue providing for the expenditures of our Government, even by means of imposts, and imposts alone, the article of sugar should bear the proportion of those taxes or burdens that are imposed by the bill. If we are to raise revenue for purposes of revenue only by imposts, then there should be a distribution of these burdens in such a way as not to lay them all upon one particular article.

The Senator from Louisiana called attention to the fact that away back in the year 1846 and prior years 30 per cent ad valorem upon sugar was a protection sufficient to enable the sugar planters of Louisiana from year to year to increase their output of sugar, and he argues to-day, and others argue, as though our conditions now are the conditions of thirty or forty years ago.

When I was a boy, if I may be permitted to illustrate by my own experience, it was a rare thing for me to see sugar that approached whiteness. Since that time all the conditions of our country and of the civilized world have changed. Although we now consume four thousand million pounds of sugar per annum in the United States (a per capita of consumption, I believe, only exceeded by the per capita of consumption in Great Britain), I think it is safe to say that not one-fiftieth or one-thousandth part of that sugar comes upon the table of the rich or the poor, of the laborer and mechanic or those who have a fortune, unless it first is put through a process which in some form is the refining process.

Therefore it is that in all the bills which have been passed that I know of since the refining process became necessary to our own civilization we have undertaken to make a distinction between raw sugar as it is produced in the fields and refined sugar as it is placed upon the table. So if you run back through all the years of the past you will see that in 1883, in 1890, in 1894, and in the pending bill as it comes to us from the House and as it is now presented by the committee amendment it is proposed to give a fair protection to the refining industry in our own country as against the refining industries in other countries.

Now, the pending bill comes to us from the House of Representatives with a specific scale of duties, beginning at 75 degrees polariscopic test and at a rate of duty of 1 cent a pound, running up three one-hundredths of a cent for each degree of polariscopic test. What is the polariscopic test? My associate on the committee explained it somewhat the other day. It is a sample of the imported sugar, whether in bags, or boxes, or barrels, and that sample is taken into the appraiser's office and an officer, looking through the polariscope, tests the fineness of the sugar. That has been the commercial method of testing the fineness of sugar the world over for the last twenty years.

Senators say it is difficult for us to fathom the intricacies of the pending schedule. It is certainly difficult for a layman, but it is not difficult for an expert in sugar. What does the bill, as it comes to us from the House, propose? It proposes that for each degree of this polariscopic test there shall be three one-hundredths of a cent added. Why is that done? Because experts have discovered, and merchants have discovered, that for each increased degree of polariscopic test there is an increased value in the sugar.

I am inclined to agree with the Senator from Maryland that a portion of this could well be distributed by placing an ad valorem duty upon it; but the House of Representatives prefer a specific duty, and I can say without offense, I hope, to anyone that those who believe in the protective policy believe that it is wiser, wherever it can be done, to provide specific duties.

In order that there might be no damage to the trade, which the Senator from Maryland spoke of, and which I believe is a desirable trade for the people of the United States, the committee have

proposed here another amendment, which will enable us, as we hope and believe, to continue the trade in the lower grades of sugars that are found throughout the islands of the world.

Mr. GORMAN. Will the Senator from Iowa permit me to ask him a question for information?

Mr. ALLISON. Certainly.

Mr. GORMAN. To what extent does the Senator believe that the provision made as to low-grade sugars is sufficient? Does he believe that it will extend even to half the additional cost of transportation from Java as compared with Habana?

Mr. ALLISON. I am not prepared to say whether it will be a full compensation for what would be called an ad valorem duty, but I believe it is such a compensation as will enable us to carry on the trade which we are now carrying on. I have no doubt that the amount allowed here will be sufficient, or approximately so.

Now, for this duty, partially specific and partially ad valorem, we have substituted $1.95 per hundred pounds for $1.87½ per hundred pounds in the bill as passed by the House. We have done that believing, as I believe (but I shall not take the time now to elucidate the tables that I have before me in great number to show it), that this is a less duty than is imposed by the existing law for the protection of refiners, if you will take out of that duty the consideration of the three-eighths of a cent per pound and the 27 cents per hundred pounds countervailing duty upon beet sugars.

Mr. TILLMAN. Mr. President——

Mr. JONES of Arkansas. Is not the three-eighths just as much a part of the tax as any other part of it?

Mr. ALLISON. I will deal with that.

The PRESIDENT pro tempore. Does the Senator from Iowa yield to the Senator from South Carolina?

Mr. ALLISON. I do.

Mr. TILLMAN. I merely wish to ask a question. The Senator dwells on and emphasizes the point of protection. Do I understand him to mean that he wishes to protect American capital or American labor?

Mr. ALLISON. That is a generality which the Senator must know how I would answer. I believe in protecting American labor——

Mr. TILLMAN. And not the capital?

Mr. ALLISON. Against foreign labor, and American capital, if need be, against foreign capital. I believe in protecting American industry, which must necessarily include both labor and capital.

Mr. TILLMAN. I merely wish to call your attention to the fact that, according to the statement of President Havemeyer before the investigating committee, there are only 25,000 men all told engaged in the sugar-refining business, and you propose to give, according to his own statement, in the differential which you offer and which you have increased, well, anywhere between twelve and twenty million dollars a year, to be taken from the consumers throughout the country for the protection of 25,000 men and the millionaires who work them.

Mr. ALLISON. I do not intend to go into a detailed discussion of that question with the Senator from South Carolina, but I want to say that all the testimony of all the past, and of all those who have studied this question, is that the sugars which are consumed in the United States will be consumed in the form of refined sugar, and that sugar will be refined by somebody, either in the United States or abroad. For my part, if there are but 25,000 laborers and whatever capital is invested in the refining, whether it be done by the sugar trust or by independent refiners, I prefer that it shall be done in the United States of America rather than in Germany, Holland, or Great Britain.

Mr. TILLMAN. Will the Senator allow me?

The PRESIDENT pro tempore. Does the Senator from Iowa yield?

Mr. ALLISON. I do not intend to go into a discussion of this subject in its details, and I trust the Senator from South Carolina will excuse me.

The PRESIDENT pro tempore. The Senator from Iowa declines to be interrupted.

Mr. TILLMAN. Certainly; I will not do so if the Senator insists upon not being interrupted.

Mr. ALLISON. That is the situation as respects the sugar schedule. Now, I wish to say a word about the policy of it. It is that we shall do what Europe has done; that we shall establish the industry of producing sugar in our own country, instead of paying $100,000,000 per annum, as we have been paying for the last twenty years, to other countries who are engaged in agriculture. But for that part of this policy I would follow Senators who would place a duty of only 40 to 45 per cent ad valorem even upon sugar as one of the methods of raising revenue to carry on the Government.

We import into the United States now nearly 3,500,000,000 pounds of sugar from other countries, and in increasing quantities constantly from Europe from sugar beets, which sugar beets are grown upon land in Germany, Austria, Holland, and Belgium that is worth three or four times the land in our own country which would produce, and by actual test can produce, sugar from beets equally well with the countries I have named. It is for this purpose that I favor these provisions for a high duty upon sugar.

The Senator from California [Mr. WHITE] did me the honor a while since to quote what I said two years ago. It was the policy in 1890 to encourage the growth of the sugar industry in our own country by paying a bounty. That policy of course failed. It failed, perhaps, first, by the rapid increase of the production of sugar in our country, requiring a large draft upon the Treasury. It failed, secondly, by the policy of the Democratic party four years ago, when they decided that they would do nothing to encourage the beet industry of our country and but little to encourage the continuation of the production of sugar from cane.

So, Mr. President, the schedule stands or falls, and this policy stands or falls, as we succeed in establishing the beet-sugar industry in our country, which can be established, as shown by chemical tests, in nearly half the States of the Union.

Mr. HOAR. It is a great agricultural industry.

Mr. ALLISON. It is an agricultural industry, as my friend from Massachusetts suggests, and a great agricultural industry. It is said that it is the beet-sugar production in Germany that has given to that country its marked prosperity for the last few years. Can anyone tell me why it is that we should export the corn, the meat, the pork, and the grain of Iowa to Europe, grown upon fields in the interior of our own country and bearing the burden of transportation to the countries of Europe which now produce sugar, and then draw from them the refined sugar which we consume in Iowa? That is the question we are deciding here.

Of course the other question is also under consideration, and I do not minimize the importance of it, and that is that while we are doing this we shall so balance the scales as between all interests as to give neither to the refiner nor to the producer an undue advantage.

That is all there is in this schedule. It may be that we have had the schedule adjusted and arranged not precisely as it ought to be, but it is confessedly within a fraction of all the schedules that have been devised in the past upon the subject, except that of 1894, and this one is much lower than any prior schedule.

I was asked by the Senator from Arkansas [Mr. JONES] to state why this three-eighths should not be counted as a part of the differential duty to refiners. This three-eighths of a cent is only 11 cents on a hundred pounds to the refiners, 27 cents of which is upon raw sugar. It is a fact, and a certain fact, as it seems to me, that if we do not give the three-eighths and the 27, the effect of it will be that our industry, which we call the beet-sugar industry, and the cane-sugar industry, if you please, will be still, as it has been, at the mercy of the beet-sugar raisers of Europe. If we shall not charge this countervailing duty, then we are in no position to compete with German sugars or with the sugars of the Continent. Therefore this countervailing duty is put on now as it was put on in 1894 in the Wilson bill, so called. They put on a countervailing duty equivalent to the bounty at that time. The result was to get rid of the countervailing duty.

Germany, France, and Austria all increased their bounties, so that the countervailing duty which the Senators on the other side of the Chamber put on four years ago proved unavailing to protect our sugar industry; and I think our own sugar industry would not be protected unless we place this countervailing duty of three-eighths of a cent per pound upon the sugars produced in Europe or in bounty-paying countries. Now, that is all there is of it. If Senators can show me that the countervailing duty is an injustice, I will deal with them in a spirit of justice as respects it. It is not involved now in the particular question before us; but I can see no way of protecting our industry in this country, whether it be beet or cane sugar, except by imitating what was proposed by the Senators on the other side in 1894 and imposing a countervailing duty equal to the bounty.

Mr. JONES of Arkansas. Mr. President——

The PRESIDING OFFICER (Mr. GALLINGER in the chair). Does the Senator from Iowa yield to the Senator from Arkansas?

Mr. ALLISON. Certainly.

Mr. JONES of Arkansas. The Senator's calculation, as I understand it, is that 38.03 cents imposed on refined sugar is justified because there is 27 cents imposed on raw sugar. I confess there would have been force in that argument if the bounty-paid raw sugar were the raw sugar used in the manufacture of refined sugar in this country. The Senator will bear testimony to the fact that year before last there was 8 per cent of beet sugar, all told, imported into the United States, and that even last year 67 per cent of the sugar coming into the United States was centrifugal sugar, not counting the muscovado sugars, molasses sugars, and the other sugars that came in afterwards. So the sugar actually used in the manufacture of refined sugar is not the beet sugar on which 27 cents is paid, but cane sugar on which no bounty at all is paid.

Mr. ALLISON. Of course, if there is no bounty paid on raw

sugar and no bounty paid upon refined sugar, there will be no differential duty upon either raw or refined sugar by the bill. So that that is all there is in that question.

Mr. BERRY. Will the Senator from Iowa permit me to ask him a question absolutely for information?

Mr. ALLISON. Certainly.

Mr. BERRY. The Senator from Iowa said to the Senator from Nevada that, leaving out the countervailing duty, there was no greater protection to the refined sugar in this bill than in the Wilson Act. I will ask the Senator if there is any greater protection in his proposed amendment to the House bill than there is in the House bill as it now stands?

Mr. ALLISON. Possibly there may be a slight increase. I think there is.

Mr. BERRY. I should like to ask the Senator one other question. The duty paid on 100 pounds of refined sugar imported at this time, outside of the countervailing duty, is about $1.04 per hundred pounds. Under the proposed scale it will be $1.93 on a hundred pounds outside of the countervailing duties. So if the bill becomes a law, there will be that difference between the Wilson bill and the present bill as to the amount of duty.

Mr. ALLISON. I will say to my friend from Arkansas that there will be just the difference between 40 per cent ad valorem of the value upon that sugar as under the existing law and $1.95 a pound. Undoubtedly we are largely increasing the duty upon sugar. There is no doubt of it. I do not think we are quite doubling it, but we are running a long way toward doubling the present duty on sugar.

Mr. BERRY. The Senator from Iowa stated that in 1894 every dollar levied on sugar—not only the imported sugar, but the domestic sugar—was paid by the consumer. Then, if the tax is largely increased, it seems to me that the refiners would unquestionably get a larger increase under this bill and a larger protection by far than they would under the other.

Mr. ALLISON. Yes; but the Senator from Arkansas forgets that the refiner must pay the duty on all the raw material that he puts into his refinery; and there is no doubt, I will say to the Senator—I have no concealment to make about what I think as to the effect of this duty—until we can develop the beet-sugar industry and greatly enlarge the production of sugar from cane in our own country, and in that portion of it in proximity to the State in which the Senator lives, whatever duty we place on sugar must, in the nature of things, be added to the price.

Mr. BERRY. Will the Senator permit me to say one word there?

Mr. ALLISON. Yes, sir.

Mr. BERRY. Three years ago the Senator from Iowa and other Senators stood here and denounced the sugar tax in the Wilson bill as protecting and fostering an illegal trust, a trust which they charged had the country by the throat, that was making impositions upon the great laboring classes of the people, a trust that was growing rich. They denounced it then: and why is it, Mr. President, that they will not join with us and take all the taxes off of refined sugar and give to the refined sugar no more than the raw? If it be the great evil to this country which it has been represented to be, why not crush it at once and forever, and say that a trust which has acted as this has done shall not have any protection from the Senate of the United States?

Mr. ALLISON. I believe it is the policy of this side of the Chamber, as I have no doubt it is, or ought to be, that of the other side, not to transfer the refining of sugar—which is essential to our method of consumption—to Germany or Holland or England: and if there is not an opportunity given for what may be called a compensatory duty to the refiner, as a matter of fact that industry will be transferred to other countries. Everybody knows that.

Mr. GORMAN. I should like to say a word, if the Senator from Iowa will allow me a moment. The statement which has been referred to of the Senator from Rhode Island [Mr. ALDRICH] was made when this bill was first reported to the Senate. I call attention to it because my own immediate constituents have a very great interest in this trade, as have the people of the entire country. The Senator from Rhode Island, as will be found in the RECORD on page 1555, made this statement in regard to the bill as it came from the House of Representatives:

We believe—

Said the Senator from Rhode Island, speaking for the Republican members of the Committee on Finance—

that the imposition of the high specific rates upon low-grade sugars testing 87 degrees or below would have the effect to exclude them from the markets of the United States. The total amount of these low grades produced is, as I have already stated, unimportant as compared with the total sugar crop, but their continued importation into the United States is very important when viewed from the standpoint of our trade and commerce with other countries. The sugars referred to are imported from the Philippine Islands, Java, China, Brazil, the British West Indies, Puerto Rico, Haiti, Santo Domingo, Mauritius, Egypt, and the Argentine Republic. They are largely brought to the United States, especially from countries in the East, as return cargoes of American ships that take from the United States cotton cloth, petroleum, and other American manufactured products, the principal article of export in many cases being cotton goods, and these countries furnish practically the only foreign market for the export of these goods. To exclude from the American market all the low-grade cane sugars from nearby countries, and sugars of all grades from distant countries, would confine American purchasers to beet sugar and to centrifugals from points nearest the United States, and send all other sugars to free markets, like Canada and England.

I should like to have the Senator from Iowa, who represents the majority of the Committee on Finance on the other side of the Chamber, state the reasons why they have agreed to change from their original position and go back to specific duties, making them higher than they were when this comment was made upon the provision as it stood, and to state how this American trade can be protected.

Mr. ALLISON. The committee propose to compensate for the change from ad valorem to specific by means of the reduction of one-tenth of a cent a pound upon sugars testing 87 degrees and below. It is said by those who know about it that this will certainly compensate for the additional cost of transportation, and that those who do trade with the countries which have been referred to will continue to trade under these conditions.

I am perfectly aware of the relatively low price of this class of sugars as compared with the large class of sugars used by refiners; but to give them compensation, it is said by those who know more about it than I do, that, whilst not adequate, it will enable them to maintain the trade, and for that purpose we have inserted a provision, as the Senator knows, covering that class of sugars.

Mr. GORMAN. I should like very much to have a more specific statement than that given by the Senator. My information is that the cost of transportation alone in sailing vessels which carry our product, under the present law, is more than 5 mills to the pound in the difference between the cost of transporting the Habana and other sugars. This slight concession is not sufficient, and it will destroy that trade. In Baltimore, Boston, and New York there are large fleets of vessels, practically the only great sailing vessels we have, which are engaged exclusively in this trade; and my information from the shippers and from those who are interested in the business, and who are not looking at the rates particularly except that they may be permitted to live, is that it will absolutely exclude those vessels from that trade.

Take the matter of the New England trade. It is said that nearly all the cotton goods, and all the other wares that go from New England, unfortunately now pass by rail by the Canadian lines and then by English steamers to China and Japan, and that we have nothing left for American bottoms except this trade. The owners of these vessels and the men who know the details of this business insist that, unless you adopt the provision practically as the Senate committee agreed to it, that trade will be gone, though it is at present enormous and growing. I should like to have the Senator's figures as to that.

Mr. ALLISON. I will say to the Senator that the committee of the importing merchants of New York who import these sugars recommended to the Committee on Finance this one-tenth as a solution of this whole matter.

Mr. GORMAN. But the Senator from Iowa will, I am quite sure, agree with me that in New York the great trade is in the other line of sugars, which you have thoroughly protected; but in the ports south of New York—Philadelphia, Baltimore, Newport News, and other Southern ports where the vessels come in and trade—is the interest that is especially affected. The great volume of trade in New York is in the other sugars, which are amply provided for.

In view of the increase which has been made, I suggest to Senators on the other side—I am not dealing now with the general question that divides us by this aisle—that they ought to at least furnish us, and furnish the country, with some positive evidence that they are not absolutely destroying the trade to which I refer. I know the Senator from Iowa and Republican and Democratic Senators do not desire to do that. I believe the best judgment of my friend from Iowa is in accord with the suggestion I make, and it does seem to me that in a case so plain as this you ought to remodel the bill as to this tax so far as low-grade sugars are concerned.

Mr. ALLISON. It may be that the bill would be improved by increasing that allowance. I do not know.

Before I take my seat, Mr. President, I want to say a word to the Senator from Maryland on another topic. He has taken occasion two or three times to speak of the extravagant expenditures and appropriations of the Government, especially under the Republican party. I want to say to him and to the Senate that I have analyzed that question with great care, and, as one Senator, I will welcome any suggestion coming from the other side of the Chamber respecting a material reduction of our expenditures.

The Senator from Maryland stated that we increased a single item $50,000,000 in 1892. That, of course, was an increase of the pensions of our soldiers. I have heard of no Democrats, at least upon the floor of the Senate, who propose to change that law, although they have had an opportunity to do it. Respecting the

other great increases, our rivers and harbors, they are passed here usually without the yeas and nays. You can hardly find Senators enough opposed to river and harbor bills to call for the yeas and nays.

So I do not think, although some of these expenditures may be unnecessary, that the Senator from Maryland can go very far in reducing the annual appropriations for rivers and harbors. I have heard him eloquently, and at length, proclaim the necessity of an enlarged and more vigorous Navy. That expenditure, I presume, he would not be willing to dispense with. I do not suppose he would be willing to dispense with another necessary expenditure—that of providing our seacoast cities with fortifications. We have been making liberal appropriations for this purpose for the last few years.

I have scanned these details, and I am sure that it is not possible for us to very greatly reduce these expenditures in the next few years. Therefore it is that I welcome any suggestion that the Senator from Maryland may have to make, with the hope of securing now, what we did not secure in 1894 by means of the tariff bill then passed, a revenue sufficient to meet our expenses.

Mr. HOAR. Before the Senator sits down, I want to ask one question as to a part of his statement which goes to the country, and it is obvious enough, I suppose. Would not the transferring, as the result of an inadequate protection of the sugar-refining business, to other countries tend very largely to prevent the establishment in this country of the business of raising cane and beet sugar for our domestic consumption?

Mr. ALLISON. There is certainly no doubt of that. The dealing with this great sugar question, from the time of its production to its final consumption, is an entirety; and if we are to foster and protect it in our country, we have got to do it with the work in our country.

Mr. HOAR. I put that question to the Senator because I have heard it said more that once on this floor that the framers of this bill were indifferent to the agricultural interests of this country. Now, if I understand it—whether the details be right or wrong I am not competent to discuss, and there is no time to discuss them now—but if I understand the attempt of the Senator from Iowa and his associates, it has been to establish, encourage, and promote a great agricultural interest of this country, which shall be enabled to supply not foreign markets, but the home market, which is now largely possessed by other countries; and it seems to me that the gentleman shuts his eyes to the effort of the framers of this measure who does not see that the struggle over this sugar scheme which we are making with our Democratic and our other opponents is a struggle to establish one of the greatest, most profitable, and most valuable agricultural industries that we can possibly get for the purpose of supplying our home market.

Mr. ALLISON. I have failed to be understood if I did not say in the beginning that but for the fact that we all believe this schedule will secure at an early period the production, from beets chiefly, of the sugar necessary for the consumption of the people of our country I would not support this sugar schedule.

Mr. BERRY. Mr. President, the Senator from Iowa knows the great respect I have for him, but three years ago, upon the floor of the Senate, he made this statement:

> I pause here to call attention to the fact that the sugar schedule as it is now proposed is in its essence a capitation tax, a tax upon every man, woman, and child in the United States of $1.

He said at another time what I think the Senator from California [Mr. WHITE] probably read a while ago:

> If I had my way, I would strike from this bill every vestige which provides a duty on sugar, and I would continue the bounty; * * * and if additional revenue is required, I would look around among the luxuries that are consumed by our people and find that revenue.

To-day, Mr. President, the Senator from Iowa stands upon the floor of the Senate and admits that this almost doubles the duty which is now contained in the Wilson law.

Mr. ALLISON. I did not admit it; I stated it.

Mr. BERRY. I understood the Senator from Iowa only a few minutes ago to say he admitted that the bill largely increased the duty—almost doubled it.

Mr. ALLISON. I said I did not admit it; I stated it.

Mr. BERRY. Very well. Then the Senator stated that to be the fact. Now he proposes to double this capitation tax. He said also, three years ago, that this tax not only applied to foreign sugar, but that it applied to the domestic sugar, and that the consumer had to pay that tax. I should like to know who gets this 91 cents on the hundred on the domestic sugar? Does that all go to the cane-sugar raiser or does it go to this trust?

One other word. It is said it is necessary to protect these refiners in order to prevent the refining business being done abroad. It is charged all over this land, and it is not denied by the press or anyone else, that the sugar trust have made millions of dollars under the schedule of 1890 and millions of dollars under the schedule of 1894; yet the Senator admits, if you include the countervailing duty, as it is called, that these refiners are still protected at least to as great or a greater extent than under the Wilson law. Why is that? If the sugar trust is all that the Republicans charge it with being, why will they not stand here and vote with us when we have an opportunity to stop its influence?

If this organization controls, as is charged, all the politics of the country, if it is an organization whose president swore that it had contributed to both political parties, an organization which contaminates everything it touches, an organization which has grown so powerful that the press of the country says that this Senate dare not antagonize it, why can not we give the lie to that charge, and why can we not vote here this evening to take away the protection which is contained in this bill, and place that trust upon an equality with other men? If they can not make a living in the refining business, let them engage in some other business. By what system of reasoning can you say to the people of this country that you will double this tax upon them; that you will continue to give this trust the benefit of this differential by the tax on refined sugar when it has already grown rich? Why will you say that these men can not make a living in the refining business unless Congress passes a law to help them make it?

I think that all professions about the trust should be brought to a test. I believed three years ago that there ought to have been no protection given in that bill for the trust. The Republicans said they believed it then. I believe it to-day, and now is the opportunity to act. Let us see whether or not you were acting in good faith when you made your professions three years ago.

Mr. STEWART. I am in favor of the speedy passage of this bill, but not for the reasons which are ordinarily assigned. It is not true that there is any immediate necessity for more revenue. There are from one hundred to one hundred and thirty million dollars of idle money in the Treasury which ought to be in circulation, and that speedily. There is an immediate necessity for paying that money out. We are paying 4 per cent per annum interest on the bonded debt, and have, with the reserve fund, $230,000,000 idle money in the Treasury. So I am not for the immediate passage of the bill because there is any necessity to raise more revenue. We do not need more taxes. We need more money with which to pay the taxes we already have to pay.

I am not in favor of the passage of this bill because I anticipate any material relief to the country, for I do not believe that any tariff legislation can cure the evils which afflict the country. It is said that when a person is afflicted with a cancer, the whole system is out of order. There is a cancer of contraction gnawing at the vitals of this Republic which diseases the whole body politic.

I hear a good deal said about trusts. Trusts are the natural consequence of falling prices. Those engaged in any class of business are as certain to unite and curtail production and manage the entire product when they are losing money as it is certain they have any sense whatever. That is the first resort when competition will destroy them on account of falling prices. They will adopt that course to protect themselves. That is what every manufacturing industry in the country is doing, and what they will continue to do.

The trust, when it is formed, becomes strong; it gets the entire combination of manufacturers in that line in it; it allows many establishments to lie idle, as is done by this sugar trust. Many magnificent establishments are idle to-day in the sugar trust. Under those circumstances, while prices are continuing to fall, nobody else can engage in the business, for if they do ruin is inevitable. So long as falling prices continue, the life of the trust is continued. Trusts in this country, as I say, are the natural outgrowth of contraction, and always have been. Nothing makes competition possible but rising prices. Then people can go into new enterprises.

Again, it is said there has been much disappointment in the amount of revenue raised by the various tariff laws. Of course there has, and there will be. With every avenue of business closed, stagnation prevails everywhere. I defy anyone to state the name of any class of legitimate business where a young man can go forth and have a reasonable certainty of making a living to-day. The opportunities for young men are absolutely cut off. The laborer is begging for employment everywhere. There are millions out of employment; there is no hope before them, and there can never be while prices fall.

If we had stability of prices, young men could do as they have done from the foundation of this Government; they could go forth and, with their labor and credit as honest and industrious young men, engage in business and make it pay. They could pay for the cost of the business establishment and they could build homes. Under those conditions this great country was started with homes from the Atlantic to the Pacific. They are building none now.

The principal discussion in every household where there are young men and young women is as to what they will do for a living. Can they marry and make homes as their fathers did? All say no. If the fact should be known, you would find the percentage of marriages have fallen off all through the country at least from 25 to 40 per cent in the last ten years. That is the result of falling prices. It paralyzes everything. The body politic

is a paralytic; and the higher taxes you levy the less will be your revenue.

The Wilson law, with an honest monetary system which would maintain the stability of prices, would give you revenue enough. You can not calculate on what revenue a tariff law will produce on account of anything which has preceded it. You must calculate that your tax receipts will shrink with the shrinkage of the business of the country. If the 70,000,000 people in this country were employed, with unlimited resources, the taxes to carry on the Government would not be felt. If there were only sufficient business for the mass of the people, it would be impossible for trusts to form; other establishments would start, and there would be competition; new railroad enterprises would spring up; new mining enterprises would be inaugurated; new agricultural developments, and new manufactories. All these things would follow the establishment of a proper financial system.

This bill can not produce prosperity, though a great many people have been deceived with regard to it, and many good people have been made to believe that a tariff will bridge the difficulty. It can no more reach the difficulty than you could cure a broken leg by putting a poultice on your toe. But many people believe it will, and I want them to have the bill as an object lesson. We all know that a readjustment of the tariff always produces confusion in business, and the first year or so it will do more harm than good, as almost every new tariff does. Dissatisfaction always springs up. We know the party in power never gained any popularity as the immediate result of the passage of a tariff bill, and I do not want the Republican party to gain any popularity.

I do not want to popularize the gold standard, which means slavery. I do not want to popularize robbing the people of the circulating medium. I do not want to popularize the movement inaugurated in Great Britain and adopted by the monarchs of the world to unite with the money powers and contract the currency, take away opportunities, and destroy democracy, which they claim they will do and are doing. I do not want to augment the money power and diminish the power of man.

It is a question between the money powers and man. If you take away opportunities and make the people dependent upon the money power, you are marching on toward the Asiatic conditions; and now we see every day that the march goes on. Wages are reduced in every town. Cleveland came out the other day and stood for a grand reduction. I do not know how much the per cent is, but a grand sweep, leading up to an election. It is man against money, and I am in favor of liberating man. You say that slavery has been abolished and the world is making progress. I deny it. Four million chattel slaves were liberated in this country, but slavery has made more progress since that hour than in any one century before.

The chains of slavery upon 300,000,000 people in India have been fastened a hundredfold, while poverty abounds and a ruthless Government robs the people. Slavery in Africa has beenestablished since. A foolish Khedive in Egypt involved that country in five hundred millions of debt. Great Britain sent her army and navy there to collect it. She placed taskmasters over the Egyptians and collects the debt. Of course the Egyptians have to labor under the lash to pay it, and each acre of land has to contribute from seven to eight dollars a year. It can be done by nothing but the most abject and cruel slavery, and this system of moneyed slavery is marching on.

We have heard it in Europe this very year. For the last five hundred years Christian Europe has been protesting against the march of barbarism and has been protesting against the murder of Christians, but when the Christians rose to assert themselves in Crete, the Christian powers of Europe united to vindicate the right of the Turk to murder Christians. When we are told by Gladstone and others that they have murdered 100,000 Christians in the last few years, we find Christian Europe combined to aid the Turk in his claim of vested right to kill Christians. We see this. Why is it? It is the money power. It is the bonds which Turkey owes. It is because the people of Turkey are enslaved by the money power the same as the Egyptians. It is the money power that is blotting out liberty in Europe. It is the money power that deprives this country of its circulating medium, and we have a promise of prosperity, a promise of prosperity without dethroning the money power, a promise of prosperity without removing this cancer. Let them try it, and try it quickly. The quicker the better.

As to this particular schedule, I am not scared about its effect upon the trust. There are going to be trusts anyhow, so long as the volume of the circulating medium is shrinking. I was opposed to the removal of the tariff on sugar in 1890 and the substitution of a bounty. It was done. It was the theory then that we would build up home industries. We are told by the managers of this bill that the protection here given will have a tendency to develop that industry, and it is very likely it will. The land upon which beets can be raised in this country is almost without limit. We have enough good land suitable for beet culture to raise beets enough to supply the world. That industry is being developed, and I am anxious that a tariff shall be restored so that the industry may thrive.

I do not like to see a tariff so levied that it will unreasonably foster this trust; but you can not kill trusts so long as you cultivate contraction, which is the mother of trusts. You will find them everywhere. You will find that your laborers have to get together and form trusts. Those who are left out of the trusts will starve. Labor unions are trusts. You can not provide for all unless you provide a larger volume of money. Otherwise every year you must reduce your population. We are reducing it very rapidly. There are at least 5,000,000 willing hands who can not find anything to do in this country. Those 5,000,000 represent 20,000,000 people. Those 5,000,000 are not in the market for money. Consequently you have taken away at least one-fifth of your population. They do not need money.

There may be a great many more of them. You are taking them out of the market for money, and therefore reducing your population and the demand for money more rapidly than ever before. You are shrinking your industries, throwing men out of employment, shrinking this great Republic. You are going on with this villainous and cruel policy, which the Republican party will pursue so long as it suits England. They are unaware that those who govern England are in this world's combination to enslave mankind. They are not aware that that is the center of the money power. They are not aware that the money combination of England is engaged in this wrecking business to wreck the world. They are not aware of that. They do not give heed when it is told them.

Mr. Gladstone told them that he would not undertake to estimate the colossal accumulations of modern obligations held in England; that it was too great for estimate. He suggested ten thousand millions, and all of them say he was far below the fact. He said to allow silver to be remonetized would be a gracious gift to the debtor world that is now compelled to pay in gold. He said they might thank you for it, but the statesmen of England who consented to extend such a gracious gift to mankind would lose their reputations for sagacity, for shrewdness, for selfishness, and he repudiated the idea.

Now we are sending a commission to Europe to treat with those people who have a policy of enslavement and robbery under which they are accumulating their millions and through which they are enslaving mankind and putting the lash on the back of the Egyptians; through which they are maintaining the right of the Turk to assassinate Christians; through which, I say, they are marching on and making the world march on to slavery. We are sending commissioners to them and asking them, if they please, for permission to pass such laws as are authorized by our Constitution. There is nothing more humiliating than sending commissions to Europe asking of monarchies the right to legislate in the great Republic of America.

I want to see all these object lessons given to the people at once. I did not oppose the sending of those commissioners, because many honest people have been made to believe that it will do some good. I want them to have the object lesson. Read the English papers and see how they are treated there. Who backs this commission? Are they backed at home? Does the appointment of Gage, of Roberts, of Jordan from the inner circle of gold contraction mean nothing?

Right in that connection Mr. Gage goes over to Maryland to the bankers' association, and a resolution is passed (he suggested it, no doubt, because he and Eckels were both there) in favor of the gold standard first, last, and all the time. That is telegraphed to Europe to encourage and aid your commissioners to persuade Europe that this country is for bimetallism. They understand perfectly that the gold standard has a fast hold upon this country, and they laugh at this proceeding and treat it as a necessity growing out of the platform and without a particle of honest intention. That is the way you are viewed there, and it is a just view.

I want the pending bill to pass. I want to protect all industries alike. I want it to be as good a tariff bill as it can be. I want it to be such a tariff bill that the tariff men themselves will say it is a good bill, so that there can be no question about it. I want the people to see that they can not have prosperity without money. I want them to know that if we will not help ourselves Europe will not help us. I want them to know that the great Republic must stand for itself and by itself. I want them to know that we must return to the legislation of the better days of the Republic before we can have prosperity. The quicker this bill is passed the better. The wandering commission is on its travels. People see what it is doing.

Now let us see what this will do. Let them see the whole business. It may be that the storm will be so great, so intense, that it will melt the hearts of Wall street, even if it does not melt those of Lombard street. Wall street may relent, but whether it does

or not the people are now organized. They have a candidate in the field. They have their platform. It is indorsed by 6,500,000 men who are in earnest. It is reenforced by hundreds of thousands every month. It is progressive.

Last year the organization of the silver forces was made in the face of the enemy. They got together nobly under those difficult circumstances. They showed their patriotism. Now they are organized. The enemy has made promises that it can not fulfill. The people will demand of you the fulfillment of those promises. You can not do it with this bill; you can not do it by sending commissioners to Europe. You must give the people more money or you must go out of power, and that ignominiously. The handwriting is on the wall. You have to reorganize now in the face of a determined, aggressive foe, which has suffered wrongs that it will right; suffered wrongs under which it smarts.

Do not fear that when the silver forces get into power they will retaliate. They are not in that mode of thinking. They are the American people. They believe in the greatest good to the greatest number, and will injure no one. They will furnish an adequate supply of money for the development of enterprises, and open the mills and the mines and give employment to all, and start the ship of state under full sail and full speed on the high road of prosperity. It is coming, and do not forget it. Anything we can do to facilitate its coming we are here ready to do. We want you to go ahead with your schemes, which we know are futile, and which we can prove mathematically can not work. Consequently we cooperate to facilitate their passage.

Mr. CAFFERY. Mr. President, the Senator from Iowa [Mr. ALLISON] referred to me in his remarks as having charged the Republican party with being driven to sugar, a Democratic article of revenue, on which to raise sufficient money to meet their ideas of how much money there ought to be in the Treasury. So that none of us on this side should be left under the impression that the tariff imposed upon sugar is intended for revenue, he disclaimed any purpose of that sort, and the tariff imposed in this schedule, he said, is proposed solely for protection.

After depicting the great benefits to accrue to the people from the culture of the beet, he went on to say that the refiner of the United States ought to be protected. He was aided and abetted in that idea by the Senator from Massachusetts, who stated that the Republican party could not be charged with any forgetfulness of the interest of the agriculturist, as this tariff would stimulate the growth of beets and very materially advance the interests of the farmers in that section of the country where beets can be grown. Nothing could more accentuate the difference between the Democratic and the Republican principle than the tariff upon sugar, the Democratic side placing it entirely on the revenue basis and the Republican side on the protective basis; and it was very carefully stated that this tariff would not have been imposed for the sugar-cane planter, but for the beet grower.

Mr. President, we have heard almost pathetic appeals for the American sugar-refining interest. We have been told that it would be a great evil if this industry should be transferred from the United States to some foreign country, this industry which so largely aids the general industrial condition of the United States. Does the American Sugar Refining Company need any artificial aid in the way of legislation? Are we left in any doubt on that point? Is there any inferiority in labor or in any other condition between refining in the United States and refining abroad? We are not left in any doubt on the subject. I will read the testimony of Mr. Theodore Havemeyer before the Committee on Ways and Means of the House in 1880. He was asked this question by Mr. Tucker:

> Speaking of the competition between the refining interests in this country and the English refining interests, would you be able to compete in the business market if there was perfect free trade in sugar?
>
> Mr. HAVEMEYER. We would beat them. We can refine sugar here more cheaply than they can in England.

This was in 1880. Again, on the 22d of February, 1881, the following discussion ensued:

> Mr. FRYE. In conversation with Mr. Havemeyer yesterday he said that the principal objection that he had against the Carlisle bill would be removed provided the low-grade sugars could be imported into this country, refined, and exported under such conditions that American refiners would still have the benefit of refining them and selling them in a foreign market. I understood him to say that the Carlisle bill would be satisfactory with this addition, that bonded warehouses for the storage of sugar in bond may be established at any port of entry of the United States under such regulations as the Secretary of the Treasury may prescribe; that any imported sugar may be transferred from such warehouse without payment of duty, and that the product of such refinery may be exported free of duty or may be withdrawn for consumption in the United States on payment of the same duties as would have been paid thereon had they been imported in a condition in which they were withdrawn. The amendment I submitted to Mr. French this morning.

To that Mr. Havemeyer said:

> I spoke to Mr. FRYE yesterday in reference to the amendment which I gave to him. * * * This amendment was meant only to be a saving clause in case there was a possibility of the Carlisle bill passing.
>
> Mr. MILLS. How much refined sugar do you export annually?
>
> Mr. HAVEMEYER. Our exports for this year would probably amount to about $250,000.
>
> Mr. MILLS. How much sugar do you think you would be able to export under that proposed provision?
>
> Mr. HAVEMEYER. The export of refined sugar would be increased very materially. I do not see why, under free trade in sugar, we could not supply a very large proportion of the world's consumption.

Again the question was propounded to him:

> Q. Have you made any money in your business in the last ten years?
> A. Do you mean Havemeyer & Elder?
> Q. Yes, sir.
> A. Yes, sir; lots of it. I do not believe that anybody else has.

Why these tears in favor of the American Sugar Refining Company? Why these pathetic appeals in behalf of a company the main official of which as early as 1880 testified explicitly that they were not only on an equality with foreign refiners, but that they could more than compete with them? And when the Carlisle bill was pending, which imposed a large duty upon raw sugars, they said if they could export their sugar and get a drawback equal to the duty, it was all they wanted.

Mr. President, what aid in the shape of additional tariff on the refined sugar can the American Sugar Refining Company ask at this late day? Is it possible that the Senate of the United States, in view of this testimony, can add to the already enormous accumulations of the American Sugar Refining Company; can add to their power to place upon the American people whatever price for sugar they desire, up to the importing point at least, and that importing point is so high that the margin for them to operate upon is very large, and results in an enormous gain to them?

It has been asserted by the Senator from Iowa, and I believe by the Senator from Massachusetts, that great benefit to the agricultural classes would flow from the stimulus of the culture of beets. We heard the other day in the Senate a most eloquent appeal in behalf of the corn grower, the wheat grower, the oat grower, the raisers of small grain all through the United States, in behalf of an export bounty directly, not indirectly.

The Senator from Utah [Mr. CANNON], who made that eloquent appeal, did not want the benefit of the farmer to be filtered through a benefit to the manufacturer, because he stated that the filtration process had never come down to the farmer; that the principle upon which the manufacturer was protected was to benefit the agricultural classes by making a larger home demand and stimulating home production, so that the home supply would find a home market readier, easier, and more profitable. But he demonstrated the fact that the manufacturer kept all he had, and he appealed to the Senate of the United States to relieve by direct bounty the raisers of small grain throughout the United States who had never enjoyed and who never will enjoy the benefit of protection in favor of any other class.

Mr. President, suppose for the moment that beet culture is undertaken under the stimulus of this high tariff and that there is an amount of beets in the United States sufficient to supply the home demand for sugar. What would be the consequence? They will come to the doors of Congress, if the time ever arrives when they can be stimulated up to producing enough to supply the home demand, and ask for more and more protection. We have an example to-day in Germany to that effect. Every year the agrarians are beseeching the Reichstag not only for a continuance of the prevailing bounty, but for more and more bounty.

Then will come the time to apply the logic of the Senator from Utah. If you have one agricultural industry in the United States living under a bounty, there is no reason why we should not have all agricultural industries protected by a bounty. If the beet growers of the United States are not only to be stimulated by protective tariffs to make enough sugar to supply the home demand, but continued in that business by further and larger bounties, why can not the corn grower, the wheat grower, the hop grower, the cotton grower, and every other agriculturist ask for the same protection or its equivalent in bounties?

The whole principle is wrong. It does not stand upon any legitimate law of trade. This vast industry of Germany and of continental Europe is rotten at the base. It has no rational support. Artificially stimulated beet sugar can not compete with the cane product, and it is a most conspicuous instance, in my opinion, of the absolute failure of the doctrine of protection.

We on this side believe, or most of us, that governments have no right either by protective tariffs or bounties to indicate to the citizen what business he shall follow. We believe that individuals should pick out their own pursuits. They have the ability and the intelligence to know what is better for them to pursue, and whenever governments come in by artificial bounties, tariff protection, or subsidies to induce the citizen to go into occupations not adapted to his surroundings, the governments make a fatal mistake; the governments usurp the province that ought to be left to individual sagacity and individual industry, and build up industries, top-heavy, without substantial bases, and surely doomed to destruction in the long run.

Now, after reading this testimony about Mr. Havemeyer, I want to know upon what ground the American Sugar Refining Company is entitled to the high protection granted in this bill? Here is the evidence direct, before the formation of this trust, which dates from 1887, that they are not only upon an equality, but that

they can refine sugar in this country with greater facility and at a less cost than in any other place in the world.

The PRESIDING OFFICER. The yeas and nays having been ordered on agreeing to the amendment, the Secretary will call the roll.

Mr. BACON. I ask that the question may be stated. There have been a number of speeches made, and it is impossible to tell what is the exact status of it.

The SECRETARY. The Committee on Finance propose, on page 63, line 22, paragraph 206, to strike out "eight hundred and seventy-five one-thousandths" and insert "ninety-five one-hundredths;" so as to make the paragraph read:

206. Sugars not above No. 16 Dutch standard in color, tank bottoms, sirups of cane juice, melada, concentrated melada, concrete and concentrated molasses, testing by the polariscope not above 75 degrees, 1 cent per pound, and for every additional degree shown by the polariscopic test, three one-hundredths of 1 cent per pound additional, and fractions of a degree in proportion; and on sugar above No. 16 Dutch standard in color, and on all sugar which has gone through a process of refining, 1 cent and ninety-five one-hundredths of 1 cent per pound; molasses testing above 40 degrees and not above 56 degrees, 3 cents per gallon; testing 56 degrees and above, 6 cents per gallon; sugar drainings and sugar sweepings shall be subject to duty as molasses or sugar, as the case may be, according to polariscopic test; sugars, tank bottoms, sirups, cane juice or beet juice, melada, concentrated melada, and concrete and concentrated molasses the product of any country which pays, directly or indirectly, a bounty on the export thereof, whether imported directly and in condition as exported therefrom, or otherwise, shall pay, in addition to the foregoing rates, a duty equal to such bounty, or so much thereof as may be in excess of any tax collected by such country upon such exported article, or upon the beet or cane from which it was produced: *Provided*, That nothing herein contained shall be so construed as to abrogate or in any manner impair or affect the provisions of the treaty of commercial reciprocity concluded between the United States and the King of the Hawaiian Islands on the 30th day of January, 1875, or the provisions of any act of Congress heretofore passed for the execution of the same.

The Secretary proceeded to call the roll.

Mr. HANNA (when his name was called). I am paired with the junior Senator from Utah [Mr. RAWLINS], and withhold my vote.

Mr. JONES of Arkansas (when his name was called). I am paired with the Senator from Maine [Mr. HALE]. If he were present, I should vote "nay."

Mr. KENNEY (when his name was called). I am paired with the Senator from Pennsylvania [Mr. PENROSE]. If he were present, I should vote "nay."

Mr. FAULKNER (when Mr. MURPHY'S name was called). I was requested by the Senator from New York [Mr. MURPHY] to state, in case this vote occurred in his absence, that he was temporarily called out of the Senate, and is paired with the Senator from New Hampshire [Mr. CHANDLER]. The Senator from New York [Mr. MURPHY] would vote "nay" if present.

Mr. PRITCHARD (when his name was called). I am paired with the junior Senator from South Carolina [Mr. MCLAURIN]. If he were present, I should vote "yea."

Mr. TILLMAN (when his name was called). Did the Senator from Nebraska [Mr. THURSTON] vote?

The PRESIDING OFFICER. The Chair is informed that the Senator from Nebraska [Mr. THURSTON] has not voted.

Mr. TILLMAN. I am paired with the Senator from Nebraska [Mr. THURSTON], and therefore withhold my vote. If he were here, I should vote "nay."

Mr. WARREN (when his name was called). I am paired with the junior Senator from Washington [Mr. TURNER]. Not knowing how he would vote if present, I withhold my vote.

The roll call was concluded.

Mr. HARRIS of Kansas. I am paired with the junior Senator from Wyoming [Mr. CLARK]. If he were present, I should vote "nay."

Mr. BATE. I desire to state that my colleague [Mr. HARRIS of Tennessee] is temporarily out of the Chamber. He is paired, however, with the Senator from Vermont [Mr. MORRILL]. If my colleague were here, he would vote "nay."

Mr. PRITCHARD. I will transfer my pair with the junior Senator from South Carolina [Mr. MCLAURIN] to the junior Senator from New York [Mr. PLATT], and vote. I vote "yea."

Mr. HANNA. I transfer my pair with the junior Senator from Utah [Mr. RAWLINS] to the junior Senator from Massachusetts [Mr. LODGE], and vote "yea."

Mr. GEAR (after having voted in the affirmative). I wish to ask if the Senator from New Jersey [Mr. SMITH] has voted?

The PRESIDING OFFICER. The Chair is informed that he has not voted.

Mr. GEAR. I withdraw my vote, being paired with that Senator. If he were present, he would vote "nay" and I should vote "yea."

Mr. CLAY. On the statement of the Senator from Ohio [Mr. HANNA] that the junior Senator from Massachusetts [Mr. LODGE] will stand paired with the junior Senator from Utah [Mr. RAWLINS], I will vote "nay."

Mr. PETTIGREW. I wish to announce that on this vote the Senator from Utah [Mr. CANNON] is paired with the Senator from Rhode Island [Mr. ALDRICH].

Mr. CHANDLER (after having voted in the affirmative). I am paired with the senior Senator from New York [Mr. MURPHY], and therefore withdraw my vote.

Mr. TILLMAN. I desire to announce that my colleague [Mr. MCLAURIN] is paired with the Senator from North Carolina [Mr. PRITCHARD], and that the pair of my colleague has been transferred to the Senator from New York [Mr. PLATT].

Mr. JONES of Arkansas. I will transfer my pair with the Senator from Maine [Mr. HALE] to the Senator from Colorado [Mr. TELLER], and vote. I vote "nay."

Mr. MORGAN (after having voted in the negative). I wish to inquire whether the senior Senator from Pennsylvania [Mr. QUAY] has voted?

The PRESIDING OFFICER. He has not voted, the Chair is informed.

Mr. MORGAN. I withdraw my vote. I am paired with the Senator from Pennsylvania [Mr. QUAY].

Mr. MANTLE. I am paired with the Senator from Virginia [Mr. MARTIN]. I find that the Senator from South Carolina [Mr. TILLMAN] is paired with the Senator from Nebraska [Mr. THURSTON]. The Senator from Nebraska [Mr. THURSTON] would vote "yea" if present, and the Senator from Virginia [Mr. MARTIN] would vote "nay." The Senator from South Carolina [Mr. TILLMAN] and myself desire to transfer our pairs, so that we may vote upon this proposition. I vote "nay."

Mr. TILLMAN. I vote "nay."

Mr. MORGAN (after having voted in the negative). I transfer my pair with the Senator from Pennsylvania [Mr. QUAY] to the Senator from Nebraska [Mr. ALLEN], and will allow my vote to stand.

The result was announced—yeas 32, nays 30; as follows:

YEAS—32.

Allison,	Foraker,	McBride,	Proctor,
Burrows,	Frye,	McEnery,	Sewell,
Carter,	Gallinger,	McMillan,	Shoup,
Cullom,	Hanna,	Mason,	Spooner,
Davis,	Hansbrough,	Nelson,	Stewart,
Deboe,	Hawley,	Perkins,	Wellington,
Elkins,	Hoar,	Platt, Conn.	Wetmore,
Fairbanks,	Jones, Nev.	Pritchard,	Wilson.

NAYS—30.

Bacon,	Daniel,	Mallory,	Roach,
Bate,	Faulkner,	Mantle,	Tillman,
Berry,	Gorman,	Mills,	Turpie,
Butler,	Gray,	Mitchell,	Vest,
Caffery,	Heitfeld,	Morgan,	Walthall,
Chilton,	Jones, Ark.	Pasco,	White.
Clay,	Kyle,	Pettigrew,	
Cockrell,	Lindsay,	Pettus,	

NOT VOTING—27.

Aldrich,	George,	Martin,	Smith,
Allen,	Hale,	Morrill,	Teller,
Baker,	Harris, Kans.	Murphy,	Thurston,
Cannon,	Harris, Tenn.	Penrose,	Turner,
Chandler,	Kenney,	Platt, N. Y.	Warren,
Clark,	Lodge,	Quay,	Wolcott.
Gear,	McLaurin,	Rawlins,	

So the amendment was agreed to.

Mr. JONES of Arkansas. I move to strike out the words "and on all sugar," after the word "color," in line 20, page 63, paragraph 206.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. In paragraph 206, page 63, line 20, after the word "color," strike out the words "and on all sugar;" so as to read:

And on sugar above No. 16 Dutch standard in color which has gone through a process of refining, 1 cent and ninety-five one-hundredths of 1 cent per pound.

Mr. JONES of Arkansas. I was out of the Chamber for an instant when the debate closed and the Senate proceeded to vote a few minutes ago. I wanted an opportunity to make some reply to a statement made by the Senator from Iowa [Mr. ALLISON] when he had the floor. He stated that, taking the thirty-eight one-hundredths of a cent tariff to countervail a bounty out, between the rates of the pending measure and the rates of the Wilson Act there was practically no difference. I wish to say that, taking the value of German refined sugar which the Senator from Rhode Island [Mr. ALDRICH] stated as being the price of the lowest grade of German refined sugar, counting in the thirty-eight one-hundredths of a cent countervailing duty, the difference in the profit to the refiner is 52.1 cents under the present measure and 13½ under the present law.

The thirty-eight one-hundredths of a cent is as much a part of the tariff tax imposed upon sugar as is the 1 cent on 75; that 1 cent on the 75 polariscopic test is as much a tax as is the $1.95 a tax on a hundred pounds.

No man can make a fair calculation of the amount of the tariff paid upon refined sugar who does not count in the two different elements in which the tax is levied. Upon one is $1.95 specific, and 38.3 countervailing duty upon the other. Each is proposed by the same bill; each is a provision for a direct tax to be levied upon the sugar when it comes into this country; and how any

man can propose to strike one feature out for the purpose of making comparison with another is beyond my comprehension.

There is a similar tax in the law as it stands now, a tax of ten one-hundredths of a cent imposed on German sugar or sugar coming from countries that pay a bounty. This 13½ cents carries that 10 cents imposed under the present law. When the Senator from Iowa proposes to drop the thirty-eight one-hundredths of a cent out of the 52 cents that the bill provides for, and claims that that makes it the same as the Senate bill, he does not drop out the same tax in the other calculation. Take 38 cents off of 52 and it leaves 14; and if you do not take 10 out of 13½, it leaves 13½ and 14 close together. But by what sort of reasoning the Senator from Iowa can persuade himself that the 38 cents ought to be dropped out of one and the 10 cents not dropped out of the other is beyond my comprehension.

Mr. President, the truth is, as I stated yesterday, that 2.30 is not a fair basis for a calculation of the value of these sugars. The value of this sugar [exhibiting] was stated by the Senator from Rhode Island to be 33 points higher than the German granulated sugar that he took in his calculation. This is English sugar. [Exhibiting.] Here is the Havemeyer & Elder sugar. [Exhibiting.] Here is the sugar [exhibiting] made out of cane by the American refiners, and the two are exactly alike.

The Senator from Rhode Island stated that this sugar [exhibiting] was worth 230. He admitted that that sugar [exhibiting] was worth 33 points more. This is exactly like the English sugar that he admitted was worth 33 points more.

Then, instead of taking 230 as the value of the refined sugar which is to be compared with the raw, you ought to take 263 as the basis, and, counting in the 38 on the one side and the 10 on the other, the difference would be eighty-five one-hundredths of a cent under the Senate bill and thirteen and a half under the Wilson Act.

Mr. President, that runs through this schedule from top to bottom. It can not be gainsaid nor denied. It is the simple, plain truth. The 38 cents is as much a part of the tax as anything else in it.

I have made this calculation, comparing the German refined sugar, which carries a tax of thirty-eight one-hundredths of a cent, with cane sugar, that has no bounty at all. If German raw was used to make the refined sugar, it would be fair and right to count in a tax of twenty-one one-hundredths of a cent in addition to the cost of the raw to compensate for the tax paid on the raw material that is used by the refiners; but in point of fact 75 per cent of the sugar consumed by the sugar refiners is cane sugar; it is not beet sugar at all. A very small per cent of beet sugar is used, if any at all.

The beet sugar that comes here is refined sugar. The sugar that is brought in competition with it is the refined sugar made of cane by the refiners. Hence it is fair, it is entirely legitimate, to count in the thirty-eight one-hundredths as against the refined sugar and treat the other on the basis of raw without any differential whatever. It seems to me to be perfectly plain. I was unwilling for the statement of the Senator from Iowa to go without challenge; but of course I know it will make no difference so far as the action of the Senate is concerned.

Mr. BERRY. I should like to ask my colleague a question.

Mr. JONES of Arkansas. Certainly.

Mr. BERRY. I want to know whether the protection to the refined sugar is greater under the Aldrich amendment or under the caucus amendment?

Mr. JONES of Arkansas. It is greater under this amendment.

Mr. BERRY. Under the caucus amendment.

Mr. JONES of Arkansas. I will give two or three points to show the case exactly. The difference on 96 sugar under the Senate bill as first proposed was 41.4 cents. The difference under the pending measure is 52.1 cents. Take 88 sugar, which is the standard of muscovados. The differential under the original Senate bill was 50 cents on the hundred pounds. Under the proposed measure it is 58.7 on a hundred pounds. That runs through from 88 to 100. These tables will go into the RECORD.

Mr. GORMAN. What is 88 under the present law?

Mr. JONES of Arkansas. Sixteen and one-half. It was, under the Senate bill as first proposed, 50 points. In the one pending now it is 58.7. Under the Wilson Act it is 16½. The 96 was 41.4 under the bill as first reported, and it is 52.1 under the bill as pending now, and it was 13½ under the Wilson bill.

Mr. LINDSAY. I ask the Senator from Arkansas whether in any event the retaliatory or compensatory duty under the proposed bill is not 28 points higher than the retaliatory duty under the existing law?

Mr. JONES of Arkansas. It is 28 points higher on refined sugar.

Mr. LINDSAY. That is what I meant.

Mr. JONES of Arkansas. Raw sugar carries 27 points, instead of 38, at the present time in Germany, whereas it formerly had 10 per cent on all sugar—one-tenth of a cent.

Mr. President, if the Senator from Iowa is willing to allow this amendment to go over until to-morrow morning, I should prefer not to proceed this afternoon. I have a statement to make in connection with it which will not take very long. If the Senator does not object, I prefer not to make it now, but that we shall have an adjournment.

Mr. ALLISON. Why not take up the next amendment offered by the committee?

Mr. JONES of Arkansas. What is that?

Mr. ALLISON. The one-tenth.

Mr. JONES of Arkansas. There is a general feeling on this side of the Chamber that we desire to adjourn, and I hope the Senator from Iowa will not insist upon proceeding further this evening.

Mr. ALLISON. I regret that we are not making more rapid progress with the bill. I now ask the Senator from Arkansas if we can not have an understanding that on Monday we shall begin our sessions at 11 o'clock?

Mr. JONES of Arkansas. I have said that we on this side are as anxious to get on with the bill as anybody. We do not want to sit into the dog days any more than anybody else; but we want to have a reasonable time given us in which to examine the bill as we go along and state our objections to it. We think that the bill has progressed with a reasonable degree of rapidity; but the sugar schedule is a most important one; and it was to be expected that some time would be taken in its discussion. There is probably no other provision in the bill which will take as much time as that.

I do not think it reasonable to ask us to begin our sessions as early as 11 o'clock on Monday, though, so far as I am concerned—and I believe it meets the approval of my colleagues—I shall be willing on some day later to agree to meet at 11 o'clock, provided we adjourn at 5. I would not consent to that as early as Monday or Tuesday next, but say Thursday or Friday next week. If we can make arrangement of that sort now, I shall have no objection.

Mr. ALLISON. I hope the Senator can agree to meet on Tuesday at 11 o'clock. I am willing to compromise between Tuesday and Wednesday at 11 o'clock. As to the hour of adjournment, I think that should suit the convenience of the Senate from day to day.

Mr. JONES of Arkansas. I am willing to compromise on Thursday. We are getting pretty close together, and there ought not to be much difficulty about that.

To be entirely frank with the Senator—we had some private conversation about this matter, and the Senator knows our feeling on this side—I am willing to agree to meet at 11 o'clock, say on Thursday of next week. I suppose I ought to have begun by fixing Monday week, so as to give a little more margin to fall back upon, but I must stand up a little more obstinately and make it Thursday.

Mr. ALLISON. Let the matter go over, then.

Mr. COCKRELL. We can arrange that when the time comes.

Mr. ALLISON. I hope we may go on a little longer this evening. I am willing to take up the next amendment of the committee.

Mr. JONES of Arkansas. So far as I am concerned, if we are to be compelled to remain in session, I should prefer to take the amendments as they come in their order. I do not want to remain in session longer, but if the Senator insists on it, so far as I am concerned, while I shall not make any motion to adjourn, I do not feel that it is just and fair to keep us here longer.

Mr. VEST. I appeal to the Senator from Iowa to let us adjourn. I have some remarks to make on this schedule. I do not want to go on to-night, and my colleague on the committee [Mr. JONES of Arkansas] says he does not want to go on to-night. You will make time by acceding to our request.

Mr. ALLISON. If I could be assured that we should make time by adjourning now, I would not object.

Mr. JONES of Arkansas. I assure the Senator that he will make time.

Mr. ALLISON. That seems to be satisfactory.

Mr. FRYE. Will the Senator from Louisiana [Mr. CAFFERY] make the same assurance?

Mr. CAFFERY. Yes; I will say also that you will save time.

Mr. HOAR. I desire to give notice of an amendment intended to be proposed at the end of paragraph 206, which I should like to have read.

The PRESIDING OFFICER. The amendment proposed by the Senator from Massachusetts will be read.

The SECRETARY. At the end of paragraph 206 it is proposed to insert:

Provided, That the President of the United States shall appoint a commission, to consist of five persons, who shall report to Congress at its next regular session concerning the condition of the industry of producing and refining sugar in the United States, and what policy is best adapted to procuring a sufficient supply of sugar for the people of the United States at the least cost, and to encourage and promote the raising in the United States of a sufficient supply of sugar for domestic consumption, and what amount of duty on imports of sugar is necessary to enable the business of refining sugar in

the United States, to be conducted at a reasonable and moderate profit, and also what amount of duty upon such imports is expedient, having reference to raising a sufficient revenue to provide for the public expenditure; and to report such facts in regard to the business of producing and refining sugar, and whether the same is so conducted as to enable persons interested therein to exercise an improper control over the market; and such other facts as they may consider important and pertinent to the subject-matter of their inquiry; no more than three members of said commission to belong to the same political party.

The PRESIDING OFFICER. The amendment submitted by the Senator from Massachusetts will be printed.

Mr. CARTER. I submit at this time an amendment intended to be proposed to the pending bill, which I ask may lie on the table and be printed.

The PRESIDING OFFICER. That order will be made, in the absence of objection.

Mr. MANTLE. I submit an amendment which I intend to propose to the pending bill, and, as it is very short, I ask that it may be printed in the RECORD and that it be also printed separately as an amendment.

The PRESIDING OFFICER. Is there objection to the request? The Chair hears none, and it is so ordered.

The amendment intended to be proposed by Mr. MANTLE is as follows:

Amend section 23, page 212, line 8 of Senate report, by inserting after the word "consumption" the following:

"*Provided further*, That in respect to lead ores imported under the provisions of this section the refined metal set aside shall either be reexported or the regular duties paid thereon within sixty days from the date of the receipt of the ore."

EXECUTIVE SESSION.

Mr. McMILLAN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After twelve minutes spent in executive session the doors were reopened and (at 5 o'clock and 25 minutes p. m.) the Senate adjourned until to-morrow, Saturday, June 12, 1897, at 12 o'clock meridian.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 11, 1897.

SUPERINTENDENT OF CHARITIES.

Herbert W. Lewis, of Maryland, to be superintendent of charities for the District of Columbia.

CONSUL.

Harold S. Van Buren, of New Jersey, to be consul of the United States at Nice, France.

ASSISTANT APPRAISERS OF MERCHANDISE.

Michael J. Brown, of Pennsylvania, to be assistant appraiser of merchandise in the district of Philadelphia, in the State of Pennsylvania.

Fred P. Vincent, of Pennsylvania, to be assistant appraiser of merchandise in the district of Philadelphia, in the State of Pennsylvania.

DEPUTY AUDITOR FOR INTERIOR DEPARTMENT.

Robert S. Person, of South Dakota, to be deputy auditor for the Interior Department.

SUPERINTENDENT OF MINT.

Frank A. Leach, of California, to be superintendent of the mint of the United States at San Francisco, Cal.

ASSAYER OF MINT.

William M. Lynch, of Louisiana, to be assayer of the mint of the United States at New Orleans, La.

PROMOTIONS IN THE NAVY.

Medical Inspector James M. Flint, to be a medical director.

Surg. Charles U. Gravatt, to be a medical inspector.

P. A. Surg. Victor C. B. Means, to be a surgeon.

Asst. Engineer John K. Robison, to be a passed assistant engineer.

P. A. Engineer Edgar T. Warburton, to be a chief engineer.

POSTMASTERS.

Mathew J. Orr, to be postmaster at Osceola, in the county of St. Clair and State of Missouri.

A. M. Chisholm, to be postmaster at Hibbing, in the county of St. Louis and State of Minnesota.

F. P. Corrick, to be postmaster at Cozad, in the county of Dawson and State of Nebraska.

Walter McKay, to be postmaster at Lead, in the county of Lawrence and State of South Dakota.

SENATE.

SATURDAY, *June 12, 1897.*

Prayer by Rev. HUGH JOHNSTON, D. D., of the city of Washington.

The VICE-PRESIDENT resumed the chair.

The Journal of yesterday's proceedings was read and approved.

PETITIONS AND MEMORIALS.

Mr. SEWELL presented the petition of Albert Naylor and 157 other citizens of Trenton, N. J., praying for the early passage of the pending tariff bill; which was ordered to lie on the table.

He also presented the petition of Louis D. Culver and 27 other citizens of South Amboy, N. J., praying for the enactment of legislation for a more rigid restriction of immigration; which was ordered to lie on the table.

He also presented the memorial of James Sheridan and 44 other citizens of Newark, N. J., remonstrating against the proposed increase of the tax on beer; which was ordered to lie on the table.

Mr. PERKINS presented memorials of James D. Phelan, mayor, and sundry commercial organizations, insurance companies, and leading merchants of San Francisco, Cal., remonstrating against the abrogation of the Hawaiian treaty; which were referred to the Committee on Foreign Relations.

He also presented petitions of sundry citizens of Alameda County; of the board of directors of the Chamber of Commerce of Sacramento; of the board of supervisors of Colusa County and Yuba County, and of sundry other county organizations, all in the State of California, praying for the abrogation of the Hawaiian treaty; which were referred to the Committee on Foreign Relations.

He also presented a petition of sundry merchants of San Francisco, Cal., praying that further appropriations for the purchase of seeds for free distribution in the United States be discontinued; which was referred to the Committee on Agriculture and Forestry.

He also presented a petition of sundry citizens of San Francisco, Cal., praying for the enactment of protective-tariff legislation, at the earliest possible date, which will adequately secure American industrial products against the competition of foreign labor; which was ordered to lie on the table.

Mr. MORRILL presented a petition of sundry citizens of Colebrook, N. H., praying for the early enactment of a protective-tariff law; which was ordered to lie on the table.

Mr. ALLEN presented a petition of Local Union No. 131, Journeymen Tailors' Union of America, of Pittsburg, Pa., praying for the adoption of clause No. 666 of the pending tariff bill, relating to the free imports of wearing apparel, etc., as passed by the House of Representatives; which was ordered to lie on the table.

Mr. GALLINGER presented the petition of Frederick W. Ely and 44 other citizens of Greenville, N. H., praying for the early enactment of a protective-tariff law; which was ordered to lie on the table.

Mr. BUTLER presented a memorial of the Tobacco Board of Trade of Raleigh, N. C., remonstrating against the proposed increase of 2 cents in the revenue tax on manufactured tobacco; which was ordered to lie on the table and to be printed in the RECORD, as follows:

RALEIGH, N. C., *June 5, 1897.*

DEAR SIR: Whereas the proposed 2-cent increase of revenue tax on manufactured tobacco would, in our judgment, operate simply as an additional burden upon the manufacturers, the effect of which would be to further depress and lower the price paid the grower without bringing in any more revenue: Therefore,

Resolved by the Raleigh Tobacco Board of Trade, That we hereby enter our united and earnest protest against said 2 cents increase, or any other increase of the revenue on manufactured tobacco, and that we believe said increase of 2 cents, or any increase or change, would be greatly inimical to the interests of the tobacco business generally, especially the growers of tobacco, upon whom the loss would inevitably fall.

Resolved, second, That copies of these resolutions be at once mailed to our Senators at Washington.

E. L. FLEMING, *President.*
E. W. THOMASON, *Secretary.*

Hon. MARION BUTLER,
Washington, D. C.

Mr. ELKINS presented sundry petitions of citizens of Bayard, Morris, and Wheeling, all in the State of West Virginia, and a petition of sundry citizens of Littleton, Va., praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

Mr. HAWLEY presented the memorial of John F. Moran and 74 other citizens of Danbury, Conn., remonstrating against the proposed increase of the tax upon beer; which was ordered to lie on the table.

Mr. HOAR presented a petition of the Worcester Bleach and Dye Works Company, of Worcester, Mass., praying for the enactment of protective-tariff legislation, at the earliest possible date, which will adequately secure American industrial products against the competition of foreign labor; which was ordered to lie on the table.

Mr. MURPHY presented petitions of Thomas H. Smith, of Jamestown; of sundry citizens of New York City, and of 104 citizens of Brooklyn, all in the State of New York, praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

Mr. SMITH presented memorials of 1,406 citizens of Newark, of 855 citizens of Newark, of 570 citizens of Hudson County, and of 1,400 citizens, all in the State of New Jersey, remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

He also presented sundry petitions of citizens of Camden, East Orange, Gloucester City, Hamburg, Harrison, Jersey City, Little Falls, Madison, Newark, Asbury Park, Barnegat, Glassboro, Millstone, Milltown, Elizabeth, Pennsville, Rockaway, Sergeantsville, and Waretown, all in the State of New Jersey, praying for the enactment of legislation restricting immigration; which were ordered to lie on the table.

BILLS INTRODUCED.

Mr. WILSON introduced a bill (S. 2128) for the relief of John O'Keane, of the State of Washington; which was read twice by its title, and referred to the Committee on Indian Affairs.

Mr. ALLEN introduced a bill (S. 2129) granting an increase of pension to Josiah D. Fye, of Aurora, Nebr.; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Pensions.

Mr. HAWLEY introduced a bill (S. 2130) granting a pension to Thomas S. Hancox; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Military Affairs:

A bill (S. 2131) granting an honorable discharge to George A. Daniels;

A bill (S. 2132) to correct the military record of Edwin T. Leach; and

A bill (S. 2133) to remove the charge of desertion against Henry L. Snow.

Mr. WELLINGTON introduced a bill (S. 2134) for the relief of C. Wright Geddes, late a first assistant engineer in the United States Navy; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Naval Affairs.

Mr. THURSTON introduced a bill (S. 2135) granting a pension to Michael Curtin, of Phillips Station, Nebr.; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 2136) granting a pension to J. L. McGee, of Beatrice, Nebr.; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 2137) to amend section 998 of the Revised Statutes of the United States for the District of Columbia, so as to make the 12th day of February a holiday within said District; which was read twice by its title, and referred to the Committee on the Library.

AMENDMENT TO THE TARIFF BILL.

Mr. ALLEN submitted an amendment intended to be proposed by him to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States; which was ordered to lie on the table and to be printed.

RETURN OF PAPERS TO JOHN DOLAN.

On motion of Mr. HOAR, it was

Ordered, That the Secretary of the Senate be directed to return to John Dolan, of Washington, D. C., all papers filed by him in support of bills which have been introduced for his relief, and upon which an adverse report has been made: *Provided*, That said John Dolan shall leave with the Secretary of the Senate a copy of all papers withdrawn.

DIFFERENCES IN RANK.

Mr. ALLEN. I submit the resolutions which I send to the desk and ask that they be read and lie on the table subject to call. At a future time I shall ask leave to address the Senate upon the resolutions.

The resolutions were read, as follows:

Resolved, That the distinction heretofore made in granting pensions by special act of Congress between the equally meritorious widows of officers of the volunteer army and navy and those of enlisted men, sailors, and marines is unjust and un-American and should be abandoned, and that hereafter all such persons should be pensioned equally.

And be it further resolved, That differences in rank between citizens of the United States when serving as officers and enlisted men, sailors, and marines, in the military and naval forces cease by the laws of this country when such persons return to private life and take their respective stations in society, and that thereafter no distinction in rank can or does exist between them.

Mr. GALLINGER. Do I understand the Senator from Nebraska to request that the resolutions lie upon the table for future action?

Mr. ALLEN. I desire to have the resolutions printed and lie on the table subject to call. Within the course of a few days I shall ask the indulgence of the Senate to submit some remarks in their support.

Mr. GALLINGER. There can be no objection, I will suggest, to the course requested by the Senator from Nebraska. I trust that the resolutions may not be called up in my absence, because I shall probably want to make a motion to refer them to the Committee on Pensions. It is an important matter, and it ought to be considered by some committee.

Mr. ALLEN. I shall endeavor to accommodate the Senator from New Hampshire. It occurs to me, however, that the resolutions announce a doctrine so plain and so unequivocal that it does not require the wisdom of the Committee on Pensions to determine whether they shall be adopted. There has been a distinction, an invidious and a cruel distinction, enforced and recognized in this Chamber during the four years I have been here, and I want to put the Senate upon record, if I can, either in favor of or against the resolutions. I do not want to have them buried out of sight by the mysterious process employed here to strangle unpleasant resolutions, putting them in a committee and never reporting them.

Mr. GALLINGER. I will add only a word. The Committee on Pensions at the present time has about 900 bills of every conceivable kind before it for consideration. Many of them are unjust bills. Some, I apprehend, introduced by the Senator from Nebraska will not receive the favorable consideration of the committee.

Mr. ALLEN. Not because they are not just, however.

Mr. GALLINGER. Well, perhaps not, in the opinion of the Senator from Nebraska. I do not think that the Senate will feel, at this early period in the Congress, like instructing the Committee on Pensions as to their procedure in the consideration of those bills. At any rate, I am willing that the matter shall come up for discussion, and perhaps the Senator from Nebraska and I may be in full concurrence when we come to hear the arguments.

Mr. ALLEN. Yes, sir.

The VICE-PRESIDENT. The resolutions will be printed and lie on the table.

Mr. ALLEN. Subject to call.

The VICE-PRESIDENT. Subject to the call of the Senator from Nebraska.

UNION PACIFIC RAILROAD COMPANY.

The VICE-PRESIDENT. The Chair lays before the Senate as a part of the morning business the resolution submitted yesterday by the Senator from Kansas [Mr. HARRIS]

Mr. HARRIS of Kansas. Since I introduced the resolution yesterday I have ascertained that the information embraced in the last paragraph was called for on the 25th of May. I therefore desire to strike out lines 20, 21, 22, and 23, and have the resolution referred to the Committee on Pacific Railroads, which will meet, I understand, on Monday.

The VICE-PRESIDENT. The modification suggested by the Senator from Kansas will be stated.

The SECRETARY. Strike out the last paragraph of the resolution in the following words:

And the President is hereby requested to inform the Senate what action, if any, has been taken under the provisions of this law to protect the interests of the United States.

The VICE-PRESIDENT. The resolution will be so modified. The question is on the motion of the Senator from Kansas to refer the resolution to the Committee on Pacific Railroads.

The motion was agreed to.

THE TARIFF BILL.

Mr. ALLISON. I move that the Senate proceed to the consideration of House bill 379.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States, the pending question being on the amendment proposed by Mr. JONES of Arkansas, in paragraph 206, page 63, line 20, after the word "color," to strike out the words "and on all sugar;" so as to read:

And on sugar above No. 16 Dutch standard in color which has gone through a process of refining, 1 cent and ninety-five one-hundredths of 1 cent per pound.

Mr. VEST. Mr. President, I listened very attentively yesterday to my friend from Iowa [Mr. ALLISON] who has charge of the bill on the part of the majority of the Finance Committee. I was exceedingly anxious to hear his construction of the schedule that is now proposed. We endeavored upon this side of the Chamber to make a distinct, clear, emphatic announcement based upon the reports of the best experts who could be reached as to the effect of the change now proposed by the majority of the committee.

It seems to me, with great respect to the Senator from Iowa, that it was due to the Senate, to himself, and his party, to state clearly and emphatically what is the construction of the other side of the Senate in regard to the effect of this change. We make the distinct issue before the country that the change largely increases the protection given to the trust. We produce the testimony of the leading and controlling members of the trust to

show that they are now making 21 per cent net upon their watered capital every year, and we challenge the legislation that gives to this monopoly the enormous increase that we have shown to exist in the bill.

What is the reply of my friend from Iowa in charge of the bill and representing the majority of the Committee on Finance and possibly the majority in the Senate? As I understand him (and if I do him injustice, I hope he will correct me now), his statement was that he believed there was an increase upon this protection if the 38.3 cents of discriminating duty put on in the shape of export bounties by Germany was included in the estimate, but leaving that out, there was no increase. Not for one single instant did the Senator from Iowa undertake to tell us in a discussion of the figures what he believed was the exact mathematical effect of this increase if the 38.3 cents was included. And by what sort of legerdemain (I use the word in no offensive sense) does the Senator exclude that 38.3 cents? He might just as well, as my friend from Arkansas said yesterday, include the 1.95 upon the refined sugar. The law puts that 38.3 cents into the estimate, and how does he get it out?

Mr. President, it seems to me so plain that this increase has been made and has not been answered that it is an insult to the intelligence of anyone to continue that discussion. I repeat now, in order that there may be no sort of mistake about it, and I challenge criticism of the table, that there has been an increase between what was known as the Aldrich amendment and the pending bill upon 96-degree sugar by the polariscopic test of 5 points, or 5 cents.

I have here before me the protection given by each one of the four measures, the Wilson Act, the Dingley bill, the Senate committee's bill, and the proposed caucus amendment. The caucus amendment is higher than any other in its protection. Upon the 96-degree polariscopic sugar, which the Senator from Iowa will admit and all experts admit to be the test sugar, it gives an increase of 5 points over the Aldrich amendment, a large increase over the Dingley bill, and an increase from 34 cents protection on the 100 pounds under the Wilson Act to sixty-six and a fraction under the caucus amendment which is now pending before the Senate.

How is this arrived at? I challenge investigation in regard to it. We accept, as a matter of course, as the basis of this calculation the prices given by the Senator from Rhode Island. It is fair, legitimate, logical, in answering his proposition, to take his prices, and certainly neither he nor his friends ought to complain if we do so. I believe those prices are too low, but for the sake of argument and in all candor and fairness I assume them to be correct. We take the price, for instance, given by Mr. ALDRICH of 96-degree polariscopic test, and it is 2.6 cents per pound. Upon that is the duty of 1.63. Adding to that the cost of the sugar itself, it would make the cost, duty paid, per pound of sugar at 96 degrees polariscopic, 3.69 cents.

But it takes 107.47 pounds of that polariscopic degree of sugar to make 100 pounds of refined sugar. That is according to the official statements of the Government published to instruct the custom-house officers as to drawback upon the different degrees according to the polariscope. Multiplying the amount which I have named, the duty and the cost of the sugar, by the 107 pounds necessary to make 100 pounds of refined, and we have the whole cost as 3.96 cents, and if that is subtracted from the cost of the refined sugar it would leave the differential and the protection at sixty-six and a fraction, instead of 61 under the Aldrich amendment and 34 under the Wilson Act.

Mr. President, if these figures are not correct, disprove them. If they are not correct, it is due to the people of the United States that that should be done. When the facts come before us indisputably that this trust is making the enormous amount of 21 per cent clear, and declaring a dividend upon $24,000,000 invested in their stock or in their plant, with a watered capital of $75,000,000, it is due that these figures should be answered or admitted. Then let every Senator take the responsibility that must rest upon him for his vote.

I have heard but one excuse for this enormous and outrageous taxation, which is utterly indefensible in my judgment, or else my able friends upon the other side would long since have defended it. It was said here yesterday by the Senator from Iowa that this was done not for revenue, but for the encouragement of the beet-sugar industry in this country. That position was emphasized by the senior Senator from Massachusetts [Mr. HOAR], who asked the Senator from Iowa if this increase of duty had not been made for the purpose solely of increasing or fostering the great agricultural interest of beet sugar in the United States. The reply was that it was done for that purpose, and, said the Senator from Iowa, as the RECORD shows, "I have failed to be understood if the Senate does not know that to be my object."

Mr. President, I call Mr. Oxnard to the stand in regard to the condition of the sugar-beet industry of the United States under the Wilson law, the derided act which took off the bounty upon sugar, and which Mr. Oxnard, who came before the Finance Committee in 1894, declared was clear assassination of the beet-sugar culture in this country. I call Mr. Oxnard to the stand before the Ways and Means Committee of the House, of which Mr. DINGLEY is chairman. Here is his testimony: "In 1830 two-thirds of the world's sugar was from cane, while in 1895 two-thirds of the world's supply was from the beet. The domestic beet sugar increase, in tons," in this country, now, mark it, "has been"—and we will see under what sort of legislation beet sugar and beet culture have prospered in the United States—in 1889, the commencement of the culture, there were 2,000 tons produced in this country; in 1890, 2,800. Then the McKinley Act was enacted. In 1891, the first year under its operation, there were 5,400 tons, from 2,800 in 1890; in 1892, 12,000 tons; in 1893, 20,000 tons.

Then came the enactment of the derided and depreciated Wilson bill. Now mark the figures for 1894, 1895, and 1896, as given by Mr. Oxnard, an interested witness upon the other side and president of the Beet Growers' Association of the United States, an owner of three beet-sugar factories, two in Nebraska and one in California. In 1894, instead of falling off under the obnoxious and iniquitous Wilson bill, which took off the bounty, it increased from 20,000 tons to 22,443 tons. The next year it was 20,000, and in 1896, according to Mr. Oxnard's estimate, it was 37,000 tons.

Mr. COCKRELL. Notwithstanding the general depression.

Mr. VEST. Notwithstanding, as my colleague says, the general depression and gloom that rested upon the country. My colleague on the committee [Mr. JONES of Arkansas] tells me that it is stated by others to be 41,000 tons, but I will take the most unwilling witness of all, the head of the Beet Growers' Association in this country.

Mr. ALLEN. Will the Senator from Missouri permit me a moment?

Mr. VEST. Certainly.

Mr. ALLEN. It is due to a correct understanding of this matter to say that the beet-sugar factories have not increased under the present law. The acreage has increased somewhat, but it has increased under a bounty that was offered in my State of five-eighths of a cent a pound on refined sugar, and I do not know but something of a bounty in California, where the other factory is owned by Mr. Oxnard. I think the increase of the beet-sugar industry during the last two or three years is due in a very large measure to the bounties offered by different States.

Mr. VEST. I am discussing the proposition that this increase of protection to the trust is in order to increase the culture or production of beet sugar and the cultivation of the sugar beet, and I answer the proposition with the statement of the head and front of the Beet Growers' Association in this country, the owner of these three beet-sugar factories, and it shows that in one year under the Wilson law the acreage (and I will adopt the Senator's word) increased 17,000 tons, equal to the increase in the three years under the McKinley Act.

Mr. ALLEN. But in Nebraska, where two of the Oxnard factories are located, the legislature passed an act two years ago last winter offering five-eighths of a cent per pound on sugar from beets grown in the State, provided the factories would increase the price from $4 a ton to $5 a ton for beets.

Mr. VEST. I understand.

Mr. ALLEN. Under that bounty the acreage was largely increased in the State. I think that accounts in a large measure for the increased acreage, and therefore the increased output of sugar.

Mr. VEST. Mr. Oxnard stated first in 1890 that if this bounty should be given by the United States Congress he would undertake to say that in a very few years there would be enough beets grown in the country to supply the domestic demand for sugar. In 1894 he stated to the committee that if the national bounty was taken away, notwithstanding the State bounty in Nebraska, the industry would languish and die; to use his expression, that it would be assassinated by taking off the national bounty of 2 cents a pound.

Mr. ALLEN. But it has not increased——

Mr. VEST. It has increased, as his own testimony shows, from 20,000 tons in 1895 to 37,000 tons in 1896.

Mr. ALLEN. I beg to state to the Senator from Missouri that it has not increased as a consequence of the present law; that there is no sympathetic relation between the increased acreage and the increased output in the country under the present law, and that the increase must necessarily be due, in a large measure, to the local bounties offered for the growing of beets.

Mr. CHILTON. Will the Senator from Missouri permit me to call his attention to the fact that the price of sugar has fallen more than the amount of the local bounty?

Mr. VEST. There is no bounty paid in California.

Mr. BACON. I was going to state, if my friend from Missouri will permit me, that I know in California the price of beets is $4 a ton. I had the statement last year from Mr. Claus Spreckels in person that the standing price in California is $4 a ton.

Mr. ALLEN. The price of beets in Nebraska was $5 a ton

until there was a failure to carry out the provisions of the act of 1895. The extra dollar was due to the payment of the local bounty, which stimulated the cultivation of beets and caused the increased acreage.

Mr. VEST. What is the number of tons produced in Nebraska?

Mr. ALLEN. I can not state the number exactly; I think it is something like 14,000,000 pounds.

Mr. VEST. Fourteen million pounds?

Mr. ALLEN. Yes; I am talking about pounds, not tons. It is in the neighborhood of 14,000,000 pounds. I can not state the exact production.

Mr. VEST. The production in 1896, according to Mr. Oxnard, was 37,000 tons, and in 1895 it was 20,000 tons.

Mr. JONES of Arkansas. About 7,000 tons in Nebraska in 1896.

Mr. VEST. According to that estimate, as my colleague suggests, and I believe he is correct, there were about 7,000 tons produced in Nebraska and about 30,000 tons outside of that State in the year 1896.

Mr. ALLEN. I think you will find that my statement in pounds is substantially correct. I wish to call the attention of the Senator to the fact that since the passage of the present law, and I am not assailing nor defending the present law, there has been no increase in the number of pounds in the United States, nor any enlargement of the output of the factories.

Mr. VEST. In regard to the latter statement, the Senator from Nebraska is mistaken. I happened to meet on this floor Mr. W. A. Clark, of Montana, who came to us once with credentials as a Senator from that State and was rejected—a very prominent Democrat and a very wealthy gentleman—and he told me that he is now putting up in California a sugar refinery to cost $700,000, and he expects to have it in running order in a very short time.

Mr. ALLEN. What kind of a sugar factory?

Mr. VEST. Beet sugar, of course.

Mr. WHITE. If the Senator from Missouri will permit me, I will state that the factory to which he refers as being in process of construction is located not very far from the city of Los Angeles, about 35 miles distant, at a place called Los Alamitos; that it is not only in process of construction, but very nearly completed, and Mr. Clark will undoubtedly have it in operation in the next campaign, as they call the sugar season.

Mr. VEST. I was informed that it would be the largest and finest refinery in the world. It is most extraordinary that one of the most successful men in the annals of American finance should make the mistake, if the beet-sugar industry is now dying, of investing $700,000, and possibly more, of his money in the face of the conclusions that have been announced here in regard to beet culture.

I had occasion to say the other day that there is one set of men in this country not mistaken as to the effect of this legislation. Our experts may be wrong. We may be in the fog, as a Senator recently a member of this body said; we may ring our fog bells as much as we please, but there is one class of men in this country not mistaken in regard to the effect of this schedule. Our friends in Wall street know what it means. Sugar was 118 when this caucus amendment was reported. When I spoke in the Senate the other day briefly it was 124. It closed last night at 125½. Does anybody believe that they do not know what the protection is to the trust? Suppose you had taken away or reduced this protection, what would have been the result? Do we not know that Wall street would have responded as my hand responds to my brain? Do we not know that an electric thrill would have gone through that market immediately, and sugar would have gone down? But it is going up, and the cry on Wall street amongst the speculators is, "The trust will get all it wants; it has friends in Congress; its interests will be protected; it will continue its enormous dividends of 21 per cent net upon preferred and common stock of $75,000,000; it is the best investment that can be made. Up with the flag of protection, because it puts money into our pockets, and it is for the benefit of all the consumers of sugar!"

Mr. McENERY. Mr. President, during the consideration of this sugar schedule we have heard a great deal in denunciation of the sugar trust as a monopoly, and one which more than any other is attempting to crush out the lifeblood and the energy of American industries. But it is not alone one of the organizations which is now meeting with condemnation from the American people by reason of the action of the representatives of wealth, the aggregated and concentrated wealth and power of this country. It has been said that there are in the city of New York 250 men who could stop the plows in the field, prevent the harvesting of crops, prevent your fleet from sailing on the ocean, your railroads from traversing the continent, stop the telegraph and telephone messages; in fact, by their power put the 70,000,000 people of the country into beggary, want, misery, starvation, and death. Another said that Congress dare not legislate against the power and the influence of Wall street; that it held in reserve a power which would always prevent any legislation against the interests of the concentrated wealth and power of this country.

But in the South there is now threatening to strangle its energies and to impoverish its people a trust in comparison with which the power, the influence, and the ability, if you may so call it, of the sugar trust is but an infinitesimal portion. I refer to the great American Cotton Company, which controls some new process for baling cotton, a trust which has been organized by the combination of several rival presses. Its intention is to purchase the cotton of the South and to bale it. Failing in this, it is its intention to establish its presses in every cotton vicinity and bale the cotton at the expense of the farmer.

No cotton planter can to-day buy one of those cotton presses. The object of that organization is to control the price of cotton, and in failing to do that, to make every planter in the South contribute to its wealth and power, and in carrying out the purposes of this power they will have at their back, by their influence and their money power, every cotton exchange in America and every cotton exchange in Liverpool, and they will force the planters to do their bidding just in the same manner as the cotton-tie trust forced them speedily and at great expense to discard the tying of cotton with rope.

Now, Mr. President, this is a power which everyone on both sides of this Chamber recognizes that it is the duty of Congress to stop by appropriate legislation. The genius, the ability, the experience of Congress will in time apply a remedy, but I say to strike down this power, to check this cruel wrong to other industries in order to reach the influence of this power, is just exactly what is being done by the opposition to this sugar schedule in the Senate.

I have not heard a proposition nor has an amendment been offered or a suggestion made that, unintentional though it may be, has not the effect of increasing the power and the influence of the sugar trust at the expense of the sugar-producing industry in this country. This trust receives more benefit from the ad valorem duty imposed by the Wilson law than from either the schedule of the bill as it came from the House of Representatives or the amendment reported by the Senate Committee on Finance. In the bill as it came from the House the trust received the greatest protection, and in this way its power was increased. Its mode and its manner of controlling the introduction into this country of low-grade sugars is beyond the power of anyone to ascertain. While it has been attempted in the Senate, no one has ever been able to ascertain what percentage of protection the trust gains by an ad valorem duty.

I know what is the feeling among the sugar producers of this country. They have been alarmed, and are yet in unrest, because they believe that it is the intention to so confuse by amendment the sugar schedule that, when it gets into the conference committee, in sheer desperation there will be a surrender to this power and a general ad valorem duty adopted. I believe this impressed the Senate Finance Committee when they changed from a mixed schedule to a specific duty.

It is now in the differential only 7½ points more than in the bill as it came from the House. That is small, comparatively, when you learn the fact that every sugar producer's interest goes along side by side with that of the trust when you measure the advantages in a specific duty. All they contended for was that the duty should be so fixed that it should be certain and determinate, and not a duty so arranged that low-grade sugars could be imported into this country and refined at a less cost than that at which they could be produced on the plantations, and then rendered into a product fit for consumption.

Mr. President, I have in my possession a great many facts bearing on this question of ad valorem duty, but as that question is not now before the Senate, I shall not inflict upon this honorable body a tedious detailed statement. I will now, in a few words, direct my attention to the amendment which is before this body.

The pending amendment is designed to strike down the dividing line between lower-grade sugars, those below 16 Dutch standard, and those above, and to make it apply to all classes of importation. Here [exhibiting] is a sample of what is known as standard 6 of the soft sugars offered by the American Sugar Refining Company to the trade. This sugar polarizes 83.6. Its value on the 10th day of June was 4.06, granulated sugar on the same day polarizing 99.08; difference of polarization, 16.02; difference in value, sixty-nine one-hundredths. That is easily ascertained by the proportions 99.08 is to 83.6, as 4.75 is to 3.97. On examination of that sugar you will perceive that it has a good color; it is a sugar which is directly sold to the trade; it is a sugar which may be largely imported.

I can see no reason for this amendment. In no direction can anyone be benefited, except it be Crooks & Co., of New York, who import the sugars made by the Scotch and the English refiners.

The Senator from Arkansas [Mr. JONES] was generous in his argument. He was controlled by a philanthropic motive when he said this was the poor man's sugar. It is a fraud and a deceit. It contains 16½ per cent of water. It is a sugar that deceives the eye. Its value is 4.06 in the market. It goes into the hands of the retailer, and the consumer can not tell the amount of sugar

and of other solids in this sample. What is the real value of that sugar? Its relative value is only 3.978, and yet the consumer pays 4.06 for it. What will be the result of this amendment? It will flood this country with that kind of sugar.

Here [exhibiting] is the poor man's sugar. This is a sample of the raw Louisiana sugar, made on sugar plantations by Louisiana industry and refined in Louisiana sugar houses. Here [exhibiting] is a sugar which is slightly darker in color, but which polarizes 94.6. The difference between that and this [exhibiting], which polarizes 88.6, is that that is nearly a pure sugar, and was worth in the New Orleans market on the 10th day of June 3 cents a pound.

Here [exhibiting] is another, higher in color, larger in grain, polarizing 99, with only 1 per cent of water in it, and it is quoted in the New Orleans market at 3.75. Here [exhibiting] is another choice white, larger grain sugar, but the consumer could hardly distinguish the difference. That polarizes 99, and its cost is 3¼ of a cent a pound. Here [exhibiting] is a very high grade of sugar, called confectioners' sugar, used by confectioners and by bakers. That sugar is worth only $3\frac{9}{16}$ cents per pound in the market, and polarizes 99.4.

Here [exhibiting] comes par excellence the poor man's sugar, with only 2 per cent of water in it, which polarizes 98. That is sold for $3\frac{9}{16}$ cents in the New Orleans market. Here [exhibiting] is a choice article, with larger grain, though a poorer sugar, without a single harmful ingredient in it, which polarizes 98.5. That is sold for 3¼. This [exhibiting] is common brown sugar, known as "off yellow," worth 3¼ cents per pound, polarizing 97.8. This [exhibiting] is a higher grade of sugar, made on the plantation, called "plantation granulated," and that is quoted at $4\frac{1}{16}$ cents a pound, while the refinery sugar, testing 88.6, is quoted at 4.06 cents.

Mr. President, if this amendment be adopted, it will have the effect to bring here in large quantities this sugar. It will be sold at a reduced price. Consequently these sugars will have to be reduced in price and their manufacture entirely and absolutely destroyed. That will be the effect of the adoption of this amendment.

Now, what is the industry to be protected, and what advantages are to accrue to the country from the adoption of this schedule? As I stated before, this specific duty, this differential, as they call it, is a direct benefit to the manufacturer of these sugars, because 85 per cent of these sugars are over No. 16 Dutch standard in color and polarize over 85 degrees. We make but few common sugars in the State of Louisiana.

Therefore, speaking for that State, I say that the interest of her planters is in the direction of the maintenance of this differential duty. Take that off, and you strike a blow at the industry in that State. Not only that, but you will put to idleness every beet factory in this country. I do not see, therefore, the patriotism in attempting to get at what they call the sugar trust in striking down the most important and growing interest of this country, one that is more national in its character than any other which appears upon any schedule of this tariff bill.

Why shall you, in order to get at your enemy, thrust the sword through the body of your friend? But that is exactly what you are doing. To reach what is called "a colossal power," they take their sword and thrust it through the body of an infant, in order to reach and strike down a giant. It is not manly; it is not courageous; and it is not in harmony with American character and American intelligence.

Mr. President, the beet-growing people and the sugar-making people are all farmers engaged in adding to the wealth of this country by cultivating its soil and by turning into finished products the things and the articles which they raise on their farms. I say the American farmer has a right to demand that he shall be permitted to produce in this country everything that we now import. That ought to be the underlying principle of all tax laws. That is about the only real and substantial benefit that you can confer upon him by tax legislation. Our agricultural exports are more than $570,000,000 per year. It is said that one-half of that amount is needed to pay for sugar and many other things which we import and which we could make at home. We have paid as import duties on articles which we could make in this country in the last six years the enormous sum of $1,750,000,000, which is as much as the interest-bearing debt of the United States.

Beet sugar can be produced in twenty-three States of this Union. That has been demonstrated beyond question or doubt, and it is believed that its successful cultivation can be extended to other States. The beet belt runs through Alabama, through northern Georgia, South Carolina, North Carolina, and on along the Atlantic coast. The introduction of the beet culture gives new life and new energy to other industries. It is a fact that wherever the beet has been introduced it has increased other crops because of the better tilth of the soil, its pulp also being useful for food for cattle, and the droppings supplying a good manure for the grain crop following. It is a fact that in this country in the vicinity of every beet factory land has advanced from 25 to 50 per cent in value.

As I have stated and attempted to show by these samples, the beet factories and the Louisiana sugar houses produce a product ready for consumption. Under the McKin ey law a bounty of 2 cents a pound was paid for all sugars over the 80 test which were produced in the United States. That law was attacked by a Democratic Congress, which, I say, with reckless disregard of the national honor, repealed it, throwing into distress and into bankruptcy and into poverty men who had invested more than $2,000,000 in improvements on the promise of the Government.

Call that bounty un-Democratic! It was not un-Democratic for New Jersey in 1872 to exempt from taxation for a period of ten years the machinery and buildings and capital stock of the beet-sugar factories erected in that State. Nor was it un-Democratic in New Jersey to pass a law in 1881 granting a bounty of 1 cent per pound upon all merchantable sugar made from beets or sorghum. Nor was it un-Democratic for Delaware to offer a premium for the manufacture of beet sugar. Maine, Nebraska, Massachusetts, Kansas, all offered bounties. So we have in line Democratic and Republican States recognizing the fact that a bounty was a proper expedient for stimulating an industry.

Germany, since 1775, has been fostering the cultivation of beets and the manufacture of sugar, and she has been followed by France, by Holland, by Russia, and other European countries, until to-day it requires 1,437 factories to manufacture the beets which are raised on the Continent.

We import over 1,500,000 tons of dutiable sugar. We send abroad, it is estimated, from one hundred millions to one hundred and thirty-seven million dollars to pay for it. To manufacture that sugar which we import will require the erection of 530 additional factories, which will cost the enormous sum of $150,000,000.

There can be no doubt that with proper legislation and protection these factories will be established. What a vast amount of money to send abroad, when we have all the essentials which are necessary to erect these factories and to keep them in successful operation.

I say every section of this country will be benefited if there is any truth in the letters which I have received from Cincinnati, from Chicago, from New York, from Philadelphia, and from all over the Union, protesting against the importation of beet-sugar machinery free of duty, for the simple reason that they all expect to enlarge their factories and engage in the manufacture of sugar machinery. Already there are 10,500 farmers engaged in the beet industry, and it requires seven factories to manufacture the beets which they raise. In Louisiana one-half of our population is engaged in the raising of sugar.

Mr. President, a few words as to the production of sugar in Louisiana. The soil of Louisiana and the amount of land that can be devoted to cane will produce—it is a large estimate, I will admit, but it has been so stated by the director of the Louisiana Sugar Station—the soil of Louisiana and the amount of land that can be devoted to cane will produce one-half the sugar needed to supply the entire people of the United States. The soil of our State wherein sugar cane is so successfully grown is not so well adapted to any other crop. The early history of the colony recites what efforts the colonists made to raise other crops, and what failures met their efforts. It can therefore be understood with what joy and with what anxiety as to the future the discovery of the adaptation of soil and climate to cane production was received when Etienne de Bore announced the results of his experience.

Struggling against uncertainty in legislation, sometimes ruinous, the sugar industry, by force of necessity, now engages the attention of one-half the population of the State; more than one-half the capital and at least one-half of its lands under cultivation are devoted to the raising of the sugar cane. This and the manufacture of sugar requires the investment of large capital and gives employment to a great army of laborers. It necessitates the use of costly machinery, much of which comes from other sections of the Union. It demands the best class of work animals, probably four times as many as are required in the cultivation of any other crop, the mules averaging in cost from $175 to $200 each, all of which come from Indiana, Illinois, Missouri, Kentucky, and Tennessee. It demands the use of large quantities of the best and most expensive fertilizers, phosphates, and lime, which come from beyond the borders of our State. The implements used, from the plow drawn by four, six, and eight mules to the lighter cultivators, are furnished by the factories in other sections of the country.

Even the cane knife, of which we now hear so much in connection with the Cuban struggle for liberty, is a costly instrument, and comes from the factories of the North. The large number of carts and wagons necessary to convey the immense tonnage of cane from field to factory come to us from other States. We need heavy supplies of chemicals, to apply which the services of skilled chemists are employed, and then there are blacksmiths, carpenters, coopers, engineers, and sugar makers, many of whom are drawn from your population during the grinding season. The

large army of employees have to be clothed and fed. Their food and clothing come from the fields and factories of the North and West. Every section of the North, East, and West feels the beneficial influence of the cultivation of cane and the manufacture of sugar. More than any other industry in the Mississippi Valley it adds to the commerce on the great river; more than any other industry it adds to the earnings of the railroads; more than any other industry it draws supplies from the mills of the East and from the Great Plains of the West.

No agricultural product is made at such heavy expense; commencing with the most expensive drainage, the cost of seed cane, of more labor than is required in the cultivation of any other crop, more mules and of higher grade, and more wages and costs; and all this in the face of the uncertainties of legislation. Fortunately, the climate of Louisiana is favorable for the cultivation of cane, but the risks involved are necessarily great. The heaviest cost, however, is in the manufacturing department of the industry, as all modern sugar factories and the necessary implements, even some of the old ones, cost from $150,000 to $200,000; such, for instance, as would turn out from two to four million pounds of first-class sugar, running from No. 16 to No. 20 Dutch standard.

Without assistance from the Government, without sharing equally with other industries in the benefits of protection arising from the imposition of a duty, the vast amount of capital employed in the sugar industry in Louisiana will be destroyed; the large and productive area of the State on which the cane is planted will be idle; the great and costly mills will go to decay, the walls will crumble, and the machinery will be eaten up with rust. The vast number of laborers, the skilled scientists and mechanics, will be out of employment. Desolation will be where there had been promise of a prosperous and happy condition. Is this section to be given up to desolation? If so, its effect will be felt in other sections. Factories of all kinds in the North and East, and the farming sections of the West, railroads and river transportation will be disastrously affected. I am no agriculturist, but I am told that the beet thrives in the cold and arid sections of the country. Where other things perish, this plant thrives and produces its best results.

Estimate the area of our country that is possessed of such a climate, where the farmer has been driven away in an unequal contest with the climate, in efforts to raise cattle and cereals. Here is where the beet-sugar central factories have been located to keep the farmer in the neighborhood, directing his attention to a new industry in order that an inhospitable climate may be wooed into giving to this country an increase of wealth and of prosperity and instilling hope into the breast of the heretofore unsuccessful farmer, to be realized in a near future into an active and a paying industry.

From what I have stated, from the vast amount of interest that Louisiana has in the cultivation of rice, of sugar, the output of her sawmills, of her salt mines, of her sulphur mines, is there any reason for doubting that the Democratic party of that State is committed to protection along Democratic lines to afford the utmost protection that revenue can give with the least burden to the people? I believe that this also is the doctrine of the Republican party. I do not believe that either party desires to impose unnecessary burdens upon the people.

Mr. President, in some quarters there has been criticism made upon the position which I have taken before this honorable body, but it is no new one to the people of Louisiana. In 1884, when the industries of Louisiana were threatened by adverse legislation, I took occasion to state substantially the grounds upon which I now stand. When I was nominated by a Democratic caucus for this position, before the vote was taken, so that there should be no misunderstanding, although not called on, I went before the caucus and made the same statement that I did in my inaugural address in 1884. There was not a dissenting voice, and if you will go to the newspapers you will find it recorded that when I uttered that sentiment there was an outburst of applause.

If we look at the condition of the country we find that a large amount of money will have to be raised in order to support the Government. Why more revenue? It is answered by the fact that there has been a constant increase in population, in the wants and in the necessities of the Government, and this is shown by a regular increase of the appropriations every four years. We need a large sum of money. It is true that extravagance has been charged in the expenditure of our revenue, but such charges are and will be made as often as one Administration succeeds another, but the accuser does no better than the accused.

One Congress is derisively called a "billion-dollar Congress." It is succeeded by another, which is expected to do better, but which, in its turn, exceeds its predecessor in appropriations. I have seen no itemized statement showing in what direction expenses can be reduced. No one will say that we ought to cease building war vessels. Each year requires an increase in our Navy. The great maritime powers are increasing the number of their ships of war and their armaments, and common prudence demands that there shall be no backward step in the progress we have already made in building up a formidable fleet.

No one demands that pensions shall cease; on the contrary, there is a universal sentiment in favor of so increasing the pension list as to provide for every widow and orphan of those who died in the Federal service, and for the care of every veteran, not niggardly, with a sum barely sufficient to stave off hunger, but liberally, so that the remaining years allotted to them shall be passed in ease and comfort; so that when their last moments shall come they will breathe blessings upon the country they served, instead of curses for its neglect and ingratitude.

No one wants the work on seacoast defenses stopped or the Army crippled in its organization or in its usefulness. We do not want to check the Government in its aid to the unfortunate who may be driven from their fields and firesides by floods and must necessarily depend upon its generosity to save them from suffering and from starvation. I hope no one will demand that there shall be even a diminution in the sums appropriated for the improvement of our rivers and harbors. That great highway, the Mississippi River, will demand additional sums in order that in the future no such disaster as the recent flood shall overtake the people dwelling along its banks and along those of its tributaries. These things considered, the fact is forced upon us that more revenue is needed now than at any time in the history of this country, save in the few years when internecine war brought woe to all our people.

For one I believe in making this country greater. So far as the Government can increase its prosperity, it is its duty so to do. We hear that there are hundreds of thousands of our people out of work. It is certain they are menacing the existing order of society and threatening the stability of the Government. Call them from the highways and the byways; employ them in building ships and fortifications; in improving your rivers and harbors. Wherever the Government can expend money for useful purposes, let it go and find its way in affording relief to a suffering people. Summon up the old Roman spirit in sending out not armies for conquest, but armies of busy and contented laborers, imbued, as were the old Roman officers and soldiers, with fidelity and devotion to the government they so well served.

By our efforts let us bring happiness and contentment, peace and prosperity, to all the people. In the symbol city of prosperity, as the people pass through its hundred gates, let its shield be borne aloft inscribed with the mart, the field, the ship, the plow, and the loom—with all the symbols of labor and of industry; and let the march of the people in progressive prosperity be lit with the fires of the forge, the furnace, and the factory.

I affirm that the true doctrine of Democracy is in line with the rapid and progressive development of our country. I deny that its principles are directed to the destruction of our industrial system, the putting out of furnace fires, the silencing of the busy hum of our looms or the whirring of our wheels, or, worse than all, to the paying of a premium to foreign pauper labor and the impoverishment of our toilers in every industrial occupation.

In Hamilton's report (in 1790) upon "Commerce and manufactures," there is not one thing said that is not good Democratic doctrine. It committed the nation to the protective system. It brought the people irrespective of party to the support of the tariff act of 1789, which was the practical beginning of a protective era lasting till 1816. All tariff legislation until that date was protective; all received the support of both parties, Federalists and Republicans (Democrats). The tariff act of 1794, which increased duties to raise a greater revenue, found stronger support among Republicans (Democrats) than among Federalists. The Republicans were more inclined to its support because of their opposition to the excise tax of the previous session. On March 26, 1804, an amended tariff act was passed still further increasing duties. The Republicans were in power, and Thomas Jefferson, the great apostle of Democracy, was President.

The acts amendatory of the act of 1789 were all in the line of protection. During this period Washington said, in his message:

> Our agriculture, commerce, and manufactures prosper beyond example—every part of the Union displays indications of rapid and various improvements, and with burdens so light as scarcely to be perceived.

Mr. Adams, in his last message, said:

> I observe with much satisfaction that the product of the revenue during the present year is more considerable than at any former period.

Thomas Jefferson, in his second annual message, said:

> To protect the manufactures adapted to our circumstances is one of the landmarks by which we shall guide ourselves.

That tariff produced an excess of revenue. In speaking on the subject, in his sixth annual message, he said:

> Shall we suppress the imposts and give that advantage to foreign over domestic manufactures? On a few articles of more general and necessary use the suppression, in due season, will doubtless be right; but the great mass of the articles on which imposts are laid are foreign luxuries purchased only by the rich, who can afford themselves the use of them.

At the present day if duties were imposed only upon articles used by the rich and high enough to provide the revenue needed by the Government there would be absolute prohibition, which has been so much discussed as the ruling idea in the bill sent to this Senate by the House. In a special message, in May, 1809, President Madison said:

It will be worthy of the just and prudent care of Congress to make such further alterations in the laws as will more especially protect and foster the several branches of manufacture which have recently been instituted or extended by the laudable exertions of our citizens.

The tariff of 1808 was protective in laying an impost duty on cordage, glass, nails, salt, and many manufactures of iron. Protection of textiles and of unmanufactured iron had received no attention, but the Berlin and Milan decrees and the English orders in council and the declaration of war against Great Britain drew attention to the necessity of a revenue tariff with protective features.

Mr. Madison urged the passage of the tariff act of 1812 "as a means to preserve and promote the manufactures which have sprung into existence and attained an unparalleled maturity during the period of the European wars." Calhoun and Lowndes joined with Clay in a demand that protection to home industries should no longer be secondary to a tariff for revenue only. The Republican party of that time, to which the present Democratic party is the successor, quoted the report of Hamilton to sustain their position upon which the earlier tariff acts had been based.

This position of the Republicans caused the Federals to ignore the traditions of their party faith and to take the antiprotection side of the controversy. The Democratic tariff of 1812 imposed the highest rates of duty since the foundation of the Government until 1842. It was, it is true, a war tax, in aid of Democratic support of the war. The existing rates were doubled. Sugar received protection to the extent of 5 cents per pound; coffee was taxed 10 cents, tea 36 cents, pig iron 30 per cent, bar iron 30 per cent, cotton manufactures 30, woolen 30, and silk 25.

The tariff act of 1816 was in its entirety protective, rendered necessary by the recent war, but its fatality was in taking from it this revenue feature, with incidental protection, after three years. In 1819, when protection under the act reached the minimum, Great Britain began to flood the country with her surplus wares. More than twice the quantity needed by this country was imported. There was depression in business, and general bankruptcy was the result. Thomas H. Benton described the condition of the country as follows:

No price for property, no sale except those of the sheriff and marshal, no purchaser at execution sales save the creditor or some money hoarder, no employment for industry, no sale for the products of the farm. No sound of the hammer save that of the auctioneer knocking down property. Distress was the universal cry of the people; relief the universal demand thundered at the doors of legislatures—State and Federal.

Relief was offered in the extension for seven years of the provisions of the tariff act of 1818. It was abortive. A panic lasting for several years followed, and relief became imperative. President Monroe urgently recommended "additional protection to those articles which we are prepared to manufacture." The tariff act of 1824 was framed. Mr. Calhoun now became the leader of the free traders.

Andrew Jackson and James Buchanan supported the bill, which recognized the doctrine of protection in a revenue bill more emphatically than any former revenue act. Opposition to the bill was more on sectional lines than from any well-defined principles. The bill fully recognized the "American system" as a living principle in our politics. Sugar received an import duty of 3 cents per pound. Coffee was taxed 5 cents; tea, 25 cents; salt, 20 cents; pig iron, 20 per cent; bar iron, $30 per ton; glass, 30 per cent and 3 cents per pound.

Manufactures of cotton were taxed 25 per cent, and silk 25 per cent. There was such improvement in the financial and industrial condition of the country that the supporters of the act were encouraged to try further efforts in the direction of raising a revenue with incidental protection, a necessary and desirable adjunct. In the Twentieth Congress the Democrats were in the majority, but they were divided over the tariff. Those of the North voted with the Whigs and passed the tariff act of 1828. Jackson had carried New York, Pennsylvania, and Illinois by his protective-tariff record, and the act was in a measure a Jackson tariff law.

This act also emphasized the "American" idea, and there was protection in every change in the act of 1824. Jackson said of the protective act of 1824–1828, in his message of 1832:

Our country presents on every side marks of prosperity and happiness unequaled perhaps in any portion of the world.

Responding to the charges that these tariff acts were unconstitutional, null, and void, because they were protective in principle and unjust and oppressive, Andrew Jackson, in his second annual message, December 7, 1830, used the following language:

The power to impose duties on imports originally belonged to the several States. The right to adjust those duties with a view to the encouragement of domestic branches of industry is so completely identical with that power that it is difficult to suppose the existence of the one without the other. The States have delegated their whole authority over imports to the General Government, without limitation or restriction, saving the very inconsiderable reservation relating to their inspection laws. This authority having thus entirely passed from the States, the right to exercise it for purpose of protection does not exist in them, and consequently if it be not possessed by the General Government it must be extinct.

Our political system would thus present the anomaly of a people stripped of the right to foster their own industry and to counteract the most selfish and destructive policy which might be adopted by foreign nations. This surely can not be the case; this indispensable power, thus surrendered by the States, must be within the scope of the authority on the subject expressly delegated to Congress. In this conclusion I am confirmed as well by the opinions of Presidents Washington, Jefferson, Madison, and Monroe, who have each repeatedly recommended the exercise of this right under the Constitution, as by the uniform practice of Congress, the continued acquiescence of the States, and the general understanding of the people.

This is a correct enunciation of the doctrine of raising revenue by tariff legislation with incidental protection.

No stronger and more convincing argument was made for the adoption of the Constitution than that the States, by impost duties and customs, regulated exclusively by one body, would be enabled to encourage manufacturers, and free themselves from the boots and shoes, ready-made clothing, hats, nails, sheet-iron hinges, and other utensils of iron which Great Britain imposed upon them, and the freedom from the regulation of the flour market by Spain, through a navigation act. Said one:

It will have energy and power to regulate your trade and commerce—to enforce the execution of your imposts, duties, and customs. Instead of the trade of this country being carried on in foreign bottoms, our ports will be crowded with our own ships and we shall become the carriers of Europe. Heavy duties will be laid on all foreign articles which can be manufactured in this country, and bounties will be granted on the exportation of our commodities; the manufacturers of our country will flourish; our mechanics will lift up their heads and rise to opulence and wealth.

The history of the times preceding the adoption of the Constitution abounds in such arguments in favor of its adoption.

The history of tariff legislation shows that the general tendency of public opinion is in the direction of a tariff for revenue, and protection necessarily following as an inseparable incident. The policy of this Administration, at least, is for a protection of American industries. That a tariff bill framed on this principle will be enacted is a certainty.

Louisiana is vitally interested in the production of salt, lumber, rice, sugar, and cotton. The pending bill makes no discrimination in the arrangement of the schedules for revenue against these products. Why should she stand idly by and decline to accept the benefits to be derived from the necessary levying of revenue by impost duties?

Call it what you will, protection or a revenue tariff with incidental protection, millions of dollars have to be raised, and the benefits of protection from it distributed. Why, then, should the people of Louisiana resist the building of cotton factories, furniture factories, the erection of sawmills, the opening and improving of sugar fields, and the erection of central factories, the opening of salt mines, and hundreds of other industries that are just now coming into existence? I say, so long as it is the policy of this Government to have a protective law, it would be a suicidal policy for the people of Louisiana to decline to demand the benefits tendered in a law which is general in the arrangement of its schedules and impartial in the duties it imposes and nonsectional in its character.

The South is more interested in the proper levying of a tariff than any other section of the country. Her development in manufacturing interests in the last two decades has been marvelous. This has been in spite of free-trade ideas and a free-trade policy. Had there been a demand for adequate protection to her cotton mills, her wealth would have doubled. Field and factory, the spindle and the plow being in close relationship, would have doubled her productive capacity, would have given tenfold value to her lands, would have multiplied her population with an intelligent and industrious people, would have rescued her from debt, and there would be now no borrowing from foreign mortgage syndicates, where principals are doubled in five years by usurious interest. No one can deny the constitutional right to levy import duties in such a manner as to afford protection.

The Democratic platform in 1892 recognized the right, and demanded a tariff bill in which the duties imposed should be general and impartial. As a Democrat, I have a right to demand that that platform shall be carried out. If in a tariff bill framed by the Republican party I find a nearer approach to the constitutional principle announced in that platform, no Democrat can consistently question my motives and say that I have abandoned the party. In the last campaign Democrats who met in convention and framed the platform in the interest of the money of the Constitution were denounced for having abandoned their party by the gold Democrats who assembled at Indianapolis and materially aided and assisted in putting the Republican party in power. We resented the accusations made by the gold Democrats, and said they were outside of the Constitution, had repudiated the bimetallic provision of the Constitution, and had left the Democratic party.

I stand to-day with Jefferson and Jackson on the tariff issue,

founded on sound constitutional interpretations, just as I said in my silver speeches I stood with them on constitutional grounds on that issue. There is not a State in the Union which, if it had the power, would not exercise it to protect its domestic interests. It is known to all that this absence of self-protection led to the jarring jealousies under the Articles of Confederation and resulted in the present power in the Constitution for the laying of import duties and the regulation of commerce by the Federal Government, and prohibiting their exercise to the States.

There is no restriction in the Constitution in the exercise of this power limiting it to a tariff for revenue only. On the contrary, it was the intention that the power should be exercised in the interest of protecting the industries of each State, which the States separately, when they had the power, were unable to do. A tariff for revenue without protection was never contemplated by the founders of this Government. There may be differences of opinion as to the schedule rates in a tariff bill, but on the facts presented in each case any Democrat has a right to exercise his individual opinion for the best interests of the country. Neither the Democratic party nor the Republican party has a right to demand that any man shall forfeit his allegiance to the Constitution by joining in a party demand for an administration of affairs contrary to that Constitution.

A bitter partisan and sectional animosity was engendered by the act of 1830, which considerably reduced the rates of duty provided in the act of 1828. It was unsatisfactory to Southern Democrats because it did not entirely eliminate the protective principle. There was a demand for the affirmation of a free-trade policy. This demand was to some extent appeased by the act of 1832, which placed coffee and tea on the free list, but, like the act of 1830, it did not entirely eliminate the protective theory—did not repudiate the doctrine of protection—and was therefore displeasing.

Nullification and the force bill were the results, and the turmoil finally led to the compromise act of 1833. Like all compromises, it lacked strength and stated nothing affirmatively. There was a gradual repeal of protective duties and a partial abandonment of the doctrine of protection. Confusion and uncertainty arose, and the policy of the Government on tariff measures was undefined. Biennial reductions, as provided in the act, soon brought the rates of duty to a point where there was no protection. There was a calamitous panic in 1837, in which the money loss was calculated at $1,000,000,000.

Prices fell to ruinous rates. There was no market for farm products. The revenue fell 25 per cent, and the Government had to borrow to pay current expenses. After fruitless efforts to enact a tariff law framed with pronounced protective features, the act of August 10, 1842, became a law.

Under the scaling act of 1833 there was laid a uniform duty of 20 per cent. This was changed by putting cotton goods to 30 per cent, woolens to 40 per cent, silks to $3.50 per pound, bar iron to $25 per ton, pig iron to $9 per ton, sugar to 2½ cents per pound, and left tea and coffee on the free list.

While the act was not such as was originally intended as a protective measure, it afforded substantial relief to the country. President Polk, in his message in 1846, said:

> Labor in all its branches is receiving ample reward. The progress of our country in resources and wealth and in the happy condition of our people is without example in the history of nations.

The act of 1846 provided for rates ranging from 5 to 100 per cent, and introduced the vicious system of ad valorem duties, and affirmed the doctrine of revenue without protection, but had some protective features. It disappointed the Northern wing of the Democratic party. The country this time escaped the usual disaster of rapid reduction in tariff rates because of adventitious circumstances.

The Mexican war created a demand for breadstuffs and supplies; the discovery of gold in California increased the demand for labor, mining implements, agricultural products, and shipping, besides increasing the money values of this country. On the other hand, European countries were in revolution from 1848 to 1851. Instead of exporting, they demanded food supplies from abroad. The German war and Irish famine created a demand for breadstuffs. These adventitious aids, like the embargo acts and orders in council, proved to be powerful protective agencies.

When they ceased to exist, say in 1854, true economic conditions asserted themselves. Our exports declined, manufactories suspended operation, and foreign imports reappeared in our markets to an alarming extent. The Thirty-fourth Congress went over to a free-trade policy in the passage of the tariff act of March 2, 1857. Immediately thereafter foreign goods flooded the country, for duties along the entire line of imports of leading articles were reduced almost to the rates of the compromise act of 1833.

Within six months after the passage of the act there was a great panic. Ruin was widespread and all branches of industry were disastrously affected. There were 5,123 failures, and the Government had again to borrow money for current expenses. The public debt increased $46,000,000, and the expenditures exceeded the receipts by $77,234,116. President Buchanan, in his message, said:

> With unsurpassed plenty in all the productions and all the elements of natural wealth, our manufactures have suspended; our public works are retarded; our private enterprises of different kinds are abandoned; thousands of useful laborers are thrown out of employment and reduced to want. We have possessed all elements of material wealth in abundance, and yet, notwithstanding all these advantages, our country, in its monetary interests, is in a deplorable condition.

The tariff act of 1861 increased duties all along the line. The act was framed on just principles, to provide a needed revenue, and at the same time to incorporate and confirm the doctrine of incidental protection, giving a helping hand to labor and encouraging home production and manufacture. There were several amendments subsequently made to the act, all in the line of protection, and rendered necessary by the exigencies of war.

The act of 1872 reduced duties considerably and added largely to the free list. Very soon thereafter, in 1873, a panic followed. Whether this panic was the result of this reduction or a decrease in the circulating medium and demonetization of silver is a question of fact not yet ascertained. I am inclined to believe that both causes contributed to the result.

The issue in the campaign of 1888 was free trade *vs.* protection. The McKinley bill was the logical sequence of the campaign, just as the Wilson bill was that of 1892. It is said that a protective tariff bill will not yield revenue. The McKinley Act, whatever may be said of it in other respects, demonstrated the contrary to be true. It raised all the necessary revenue for current expenses and provided a surplus.

The Wilson bill, in its original intent, carried the doctrine of free trade—that is, of low tariff to the extreme. The idea was that protection of any kind was opposed to the interests of a free and prosperous people. The bill as modified proved a disastrous failure. The sugar schedule did not respond to what was expected of it because of its ad valorem rate, and the income tax was eliminated, both of which were relied upon for a large revenue. The fact remains that there is surplus money in the Treasury, arising from the sale of bonds, and which debt has to be paid.

We have had tariff acts carrying protection with the imposition of duties from 1789 to 1842 and from 1861 to 1894, and low tariffs in 1783, 1816, 1832, 1846, 1857, and 1894. We are told that taking the two decades 1840 to 1850 and 1850 to 1860, and regarding the first as a period most affected by the low ad valorem tariff of 1846, the comparison is in favor of the latter; but no account is taken of the disaster which followed the reduction of the tariff of 1816, 1832, and 1833. In the decade 1850 to 1860 it will be remembered that the adventitious circumstances—the Mexican war, revolutions in Europe, discovery of gold in California, and the Irish famine—all had the effect of protective agencies.

From this partial and imperfect résumé of tariff legislation, it will be noted that parties have occupied different positions on the tariff question and that leading statesmen have changed their opinions, dictated by party necessity or by local self-interest.

It may be truthfully stated that the Government has no such thing as a tariff policy. It is time, in my opinion, for one to be asserted which will be certain and permanent. The tariff policy ought to be taken out of party politics and relegated to the business methods of the Government. If it could be estimated, I think the loss to the people of the United States by the frequent changes of tariff laws, the unsettling of values, and the insecurity of investments would express an amount that would bewilder the mind.

The argument as to the unconstitutionality of a tariff law has long ceased to be available. The Democratic party as well as the Republican party is committed to tariff legislation as the best mode of raising revenue. There is no such thing as absolute free trade in this country. So true is this that any party presuming to advocate it would deservedly pass into oblivion.

The Democratic party will never risk a campaign before the people and say that incidental protection means opposition to the encouragement of American industries.

In the platform of 1892 it was affirmed that "we hold that tariff duties should be levied for purposes of revenue, such duties to be so adjusted as to operate equally throughout the country." In my opinion the tariff bill before the Senate responds more exactly to this declaration than did the Wilson bill. It covers all industries in all sections, and is designed to raise an adequate revenue. The Wilson bill was sectional and partial. It carried a low tariff on some things and an unnecessarily high tariff on others, and had a large free list. It unduly protected some industries, while as a revenue-producing tariff it was a confessed failure.

It is urged, as an argument against a tariff embodying any protective idea, that it will cause an additional price to be added to the protected article and thus impose a burden upon the consumer.

In 1790 Mr. Hamilton asserted that "internal competition is an effectual corrective of monopoly, and in the end leads to a lower scale of prices for protected manufactures than prevailed for

foreign." Experience has demonstrated this to be correct. It is within the memory of many Senators that in certain lines of goods European nations practically monopolized the trade in this country and we had to pay high prices for them. By protecting the manufacture of such goods they have multiplied in this country. They fully equal the imported goods, and we now get them at a greatly reduced price. They are within the reach of the poorest.

An argument against a protective system was made by great Democrats, embodying the idea that capital would be forced here and employed in manufacturing and destroy those already in existence. Mr. Buchanan said in 1846:

> Our domestic manufactures have been saved by the election of James K. Polk from being overwhelmed by the immense capital which would have rushed into them for investment, and from an expansion of the currency which would have annulled any protection short of prohibition.

With a judicious tariff manufactures will multiply; labor and capital will find profitable employment, as new and inexhaustible fields will be opened to each. Domestic merchants will find ready sales at remunerative prices, while commerce and interstate trade will be stimulated by the distribution of both raw materials and manufactured products. The nation will approach complete independence in the employment of skilled labor, and there will be a harmonious development in all sections and in all the great interests of the people. To accomplish this a tariff bill ought to be impartial as to individuals and as to sections.

Every industry that needs protection to keep it in active existence and free from injurious foreign competition ought to receive it, not to such an extent as to enrich the beneficiaries and to impose unnecessary burdens upon the people, but fully enough to provide a revenue for all possible needs of the Government, to encourage domestic production and manufacture, to create competition at home, and to raise the country to a plane of perfect and complete independence.

The founders of this Government believed it to be a right and a duty to foster industry by legislation. They invested the Government with ample power to provide a revenue through legislation, and at the same time to protect the industries of the country. Under the Articles of Confederation there was an era of unlimited free trade. There was no uniformity in duties imposed. States nullified the laws of other States. The large importations of foreign goods were sold at prices which prevented the establishment of factories at home, drained the specie from the country, and proved ruinous to all domestic industries.

There was a crying demand for industrial and commercial independence, for, in the language of one of our early statesmen, "foreign nations were passing such laws as they judged most likely to destroy our commerce and extend their own. The arm which had struck for independence in the field was palsied in the workshop, the industry which had been burdened in the colonies was crushed in the free States, and the mechanics and manufacturers of the country found themselves, in the bitterness of their hearts, independent—and ruined."

What happened then will again occur if we invite by a low tariff the importation of foreign goods. Cheap labor abroad will always enable the foreign manufacturer to undersell our home products if duties be low, inflicting cruel wrong upon our skilled and intelligent labor. We do not want to degrade this labor. We do not want to close a single factory and turn its operatives out upon an inhospitable world. The only means of raising adequate revenue is by tariff legislation, and if we, in the interests of foreign manufacturers, impose low duties, disregarding revenue necessities and adequate protection to domestic industries, our revenue will be scant, our Government be degraded and embarrassed, and our labor, thus discriminated against, sordid and malcontent.

Whenever Congress attempts tariff legislation there are Democrats who contend for and vote for the protection of the industries of their States. They endeavor to get as high protection as possible, and it is a rare instance when one offers an amendment to reduce the tariff rate applicable to the interests in the State he represents. In this way they aid and assist in making the tariff protective, and then vote against it because it is protective.

In the enactment of the Wilson law there was a struggle to secure individual and local interests. It was asserted that one prominent Democrat threatened to defeat the bill unless a certain local interest was satisfied. In this way the tariff act became a disastrous compromise of selfish interests. One end of it was highly protective to satisfy Democrats who demanded protection for local interests, and its low tariff rates were the logical sequence of an absence of interests to be protected.

A principle can not be violated in one particular instance without discrediting the whole doctrine which it supports. It would be more consistent to vote for the bill, unless in other respects it is objectionable. There can be no excuse for voting against it by those who help to make it protective because it is of that character.

The history of the party on the tariff question and the conduct of the masses of the party and the declarations of its leaders have been equally inconsistent.

District, State, and national platforms have been at variance. The national platforms have declared for a tariff for revenue only and a tariff with incidental protection.

This "incidental protection" is thus expressed by Mr. Madison:

> In adjusting the duties on imports to the object of revenue, the influence of the tariff on manufacturers will necessarily present itself for consideration. However just the theory may be which leaves to the sagacity and interests of individuals the application of their industry and resources, there are in this, as in all cases, exceptions to the rule.

This means a discriminative duty in favor of industries which exist, but which would cease to exist unless protected. What was a theory with Hamilton became a fact in the enunciation of incidental protection in Democratic platforms and in the consideration of the Wilson bill, with its protective features in parts of the act.

In 1872 the Liberal Republicans nominated Horace Greeley for President on a platform declaring the tariff one of local interests, and simply relegated the question to the Congressional districts. It was a declaration that it should not be made a party question and should be taken out of politics. The Democratic convention met at Baltimore and accepted the platform and the nominations of the Liberal Republican party. It thus favored the taking of the tariff question out of national politics and eliminating it from the professions of Democratic faith.

The Democratic party in 1876 nominated for its President Samuel J. Tilden, a protection Democrat, who declared over his own signature that he had a strong liking for protection. This declaration was made in 1833, and during all the discussion of the tariff question thereafter there is not on record one syllable to show that he ever retracted his utterance on that occasion.

In 1880 the party nominated General Hancock for President. It declared in the platform for a revenue tariff. But this was done away with when the party accepted as a supplement to the platform General Hancock's letter of acceptance, in which he said that the tariff question was one for local discussion in Congressional districts. This was the second attempt of the party to eliminate the tariff question from national politics and strike it from national Democratic platforms.

In the late campaign, despite the efforts of the Republican party to tender the tariff issue, the Democratic party ignored it and forced the financial issue.

The Democratic party three times elected Samuel J. Randall, a protection Democrat, Speaker of the House of Representatives, placing him in a position in which his influence and power were great in shaping and directing tariff legislation.

I have recited these facts not to impeach the integrity of the party, in no way to detract from the brilliant record it has made, but to show that the tariff question has never been an element of Democratic fealty.

The tariff question is an economic one, and it ought to have no place in party platforms. It should not be disturbed by party defeats and party successes. The bill under discussion should become a law and remain on the statute book at least a sufficient time to demonstrate its merits and its defects.

During the period of reconstruction and of the infamous governments which were imposed upon the people, old-line Whigs and Democrats united as one body in efforts to get rid of negro domination. While the struggle lasted, there was no tariff issue presented to the people of the South. The problem was far above free trade and protection. Now that the danger of the supremacy of the negro in government has in a great measure been removed, it is but natural that men who hold views of protection should seek the opportunity of pressing their convictions.

The South has been solidly Democratic from necessity. In the efforts to secure good and honest government by placing white men in power she lost sight of minor interests which, though subordinate to the great and all-absorbing issues confronting her, are nevertheless important for her development and welfare. In Louisiana many of those who acted promptly and effectively in overthrowing carpet-bag government were men who had been reared and educated in the Whig school of politics. There were and are Democrats whose services to the party are not less than those of any Democrat in the Union. These men hold to the views that I have but indifferently expressed.

Two Senators from Louisiana opposed the tariff act of 1857 because it failed to provide adequate protection to the interest of their State. These men were dear to the State of Louisiana and to the South; both were leaders in the movement of secession. One was originally from the North, the other originally a British subject. They believed their allegiance was first to their adopted State. They threw her into war in devotion to what they believed to be a preservation of her honor and conducive to her interests. There is now no divided allegiance. We are not, and I hope we will never be, called upon again to make our choice between allegiance to Federal and State government, but in all the material

interests which affect Louisiana, in all matters of legislation which will promote her interests, when the choice is presented to me of voting for them or party measures which would lay her fair surface bare and desolate, I have no hesitation in saying, and I utter the statement with the proudest satisfaction, that I will, regardless of party discipline, vote in favor of any measure that will bring prosperity to my State, and in doing this I will not, to promote such interests, endeavor to destroy the interests of other communities. I want all to share alike in the benefits of legislation. I do not want to see sectionlism and favoritism encouraged.

It is difficult, Mr. President, to conceive how any tariff bill can be enacted into a law without carrying some degree of protection with it. The greater the amount to be raised, the greater is the amount of protection afforded. If a revenue of two hundred millions is to be raised, it necessarily follows that two hundred millions of protection must be placed on the different industries of the country in the various sections.

The question presented is how to impartially place this amount, and what industries need the greatest protection to make them self-supporting and beyond foreign competition, in what sections the protection inevitably following this levy shall be placed, the effort being to produce the greatest good to the country in all sections and in every industry.

If no revenue were needed, it is certain no revenue law would be passed; and if necessary to protect our mechanical, mining, manufacturing, and agricultural industries from being destroyed by foreign competition, another provision of the Constitution, to regulate commerce, would have to be invoked in order to apply the proper remedy.

The whole question, then, in framing a revenue law is as to the proper arrangement of schedules. It really becomes a question of schedules, not any underlying principle, except what is right and just. It is the duty of each Senator, without reference to party, to aid and assist in the proper framing of the schedules and to direct the application of the money to be raised in such a manner as to promote the best interests of the country, in a manner that will promote the happiness and contentment of the people by imposing the least burden upon them.

The policy of arbitrarily objecting to schedules to make a record for an ensuing campaign, in my opinion, is inexcusable.

In order to frame the pending bill an estimate was made of the amount necessary to be raised. The schedules and paragraphs were arranged for this purpose. There was at least apparent consistency in the whole. To go through the bill and cut down rates by a half or a fraction of a cent is to disturb the symmetry of the bill, to make patchwork out of it, and in the end to destroy its usefulness as an instrumentality for raising a revenue for the Government.

I do not mean to intimate that objectionable schedules should be received, but some measure, at least, should be proposed to take the place of the one rejected. I mean to say that the charges of robbery, etc., and objections made simply to make a record for campaign uses is not right or proper.

The bad financial condition of the country, the scarcity of a circulating medium, the low prices of farm products, of wages, the increased price of gold, the absence of a demand for labor, and the general and universal distress are admitted. I do not propose to go into a lengthy discussion of the cause which has led to this universal depression in business and suffering among the masses of the people.

The Republican party claims that it is exclusively due to the repealing of the McKinley tariff law and the enactment of the Wilson bill.

The Democratic party ascribes it to the demonetization of silver, the exclusion from coinage, equally with gold, silver, one of the money metals of the Constitution. I fully agree in this contention, and, in my opinion, there can be no lifting of the dark curtain which overhangs us until the mints are opened to the free and unlimited coinage of silver and gold as it existed prior to 1873.

The Democratic party sympathize with the prevailing distress. There has been but little, if any, improvement in the condition of the country. The appeals of the Democratic party for relief were earnest and vehement. The Republican party promised that relief would come with a new tariff law framed according to the principles of that party in tariff legislation. Under existing conditions there is no opportunity of enacting financial laws in accordance with the views which I hold in common with other Democrats.

The people accepted the Republican promise of relief by tariff legislation. I believe we should respect the wishes of the people and interpose no objection to the means of relief which this party offered and which the people accepted. We ought to endeavor as far as conscience will permit to carry out the will of the people. If we were sincere in our demands for the relief of the people, to lift the heavy burden from them which they have borne so long, we should not reject the relief which was promised and which they accepted, no matter from what source it comes.

I do not believe that it can come solely from tariff legislation, either by Democrats or Republicans; but the bill before the Senate may be the first steps to the restoration of quiet and rest and the beginning of confidence, and thus pave the way for the complete regeneration of the country by the free and unlimited coinage of silver at the legal ratio of 16 to 1.

Entertaining these views, I will vote for the bill and do what I can to put it speedily upon the statute book.

The PRESIDING OFFICER (Mr. FAIRBANKS in the chair). The question is on the amendment submitted by the Senator from Arkansas [Mr. JONES], which will be stated.

The SECRETARY. In paragraph 206, page 65, line 20, after the word "color," it is proposed to strike out "and on all sugar;" so as to read:

And on sugar above No. 16 Dutch standard in color which has gone through a process of refining, 1.95 cents per pound.

Mr. CAFFERY. I call for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. HARRIS of Kansas (when his name was called). I have a general pair with the junior Senator from Wyoming [Mr. CLARK]. If he were present, I should vote "yea."

Mr. HARRIS of Tennessee (when his name was called). I am paired with the senior Senator from Vermont [Mr. MORRILL]. If he were present, I should vote "yea."

Mr. MORGAN (when his name was called). I am paired with the senior Senator from Pennsylvania [Mr. QUAY]. Not seeing him in the Chamber, I withhold my vote. I should vote "yea," if he were present.

Mr. TILLMAN (when his name was called). I am paired with the Senator from Nebraska [Mr. THURSTON]. As he is not in the Chamber, I shall not vote. If he were present, I should vote "yea."

Mr. WARREN (when his name was called). I am paired with the junior Senator from Washington [Mr. TURNER], but, by an arrangement with the junior Senator from Georgia [Mr. CLAY], the pair has been transferred to the junior Senator from Massachusetts [Mr. LODGE], so that the Senator from Georgia and I are at liberty to vote. I vote "nay."

Mr. WELLINGTON (when his name was called). I have a pair with the Senator from North Carolina [Mr. BUTLER]. The junior Senator from New York [Mr. PLATT] is paired with the Senator from Louisiana [Mr. MCENERY]. It has been arranged to transfer that pair, and I vote "nay."

The roll call was concluded.

Mr. HARRIS of Kansas. The junior Senator from Delaware [Mr. KENNEY] requested me to announce his pair with the junior Senator from Pennsylvania [Mr. PENROSE].

Mr. JONES of Arkansas. I inquire if the Senator from Maine [Mr. HALE] has voted?

The VICE-PRESIDENT. He has not voted.

Mr. JONES of Arkansas. I am paired with that Senator, and therefore withhold my vote. If he were present, I should vote "yea."

Mr. WARREN. I desire to announce that my colleague [Mr. CLARK], who is detained from the Chamber, is paired with the junior Senator from Kansas [Mr. HARRIS].

Mr. PERKINS (after having voted in the negative). I have a general pair with the junior Senator from North Dakota [Mr. ROACH]. In his absence, I withdraw my vote.

Mr. MANTLE. I have a general pair with the Senator from Virginia [Mr. MARTIN]. I understand that if he were present he would vote "yea" upon this amendment. As I intend to vote in the same manner, I shall cast my vote. I vote "yea."

The result was announced—yeas 20, nays 32; as follows:

YEAS—20.

Allen,	Daniel,	Mantle,	Smith,
Bacon,	Faulkner,	Mills,	Turpie,
Bate,	Gorman,	Mitchell,	Vest,
Berry,	Gray,	Murphy,	Walthall,
Caffery,	Heitfeld,	Pasco,	White.
Chilton,	Lindsay,	Pettigrew,	
Clay,	McLaurin,	Pettus,	
Cockrell,	Mallory,	Rawlins,	

NAYS—32.

Allison,	Fairbanks,	Hoar,	Proctor,
Baker,	Foraker,	Jones, Nev.	Sewell,
Carter,	Frye,	McBride,	Shoup,
Chandler,	Gallinger,	McEnery,	Spooner,
Callom,	Gear,	McMillan,	Warren,
Davis,	Hanna,	Nelson,	Wellington,
Deboe,	Hansbrough,	Platt, Conn.	Wetmore,
Elkins,	Hawley,	Pritchard,	Wilson.

NOT VOTING—23.

Aldrich,	Harris, Kans.	Mason,	Roach,
Burrows,	Harris, Tenn.	Morgan,	Stewart,
Butler,	Jones, Ark.	Morrill,	Teller,
Cannon,	Kenney,	Penrose,	Thurston,
Clark,	Kyle,	Perkins,	Tillman,
George,	Lodge,	Platt, N. Y.	Turner,
Hale,	Martin,	Quay,	Wolcott.

So the amendment was rejected.

Mr. LINDSAY. I ask to have read the amendment I offered the other day, with a view of placing all sugars upon an equality.

The VICE-PRESIDENT. The amendment proposed by the Senator from Kentucky will be stated.

The SECRETARY. In paragraph 206, page 63, line 13, after the word "Sugars," it is proposed to strike out the words "not above No. 16, Dutch standard in color;" and also, after the word "proportion," in line 19, to strike out down to and including the word "pound," in line 23, as follows:

And on sugar above No. 16 Dutch standard in color, and on all sugar which has gone through a process of refining, 1 cent and ninety-five one-hundredths of 1 cent per pound.

So as to read:

Sugars, tank bottoms, sirups of cane juice, melada, concentrated melada, concrete and concentrated molasses, testing by the polariscope not above 75 degrees, 1 cent per pound, and for every additional degree shown by the polariscopic test, three one-hundredths of 1 cent per pound additional, and fractions of a degree in proportion; molasses testing above 40 degrees and not above 56 degrees, 3 cents per gallon, etc.

Mr. LINDSAY. Mr. President, after the very candid statement made on yesterday by the Senator from Iowa [Mr. ALLISON] there can be no doubt that this particular schedule is intended as a protective measure pure and simple. It is true it will raise a very large amount of revenue, but pains are taken to declare that the purpose of the taxation is not revenue, but to promote the particular industry known in this country as the sugar-beet industry, including, of course, the sugar-cane industry.

To do this we have a proposed tax which operates upon every class of the community, rich and poor, and operates so nearly equally upon every class of the community that it approximates a capitation tax. The highest rate of taxation applies to refined sugar, and the Senator from Iowa candidly stated that not more than one pound out of fifty of the sugars used by the people of this country, without regard to wealth, was of a quality inferior to refined. The tax of $1.95, which is proposed to be put upon every 100 pounds of sugar under this bill, will operate as a tax upon everyone who uses sugar, no matter how humble or how great the particular person may be.

This is to be done under the pretense that it is necessary to build up the sugar industry and render this country independent of foreign countries by supplying all our sugar by our home production; and the rather remarkable position has just been taken by the Senator from Louisiana [Mr. MCENERY] that to afford adequate protection and assistance to the agricultural producers of sugar from either cane or beet it is necessary the sugar trust shall be fostered and kept alive; in other words, that we are now about to develop a great industry which can not live unless, by positive legislation, we keep alive a great organization of capital, which operates as an undisguised trust, which avows its ability to control 80 per cent of the production and 80 per cent of the sales of sugar, which avows that it fixes the price at its own will, and does not conceal the fact that out of the great profits coming to it under the laws which have been in force during the past twenty years it has used a portion to control the politics of the communities in which its factories are located.

I am not here to make any war upon the protection offered the sugar producer. I realize that any such attempt is now hopeless. The Republican caucus has decided that this particular industry shall have protection that no other industry, unless it be the tin-plate manufacturers, ever enjoyed, and I take it there are enough Senators bound by the fiat of that caucus to insure that this protection shall be given. The other side avow that they do not control a majority of Senators by party obligations; therefore I am not without hope that independent Senators enough may be found to assist in crippling, if we can not strike down, the great trust which dominates our markets and assumes to control our politics.

How much of this tax—and it is a tax pure and simple—is intended to encourage the production of sugar by the agricultural people? My friend from Iowa says that if there were no such incident to this tax as the encouragement of American industries, he would regard 45 per cent ad valorem as a reasonable revenue duty to be laid upon imported sugar. Forty-five per cent to be laid as an import duty would operate as 45 per cent incidental protection to the American producers of sugar. But this bill does not confine itself to 45 per cent ad valorem incidental protection to the American sugar producer. The Senator who represents the majority of the Finance Committee says that the protection to be given will amount to nearly twice 45 per cent.

In order that I may do no injustice, that I may not overstate the case, I will admit that 55 per cent of the tax to be levied will be in the nature of a revenue duty, but 45 per cent is protection pure and simple. Let us apply these facts to the status of the industry we assert our intention to build up. The total annual consumption of sugar in the United States is over 4,200,000,000 pounds. Before it goes into consumption it is almost universally refined. I deduct one-seventh from the aggregate in order to ascertain the amount of refined sugar our people use each year. Deducting 600,000,000 pounds to ascertain the amount of refined sugar, I find that we consume annually 3,600,000,000 pounds.

This bill proposes to tax these 3,600,000,000 pounds of sugar $1.95 upon each hundred pounds. The aggregate tax to be levied under the bill and paid by the people will be $70,200,000. Fifty-five per cent of that sum, which may be justified upon the idea that it is a tax for revenue, will amount to $38,620,000, and 45 per cent, which is conceded to be protection, without the slightest regard to revenue, which is conceded to be a subsidy for the sugar-planting and the sugar-refining interests, will amount to $31,580,000.

What is this industry we are thus to protect? What is the condition of the industry we propose to build up? The whole amount of American sugar produced last year, cane and beet, was less than 600,000,000 pounds. At 3½ cents a pound it would sell in the market for $21,000,000. That is the last cent to be realized by the producers of sugar. With a 45 per cent incidental protection—$21,000,000 is the aggregate of the entire crop—and we propose by this bill to give to that $21,000,000 of sugar product $31,580,000 in the way of an undisguised subsidy each year so long as present conditions shall exist.

For every $1 worth of sugar produced in this country by the sugar raisers we propose to give $1.50 pure and simple, unconcealed protection, and when we count the protection incident to the revenue portion of the duty in addition to this, we find that this $21,000,000 of American product will receive over $70,000,000 of protection each year, or nearly $3.50 to each dollar of the value of the output of the industry.

I propose to make no war upon any of this protection that goes to the sugar planter. We may submit to that, but I insist the trust does not need and is not entitled to separate and special protection, and ought not to receive it.

Mr. ALLEN. I should like to ask the Senator from Kentucky a question. I ask if he thinks it is possible to frame a sugar schedule on any basis or upon any theory that this American trust will not receive benefit from it either directly or indirectly?

Mr. LINDSAY. I do not believe we can frame a bill that will not incidentally give to this trust more protection than it needs and more assistance than it ought to have.

Mr. ALLEN. Then I should like to ask the Senator this question: Why not proceed as though we meant to do business, and by a quo warranto proceeding or some appropriate process dissolve this trust and take from it its power? We have laws sufficient for that purpose.

Mr. LINDSAY. I hope before this tariff bill becomes a law an amendment will be ingrafted upon it which will enable the courts of the country to protect the people against the avarice of this and all other trusts; but it is not for the legislative department to give additional subsidies to this combination because the courts may have failed, or the executive officers may have failed to take the necessary steps to dissolve the trust.

Mr. ALLEN. Will the Senator permit me at that point to make a suggestion?

Mr. LINDSAY. Yes, sir.

Mr. ALLEN. We had four years of Democratic Administration, which closed on the 4th of March last, and not a solitary step was taken by that Administration to close out that trust. We had four years of Republican Administration just preceding that when nothing was done to close out that trust.

Mr. LINDSAY. My friend overstates the proposition to some degree. Under a Democratic Administration a suit was instituted which resulted in the dissolution of what is denominated the railroad trust.

Mr. VEST. Will the Senator permit me?

Mr. LINDSAY. Certainly.

Mr. VEST. The Senator from Nebraska overstated the proposition in another respect. A suit was instituted by the United States in New Jersey, in the Federal circuit court in that State, and it was decided there, and taken to the Supreme Court, against this very sugar trust.

Mr. ALLEN. I think the Senator from Missouri is mistaken.

Mr. VEST. I am not mistaken.

Mr. ALLEN. Under what was known as the old Parsons law?

Mr. VEST. Oh, no. The suit was instituted under what is misnamed the Sherman antitrust law. I say it was misnamed after Mr. Sherman, because it was drafted by Mr. Edmunds. The trust, however, escaped.

Mr. ALLEN. Things are named by their opposites sometimes.

Mr. VEST. The trust escaped because the Government was unable to prove that its product went into interstate commerce. The Senator will find it in the decision of the Supreme Court, I think in 114 United States Reports.

Mr. HOAR. I think the Senator from Missouri is mistaken in saying that the law was drawn by Mr. Edmunds.

Mr. VEST. Partially. He drew most of it.

Mr. HOAR. I was on the committee when that law was drawn.

Mr. VEST. So was I.

Mr. HOAR. I know the facts.

Mr. VEST. The Senator from Massachusetts assisted and I assisted in framing the bill, but Mr. Edmunds reported it.

Mr. HOAR. That is another thing.

Mr. VEST. And if anybody deserved to have the law named after him it was Mr. Edmunds, and not Mr. Sherman, who was opposed to it. Though he was against the trust, he did not like that bill.

Mr. ALLEN. With the permission of the Senator from Missouri, I should like to ask what became of that case?

Mr. VEST. It was decided in favor of the trust on the ground that the Government could not produce the evidence that the refined sugar had gone into interstate commerce. When we drew that bill, we were confronted with this difficulty: Senator Sherman, as the RECORD will show, introduced a bill which ignored State lines and provided that the Government of the United States could institute proceedings in any State as to the product of any trust which was sold in that State.

There was very naturally criticism by the lawyers in this body in regard to such a measure, and after three days' debate Mr. Sherman's bill was referred to the Committee on the Judiciary. Then the antitrust law was drawn, and principally by Mr. Edmunds. The Senator from Massachusetts [Mr. HOAR] participated, and so did I, but I never had an idea of claiming that it was my bill. Mr. Edmunds reported it to the Senate. In that bill we undertook to keep within what we conceived to be the constitutional limitation, assuming that our jurisdiction applied to commerce with foreign nations and commerce among the States, and that you must prove against a trust, in order to dissolve it and stop its commercial transactions, that its product did go into commerce among the States.

Mr. Olney was very severely criticised because he did not attack the sugar trust particularly. He caused proceedings to be instituted in New Jersey. The case was tried there and went to the Supreme Court of the United States, and the trust gained it upon a failure of proof. There was no question but that it was a trust.

Mr. ALLEN. Does the Senator say that there was not evidence enough within the reach of the law officers of the Government to prove a prima facie case of interstate commerce?

Mr. VEST. I say exactly what the Senator will see in the decision, that there was no proof that the identical product of the trust in New Jersey was shipped to other States. The Government was not able to get the proof of it; I do not know why. I can see the difficulty, as any lawyer can, in such a case; but the case went off on that point, as the Senator will find if he will send to the Law Library and get the volume containing the report of the case.

Mr. ALLEN. Then I should like to ask the Senator from Missouri what is to prevent the Government of the United States from resorting to the common-law writ of quo warranto, bringing this trust into court and dissolving its existence regardless of any statute?

Mr. VEST. I have no doubt it could be done if we could get at the proof in the case, if the State corporation was operating in restraint of trade under the Edmunds law.

Mr. ALLEN. It does not make any difference about it being a State corporation.

Mr. VEST. But the question was, Did it operate in restraint of trade among the States?

Mr. HOAR. You can not issue a quo warranto against a State corporation.

Mr. VEST. I do not know that you can issue that particular writ of quo warranto, but the proceedings to which I refer were instituted under the Edmunds law.

Mr. ALLEN. Does the Senator from Massachusetts pretend to say that the charter of a State corporation can not be dissolved, or, at least, that it can not be prevented from doing business when it monopolizes interstate trade and results in a monopoly?

Mr. HOAR. If my honorable friend the Senator from Nebraska will pardon me, in all good nature, I do not pretend anything in the Senate. I am asked to state my view of a law question and whether I pretend so and so.

Mr. ALLEN. I did not mean to offend the Senator.

Mr. HOAR. It is not a very agreeable kind of a question.

Mr. ALLEN. I simply wanted to give it as my opinion (and it is the opinion of only one man, and not quite so good or right as that of the Senator from Massachusetts) that there is no question about the power of this Government to dissolve such a corporation, regardless of the fact where it gets its charter. Whenever it leaves the State in which it is incorporated and engages in the transaction of business which is international commerce and interstate commerce, the nation has control.

Mr. LINDSAY. Mr. President——

Mr. HOAR. Will the Senator pardon me for a sentence?

Mr. LINDSAY. Certainly.

Mr. HOAR. I supposed the law to be that the writ of quo warranto is a writ to dissolve a corporation which by illegal conduct has forfeited its power to exist, and that it is a writ addressed to it to come and show cause by what warrant it continues to act as a corporation. I suppose that can only be done, under our system of jurisprudence, in the courts of the sovereign that created the corporation, which is the State in the case of a State corporation. I do not concede that that is a proper writ or remedy to prevent a corporation from doing an unlawful thing.

Undoubtedly the courts of the United States may by proper process enjoin a State corporation, as they could an individual, against violating a United States law in cases where such an injunction is the proper and fitting proceeding, but that would not be by instituting an action of quo warranto, and it would not be in any case, as I suppose, within the powers of the United States courts to dissolve a State corporation.

Mr. ALLEN. Mr. President——

Mr. LINDSAY. I can not yield further.

Mr. ALLEN. Very well.

Mr. LINDSAY. I can not stop my line of argument to determine what the executive and judicial officers of the Government can or ought to do in regard to the sugar trust, nor to have the question settled who is entitled to the credit of the preparation of the antitrust law, about which we hear so much of late. These matters are collateral to the argument I propose to make. Whether the executive and administrative officers have performed their duties or whether the courts have faithfully administered the existing laws makes no difference to me, when as a member of the legislative department I am asked to support a measure which gives to the trust additional aid to the end that it may continue the work which I, with other Senators, believe ought to be suppressed.

The suit of 1891 in the State of New York was a proceeding in the nature of quo warranto, and it resulted in dissolving the New York corporation which had entered the trust, upon the ground that it thereby exceeded and abused the grant of corporate power; but after that proceeding had been had, the trust organized as a corporation under a New Jersey charter, and the question of its powers and the abuse of them is a question addressed to the authorities of the State of New Jersey.

If this corporation violates any law of the United States, if this corporation so conducts its business as to violate the Constitution of the United States, then to the extent it so violates the Federal Constitution or laws it is within the province of the authorities of the United States to prevent such violations by fine and imprisonment of its officers and agents, or by any other usual or regular method of suppression. But that is not the question here. If we are giving aid and comfort to this corporation by existing laws, that aid ought to be withdrawn. If we are proposing to give additional aid and support, that additional aid and support ought to be refused.

In 1890, when the present antitrust law was under discussion, the powers of the Government were exhaustively considered and discussed. There was one proposition about which there was no dissent, and that was that the Government of the United States had the clear, the indisputable power, and rested under the imperative duty to withdraw any assistance which such a trust might receive through or in virtue of its revenue laws; and that is the point to which I desire to call the attention of the Senate.

It was said by the Senator from Rhode Island [Mr. ALDRICH], when he made the opening statement in favor of this bill:

> The fact that the business, as conducted to-day, is in comparatively few hands, and that a large portion of it is carried on by one company, while it furnishes a reason for unusual care in the adjustment of rates in order that no undue or unfair advantage shall be given to sugar refiners, should not be allowed to furnish a pretext in the preparation of a tariff bill constructed upon protective lines for the destruction of a great industry. In other words, it is important from every economic standpoint that we make it possible that the refining of sugar can be successfully carried on here, and that the business be not turned over by legislative discrimination to German refiners.

The extent of his claim was that in the construction of a tariff bill upon protective lines we should not make it possible for a foreign industry to break down the existing sugar industry in the United States. I agree to that. I wish to impose no business disabilities. I favor no discrimination against the American sugar-refining industry. I wish to see that industry go on and flourish within the lines of proper and legitimate management. What I object to is not that we fail to discriminate against it, not that we fail to make it impossible for the industry to live, but that we take it up as a favored enterprise, to be fostered and encouraged, in the face of its history during the twenty years last past.

Does the sugar-refining industry in the United States need protection? If it does, how much protection ought it to have? We have had experts dealing in figures and reaching conclusions which laymen can not dispute because they can not comprehend the premises, but there are facts which speak and need no explanation. The sugar industry is to-day living under the Wilson law with the expectation of benefits to come to it under the bill which the caucus of the Republican Senators has decreed shall pass this body. Yesterday in the New York market sugar, centrifugal, 96 degrees

test, sold for 3¼ cents a pound. It is not disputed that 107 pounds of that sugar will make 100 pounds of refined sugar. That would make the cost to the refiner 3.75 cents per pound of crude sugar.

Now he has taken that sugar and refined it, and put it upon the market, and yesterday he sold the refined product in New York for 4¼ cents a pound. The difference on yesterday between the cost to the refiner of the raw product and the market price of the refined article was 1 cent, or more than 25 per cent advance upon the raw product. This profit the refiner divides with the retailer, and it may be safely said (and nothing has been said upon the other side which would militate against the conclusion) that upon every pound of refined sugar, with this difference in the purchase and the selling prices, the refiner pockets one-half of 1 cent in the way of clear profit.

Mr. SEWELL. Will the Senator from Kentucky allow me to make a suggestion?

Mr. LINDSAY. Certainly.

Mr. SEWELL. The Senator from Kentucky does not take into consideration that the price of the sugar he refers to is in bags on board ship. The sugar has to be taken to the refinery and refined. He has to calculate upon the price of the barrels. The refined sugar is sold in barrels. That comes up to one-half of what the Senator speaks of.

Mr. LINDSAY. I will not stop now to make a close calculation of how much of this profit goes in the way of expense for the barrels, bags, etc. Suppose that one-half of it goes to that account. You have a quarter of a cent left to the refiner, which amounts to 12½ or 15 per cent profit on each dollar invested, and at three-eighths of a cent a pound profit the trust cleared in less than three years $25,000,000.

In 1880 Mr. Havemeyer, in answer to a question propounded by Mr. Tucker, of the Ways and Means Committee of the House of Representatives, said:

> Would you be able to compete in the business market if there was perfect free trade in sugar?
>
> Mr. HAVEMEYER. We would beat them. We can refine sugar here more cheaply than they can in England.

And again:

> I do not see why, under free trade in sugar, we could not supply a very large proportion of the world's consumption.

Nothing has happened since 1880 to deprive the great sugar-manufacturing combination of the power to compete with the world, if you give it free sugar, or if you compensate for the tax it has to pay on the raw by an equal tax upon the manufactured product.

We were told three years ago by the president and secretary of the trust that the price of sugar has been reduced to the consumer. How, and why? By combining all the factories under one management, by reducing the number of officials, by striking down healthy competition, the trust claims to have been enabled to reduce the cost of production, and therefore to reduce the price to the consumer. In 1880, with competition open and flagrant, free sugar would have enabled the refiners to compete with the world. In 1897, with competition destroyed, with the whole business in the hands of one corporation with an aggregation of capital which makes the trust simply irresistible, we are told now that it can not live unless we give it a differential duty of from 40 to 50 cents on each 100 pounds.

Mr. CAFFERY. Will the Senator from Kentucky permit me?

Mr. LINDSAY. Certainly.

Mr. CAFFERY. Will the Senator explain to me the character of his amendment? Is it to put all sugars upon a uniform specific basis?

Mr. LINDSAY. It is to strike out all of the bill as it comes from the House which makes a discrimination between sugars above the Dutch standard or which have had their color changed by refining, and sugars in the hands of the sugar producers. It is to put the refined sugar upon the same footing with the highest quality of sugar produced by the Louisiana sugar planter, and to give the trust no advantage over the Louisiana sugar planter. I will read what I propose to strike out.

Mr. CAFFERY. Will the Senator please read the section as he proposes to amend it?

Mr. LINDSAY. I will ask the Secretary to read the clause as it is proposed to be amended.

The SECRETARY. If amended, the clause would read as follows:

> Sugars: Tank bottoms, sirups of cane juice, melada, concentrated melada, concrete and concentrated molasses, testing by the polariscope not above 75 degrees, 1 cent per pound, and for every additional degree shown by the polariscopic test, three one-hundredths of 1 cent per pound additional, and fractions of a degree in proportion.

Mr. PLATT of Connecticut. For the sake of information, I ask the Senator whether the effect of his amendment is to put raw sugars and refined sugars at the same duty?

Mr. LINDSAY. The same rates of duty, precisely. That is what I am attempting to do. In other words, instead of making $1.95 upon the 100 pounds the maximum duty levied upon the highest grade of sugars, I would have it $1.75, or 20 cents less than the bill proposes.

Mr. GRAY. Strike out what is called the differential?

Mr. LINDSAY. Strike out the differential.

The bill as it now reads provides that upon sugars testing 75 degrees a cent shall be levied on each pound, and that an additional duty of three one-hundredths of a cent shall be levied for each additional degree as shown by the polariscopic test. The maximum duty on unrefined sugar will be three times twenty-five one-hundredths of a cent in addition to 1 cent, or 1 cent and seventy-five one-hundredths upon each pound. That is the last mill the sugar in the hands of the sugar raiser can get in the way of protection. I propose that it shall be the last cent the sugar refiner shall get in the way of protection; and if that be made the law, the sugar refiner will still get more protection than he claims he is now getting; the sugar-refining industry will still flourish, and the sugar-refining industry will be protected by this protective-tariff law just as the sugar producer will be protected.

Take sugar 94 degrees polariscopic test as the average of sugar before it has undergone the process of refining, and let us see what the sugar trust would get from the bill as it is proposed, and under the bill as I propose to amend it. On 75-degree sugar the tax is 1 cent. The difference between 75 and 94 is 19, which, multiplied by 3, amounts to fifty-seven one-hundredths of a cent, giving the sugar producer who sells sugar testing 94 degrees of purity $1.57 per 100 pounds protection.

This bill, independent of the difference of the retaliatory duty against foreign export bounties, if that be the proper name to give it, proposes to give the sugar refiner $1.95 protection on each 100 pounds of refined sugar, a difference of 38 cents on the 100 pounds over the protection to be given the planter. Ninety-four-degree sugar will net the sugar raiser $1.57 in the way of protection. The 6 additional degrees up to purity will amount to 18 cents on each 100 pounds, and the sugar refiner will get the benefit of those 18 cents under the amendment I propose.

If he needed no protection in 1880, why, with all his improved opportunities and his improved position, does he need more than 18 cents on the 100 pounds independent of and in addition to the retaliatory duty in 1897? Suppose you take 96 as the average of the purity of sugar in the hands of the sugar producer.

Mr. CAFFERY. Will the Senator yield to me for a minute?

Mr. LINDSAY. Certainly.

Mr. CAFFERY. The Senator, then, places all sugars on the same basis?

Mr. LINDSAY. I do.

Mr. CAFFERY. The Senator gives to all $1.75.

Mr. LINDSAY. I give to all that test high enough under the polariscopic test $1.75.

Mr. CAFFERY. Now, if it takes so many pounds of raw in addition to make a pound of refined, do you not by that discriminate against the refiner?

Mr. LINDSAY. I do not.

Mr. CAFFERY. I wish the Senator would explain it.

Mr. LINDSAY. I think I can explain it by the figures given by the Senator yesterday. Just as the raw sugar approximates purity it takes a smaller number of pounds to make a pound of refined sugar.

Mr. CAFFERY. That is true.

Mr. LINDSAY. When you get up to 96 degrees, 103¼ pounds, as I understand the figures given by the Senator yesterday, will make 100 pounds of refined sugar.

The difference between 96 and 100 is four times three one-hundredths of a cent, which amounts to 12 cents on every 100 pounds; and you thus cover the difference in quantity. You can not work out this proposition in any way, on any figures that have been submitted by either side, under which my amendment, if adopted, will not leave the sugar refiner in as favorable an attitude as he was in 1880, when he said he needed no protection.

Mr. CAFFERY. The figures which I introduced yesterday show this: Taking the Treasury statement to be correct, the theoretical statement is that at 96 test it will take 104.72 pounds to make 100 pounds of refined. By the Treasury statement it will take 107.47 pounds of raw to make 100 pounds of refined. When the refiner imports 96-test sugar, which can be taken very safely as the basis for all calculations, he pays the tariff on 4 pounds more than he sells, does he not?

Mr. VEST. If he export it, he gets the drawback on 107.47 pounds.

Mr. CAFFERY. Suppose he does not export it?

Mr. VEST. Of course, then, he does not get any drawback.

Mr. CAFFERY. He gets no drawback and he pays as much tariff. There is a discrimination against him to the amount he has to pay extra upon the 7 or the 4 pounds of raw sugar, is there not? I wish the Senator from Kentucky would make that clear. I do not exactly understand it.

Mr. LINDSAY. I can not undertake to follow the labyrinths of figures that may be presented by sugar experts.

Mr. CAFFERY. I disclaim being a sugar expert. I am not a sugar expert.

Mr. LINDSAY. But I can say that the sugar refiner to-day lives under a duty one-eighth of 1 cent in addition to the advantage given him by the ad valorem tax, and these additional three one-hundredths amount to as much as the present ad valorem tax advantage, and he gets only 10 cents a hundred pounds compensation against the German sugar bounty, which is 38 cents on the 100 pounds, and yet he buys his sugar at 3½ cents a pound and sells it in the United States at a profit of 1 cent, or more than 25 per cent advance. There has always been, and there will be under any method of taxation anyone else than an expert can devise, concealed advantages to the sugar trust which those who oppose it will not be able to point out.

Let us see whether or not the trust ought to have any advantage at all, and whether, if there be a doubt, the doubt ought not to be resolved against it. In 1890, when the antitrust bill was being discussed, and the then sugar trust cut a very important figure in the discussion, the distinguished Senator from Mississippi [Mr. GEORGE], whose seat is to-day vacant because of his unfortunate illness, defined a trust and its methods in language accurate in all its details and wonderfully perspicuous. Senator GEORGE said:

These trusts and combinations are great wrongs to the people. They have invaded many of the most important branches of business. They operate with a double-edged sword. They increase beyond reason the cost of the necessaries of life and business, and they decrease the cost of the raw material, the farm products of the country. They regulate prices at their will, depress the price of what they buy and increase the price of what they sell. They aggregate to themselves great, enormous wealth by extortion, which makes the people poor. Then, making this extorted wealth the means of further extortion from their unfortunate victims, the people of the United States, they pursue unmolested, unrestrained by law, their ceaseless round of peculation under the law, till they are fast producing that condition in our people in which the great mass of them are the servitors of those who have this aggregated wealth at their command.

Mr. BATE. What is the date?

Mr. LINDSAY. I read from Senator GEORGE'S speech made in 1890. What was this sugar trust organized for, and what does it do? Let its president tell its own story. In 1898 Mr. Havemeyer, the president, said in answer to certain questions, as I shall read:

Senator ALLEN. The American Sugar Refining Company is able to control the prices of the sugar sold in the United States, is it not?
Mr. HAVEMEYER. Up to the importing point, it is.
Senator ALLEN. And when you sell in this country you control the price?
Mr. HAVEMEYER. Yes, sir.
Senator ALLEN. And it was organized, Mr. Havemeyer, as I understand it, with the view of controlling the price and output of the people of this country?
Mr. HAVEMEYER. That was one of the objects of the consolidation.
Senator ALLEN. And you have succeeded in doing it?
Mr. HAVEMEYER. Yes, sir.
Senator ALLEN. That was the principal object in organizing the American Sugar Refining Company?
Mr. HAVEMEYER. It may be said that that was the principal object.
Senator ALLEN. And making money, incident to that control?
Mr. HAVEMEYER. Yes, sir.

And again, after stating the number of companies it had absorbed, the number of rivals it had coerced into its partnership, and the additional liabilities it had incurred by the increase of stock, Mr. Havemeyer was asked by Senator ALLEN:

By which means, Mr. Havemeyer, you are able to control the price and output of these other refineries that were brought into the trust?
Mr. HAVEMEYER. Yes.
Senator ALLEN. Before that you had not been able to control the price of sugar absolutely? There was competition between the American Sugar Refining Company and these outside factories?
Mr. HAVEMEYER. Yes, sir.
Senator ALLEN. That competition you succeeded in destroying by bringing them into the trust, did you?
Mr. HAVEMEYER. Yes, sir.
Senator ALLEN. And made the price of sugar to the American Sugar Refining Company much more favorable than it had been before that time?
Mr. HAVEMEYER. Precisely.

That is a specimen of candor that commands a certain kind of admiration, outrageous as may be the conduct of the corporation whose president, with so much boldness, portrays its purposes and its success.

There is a sugar refinery on the Pacific Coast which does not belong to the American Sugar Refining Company. No; but Mr. Havemeyer told us that the American Sugar Refining Company owns one-half the capital stock of the Western Sugar Refining Company, and is thereby enabled to dominate its policy. There are sugar-refining companies in Boston which do not belong to the trust. Yes; but those independent sugar-refining companies in Boston are interested in the trust as the holders of stock in the Sugar Refining Company.

When they compete with the Sugar Refining Company they lessen the dividends on their stock. When they do not compete they help to keep up the prices of refined sugar; they increase their own earnings and increase their dividends on the stock they hold in the Sugar Refining Company. There are not 5 per cent of independent sugar refining establishments in the United States, and they live by the sufferance of the trust. It controls 80 per cent of the entire output. It controls the price to the extent of 80 per cent of the output. The independent companies do not compete with the trust, and that is explained by this testimony. When they attempt to compete, the trust holds its sugar until their 20 per cent is exhausted, and then it is the master of the situation.

This is the trust that Senator GEORGE had in mind when he penned the graphic description of the character of the enterprise, the methods of its operation, and its results upon the public.

There was another distinguished Senator who participated in the discussion of the antitrust law of 1890. Senator Sherman, after commenting upon the sugar trust, and calling attention to the outrages that were being perpetrated by it, used the language which I shall now read. After speaking of the necessity for organized capital, the necessity for corporate enterprises, he said:

But associated enterprise and capital are not satisfied with partnerships and corporations competing with each other, and have invented a new form of combination, commonly called trusts, that seeks to avoid competition by combining the controlling corporations, partnerships, and individuals engaged in the same business, and placing the power and property of the combination under the government of a few individuals, and often under the control of a single man called a trustee, a chairman, or a president.

The sole object of such a combination is to make competition impossible. It can control the market, raise or lower prices, as will best promote its selfish interests, reduce prices in a particular locality, and break down competition and advance prices at will where competition does not exist. Its governing motive is to increase the profits of the parties composing it. The law of selfishness, uncontrolled by competition, compels it to disregard the interest of the consumer. It dictates terms to transportation companies, it commands the price of labor without fear of strikes, for in its field it allows no competitors. Such a combination is far more dangerous than any heretofore invented, and, when it embraces the great body of all the corporations engaged in a particular industry in all of the States of the Union, it tends to advance the price to the consumer of any article produced, it is a substantial monopoly injurious to the public, and, by the rule of both the common and the civil law, is null and void and the just subject of restraint by the courts, of forfeiture of corporate rights and privileges, and in some cases should be denounced as a crime, and the individuals engaged in it should be punished as criminals. It is this kind of a combination we have to deal with now.

The sugar trust was a combination, and the oil trust was another combination the venerable Senator had in view when he uttered this striking language:

If the concentered powers of this combination are intrusted to a single man, it is a kingly prerogative, inconsistent with our form of government, and should be subject to the strong resistance of the State and national authorities. If anything is wrong, this is wrong. If we will not endure a king as a political power, we should not endure a king over the production, transportation, and sale of any of the necessaries of life. If we would not submit to an emperor, we should not submit to an autocrat of trade, with power to prevent competition and to fix the price of any commodity. If the combination is confined to a State, the State should apply the remedy; if it is interstate and controls any production in many States, Congress must apply the remedy.

I call the attention of Senators to the following expression given by this apostle of protection:

If the combination is aided by our tariff laws, they should be promptly changed, and, if necessary, equal competition with all the world should be invited in the monopolized article.

That is what I am appealing for to-day. If the courts can not restrain or control this trust, and it receives advantages from the revenue laws of the United States, we can at least repeal or modify those laws to the extent they help to build up and foster and continue the power of this monstrous monopoly by opening the markets of the United States to the competition of the world; and that is what I ask you to do.

If my amendment goes too far; if the Senator from Louisiana is right, that the reduction is too great, then let the friends of the monopoly, let those who think it ought to be treated fairly, let those who can ascertain the secrets of its trade, propose a modification, so that it will get no protection other than that which is necessary to compensate against the protection upon the raw material, and I will accept it. But as long as the trust sits with sealed lips, and as long as it demands that a duty shall be fixed which discriminates in its favor as it was never discriminated in favor of except in 1890, then I say let us give it the same protection we give to the raw product, and no more, and let it take the consequences.

We will not break down the sugar-refining industry. If the Sugar Refining Company can not live under a tariff which treats it as the sugar producer is treated, it will come back to Congress not as a monarch or an autocrat of trade, but like any other citizen, prepared to turn its case inside out, so that the legislative department of the Government can understand the mysteries of its trade and do it justice through well-understood and intelligent legislation.

The sugar industry lived before the war in Louisiana with 30 per cent protection. It lives to-day with 40 per cent protection. It has no right to complain that the Congress of the United States in 1894 declined further to treat it as an industry entitled to be paid a bounty. There can be no breach of good faith where no obligation exists. Donations, subsidies, and gratuities are acts of grace and not matters of contract. When Congress concluded that this matter of grace, this matter of subsidy, should exist no longer and changed its policy as to the sugar industry, it broke no contract, it violated no faith.

Senators say that $2,000,000 were invested upon the faith of the bounty to be paid. Congress listened to that appeal, and the year after its policy had been changed doubly compensated Louisiana for the investment of this $2,000,000. Whether it had authority to do it or not, the appeal was irresistible, the bill was passed,

and the additional bounty has been paid. Eleven million dollars were given annually to the sugar industry in the way of bounty; not a dollar to the wheat industry, not a dollar to the cotton industry, not a dollar to any other industry, but all those industries were taxed to raise the money to pay the bounties to the sugar producers.

If any part of our moral obligation remains unsatified, I am willing to satify it; but it does occur to me that to impose a tax of 70 per cent upon the value of all the sugar used by the people of the United States to protect such an industry as the sugar trust is carrying the doctrine of protection beyond the limits of any possible excuse or apology.

I read from Facts and Figures, prepared by gentlemen in Chicago who are in favor of promoting the production of beet sugar in the United States. They state that the people of the United States consume annually 2,163,160 tons of sugar, and that in 1896 the United States produced 267,000 tons of cane and beet sugar combined. Every time 1 pound of American sugar is protected by the tariff, 7 pounds of foreign sugar, which the American producers can not supply, are taxed for their benefit. When will we be able to convert the United States into a sugar-producing country, a country producing sugar enough to supply all of the wants of the people? Louisiana has practically reached the maximum of her capacity.

Mr. McENERY. It is estimated that the sugar-producing capacity of Louisiana can be doubled.

Mr. LINDSAY. Well, double it.

Mr. McENERY. And instead of 300,000 acres there can be 600,000 acres put in cultivation.

Mr. LINDSAY. Then, instead of raising 237,000 tons it is possible in Louisiana to raise 374,000 tons. Then we have 30,000 tons of beet sugar. When is the beet-sugar industry to make up the great difference between 600,000 tons of sugar, after Louisiana has exhausted her capacity, and the 2,183,769 tons of sugar we consumed last year? Population and consumption will increase as fast as production. Ten years hence the disproportion between the production and consumption will possibly be as great as it is to-day.

We have entered upon a system of protection which is against the policy of the Republican party itself. That party has always claimed that they protect an industry for the purpose of encouraging competition, and, as Mr. Garfield said, with the ultimate end of reaching free trade. Now, the Republican party has taken hold of an industry that can never reach that point, and there is not a Senator who will vote for this bill who believes this country can ever supply its home demand for sugar. This is protection for the sake of protection; not protection for the sake of revenue, but 45 per cent of the tax protection without any reference whatever to revenue.

Does anyone believe that this thirty-one millions of revenue which is to be raised for the protection of the sugar producers of the United States and the sugar trust could not be legitimately raised in some other way than by taxing the breakfast table of the poor man?

The Democratic party three years ago gave the poor man free salt from all countries except those which imposed a duty upon the American salt. We gave free wool, we gave free lumber, and we gave free cotton, free binding twine, free cotton ties, and free bagging; but now the breakfast table is to be taxed for protection's sake $31,000,000 and upward on sugar, 35 per cent ad valorem on salt, and $2 a thousand feet on the pine plank out of which the table is manufactured.

I do not complain that the other side have done all these inexcusable things, because from the standpoint of protection they are logical; but I do insist that, having protected sugar up to the point of $1.75 on each 100 pounds, the trust should be allowed to stand upon that amount of protection until, like every honest industry, it comes here and exposes the secrets of its trade and gives us to understand what amount of protection is necessary to enable it to exist; and when that is done, then appeal to the justice of the American Congress, instead of coming here and, by concealing the facts, seek to entrap Congress into giving it protection which it does not need, and which, if it ever did deserve, it has long since by its misconduct forfeited the right to demand. Let this trust run one year or two years without the necessary profit to enable it to distribute moneys in controlling elections—local, State, or Federal—and then come back to Congress with clean hands, when its presence will not give rise to suspicions of corruption nor provoke scandal, and tell the whole truth and trust to Congress to do its duty.

The responsibility for continuing the dominating influence of this trust rests with those who vote against the proposition I make without suggesting a substitute which will work no injustice to the sugar refiner, but will remove all ground for the continued scandal which taints the air whenever the trust comes to Congress. The opportunity is now presented to act, to act decisively, and to reduce this single-handed power, this autocrat of legislation, to the level of an ordinary American citizen, and that opportunity ought not to be neglected, to the further scandal of the American Congress.

Mr. CAFFERY. Mr. President, it is easy to see from the questions I asked the Senator from Kentucky [Mr. LINDSAY] that I was under the impression that his amendment discriminated against the refiner.

Mr. LINDSAY. No; it does not.

Mr. CAFFERY. I thought it did to some extent, and I am now satisfied it does not.

The Senator from Arkansas [Mr. JONES] has furnished me some figures which show that the refiner is not discriminated against in the matter of having to buy more than 100 pounds of raw sugar at certain degrees of polariscopic strength to make a hundred pounds of refined sugar, and there are two examples given. For instance, take sugars at 96 test, which are the sugars that are mostly used by refiners. Under the Treasury statement it would take 107 pounds of those sugars to make 100 pounds of refined.

Under the amendment proposed by the Senator from Kentucky the tariff on such sugar of 96 test would be 1.63. Multiplying 1.63 by 1.07 the whole amount of tariff on the sugar at this test would be 1.7441. So, at 93 test the amount of tariff on sugar under the amendment of the Senator from Kentucky would be 1.7355. The sugar trust will enjoy the full amount of the 1.75 tariff. The Senator commences in his amendment with sugar at 1 cent a pound, 75 degrees, running 3 degrees up to a hundred. So the refined sugar clearly gets the maximum of the tariff, 1.75.

These two examples show that the amount of tariff that the refiner would pay upon the raw sugar would be about the amount of protection in his favor upon the refined, and so as to that matter he would be evened up.

But there is another element, the element of handling this extra amount of pounds required to make 100 pounds of renned sugar out of 100 pounds of raw. How much that would be I do not know. I do not think it would be a great deal. The refiner would have to haul and handle 107 pounds of 96-test sugar to make 100 pounds of refined sugar.

Mr. LINDSAY. I will ask the Senator whether German refined sugar sells in this country for as much as the American refined sugar?

Mr. CAFFERY. It does not.

Mr. LINDSAY. Then the refiner gets the advantage of that, does he not?

Mr. CAFFERY. Yes, sir.

Mr. LINDSAY. I understand that to be about one-fourth of a cent a pound.

Mr. CAFFERY. I think it is.

Mr. CHILTON. Does he not get the advantage of the difference between the 100 and the 107 pounds?

Mr. CAFFERY. Exactly. I was coming to that point. The sirup made out of the residue, or waste, you may call it, is estimated to be worth about 2 cents a gallon. It appears to me that this residue would easily offset the amount of freightage and handling that the refiner would have to pay for, so that he would get just as much protection on the refined sugars as exists upon the raw. He would be without any protection whatever, and everybody would be upon an even keel.

Mr. President, 1.75, the maximum, is quite sufficient either for revenue or protection. The Louisiana sugar planters would hardly have the face to ask for more than 1.75 cents on sugar worth 4 cents or 3½ cents. It is a very heavy tariff for protection's sake. The beet grower can ask no more; and when you come to a revenue basis, it is quite sufficient to put on any article, in my opinion.

It is very true, as I stated yesterday evening in my answer to the query of the Senator from Connecticut [Mr. PLATT], that if you place all the tariff upon an article of consumption that the people would consume anyhow, you have got your revenue, and you could relieve other sources of taxation, and so the thing equalizes. But this is quite sufficient to place upon any one article of import for purposes of revenue, and it is quite sufficient for any purposes of protection. It is as much protection as any industry ought to enjoy. It is about 60 per cent on the ordinary price of Louisiana centrifugal sugar, and that is enough for protection. The protection now is something over 40 per cent—about 42½ to 43 per cent, or somewhere in that neighborhood.

I consider from the statements made by the sugar-trust officials themselves that they do not stand in need of any protection whatever. It is clear from their statements that they can hold the markets of the United States against all competitors. They fear no foreign competition. The foreign beet sugars are made by a lot of independent refiners in their own sugarhouses. The business abroad is not of such large proportions as it is in the United States. They do not turn out per diem anywhere near the amount of sugar that the American Sugar Refining Company does. That company minimizes the cost of production in every particular; and while I do not want to discriminate against them, and would not do it if I knew the effect of my vote was that way, I do not

propose, so far as I am concerned, to give them any protection whatever. I do not think they are entitled to it.

I think the money they have made heretofore unduly out of the American people is sufficient for them to carry on the business without further extortion and further tyranny and further oppression. Therefore it is that I support the amendment of the Senator from Kentucky. I think it will do no harm whatever to the sugar trust, and if it has the effect only of keeping the sugar trust out of legislation, it will be a godsend to this country. At every session of Congress there is a sort of mildew upon the Senate and the House of Representatives from contact with that institution; and, as it needs no such support, as it is not an infant industry to be encouraged, but an ancient institution that is firmly rooted and can not be destroyed, and, from its own testimony, ought to stand and does stand stronger and firmer than any other sugar industry in the world, I am not disposed to give them gratuities and bounties.

Mr. President, the baleful presence of the sugar trust in the National Legislature brings about a feeling of shame that this, the incubus, still hangs on, asking for a further lease of power to stifle trade and poison legislation. I will narrate an incident which I read in a newspaper some year or so ago. A Louisiana planter attempted to sell some sugar in Omaha. His Omaha patron wanted to buy sugar. The best Louisiana centrifugal sugar, as was shown by my colleague [Mr. MCENERY] in the samples he offered this morning, is quite equal to the output of the American Refining Company. This Omaha patron could not buy. Why? The sugar trust boycotts every man who does not patronize it exclusively.

If a patron of a Louisiana sugar planter purchases sugar from him, he can not buy from the sugar trust. That was stated by the Omaha purchaser, or the designed purchaser, to the Louisiana planter. He would like to take the sugar of the Louisiana planter, he said, but he could not do it, for if he did he would be deprived from supplying his customers. As the Louisiana supply would not last the whole year and he could not get the supply from the Louisiana planter continuously, he had to decline what he considered to be a good bargain. This was current in the newspapers.

I desire to state to the Senate that there is an extraordinary decline in the price of Louisiana sugars just at the time they are marketable, and there is an extraordinary rise just after they are marketed. I account for that by the depression of the price by the sugar trust. Some years ago the sugar trust nearly monopolized the Louisiana product, and if the planter did not take the price the sugar trust offered, he could not sell at all; and that price shaded, always shaded, the price of centrifugals in New York.

The sugar crop in Louisiana is marketed about the 1st of January or a little prior to that, and is all sold about the 1st of May. Here I find in the tariff hearings before the Committee on Ways and Means of the House of Representatives, on Schedule E, on page 620, a statement giving the average monthly quotations of Louisiana vacuum-pan sugar for nine years. The average price in January, when these sugars are marketed, was 5 cents. That was for nine years, from 1885 down to 1893. The average price in August for nine years was 5.57, a little over a half cent higher, and it runs through nearly every year the same way for nine consecutive years.

What accounts for that? I have heard that the sugar trust accounts for it by saying that we put too much sugar on the market at one time. Our sugar did not conflict with theirs, and they bought a great deal of it. They refined and melted a great deal of this sugar, and they distributed the refined sugar made out of Louisiana sugar all over the country.

Now, I should like to know what is the cause of the depressed price at the time the sugar is marketed and at the time the trust buys it except the control of the market by the sugar trust.

Mr. SMITH. Will the Senator allow me a moment?

Mr. CAFFERY. Yes, sir.

Mr. SMITH. We have heard in most of the speeches upon the other side of the Chamber that it is of great importance to help the beet-sugar industry. I ask the Senator from Louisiana what, in his judgment, would be the result to the beet growers of the country in the disposition of their sugars when you have had such an experience in Louisiana with your cane sugars?

Mr. CAFFERY. Mr. President, I think if the culture of beets were developed to the extent that the output of beets would supply the home market, it would prove to be somewhat of a corrective against the power of the sugar trust, because the sugar trust manipulates the market of the domestic product by reason of the small amount of the domestic product and by the overwhelming mass of the sugar imported. If the domestic producers were producing enough to sell of their own to supply the market, there would be no means of the sugar trust importing the sugars and holding the market, and thereby depressing the price of the home product. But, as I stated yesterday, I do not believe that a greater evil could befall the sugar-beet people than to go into the sugar-beet industry.

Mr. ALLEN. What does the Senator mean by going into the sugar-beet industry?

Mr. CAFFERY. I mean that if this industry is stimulated by tariff or by bounty when it is apparent that the German sugar can not compete with the cane sugar upon an even plane, we would build up a tremendous superstructure, whose base is artificially supported by legislation; that that legislation is capricious, unstable, and uncertain, and at the very moment when you get your enterprise supported, built up, maintained by legislation, the legislation may be withdrawn and your enterprise destroyed.

Mr. ALLEN. Did not the Senator from Louisiana say in 1894, in the discussion of the Wilson tariff bill, that the cane-sugar industry of Louisiana could not support itself without some protection?

Mr. CAFFERY. I did not, that I recollect.

Mr. ALLEN. Did the Senator not use words to that effect?

Mr. CAFFERY. I did not.

Mr. ALLEN. Did not the Senator from Louisiana refuse to vote upon that bill with his party in consequence of insufficient protection to Louisiana sugar?

Mr. CAFFERY. I did not fail to vote for that bill; I voted for that bill.

Mr. ALLEN. The Senator voted for the bill, but under duress. I remember the peculiar circumstances which occurred here at that time.

Mr. CAFFERY. I have explained to the Senate on several occasions, and I believe to the Senator from Nebraska himself—I am not certain about that—why I cast that vote. That vote had no reference whatever to any tariff for protection or tariff for revenue. That vote was cast "nay," and afterwards changed, as I openly proclaimed upon the floor of the Senate at the time, as a resentment against the violation of caucus faith upon the part of the Democratic party.

Mr. ALLEN. That caucus faith, as I understand, was that there should be some protection to the cane-sugar industry of Louisiana.

Mr. CAFFERY. It was not a protection, Mr. President. I never put my support of the Wilson tariff duty of 40 per cent plus one-eighth plus one-tenth upon any ground of protection. I put it upon the ground of revenue, and, as the Senator will remember, I stated that the Louisiana people had been induced by reason of the bounty—which I never supported and which I repudiate—to undertake great expense, to incur large debts, acting under the presumption of the continuance of that bounty for the term stated in the law; and then to destroy the bounty without some alleviation to the fall would be cruel, would be unjust, and would amount to having led the people into a line of conduct, into embarrassments, into debts, and then, in the midst of their debts and embarrassments, to strike them a deadly blow.

Mr. ALLEN. Then I understand the Senator to say that the grant of a bounty to the cane-sugar industry, in the first instance, was a work of supererogation; that it was not necessary to its development or its protection; and therefore the Senator from Louisiana was against it, or would have been against it if he had been here.

Mr. CAFFERY. I never would have voted for a bounty.

Mr. ALLEN. Does the Senator from Louisiana now say that the cane-sugar industry of Louisiana is and can be self-supporting without any protection, direct or indirect, in the form of a protective tariff or a bounty from this Government?

Mr. CAFFERY. I have not said so.

Mr. ALLEN. I ask the Senator what he would say to that proposition?

Mr. CAFFERY. I state, as I did yesterday, that under the 24 per cent ad valorem tariff in 1857 the sugar industry flourished more than it ever flourished, and that demonstrated the fact that the sugar industry did not require for its development a very high tariff. Now, whether with no tariff at all it would flourish I am not prepared to give a very decided answer. I think, if you want to know my individual opinion——

Mr. ALLEN. Certainly.

Mr. CAFFERY. I think that there is a section of my State that is about equal to Cuba in the production of sugar cane, taking all things around, taking the advantages that we enjoy, together with the disadvantages that we are laboring under—I think that we can about hold our own even under free trade.

Mr. ALLEN. I understand sugar beets are not grown in Louisiana?

Mr. CAFFERY. They are not.

Mr. ALLEN. How, then, does the Senator reach the conclusion that the beet-sugar industry can not live without protection?

Mr. CAFFERY. I reach the conclusion in this way: I think the conditions in Germany, in France, and in the Continent of Europe generally, where beets are raised, are quite as favorable as they are in the United States. I find that after some forty years of protection and bounty the beet-sugar industry is toppling to its fall. I find that at every single session of the German legislature

there is a demand for more and more bounty. I find that while the Germans are apparently prospering in sugar culture, they are paying more for sugar than it is worth.

They pay about 3 cents a pound additional to the price paid by the consumer in the United States and Great Britain. I find that while they pay this excessive price, the consumption is not over one-third of what it is in the United States. I therefore conclude that if this artificial culture of the beet—I call it artificial, because I do not believe it is natural—can be built up to the proportions of the beet crop of Germany and France and Sweden and Norway and Belgium and other countries of Europe, the consequences may be, and likely will be, precisely similar to the consequences that have befallen the beet culture in Europe.

In other words, you make cheap sugar for the foreigner and you make high sugar for the home consumer. You will put it so that they can not consume sugar. The same sugar that sells for between 7 and 8 cents a pound in Germany the American gets for 4 and 4¼ cents. If it is the object and design of the tariff in this bill to stimulate that production just precisely as it has been stimulated abroad, the same result will follow, and the beet growers will be constantly threatened with annihilation. Multiply the German population by the amount of 3 cents a pound, and if they consumed as much sugar as we do in the United States, it would be from fifty to sixty million dollars per annum for the privilege of raising sugar. I do not believe the game is worth the candle.

Mr. ALLEN. If we were to pursue the policy of stimulating beet culture in some form—and I am not arguing in favor of protection or a bounty at this time—and by that means increased the beet output, would not that have a tendency to benefit the consumer?

Mr. CAFFERY. No, sir.

Mr. ALLEN. Would not an increased quantity lower the price?

Mr. CAFFERY. It has not done so in Germany.

Mr. ALLEN. Of course you can not violate the natural laws of trade. Let me ask the Senator how much refined sugar is made from a ton of cane in Louisiana?

Mr. CAFFERY. Sometimes 200 pounds, but this is abnormal—160 to 170 pounds, or about that.

Mr. ALLEN. We make from 246 to 250 pounds of granulated sugar out of a ton of beets in Nebraska. I think the output in Louisiana must be more than 200 pounds.

Mr. CAFFERY. Two hundred pounds is a large average in Louisiana. They do not make that in many districts.

Mr. ALLEN. Yet, with this large saccharine substance, 246 or 250 pounds to a ton of beets, the Senator still thinks that the beet-sugar industry is not worthy of stimulation?

Mr. CAFFERY. I do not. While you grow about 12 tons of beets to the acre, in Louisiana we make from 20 to 30 tons of sugar cane.

Mr. ALLEN. Sometimes more.

Mr. CAFFERY. Very seldom, on the average.

Mr. ALLEN. Sometimes much more. Without intending to be personal or offensive at all in the slightest degree, may it not be possible that the sugar interests of Louisiana are opposed to the competition which would result if the beet-sugar industry were thoroughly established in this country?

Mr. CAFFERY. The question implies a kind of insinuation that I am governed in my action by that sort of sentiment.

Mr. ALLEN. I do not mean it in that sense. May not the Senator, taking into consideration Louisiana's interest, be imperceptibly influenced in favor of the development of the Louisiana cane industry and against the beet-sugar industry?

Mr. CAFFERY. If it is imperceptible to me, if it is unknown to me, how on earth can I answer the question? I know when I design something, but if the Senator says that I may be imperceptibly swayed, then he knows about as much about it as I do, and more, too.

Mr. ALLEN. The Senator recognizes the fact that sometimes men are so circumstanced that their minds are biased and their conduct is biased, and yet, possibly, they are not conscious of the fact at the time.

Mr. CAFFERY. That is a psychological statement to which I bow assent.

Mr. ALLEN. The Senator recognizes that as a truth?

Mr. CAFFERY. Yes, sir. I recognize it as a fact.

Mr. ALLEN. Now I ask whether the Senator from Louisiana is not so circumstanced that possibly he is a victim of that psychological fact?

Mr. CAFFERY. There is no telling. I may be the victim of many delusions. I may be worked upon by causes the extent of which and the character of which I can not place or determine, and of which I do not even know the existence, but as I know myself—and perhaps I do not—and as I review my own feelings on this proposition, I am not conscious of being influenced in the slightest by any motive of the kind which the Senator from Nebraska thinks may linger in my mind unknown to me and imperceptible to me.

It appears that from a discussion of acute mathematics on the sugar schedules the Senator from Nebraska has led us into the high domain of hairsplitting metaphysics. In that domain I know I am no match for him, and I do not care to stay in it any longer than I can get upon the solid ground of reality and facts. I was simply stating that in my opinion it would be a very unfortunate thing to stimulate an industry which could not sustain itself after the stimulation.

There is something in the protective theory as to infant industries. There is no doubt about it. There is no question that where a tariff law is properly applied to an industry which can sustain itself by reason of the natural environments, tariff stimulation will push it forward into quicker maturity. I suppose we will not quarrel about that statement. I hope my friend the Senator from Nebraska will not get metaphysical on that point. But does the principle apply to industries which, though stimulated, though brought to quicker maturity, can not maintain themselves after the artificial aid is withdrawn?

I submit to the Senator that, judging the United States by Europe, comparing the beet industry in Germany with the contemplated beet industry in the United States, precedent is against him. The Germans can not sustain themselves. If they were to admit sugar from the Tropics, take down the high protective wall, or even lower it, their whole artificial beet culture would dry up. It can not stand alone, and the culture in Germany embodies within itself two of the most pernicious principles, in my view. The original pernicious principle is protection, and the supplementary pernicious principle is a bounty on exports. They have not only a protection which is an absolute barrier to the introduction of foreign sugar, but they have an export bounty that stimulates a culture already stimulated too much, so that they are clamoring and clamoring and clamoring for governmental aid all over Europe. They can not stand alone. Is that the condition in which the Senator from Nebraska desires to place his people?

It is a safe proposition to lay down that there is not a single industry in the United States which flourishes to-day that has not flourished in spite of tariff, and there is not a single industry in the United States which is not flourishing to-day, how high and how great soever it may have been protected, that displays a character to sustain itself without the artificial prop. You have to have the natural environments. You have to have the adaptability. I invite my friend the Senator from Nebraska into the field of free trade. Take away your artificial restriction, your artificial appliances, your props, your stimulating drinks, and let every industry stand or fall according to its merits.

This attempt to induce the beet culture in the United States, in my opinion, is founded upon a wholly erroneous principle. If beet culture in the United States is naturally profitable, the people are going into it; if it is not profitable, they will not. They ought not to be almost bribed to go into it. And beet culture, in my opinion, is one of the instances, and a conspicuous instance, of the fallacies that lie at the bottom of the principle of protection.

When we come back to the real point at issue and discuss the amendment of the Senator from Kentucky [Mr. LINDSAY], we are met face to face with the proposition whether or not we shall continue this governmental aid to an institution which in the past and now displays the greatest capacity to get along without any help. It is not a case where you have to compensate by extra duty, because the refiner gets just what he pays. He is protected against the foreigner by the amount of tariff upon the foreign product, and what he pays out for his raw material is compensated to him by the amount he gets against the foreign article.

I do not pretend to be an expert in this matter, but I am perfectly safe in giving a vote in favor of the amendment, even if wrong, for I know from the well-disciplined vote on the other side that it will be cast as a solid shot against this amendment, and there is no danger whatever of its being adopted. The vote on the amendment will signify whether the Senate of the United States is a friend of the sugar trust; whether or not the trust is so needful of charity, is such a mild, humane institution, so beneficent as to warrant any particular favor at the hands of the Congress of the United States. This institution that comes before us as a violator of law, this institution which has set at defiance the very statutes we have passed here, this institution which carries on its business in restraint of trade, in contempt of the prohibition of the statutes, this institution demands at the hands of the United States a bonus to be allowed to carry on its business. I am in favor of the amendment of the Senator from Kentucky.

Mr. MORGAN. I desire to present an amendment which I propose to submit to the bill at the proper time. I ask that it may be read from the desk.

The PRESIDING OFFICER (Mr. MANTLE in the chair). The amendment will be read.

The Secretary read as follows:

There shall be levied and collected a sum equal to 2 per cent of the profit made by each person or corporation in buying or selling any bonds or stocks, whether the same are issued in the United States or in any other country.

There is exempt from the operation of this act all the profits realized or accrued on the purchase or sales of stocks or bonds that have been held and owned in good faith by the same person or corporation for a continuous period of six months or more prior to such sale. It is the duty of every person and corporation, within ten days after a profit is realized or has accrued on any purchase or sale of stocks or bonds subject to taxation under this act, either for present or for future delivery, to report the same under oath to the collector of internal revenue of the district in which the purchase or sale is made, stating the date of such purchase or sale, the amount thereof, the description of the stocks or bonds so purchased or sold, and the name and residence of the person or corporation with whom such dealings of purchase or sale were had, and the amount of the profit realized on such transactions, each separately; and the Secretary of the Treasury is authorized to make all needful regulations for the assessment and collection of the taxes imposed by this act.

Any person, and the agents or officers of any corporation, who shall omit or refuse to make due report and return of any profits realized or accrued on the purchase or sale of bonds or stocks that are taxable under this act, according to law and the regulations prescribed by the Secretary of the Treasury, is guilty of a misdemeanor, and shall be punished by any court having jurisdiction of such offenses by a fine not exceeding $500 and by imprisonment for a term not less than thirty days nor exceeding one year, at the discretion of the court.

Mr. ALLISON. Mr. President——

Mr. ALLEN. With the consent of the Senator from Iowa, I rise for the purpose of receiving recognition, that I may proceed with some remarks Monday morning.

The PRESIDING OFFICER. The Senator from Nebraska will be recognized as entitled to the floor.

Mr. ALLISON. I move that the Senate adjourn.

The motion was agreed to; and (at 4 o'clock and 30 minutes p. m.) the Senate adjourned until Monday, June 14, 1897, at 12 o'clock meridian.

SENATE.

MONDAY, *June 14, 1897.*

The Senate met at 12 o'clock m.

Prayer by Rev. L. B. WILSON, D. D., of the city of Washington.

The Journal of the proceedings of Saturday last was read and approved.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented memorials of the Oswego Lumbermen's Exchange, of Oswego; of E. W. Rathbun & Co., wholesale lumber dealers, of Oswego, and of C. W. Mott, of Oneida, all in the State of New York, remonstrating against the imposition of the proposed duty of $2 per thousand feet upon lumber; which were ordered to lie on the table.

Mr. PLATT of New York presented sundry memorials of citizens of New York City, Geneva, Albany, Waterville, Rochester, Yonkers, Callicoon, Northbranch, and Brooklyn, all in the State of New York, remonstrating against the proposed increase of the tax on beer; which were ordered to lie on the table.

Mr. MORRILL presented a petition of sundry citizens of Pownal, Vt., and a petition of sundry citizens of Saxtons River, Vt., praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

Mr. PASCO presented a petition of the Chamber of Commerce of Fernandina, Fla., praying that an appropriation be made for the purpose of keeping the entrance of Cumberland Sound open to commerce; which was referred to the Committee on Commerce.

Mr. PRITCHARD presented a petition of sundry citizens of Burlington, N. C., and a petition of sundry citizens of Concord, N. C., praying for the passage, at the earliest possible date, of such protective-tariff legislation as will adequately secure American industrial products against the competition of foreign labor; which were ordered to lie on the table.

Mr. HANSBROUGH presented a petition of sundry citizens of Milton, N. Dak., praying for the early passage of the pending tariff bill; which was ordered to lie on the table.

Mr. HOAR presented a memorial of 61 citizens of Massachusetts engaged in the manufacture of shoes, remonstrating against any increase in the present rate of duty on tanned skins for morocco or a duty on raw goatskins; which was ordered to lie on the table.

He also presented a petition of 196 business men of Lowell, Mass., and a petition of 36 citizens of North Adams and Briggsville, Mass., praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

He also presented a petition of the Woman's Christian Temperance Union of Bristol County, Mass., praying for the enactment of legislation prohibiting the reproduction of pugilistic encounters by means of the kinetoscope; which was ordered to lie on the table.

Mr. TURPIE presented a petition of sundry citizens of New Albany, Ind., praying for the speedy enactment of a protective-tariff law; which was ordered to lie on the table.

Mr. HAWLEY presented the petition of T. E. Hopkins and 36 other citizens of Danielson, Conn., and the petition of T. M. Ross and sundry other citizens of Tolland County, Conn., praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

Mr. SPOONER presented petitions of Dorton Mihills and 103 other citizens of Evansville, of Benjamin P. Hill and 31 other citizens of Bayfield, of D. S. Conger and 44 other citizens of Prairie du Sac, of C. C. Pratt and 11 other citizens of Deerfield, of Frank B. Bacon and 106 other citizens of Sparta, of E. T. Buxton and 30 other citizens of Superior, and of John B. Stickney and 103 other citizens of Mazomanie, all in the State of Wisconsin, praying for the early passage of the pending tariff bill; which were ordered to lie on the table.

SALE OF ALCOHOLIC LIQUORS IN SOUTH CAROLINA.

Mr. TILLMAN. From the Committee on Interstate Commerce I submit a report giving the judicial decisions on the regulation of commerce between the several States and with foreign countries in reference to the South Carolina liquor law. I move that the report be printed for the information of the Senate, to accompany the bill (S. 224) to limit the effect of the regulation of commerce between the several States and with foreign countries in certain cases.

The motion was agreed to.

BILLS INTRODUCED.

Mr. PETTIGREW introduced a bill (S. 2138) to give the consent of Congress to a compact entered into between the States of South Dakota and Nebraska respecting the boundary between said States; which was read twice by its title, and referred to the Committee on the Judiciary.

Mr. ALLEN introduced a bill (S. 2139) granting a pension to Richard Barnes, of Madison County, Nebr.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Pensions.

Mr. DANIEL (by request) introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Claims:

A bill (S. 2140) for the relief of the legal representatives of Paul McNeel, deceased, of Pocahontas County, W. Va.;

A bill (S. 2141) for the relief of W. E. Judkins, executor of Lewis McKenzie; and

A bill (S. 2142) for the relief of Alexander Stoddart, of New York.

AMENDMENT TO THE TARIFF BILL.

Mr. PRITCHARD submitted an amendment intended to be proposed by him to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States; which was referred to the Committee on Finance, and ordered to be printed.

ENROLLED BILL SIGNED.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the Speaker of the House had signed the enrolled joint resolution (S. R. 64) relating to the payment of salaries in the consular service; and it was thereupon signed by the Vice-President.

THE TARIFF BILL.

The VICE-PRESIDENT. The morning business appears to be closed.

Mr. ALLISON. I move that the Senate proceed to the consideration of House bill 379.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

The VICE-PRESIDENT. The pending question is upon the amendment of the Senator from Kentucky [Mr. LINDSAY], upon which the Senator from Nebraska [Mr. ALLEN] has the floor.

Mr. ALLISON. If the Senator from Nebraska will yield to me for a moment, I ask that beginning on Wednesday morning the sessions of the Senate shall commence at 11 instead of 12 o'clock, as now.

Mr. VEST. All right.

Mr. ALLISON. I think it would facilitate the business if we should adopt that course.

Mr. VEST. That is with the understanding, of course, that we shall adjourn at 5 o'clock.

Mr. ALLISON. I think perhaps it would not be wise to make such an order as to the hour of adjournment. I have no doubt that we will all feel like adjourning about 5 o'clock, or, at any rate, like passing from the consideration of this bill to other business that may be necessary—executive business, and so on. I assure Senators that they will have no trouble as to the hour of adjournment if this order is agreed to.

Mr. VEST. That is all right. I want to be entirely frank about it. It is the late sessions that count against those of us who are working on the bill. I do not mind meeting at 11 o'clock in the morning, but to stay here after 5 is more than those of us who are past middle life want to bear.

Mr. ALLISON. Under our methods of business, as the Senator

very well knows, it may not always be convenient to adjourn at a particular time.

Mr. VEST. I mean, to let the tariff bill go over.

Mr. ALLISON. Unless there is some special reason, perhaps that can be arranged.

Mr. VEST. I do not mind executive sessions after 5.

Mr. ALLISON. I hope there will be no agreement as to the hour of adjournment. I think there will be no difficulty in arranging that to suit Senators on both sides.

Mr. VEST. Very well.

Mr. ALLISON. I ask unanimous consent, therefore, that, beginning Wednesday morning, the hour of meeting shall be 11 instead of 12 o'clock until otherwise ordered.

The VICE-PRESIDENT. The Senate has heard the request of the Senator from Iowa asking unanimous consent that, beginning on Wednesday, the hour of meeting of the Senate shall be 11 o'clock in the morning instead of 12 o'clock, as heretofore.

Mr. ALLISON. Until otherwise ordered.

The VICE-PRESIDENT. Until otherwise ordered. The Chair hears no objection to the request. No objection being entered, that will be the order. Beginning Wednesday morning, the Senate will meet at 11 o'clock. The Senator from Nebraska will proceed.

Mr. ALLEN. Mr. President, during the very interesting remarks of the senior Senator from Kentucky [Mr. LINDSAY] on Saturday last the following colloquial discussion took place:

Mr. ALLEN. Then I should like to ask the Senator from Missouri what is to prevent the Government of the United States from resorting to the common-law writ of quo warranto, bringing this trust into court and dissolving its existence regardless of any statute?

Mr. VEST. I have no doubt it could be done if we could get at the proof in the case, if the State corporation was operating in restraint of trade under the Edmunds law.

Mr. ALLEN. It does not make any difference about it being a State corporation.

Mr. VEST. But the question was, Did it operate in restraint of trade among the States?

Mr. HOAR. You can not issue a quo warranto against a State corporation.

Mr. VEST. I do not know that you can issue that particular writ of quo warranto, but the proceedings to which I refer were instituted under the Edmunds law.

Mr. ALLEN. Does the Senator from Massachusetts pretend to say that the charter of a State corporation can not be dissolved, or, at least, that it can not be prevented from doing business when it monopolizes interstate trade and results in a monopoly?

Mr. HOAR. If my honorable friend the Senator from Nebraska will pardon me, in all good nature, I do not pretend anything in the Senate. I am asked to state my view of a law question and whether I pretend so and so.

Mr. ALLEN. I did not mean to offend the Senator.

Mr. HOAR. It is not a very agreeable kind of a question.

Mr. ALLEN. I simply wanted to give it as my opinion (and it is the opinion of only one man, and not quite so good or right as that of the Senator from Massachusetts) that there is no question about the power of this Government to dissolve such a corporation, regardless of the fact where it gets its charter. Whenever it leaves the State in which it is incorporated and engages in the transaction of business which is international commerce and interstate commerce, the nation has control.

Mr. LINDSAY. Mr. President——

Mr. HOAR. Will the Senator pardon me for a sentence?

Mr. LINDSAY. Certainly.

Mr. HOAR. I supposed the law to be that the writ of quo warranto is a writ to dissolve a corporation which by illegal conduct has forfeited its power to exist, and that it is a writ addressed to it to come and show cause by what warrant it continues to act as a corporation. I suppose that can only be done, under our system of jurisprudence, in the courts of the sovereign that created the corporation, which is the State in the case of a State corporation. I do not concede that that is a proper writ or remedy to prevent a corporation from doing an unlawful thing.

Undoubtedly the courts of the United States may by proper process enjoin a State corporation, as they could an individual, against violating a United States law in cases where such an injunction is the proper and fitting proceeding, but that would not be by instituting an action of quo warranto, and it would not be in any case, as I suppose, within the powers of the United States courts to dissolve a State corporation.

Mr. ALLEN. Mr. President——

Mr. LINDSAY. I can not yield further.

Mr. ALLEN. Very well.

At this point I was cut short from answering the Senator from Massachusetts [Mr. HOAR] by the refusal of the Senator from Kentucky to permit further interruption, and I embrace the first opportunity to reply briefly to him on this point.

Quo warranto is the proper common-law writ by which to inquire into and determine the right of persons to exercise corporate functions or franchises, and the remedy is limited only by the facts and circumstances of each particular case as it presents itself, for it is doubtful if in illustrative jurisprudence two cases can be found presenting exactly the same or substantially a similar state of facts. The English law of quo warranto descended to us as an inheritance, and it came in all its fullness and efficiency, and not so crippled and hedged about by unreasonable and unnecessary restrictions as to make it barren of results when properly set in motion. I can not bring myself to agree with the Senator from Massachusetts, much as I am inclined to do so, for, as I look at the question, there can be little, if any, doubt of the jurisdiction of the Federal courts to oust a corporation in so far as it engages in interstate or international commerce if it does not possess lawful authority to do so.

If Havemeyer and his associates went to New Jersey to procure a charter as a mere shield from consequences of a business conducted elsewhere, and not to conduct business there, the act was fraudulent, the charter was void, and the Federal court would, in a proper case, have jurisdiction to so adjudge it. It must be remembered that under the liberal practice obtaining in the United States the court, in a case of quo warranto, is not confined to entering a judgment of ouster merely, but it has authority to enter as a part of its judgment a perpetual injunction restraining the corporation from the exercise of functions it does not lawfully possess. In addition to quo warranto, a bill in chancery may be filed to restrain the corporation from carrying on a business not contemplated by its charter, and I take it for granted that it is elementary that a corporation deriving its chartered powers from the legislature of New Jersey or any other State does not possess the right to engage in interstate or international commerce, and that the State granting the charter has no power to confer that authority.

A State possesses power to charter a corporation to transact business within its territorial limits only. It can not extend beyond State boundaries and it must of necessity be confined to carrying on a lawful business within the State and to State commerce, and incidentally to such interstate and international commerce as may by the sufferance of Congress be transacted within the State. It has no authority, however, by virtue of its corporate existence to pass beyond the boundaries of the State of its origin and domicile and engage in a commerce over which, by the Constitution, Congress has original and exclusive jurisdiction.

The common-law remedy of quo warranto not only authorizes the court to inquire by what warrant or authority the corporation transacts business, but to inquire into and determine whether a particular branch of business comes within its chartered privileges or not, and if it does not to oust it from the transaction of such business and restrain it from engaging therein again.

The Constitution declares—

That Congress shall have power to regulate commerce with foreign nations and among the several States and with the Indian tribes.

These powers are very comprehensive and embrace not alone a direct regulation by act of Congress of how and when such commerce may be conducted, but the means, and as an incident the Congress may declare that no commerce shall be carried on through the instrumentality or agency of corporations. It may confine such commerce to individuals, or copartnerships, or, in fact, impose any other restriction on it that may be deemed politic and wise.

The grant is to regulate commerce with the foreign nations. This does not mean with foreign nations as distinct political entities, but with the people of foreign nations, and therefore it embraces within its legitimate scope complete authority to regulate the interchange of traffic between the people of the United States and the people of a foreign nation, and there follows impliedly from this the incidental power to determine the class of vessels in which commerce may be carried, and, in fact, the right to regulate commerce carries with it the right to suspend or prohibit it if necessary for the time being and for the general welfare, and it is declared that Congress shall have power to regulate commerce "among the several States." In the first case the word "with" is used, while in the latter "among" is employed. Perhaps there is no significance in this change of expression in speaking of the two classes of commerce, and yet it must be noted in passing that a change was made. This does not mean among the several States as political entities, for at the time the Constitution was adopted there was no commerce among the several States as such, or practically none, and therefore it must be held to refer to the people of the several States.

And here, too, is implied the authority to prohibit the interchange of commercial relations between the people of the several States if for any purpose it shall be deemed wise and proper for Congress to do so. And there is further implied the right to choose the means of regulating and the instrumentalities thereof, and therefore I assume it is elementary that if Congress shall declare that no commerce among the several States shall be carried on through the instrumentality of a corporation, the law would be constitutional and would be enforced not only in the Federal courts, but in the State courts as well, for it is primarily the duty of the State courts to enforce an act of Congress when its jurisdiction is properly invoked in the ordinary course of litigation. It would be strange, then, if, Congress possessing this power, broad and comprehensive as it is, we should find ourselves without a remedy to enforce an act of regulation. It was an axiom at the common law that for every right there was a remedy, and that axiom came to us from the English law, and we may therefore properly declare that where there is a right in the sovereignty of the United States there is a remedy for its enforcement.

Let us suppose that the Havemeyers, residing in New York, went across the line into New Jersey and procured a charter from the legislature of that State, without having a domicile there, and by virtue of that charter established an office in the city of New York

and created a monopoly in the sugar business. If the chief purpose in obtaining the charter was to enable them to transact business as a corporation in New York and engage in interstate and international commerce, the New Jersey charter would not afford them protection from the Federal courts in New York, or any other district or circuit where their business may be conducted. The moment they ceased to transact a purely local or State business within the State of New Jersey and engaged in interstate and international commerce beyond the territorial lines of that State, that moment they placed themselves in a position where they were subject to the jurisdiction of the United States courts, and it would be somewhat singular if they could engage in a business 99 per cent of which is interstate and international in its character and the courts of the United States would have no jurisdiction to control them or adjudge their business unlawful, if unlawful, or conducted unlawfully, or oust them in so far as their business might be a monopoly and in violation of the common or statute law.

I assume, for the purpose of this argument, that at the common law a monopoly was in violation of law, and was subject to control of the courts, and its agents might be indicted and punished and its existence dissolved and the corporation restrained by injunction from carrying it on in the future.

It is admitted on all hands that no sugar schedule can be framed by any party from which the sugar trust will not derive pecuniary benefit. I am well satisfied from my own observation and experience as a member of the investigating committee of 1894 that this is true. Then why waste time on this schedule? If there is a real desire and an honest purpose to destroy this gigantic monopoly that is eating out the substance of the people, why not employ the courts to dissolve it, or at least to oust it from the exercise of this particular function? We should begin at the proper place and employ the proper remedy and deprive it of a monopoly of one of the staple necessities of life.

As long as we higgle on schedules, the sugar trust will laugh at us in derision and mock our impotency and continue to fatten on unlawful exactions from the people. It will only fear the Government when we shall invoke the aid of the courts and deprive it of existence outside of its lawful situs.

It has been suggested that the courts can not be relied on to control this monopoly; that the judges are surrounded by influences that will prevent them from determining the question as they should. If this be true, then the Government in its judicial branch is a failure and the people are without a remedy. I have confidence, however, in the courts of the United States to believe that when their jurisdiction is properly invoked they will not hesitate to deal justly by the people and dissolve this gigantic monopoly.

There is another subject to which I desire to direct attention for a moment. We have a treaty relation with the Hawaiian Islands by which Hawaiian sugars are admitted into the United States free of duty. There come to the United States annually at least 225,000 tons under that treaty which do not pay a cent of revenue into the Treasury. I think I am entirely safe in asserting that the United States loses from six to six and a half million dollars annually in consequence of the treaty.

The time has come, in my judgment, when this treaty ought to be revoked. I am not prepared to say that it ought never to have been made. Its making antedates by several years my advent into public life, and I am not prepared to say that circumstances did not exist at the time which warranted the Government in entering into a treaty with the then King of Hawaii.

But, Mr. President, the people derive no benefit from the provision of the Hawaiian treaty which admits sugar free of duty. The investigation in 1894 by the special committee apointed by this body developed the fact that the American Sugar Refining Company, at the head of which stands Henry O. Havemeyer and the king of the sugar trust of the Hawaiian Islands, Claus Spreckels, were in partnership in Hawaiian sugars; that they owned jointly the Western Refining Factory, located at San Francisco, Cal., and that an agreement existed between them by which all the section of our country lying west of the Missouri River was turned over to Spreckels to supply with sugars, and the portion of the United States lying east of the Missouri was devoted exclusively to the forays of the American sugar trust. And I think the fact is that only about 7 per cent of the sugar trust's sugars go west of the Missouri River.

Mr. President, we receive no benefit from this treaty relation. Sugars raised upon many of the islands in the Atlantic and Pacific oceans are shipped to Honolulu, there repacked and marked Hawaiian sugars, and brought into this country under the language of that treaty, but really in violation of its spirit and purpose.

Why, then, should the people be deprived of deriving revenue to the amount of between $5,000,000 and $7,000,000 a year from these imported sugars? There is no competition between Hawaiian sugars and sugars manufactured or refined by the American sugar trust. The moment those sugars come to the United States that moment they are owned and controlled by this combination between Havemeyer and Spreckels, and there is immediately stifled that natural and legitimate competition which under proper regulations would exist.

The sugar trust takes these sugars in its control and fixes the price to the American consumer, entirely regardless of the fact that they are admitted free of duty. Those sugars would be no higher to the consumers if they paid this tax of between $5,000,000 and $7,000,000 annually. And how many years will elapse until the 225,000 tons of sugar admitted annually free of duty as Hawaiian sugars will grow into 450,000 tons or 500,000 tons, when the Government will be deprived of revenue to the amount of from $12,000,000 to $14,000,000 a year?

Mr. President, we can not build up the American sugar industry or develop it in the slightest degree if this treaty is permitted to remain intact. It has been demonstrated that beet sugar, for instance, up to this time, can not be produced and sold in the market for less than about 4 cents a pound, while under the operation of the Hawaiian treaty Hawaiian sugars can come to the United States and be sold to the consumer for less than 3 cents a pound and a reasonable profit be made on them. How can it be expected, if that treaty is permitted to remain, that domestic sugar can contest in the markets of the United States with the product of the Polynesians and the low class of labor found on the islands of the Pacific Ocean?

Mr. President, so far as I am concerned, as one member of this body, and in my judgment, so far as the Populist party is represented in this Chamber, there is but one course to pursue, and that is to cast our votes at all times and under all circumstances to cancel the treaty between the United States and the Hawaiian Islands, and by that means give some impetus, if impetus can be given in that way, to the development of the American sugar industry. Not only that, sir, but we can not afford to cast our votes to throw away $6,500,000 of revenue annually and give it to the American sugar trust that is now eating out the life and paralyzing the energies of the American people. It will be one step at least in the direction of impairing the efficiency of that trust.

Mr. President, I have, in the four years I have been here, witnessed the singular spectacle of a play on the part of Congress with the American Sugar Refining Company. In 1894, when the Wilson bill was before this body and was being considered, Senators on the other side of the Chamber held up their hands in holy horror that the Democratic party and the Populists should be bold enough to give the sugar trust some advantage under the sugar schedule of that bill. That act reduced the benefits that were then being derived under the McKinley law by the sugar trust. It did not wipe out entirely the profits they were making, it is true; for, sir, I conceive it impossible for Congress, in the form of a sugar schedule, to deprive this gigantic corporation of some profit.

Now, Mr. President, in 1897, when this bill is pending before this branch of Congress, our Democratic friends hold up their hands in horror that the American sugar trust should receive some benefit from it, and yet all, Democrats, Republicans, and Populists agree that it is impossible to frame and pass through Congress a sugar schedule that will not result in benefit to the trust. Sir, if we are honest with the American people, if this reform Administration that was heralded as the advance agent of prosperity seven or eight months ago intends to do anything for the relief of the American people in this respect, why not invoke the courts of the country to dissolve and oust this corporation, in so far as it assumes to exercise functions that control interstate and international commerce?

Mr. President, he would be a bold man indeed, and a reckless lawyer, who would assert that this corporation or any other could pass beyond the territorial limits of the State in which it was organized and created and engage in a purely interstate and international commerce without jurisdiction upon the part of the Federal courts to oust it of unlawful exercise of that power, especially when it has become a monopoly and inimical to the general welfare. We may talk of schedules high and schedules low, we may undertake to make the American people believe that we are in favor of checking this gigantic monster, we may deceive a portion of the people; but this monopoly will never stand in fear of Congress or any other branch of this Government, it will never cease to fatten and grow rich out of the American people, until the plenary jurisdiction of our courts is invoked for its dissolution and restraint.

The PRESIDING OFFICER (Mr. CHANDLER in the chair). The question is on the adoption of the amendment proposed by the Senator from Kentucky [Mr. LINDSAY]. Is the Senate ready for the question?

Mr. PETTIGREW. Mr. President, I do not care to address myself to the pending amendment, but I wish to submit some remarks in regard to the amendment which I offered on the 25th of May, providing that all articles the subject of a trust shall be admitted free of duty.

Mr. President, our civilization is founded upon the theory of evolution, upon the doctrine of the survival of the fittest, upon

the law of competition, and is opposed to socialism. We say, as far as is consistent with the existence of protection under the law, Let man, untrammeled and unrestrained, work out his destiny. The result of this theory in the past was feudalism, or the supremacy of brute strength and physical courage, and its resulting paternalism. But feudalism, by the operation of the law of competition and evolution, destroyed itself by the subjugation of the weaker by the stronger and the creation of monarchical forms of government in its place.

To-day, under the operation of this law of competition, we are drifting toward socialism on the one side and plutocracy on the other. It is for us to say whether we will stop the march of events in their course, and make this again a government of the the people, by the people, and for the people, or allow the present to crystallize and thus continue to be what we now are—a government of the trusts, by the trusts, and for the trusts—a plutocracy of artificial persons, sustained by bribery. In the past all plutocracies have been of natural persons, with something of conscience and human sympathy in their composition, and they have kept discontent in check by force and bribery, by a paid police, and by a standing army. But as our plutocracy is of the worst form, without heart and conscience, being an artificial person, it is fitting and well that it should be forced—if its existence shall be perpetuated—to rely upon the one means of sustaining its existence—that of loathsome bribery.

We have abandoned as a people the doctrine so oft repeated and so much believed, that competition is the life of trade, and have adopted the doctrine that competition is killing, resulting in the organization of trusts and combinations to restrict production, to maintain or increase prices, until to-day there are but few articles manufactured in the United States that are not the subject of a trust. There is a trust to control coffee, coal, sugar, lead, oil, glass, all kinds of hardware, steel, chemicals, and crockery. Thus the fundamental principle of our civilization is overturned, and those who can not combine—the farmer and individual proprietor and toilers of the land—are at the mercy of those who do combine.

TARIFF AND THE TRUSTS.

When the Republican party came into being as the advocate of protection to American industry by the means of a tariff, it wisely based its advocacy of the doctrine of protection upon the theory on which our civilization rests—competition, and declared that the building of American factories to supply the protected article would create competition and thus lower the price of the article to the consumer. In every campaign we have told the people the story of nails—how they were 6 cents per pound, and we put a duty on them of 2 cents per pound, and American genius and energy produced the machinery, and competition reduced the price, and nails sold for 1 cent per pound, and the Republican doctrine of protection was triumphantly vindicated.

Last year the nail trust was organized, and the price of nails rose from 1 cent a pound to 3¼ cents a pound, and thus the Republican theory of protection was completely overthrown. The same story can be told of almost every manufactured article in this bill. How to remedy this defect so as to justify a tariff for protection in the future is the problem which every Republican is called upon to solve. The two questions are so intimately connected that they must go together. No tariff bill can be defended that does not protect the people against trusts. If the Republican party undertakes it, you will go down in defeat at the next election.

Mr. President, I offer my amendment in good faith as a protectionist. If it is not adopted, the theory of protection falls to the ground. If it is adopted, you can defend this bill before the people of the United States.

The amendment provides—

That all articles on the dutiable list mentioned in this act shall be admitted free of duty if said articles or articles of a like character of domestic production are manufactured or their sale controlled or the price affected by a trust or combination to increase the cost of said articles to purchasers by preventing competition or otherwise. Every contract, combination in the form of a trust, or association or corporation whose effect is to restrict the quantity of production or increase the price of any article, or any conspiracy in restraint of trade, shall be deemed a trust within the provisions of this act.

Any citizen of the United States may file a petition, verified by oath or affirmation, in any district court of the United States where the defendant has an office or place of business or may reside, alleging the existence of a trust as herein defined, and that articles or products subject to duty under this act, or articles or products of like character of domestic production, are manufactured, or their sale controlled, or the price affected by said trust; whereupon a summons shall be immediately issued from said court directing the defendant to appear and answer said petition, the case to be governed as to time and manner of service, the pleadings and all proceedings had therein, as is now provided by law in civil causes instituted in the district courts of the United States.

If any citizen of the United States shall file with any district attorney for said district the petition herein set forth, it shall be the duty of said attorney to institute proceedings forthwith in the district court for said district in the name of the United States for the purpose of determining the issues made by said petition, like proceedings to be had in such case as hereinbefore prescribed.

The summons to the defendant or defendants herein required shall be served upon the president or chief officer, if a corporation, or upon all the members, if an association or partnership, and the Secretary of the Treasury shall also be notified of the existence and nature of the suit.

All cases instituted as herein provided shall be advanced upon the docket of the court so as to have precedence of trial over all civil causes thereon, and an appeal may be taken from the decision of the district court to the circuit court of the United States for the district, under the same rules as are prescribed for like appeals in other civil cases, but the judgment of the circuit court shall be final.

If the decision of the court shall be that the allegations of the petitions are true, an order directing the customs officers of the United States to thereafter permit the importation of such article or articles free of duty shall at once issue: *Provided*, That where a duty is levied upon raw material or any article that is improved by any process after being imported, the duty on the raw material or unrefined or unimproved article shall be collected, and a like amount of duty upon the refined or improved article as provided by this act; but the differential or additional duty shall not be collected if the improved or refined product is found to be the subject of a trust, as hereinbefore set forth: *Provided*, That at any time after judgment the Secretary of the Treasury, upon written grounds, or any party to the proceedings upon petition, verified by oath or affirmation, may move the court to set aside or suspend the enforcement of such judgment. If upon hearing it shall be adjudged that the trust has ceased to exist, it shall be the duty of the Secretary of the Treasury to withdraw or cancel his orders to the customs officers, and such officers shall immediately resume the collection of the duties imposed by this act. The parties to the original proceeding who do not join in the motion shall have reasonable notice thereof, and the motion shall be advanced and have precedence of trial over all civil causes. Appeals may be taken as in the original proceeding to the circuit court, but the judgment of that court upon the motion shall be final.

But you urge that if this amendment is adopted it will defeat the object of passing a tariff bill, as no revenue will be derived therefrom. If this is true, then surely we are in the hands of the trusts. But I contend that this tariff bill is so framed that the articles which are the subject of a trust are not the articles from which much revenue is derived, the evident purpose of the framer of the bill being to give the American market to the trusts and raise the revenue from other articles.

Is it not more reasonable to suppose that the trusts will dissolve rather than share the rich American market with foreigners? For if the trusts do not disband, and thus allow the various manufacturers to compete with one another, the operation of the amendment I offer will be to compel them to compete with the foreign manufacturer. Is it not sure to follow that, rather than open our doors to the free competition of the world, the trusts will cease to exist?

It is urged, however, that but part of the manufacturers may be in the trust, and that this amendment punishes the innocent with the guilty; but there can be no innocent persons, for the amendment provides that in order to be a trust the effect must be to restrict the quantity of production or increase the price of the article. Thus those not in the combination are the recipients of the benefits, and the willing recipients, or they would have prevented the rise in price resulting from the trust. If the trust ceases to exist as to any article, the Secretary of the Treasury may commence proceedings to have that fact declared by the court, and the duty again collected.

TRUSTS RESULT FROM DECLINING PRICES.

The rapid growth of trusts in the United States began with the demonetization of silver, and the formation of trusts was the means adopted by some of the most far-seeing and shrewdest men having control and direction of capital invested in manufacturing and transportation to avert losses to themselves by reason of falling prices, which lead to overproduction and underconsumption. They realized that the first effect of a decline in prices is to stimulate production, because the producers hope to make up the difference in price by larger sales at a less expense. They also foresaw what the average producer fails to see, that when the decline of prices is general the purchasing power is less in the whole community, and therefore an increased production can find no market at any price, so that there exists at the same time an overproduction of things which are most needed and an underconsumption of these very things, because of the inability to purchase them.

The organizers of the trusts did not go into the causes of the falling prices. In most cases they knew nothing about the natural effects of throwing the entire burden upon one metal constituting the basis of the money of the world, which had formerly rested upon both gold and silver. So they made the common error of mistaking effect for cause, and attributed the decline in prices to overproduction. Therefore they combined and formed trusts to restrict production and keep up prices.

But the sole argument which the advocates of the gold standard have offered to appease the producer of farm products for the lower prices which he must take for the results of his labor, and to the workingman for the enforced acceptance of lower wages, has been the increased purchasing power of what they call "honest money," whereby $1 now will buy as much of most articles of general consumption as $2 would have done twenty years ago.

The effect of the successful operations of trusts is to compel higher prices to be paid for the finished product, or for transportation, while they do not check the decline in the value of raw material nor in the rates of wages, nor do their managers wish to do so.

I do not desire to be understood as charging that the trusts are able to withstand the general fall of prices. The ability of the consumer to pay fixes the limit beyond which prices can not be forced, and that is the only limit upon the powers of a trust to

regulate prices when the combination of domestic producers is so perfect as to defy competition at home and the tariff duty upon the imported articles excludes the competition in our markets of foreign producers.

Therefore the people of the United States are robbed by the trusts of the only advantage, if it can be called an advantage, which the advocates of the gold standard offer as a reason for the perpetuation of that standard.

Certainly, Mr. President, no consistent advocate of the gold standard can refuse to give his vote in support of a measure like my amendment, which is intended to destroy the monopolies held by the trusts in order to let the people get the advantage, through competition, unhampered by tariff duties, of the lower prices for all that they must purchase, which would naturally follow the maintenance of the "existing gold standard."

I insist that so long as the gold standard prevails the legislation of this Congress ought to be such as to give to the people who are the consumers of manufactured articles, who pay the freight on the railroads, all the advantage which would naturally come to them through the legislation of this and other countries which increased the purchasing power of gold, and that this Congress ought not to permit the passage of any tariff legislation for the protection of American manufacturers without taking good care that no benefit whatever shall accrue to trusts from such legislation, whether the trusts are now in existence or may be organized in the future.

OBJECTION TO TRUSTS FOUNDED ON REASON.

Mr. President, the objections to trusts are not fanciful, neither are they prompted by animosity to wealth or wealthy men. They rest upon public principles which are inherent and fundamental to our civilization. At common law bonds and contracts in restraint of trade are void.

In the time of Henry V the judge declared, when such a contract was presented and proven before him, that if the guilty party were present he should go to prison. In 1811 Judge Sedgwick said that bonds to restrain trade in general are bad, as prejudicial to trade and honest industry. (8 Mass., 283). The common law from the first forbade agreements to restrict the freedom of trade, and has been universal in its application and in accordance with the spirit of our institutions.

The supreme court of Pennsylvania, as early as 1832, in declaring the illegality of an agreement between five coal-mining companies to fix the amount of each one's product, to bring the price and sales under the control of the combination (Judge Agnew) said such a combination is more than a contract; it is an offense, and that where the public is subject to the power of confederates a combination is criminal. (68 Pa. State, 173.)

In New York, where the owners of canal boats had combined to divide profits and control rates, the court held such a combination to be illegal and void. (5 Denio, 434; 4 Denio, 349.) The principle of the common law was laid down in England four hundred and sixty years ago that—

A monopoly has three incidents mischievous to the public: 1, the rise of the price; 2, the commodity will not be as good; 3, the impoverishing of poor artificers and all those not parties to the combination.

It has been remarked frequently in my presence during the last few days that there were no trusts; that corporations existed, but that no trusts existed. Under my amendment, in which I undertake to define trusts, any combination to limit production or increase prices is a trust, and therefore subject to the penalties prescribed in the amendment. But I think, perhaps, Mr. President, it is well to give the history of some of these combinations of capital, some of these corporations which control prices and limit production, in order that we may best determine whether such combinations actually exist.

SUGAR TRUST.

Prior to August, 1887, there was life and free competition in all branches of the sugar trade. The producers of raw sugars all over the world sought in the ports of the United States a market in which numerous strong buyers were always ready to take their offerings at a price varying with the supply and demand. The duty collected by the United States upon imported sugar was specific, so many cents per pound, according to the color and saccharine contents of the goods. The seller knew what the duty was, and that it could not be changed by any collusion with the buyer in regard to the price. The buyer knew what the sugar was worth for his purposes, and how to refine it for the home consumption or to sell it for use unrefined, as the case might be.

There was the same healthy competition among the sugar refiners as among the producers and importers of raw sugar. This was manifested by constant efforts to improve the product and to lessen the cost of refining by the introduction of better processes.

The distribution of the raw and refined sugar to the consumer through the usual trade channels from the importers and the refiner by way of the jobber, the wholesale grocer, and the retail grocer to the family was also untrammeled. Each bought where he could purchase to the best advantage and sold upon terms agreed upon between him and the buyer, and not dictated by any third party.

In short, Mr. President, the sugar business was subject to the laws of trade as understood and expounded by the best school of political economists.

But in 1887 the enormous profits amassed by the Standard Oil Trust suggested to a few of the leading refiners the possibility of controlling the sugar trade in the same way. It was then claimed for the first time that the individual refineries through competition were unable to make sufficient money to continue in business.

This seems a little strange in view of the fact that most of the refiners who had the misfortune to die or had retired from business before that time are known to have left or still possess many millions. These millions, however, no doubt seemed insignificant in comparison to the potentialities of wealth offered by the adoption of trust methods.

So the sugar trust was formed in the fall of 1887 by a combination on the plan of the oil trust, between a number of corporations, some of which were formed out of existing unincorporated firms for the express purpose of entering the trust, which was called the Sugar Refineries Company.

The firms or corporations that composed it at that time were:

1. The Brooklyn Sugar Refining Company, New York.
2. The Decastro & Donner Sugar Refining Company, New York.
3. The Dick & Meyer Company, New York.
4. The Havemeyer Sugar Refining Company, New York.
5. The Havemeyer & Elder Sugar Refining Company, New York.
6. The F. O. Matthiessen & Wiechers Sugar Refining Company, New York.
7. The Moller, Sierck & Co. Sugar Refinery, New York.
8. The North River Sugar Refinery, New York.
9. The Fulton Sugar Refining Company, New York.
10. The Knickerbocker Refining Company, New York.
11. The Havemeyer, Eastwick & Co. Sugar Refining Company, New York.
12. The Bay State Sugar Refinery, Boston.
13. The Boston Sugar Refinery, Boston.
14. The Continental Sugar Refinery, Boston.
15. The Standard Sugar Refinery, Boston.
16. The De Forrest Sugar Refinery, Portland, Me.
17. The Planters' Sugar Refinery, New Orleans.
18. The Louisiana Sugar Refinery, New Orleans.
19. The Belcher's Sugar Refinery, St. Louis.
20. The American Sugar Refinery, San Francisco.

And a year or two later,

21. The Baltimore Sugar Refining Company, Baltimore, was absorbed.

One of the first acts of the new trust was to close up the North River Sugar Refinery. This led to an action by the attorney-general of New York in behalf of the people for the forfeiture of the charter of the company, at the end of which the court of appeals declared the trust illegal, and the charter of the North River Company was forfeited. The trust was thereby compelled to abandon its organization and reorganize under the laws of New Jersey as the American Sugar Refining Company, a single corporation, in which were combined all the parties to the original trust.

What the value or the valuation was of the properties and plants which were thus united under one management it is impossible to say, but it did exceed $10,000,000. The capitalization of the whole was $50,000,000, which thus contained $40,000,000 of stock for which no consideration was paid. This was divided into common and preferred stock, one-half of each. The common stock was to pay quarterly dividends, which have never been less than 3 per cent, or 12 per cent per annum. The preferred shares are guaranteed to pay 7 per cent per annum, and this interest or dividend must be paid before the common shares are entitled to any distribution of the profits.

The properties which have since been acquired by the trust are the Spreckels Sugar Refining Company, the Franklin Refining Company, and the E. C. Knight & Co. Sugar Refinery, of Philadelphia, and the California Sugar Refinery, of San Francisco.

Another refinery, built about a year ago at Camden, N. J., was bought up and never opened. It was rumored that the trust had bought the property. These new properties cost the trust $10,895,000 in stock.

The capital was now raised to $75,000,000, also one-half common and one-half preferred shares. The common has never paid less than 12 per cent per annum, and on one occasion—I believe it was in 1893—an extra dividend of 10 per cent was distributed. The preferred have always paid the guaranteed 7 per cent, besides the interest on ten millions of bonds.

All the above refineries are now owned by the trust, at least I know of none having been disposed of. One has been turned into

a coffee-roasting establishment, to run in competition to the Arbuckle Bros., who have begun the building of a sugar refinery. Quite a number have been kept closed since the trust was formed. Those now in operation are:

At Philadelphia, the Franklin Sugar Refining Company, the E. C. Knight & Co. Refinery, and the Spreckels Sugar Refining Company have been combined.

At New York, the Havemeyers & Elder Sugar Refining Company and the Brooklyn Sugar Refining Company have been combined; and the F. O. Matthiessen & Wiechers Sugar Refinery and the Havemeyer Sugar Refining Company have been combined, and if needed, the Decastro & Donner Sugar Refinery is opened.

At Boston, the Standard Sugar Refinery and the Boston Sugar Refinery have been combined.

At San Francisco, the American Sugar Refinery and the California Sugar Refinery.

Further, one or both refineries at New Orleans part of the year. All the rest are closed.

The average product of the trust refineries is 30,000 barrels per day. Allowing 300 working days in the year, this would mean that they are melting up something like 1,400,000 tons of raw sugar per annum, or, say, 70 per cent of the total consumption of 2,000,000 tons. The remainder of 600,000 tons is used by the independent refiners, including part of the Louisiana cane crop which is consumed without refining, and the refineries using beet sugar, etc., grown in this country.

There are now only four independent refineries in operation, and two are now being built at Brooklyn, one by Messrs. Arbuckle Bros, the other by Mr. Claus Doscher, who was formerly connected with the Brooklyn Sugar Refining Company. The four independent refineries now in operation are the following: The Mollenhauer Sugar Refinery and the National Sugar Refinery, New York; the Revere Sugar Refinery (Nash, Spaulding & Co., owners), Boston, and the W. I. McCahan Sugar Refinery, Philadelphia. Their combined product, I believe, is about 450,000 tons per annum.

The trust takes about 80 per cent of the Louisiana crop, mostly for the New Orleans refineries, and in order to get the sugars cheap they generally reduce their own prices all round as soon as the crop comes to market.

The Hawaiian sugars are bought under contracts with the producers, who are thereby enabled to absorb a good proportion of the duty saved. The terms have varied, but I think the present arrangement is that the trust pay the New York value of centrifugals 96 degrees test on day of arrival of any cargo at San Francisco or any other United States port, less one-fourth cent per pound.

Mr. President, in this connection there is certainly a very interesting state of affairs. It appears that the sugar trust has bought the Hawaiian sugar, paying for it at the New York price, less one-fourth of a cent a pound; in other words, the duty which would have been levied upon Hawaiian sugar has been divided between the producers and the sugar trust. The contract between the Hawaiian sugar producers and the sugar trust expires within a few weeks, and the trust is trying to force the producers to give them a larger share of the duty. They are not satisfied with one-fourth of a cent a pound, which amounted last year to $1,200,000, but they want more of the plunder.

It is very significant in this connection, Mr. President, that the committee of this body struck out the House provision continuing the Hawaiian treaty. It looks as though the intended purpose was to help the sugar trust and compel a greater division of the spoils. We can judge whether this is so or not when the committee bring in their provision to reinstate the treaty, and we can clearly, it seems to me, reasoning from cause to effect, see that the job has been consummated and that the producers have surrendered. It seems to me the Republican party is serving a curious purpose when it permits itself to be used in this manner.

It is said the trust is opposed to the continuation of the remission of duties to the Hawaiian sugar planters, and that has been used as an argument why the treaty should be continued. Mr. President, from the very moment the trust succeeds in getting the planters to divide the great bonus we give them by remitting duties, we shall find the sugar trust as ardent and as patriotic as the most enthusiastic jingoist from Massachusetts in favor of continuing the treaty.

A portion of the beet sugar produced in California as well as in Nebraska and other Western States is refined on the spot and goes into consumption. The rest is absorbed in the trust refineries, mostly in San Francisco.

I was a little surprised the other day to hear the Senator from Massachusetts [Mr. HOAR] urge as a reason why the duty should be increased upon refined sugar that it would stimulate the production of sugar in this country. It seemed to me to sound like the same old argument which has been used to carry through almost every scheme to enrich a few people at the expense of the many.

Beet sugar is refined by the factories which produce it. The sugar does not go to the refinery at all. All the sugar is ready for market when it leaves the mill. Therefore, to stimulate the production of beet sugar in this country means the destruction of the refiners now operating; it means the absolute destruction of their property. The day that beet sugar supplies the American market the property of the refiners, whose refineries are located all along the coast, will be absolutely worthless. That will happen when the American farmer produces beets enough to supply the American market.

Therefore the trust is interested in anything and everything which will prevent the growth of the beet-sugar industry in this country. How a duty in the special interest of a lot of gamblers in New York can be construed into stimulating the beet-sugar industry of this country is beyond the range of my imagination. Neither will that argument be of any value to obtain for the Republican party the votes of the people of the West. They are going to know the facts in regard to this bill; they are going to know whether what we charged in the last campaign was true or not, that the Republican party has ceased to stand for anything but the gold standard and the trusts.

As a rule, we have always received about 80 per cent of the Cuban crops each year, which yielded a total of 1,000,000 tons and over, but, owing to the insurrection, only about 200,000 to 250,000 tons have been made during the last two years. For 1896 our sources of supply have been as follows:

	Tons.
Cuba	251,522
Puerto Rico	29,841
St. Croix	3,571
Trinidad	23,449
Haiti and Santo Domingo	48,809
British West Indies	84,527
Demerara	66,973
Surinam	5,951
Europe	*525,232
Egypt	41,793
Java	312,502
Mauritius	18,181
Philippine Islands	61,382
Sandwich Islands	†46,185
Brazil	68,519
Argentine Republic	12,867
Total four Atlantic ports (New York, Philadelphia, Boston, and Baltimore)	1,599,484
Total Pacific ports (San Francisco), nearly all from Sandwich Islands	†157,981
Total imports of foreign, including Hawaiian	1,757,465

The 2,000,000 tons of sugar now used in the United States per year are drawn from the following sources:

About 1,550,000 tons come from foreign countries.
About 200,000 tons come from Hawaiian Islands.
About 250,000 tons are produced in this country—in Louisiana and Texas from cane, say about 200,000 tons; the remainder, 50,000 tons, from beet, maple, and sorghum.

Say 2,000,000 tons.

I wish to call attention to this fact, Mr. President, that all the Hawaiian sugar was not received at the port of San Francisco. On the contrary, 49,000 tons of Hawaiian sugar went to the port of New York and were admitted there free of duty, the same as that which was admitted at San Francisco.

Two million tons, Mr. President, are 4,480,000,000 pounds. Estimating the population of the United States at 76,250,000, the average annual consumption of each individual—man, woman, and child, of all races—is 62 pounds, and 70 per cent of this, or 43 pounds, is supplied by the trust.

Practically the entire sugar trade of the United States is subject to the dictatorship of the trust. The independent refiners follow the trust quotations and place their product in the same way. In buying raw sugars they are believed to have an understanding. At any rate, no signs of competition are visible. There are enough buyers disgruntled with the trust to keep up the independent refiners, and the latter are glad to be let alone by the trust so long as the trust is graciously disposed, as at present, to let them live upon the crumbs which fall from its table.

HOW THE SUGAR TRUST CONDUCTS BUSINESS.

Let us consider the manner in which the business of the sugar trust is conducted. From the date of its organization in 1887, including as it did all the leading refineries, the trust controlled the sugar trade of the United States. Recognizing this fact, the Wholesale Grocers' Association of New York requested to be informed by daily quotations from the trust of the price of sugar, and otherwise how to manage their business. The trust complied and began at once to issue daily quotations of the price at which all grades of sugar manufactured by it should be sold by the wholesale grocers and jobbers, the profit of these to depend upon certain discounts and drawbacks allowed by the trust, but only paid

* Nearly all beet. † Duty free.

at the end of three months upon the affidavit of the wholesale grocers and jobbers that the trust prices had been strictly adhered to.

At first, before the grocery merchants generally had become accustomed to submit to trust methods, the trust used to inflict severe punishment upon those who did not comply with its rules by refusing to supply them with goods, and it still continues to remind the trade of its power by occasionally summoning a merchant to its office to answer to the charge of selling below the established quotations. There was a time, also, when it was not possible for a merchant who handled the product of any of the independent refiners to obtain sugar from the trust, but it is said to be more lenient in this respect now.

About a year ago, in order to avoid the charge of discrimination in sales, the trust determined not to sell their goods to anyone. They then established a system of factors, to whom all sugar for the trade is consigned to be sold for account of the trust, upon a commission of three-sixteenths of a cent per pound, to be paid upon affidavit at the end of three months from the date of each consignment that the trust prices as established daily have been adhered to in selling. There are also certain commissions allowed upon like terms. By this system of factors the managers of the trust also secure themselves against loss. If a wholesale dealer in groceries, sugars, teas, and coffees who is a factor of the trust fails, the sugar trust takes possession of the sugar which he has on hand, and also receives from the assignee of the failing dealer all collections for sugar sold by him.

One exception is made by the sugar trust to the policy of making no sales to anyone, and that is in favor of manufacturers, such as bakers, confectioners, packers and preservers of fruit, etc. Sales of sugar are made to such persons upon an agreement that the sugar is not to be sold except in the form of confections, candy, cake, pies, preserves, etc. It is a fact that a manufacturer of candy or a canner of fruit must sign a written agreement that he will not buy sugar of anyone but the trust, and that he will not sell or dispose of the sugar except in a manufactured form in connection with his own product, and if he will not sign such an agreement, then the trust will furnish him no sugar whatever.

A factor or manufacturer who did not comply with the agreement as to prices and sales would be refused further consignments or supplies, and would thus be compelled to go out of business. Agents of the trust are continually on the watch to detect apparent violations of the agreement, and merchants and manufacturers are subject to frequent annoyance growing out of false and malicious reports of the trust spies.

The trust does not now attempt to control the retail trade, which can only purchase from the factor. Having made sure that the retail grocer pays the trust price for his goods, he may sell sugar to the consumer at any price he pleases.

The methods of the sugar trust can be best illustrated by the evidence taken before the Lexow committee in New York last winter. I shall not read this testimony, but I ask to have it inserted in my remarks. I will say, however, that Francis H. Krenning, of St. Louis, a wholesale grocer, refused to sign the agreement which the trust presented to him, and thereupon they refused to sell him sugar upon any terms. He then applied to the four independent refiners of this country to secure sugar for his customers.

They also refused to sell him a single pound of sugar under any circumstances, showing that after all the trust reaches every refinery in this country, and that the combination is absolute and complete. He was therefore compelled to import sugar. But he says that if the duty on refined sugar is increased above the present rate under the Wilson Act, he will be compelled to cease importing; that it will be impossible to do it, and he will be forced out of the sugar trade, in fact.

DEFIED THE SUGAR TRUST.

Francis H. Krenning, a St. Louis wholesale grocer, gave some clear-cut testimony in regard to the methods of the sugar trust in controlling middlemen and the absence of any real competition by the so-called "independent" sugar refineries. Mr. Krenning said that, desiring to maintain his independence, he refused to sign the latest sugar factors' agreement, and was promptly turned adrift by the trust, which charged him more for sugar than even the retailers were required to pay.

He tried to get sugar from the brokers of the "competing" refineries, and they flatly refused to sell him a pound. Nevertheless, he has managed to get along and make money by buying sugar of the small independent refineries in Louisiana during the season and by importing Dutch sugar at other times. The trust has not yet succeeded in closing him up, though it has placed spies upon him and attempted to cut off his source of supply. Mr. Krenning expects to be able to keep on fighting unless the tariff on refined sugar is raised, in which case he would have to go out of business or agree to the trust's conditions.

His testimony, which was substantiated by telegrams from the trust and from the "independent" refiners, was so telling that Senator McCarren could not let it pass unchallenged. The witness proved more than a match for him. He told him that Dutch sugar could be imported because the Dutch refiners were satisfied with a small margin of profit. He demonstrated that sugar labor was paid the same here as in Holland, and when Senator McCarren tried to disprove by him the theory that wholesale grocers can not exist without the consent of the trust, he answered him by pointing out that he was only one out of 18,000, or the exception which proved the rule.

The first witness in the afternoon was Francis H. Krenning, of St. Louis. Senator Lexow lost no time in getting down to business.

Q. Have you as a jobber had transactions with the American Sugar Refining Company?

A. Yes, sir.

Q. Did you accept the factors' plan of agreement?

A. No, sir.

Q. Is this the system of factors' agreement adopted in St. Louis [handing the witness a document]?

A. Yes, sir.

"What happened when you did not accept the agreement?" asked Senator Lexow.

"The American Sugar Refining Company notified its St. Louis broker that we were to pay 9 points more for sugar. We also lost the rebate, which made a total difference of 36 points, or $1.30 a barrel."

ATTEMPT TO CRUSH KRENNING.

Mr. Krenning here produced a copy of a telegram which he said the American Sugar Refining Company sent the St. Louis broker on November 22, 1895. It was as follows:

"Have no consignment of sugars to offer Krenning. Will sell Krenning at $4.75, direct shipment."

"What price would that be, including freight?"

"It would give the factor $1.75 per barrel advantage over us."

Mr. Krenning also said that subsequent to this the Mollenhauer Sugar Company and the Howell National Sugar Company, both "independent," had declined to sell his firm sugar. He identified the copy of a telegram which his firm had received from the Howell Company. It was as follows:

"Howell declines to sell Krenning under any terms."

"What is the effect of the factors' agreement?"

"You can not do business without the factors' agreement."

"Are jobbers having the factors' agreement allowed to sell to you, not having the factors' agreement?"

"No, sir."

Mr. Krenning said that because of his refusal to sign the agreement his firm had experienced considerable difficulty in securing any sugar at all.

Q. Do you know whether an attempt has been made to exclude the Louisiana planters' sugar from competition?

A. Yes, sir; they attempted to exclude the Louisiana planters' sugar the same as the imported sugar.

Q. Are the factors allowed to sell the Louisiana sugar?

A. In 1896 they were prohibited from selling it, but in 1897 they were allowed to sell it under certain restrictions.

Q. (Senator McCARREN.) Why did you refuse to become a factor?

A. Because the factor system stifled competition, and that is not right.

Mr. Krenning said that the American Sugar Refining Company, during the grinding season, in which the sugar crop of the country is being produced, lowered the price of sugar in St. Louis by one-fourth of a cent a pound below the price at which it is sold in the East, and that immediately after the grinding season caused the price of its product to be increased in St. Louis.

Q. (Senator McCARREN.) Can you explain to the committee why foreign refineries sell at a lesser price than the American Sugar Refining Company?

A. The foreign refiners are content with a smaller margin of profit than the American Sugar Refining Company.

WATERLOO FOR M'CARREN.

Q. Is it not because labor is cheaper on the other side?

A. No, sir; the average wages of laborers in the sugar business is about the same here as in Europe.

In reply to another question by Mr. McCarren, the witness said his firm was selling more sugar than ever and that they were making greater efforts to sell.

Q. (Senator McCARREN.) Have you ever found it difficult to supply your trade since October, 1895?

A. Sometimes.

Q. And your profits have been as great as when you dealt with the American Sugar Refining Company?

A. About the same.

Q. Then why did you come here to testify?

A. I want to show how that company has tried to prevent the importation of foreign sugar.

Q. And you are a living example of their failure to force wholesalers out of business?

A. I am the exception that proves the rule.

Mr. Krenning said that if the tariff on foreign sugar was increased his firm would have to go out of business or else sign the factors' agreement.

Q. (Senator McCARREN.) Would you be in favor of paying a slight increase for the American product if labor would benefit by it?

A. Yes, sir.

Q. Then why don't you do it in this instance?

A. We can't get the American sugar without signing the agreement.

The relation of the daily price of refined sugar fixed by the trust to the market price of raw sugar is illustrated by the transactions of one day in May of the present year. On that day the price of granulated sugar as fixed by the trust was $4.56 per hundred pounds. Now the factor's trade allowance on this of three-sixteenths of a cent a pound is 18¾ cents, leaving the price to him $4.37¼. From this is to be deducted in his favor the trade discount of 1 per cent, say 4¼ cents, leaving $4.32¾, and from this a further discount of 1 per cent is made for cash, leaving the net price to the factor of refined, $4.28¼ per hundred pounds. The price of raw centrifugals, 96 degrees test, duty paid, on that day was $3.31¼ per hundred pounds.

The difference, or apparent profit, is 97¼ cents; or if all the decimals had been carried out, as they would be in large transactions, say $97.29 on 10,000 pounds. From this, of course, is to be deducted the cost of refining. This is estimated by men who have grown up in the sugar trade as samplers and graders of sugar and have followed the cost of refining for years, from the time when it was 4 cents a pound and more down to the present time, to be now from 37½ to 44 cents per 100 pounds.

Taking the highest estimate, and both cover everything that enters into cost of refining, including labor, interest on capital, wear and tear of plant, and delivery of goods f. o. b., the net profit is $53.29 on 10,000 pounds.

The average product daily of the trust refineries is 30,000 barrels of 320 pounds each, or 9,600,000 pounds, upon which the profit thus estimated is $51,098.40. For three hundred working days in the

year it would be $15,329,520. The annual charge of 7 per cent upon $37,500,000 of preferred stock is $2,625,000. The annual dividend of 12 per cent on $37,500,000 of common stock is $4,500,000. Together they amount to $7,125,000, or less than one-half the estimated net profit of the trust, for three hundred working days, of 30,000 barrels daily product of granulated sugar.

In this connection, it is well to remark that the work of refining is done almost entirely by machinery; the number of men employed is very small; they are required to work twelve hours a day, and during the summer the heat is intense. So to-day no American laborers are employed in the sugar refineries of this country. The work is done by Huns and Poles, who have largely been imported for that purpose, and the number is exceedingly small—five or six thousand men at the outside. Yet we hear so much about the protection of American labor, and under the provisions of this bill we actually make a present to the sugar trust of $10,000,000, not $2,000,000 of which will be paid to those laborers.

The product is not all granulated sugar, and the relative quantity of hard and soft sugars made by the trust is a trade secret which is carefully kept. But the margin of profit on the soft sugars is greater than on the hard, because they are made from a cheaper grade of raw sugars and the process of refining is less expensive, so that the estimate of the profits of the trust based on all granulated sugar is not too large.

Moreover, the price of raw sugar in New York is subject to manipulation by the trust, as has been before alluded to in speaking of the purchase of the Louisiana crop. The price of raw sugar in New York is governed nominally by the prices quoted by cable for cane and beet sugars in London and Hamburg. But if the trust wanted to buy in New York, they might sell in London or Hamburg, so as to put down the price, and then buy in New York the next day.

Similar tactics are believed to be pursued in regard to the purchases of sugar abroad, and if the invoices of sugar imported by the trust are made out at lower rates than actually paid, as has often happened in the case of merchandise imported by others, an explanation would be easy of the preference by the managers of the trust for an ad valorem duty instead of a specific duty of so much per pound. If the trust keeps out of the market for three or four weeks, the price of raw sugar goes down, because the other refiners can not take enough to keep the market up.

In addition to the advantage which thus accrues to the sugar trust through an ad valorem duty upon the raw sugar, there is also in the Wilson tariff act, as well as in the bill now before the Senate, a differential duty upon refined sugar. This is estimated by the trade to be about 22 cents per 100 pounds under the Wilson tariff. The trade also estimate that the proposed differential in the bill now under discussion, as it passed the House, was 35 cents per 100 pounds, and as originally reported by the Senate Finance Committee it was 45 cents per 100 pounds. As now reported by the Republican caucus of the Senate, the differential duty in favor of the trust is 52 cents per 100 pounds.

It is this differential duty which the amendment of which I gave notice on May 25, and which has been read to-day, undertakes to abolish, unless the sugar trust ceases to exist, or, in other words, changes its methods of business so far as they restrict and restrain trade.

How much relief this would afford to the trade is a matter that can only be tested by experience. At present the quantity of refined sugar imported is quite small in comparison with the total consumption of this country.

Foreign refined sugar is now sold in limited quantities in New York, duty paid, at one-eighth to three-sixteenths of a cent lower than the net price of American refined—that is, the daily trust price—less the trade allowance and discounts. But it is not so popular as the domestic refined, partly because of the manner in which it is put up in bags instead of barrels and partly because it does not run so regular in the qualities of color and grain, although the saccharine test of most of it is equal to that of the American product.

It is quite probable that the repeal of the differential duty, which amounts now to a little over one-fifth of a cent per pound, and was increased to nearly half a cent a pound by the Senate Finance Committee and by the Republican caucus to over half a cent, would not enlarge to any great extent the importations of foreign refined sugar in ordinary times, but the chief value of the repeal would consist in the check which it would impose upon the arbitrary increase of the price of refined sugar by the trust, for such an increase would be sure to cause foreign refined sugar to be sent here in quantities sufficient to affect the market.

The Senator from Rhode Island [Mr. ALDRICH], in presenting the bill to the Senate, stated that at times raw sugar and refined sugar brought the same price in Germany. There is no doubt that is true, from the fact that the modern German factories are refineries as well, and they turn out nothing but refined sugar, and the cost of refining is therefore practically saved. So they can sell refined sugar at about the price of raw sugar, and if we were producing beets in sufficient quantities to make the sugar of this country, we would sell refined sugar at about the same price, for every modern factory is a refinery as well.

DUTY IN FAVOR OF THE TRUST.

So far I have only referred to the strictly revenue duty upon sugar. I come now to the consideration of the differential duty imposed for the protection of the refiners.

The refiners of sugar, when they are not combined in a trust, are entitled to protection just as much as any other class of American manufacturers. But this protection should, like the duty upon the raw or unrefined article, be specific and so stated that all can understand it. Upon this point the sentiment of the public is, I believe, expressed in the following:

"Put a round extra duty of one-eighth of a cent per pound on all refined sugars, and if that is not enough, make it one-fourth of a cent. If the protection is too high, matters will easily adjust themselves by the building of more refineries."

I have no objection to whatever measure of protection to the sugar refiners may be satisfactory to a majority of the Senate. If the amendment which I have proposed to the pending bill be adopted, the following provision will apply to the sugar schedule as well as to others:

Provided, That when a duty is levied upon raw material or any article that is improved by any process after being imported, the duty on the raw material or unrefined or unimproved article shall be collected as provided by this act; but the differential or additional duty shall not be collected if the improved or refined product is found to be the subject of a trust, as hereinbefore set forth.

THE TRUST HAS NOT REDUCED BUT INCREASED THE PRICE.

I have already given a description of the manner in which the sugar trust conducts its business. Its methods are obnoxious to every free American citizen. But, Mr. President, the claim is made in behalf of the trust that it has cheapened the cost of sugar to the people.

I have therefore investigated the question, and find, on the contrary, that the organization of the trust has raised the price of sugar: not that sugar has not gone down since the trust was organized, for all things have gone down in value as measured in gold, but I contend that the price of refined sugar compared with the price of raw sugar is higher to-day and has been every day since the trust was formed than it was before. In other words, the difference is greater. I have prepared a table showing the price of raw centrifugal sugar in New York in 1886 and each year since up to 1896, and the price of refined granulated sugar at the same place, and also the difference between the two.

I find that in 1886 the difference between raw and refined sugar in New York was 71 cents a hundred pounds. In 1887, the year the trust was organized, but previous to its going into operation, it was 64 cents a hundred. In 1888, the year after the trust was organized, the difference between raw and refined sugar in New York was $1.25 a hundred pounds. In 1889 it was $1.32 a hundred pounds. In 1890 the McKinley bill was pending; we were going to put sugar on the free list, and the trust was anxious for a differential protection, and it reduced the price of refined sugar so that the difference between raw and refined was but 70 cents a hundred pounds.

In 1891, however, they raised it to 73 cents a hundred pounds, and in 1892 to $1.03 a hundred pounds, and in 1893 to $1.15 a hundred pounds; but again a tariff bill was pending, the Wilson bill was under consideration, and they reduced the difference to 88 cents a hundred pounds. In 1896 it was 91 cents per hundred pounds, and to-day there is 97½ cents difference on the hundred pounds between the price of raw and refined sugar as against 64 cents when the trust was organized. Therefore we have between 30 and 35 cents more to pay for refined sugar than we would have to pay if the trust had never been organized.

Average prices of sugar, raw centrifugals, 96 degrees, and granulated refined, in New York, for the calendar years 1886 to 1896.

Year.	Raw centrifugal.	Refined granulated.	Difference.	Year.	Raw centrifugal.	Refined granulated.	Difference.
	Cents.	*Cents.*	*Cents.*		*Cents.*	*Cents.*	*Cents.*
1886*	5.53	6.23	0.71	1892†	3.32	4.35	1.03
1887*	5.38	6.02	.64	1893†	3.69	4.84	1.15
1888*	5.93	7.18	1.25	1894†	3.24	4.12	.88
1889*	6.57	7.89	1.32	1895*	3.27	4.15	.88
1890*	5.57	6.27	.70	1896*	3.62	4.53	.91
1891†	3.02	4.65	.73				

* Duty paid † Free of duty.

These figures are taken from the Statistical Sugar Trade Journal of New York. They show that at no time since the trust was organized has the difference between the cost of raw and refined sugars been so small as in 1887, before the formation of the trust. In 1887 the average difference between the cost of raw centrifugals and refined granulated was sixty-four one-hundredths of 1 cent per pound. The next year the trust took advantage of

their mastery of the situation and advanced the price of granulated one cent and a quarter a pound above the price of raw sugar. In 1889 they gave the screw another twist and advanced the price to 1 cent and thirty-two one-hundredths of a cent above the price of raw sugar.

In 1890 a tariff bill was pending which put sugar on the free list, but in which the trust wanted the protection of a duty on refined, and so it reduced its margin of profit to seventy one-hundredths of a cent a pound. This was only increased by three one-hundredths of a cent in 1891, but the margin was over a cent a pound in 1892 and 1893. The trust came down to eighty-eight one-hundredths of a cent a pound in 1894, while the Wilson bill was pending, and kept that rate, on an average, in 1895. Last year the difference was ninety-one one-hundredths of a cent, which is about the average of the past eleven years, or twenty-one one-hundredths more than in 1886, the year before the trust was organized. The difference at present, as I have shown already, is a little over ninety-seven one-hundredths of a cent a pound.

When the reduction in the cost of refining sugar since 1886 is taken into consideration, when we take into consideration the cheaper labor, cheaper material of every kind which can be had to-day than in 1886, this increase between the cost of raw and refined sugar shows how perfectly and how completely the trust have been able to manipulate and control the market.

Under these circumstances, owing to the fact that the trust charge practically all the difference they can possibly charge under whatever tariff we levy, it seems to me the conclusion must be that they can refine sugar as cheaply as anybody, and that any differential duty that we may place upon sugar is absolutely in the interest of the trust; and if we do it, we do it with our eyes open, intending to put that much in the pockets of the trust and take it out of the pockets of the people of this country. There ought to be no differential duty whatever in favor of refined sugar.

Mr. Havemeyer testified before the House committee that he could refine sugar as cheaply in this country as it could be refined any place in the world. Therefore what reason is there—I would like to know what reason the committee can give—why we should take out of the pockets of the people of this country this sum of money and put it into the pockets of men who, owing to this fact, have succeeded in staining the fair character of the Senate of the United States in the eyes of the people of this country?

They came in 1890, and what occurred? The House of Representatives had placed a duty of four-tenths of a cent a pound on refined sugar, all other sugar to be free. The bill came to this body. Everyone knows that 40 cents a hundred is a sufficient duty upon refined sugar, for it costs only 40 cents to refine it. It is 100 per cent. Yet the Senate of the United States deliberately increased the amount to 50 cents a hundred, making the duty about 140 per cent upon the cost of refining. Of course a sugar scandal grew up. Mr. Havemeyer testified in 1894 that under the operation of the McKinley law the sugar trust made a profit in three years of $35,000,000, and he said so long as the McKinley law continued upon the statute books he proposed to take out of the people of this country that profit.

Everybody understands how in 1894 the sugar trust was on the ground and how close the fight was; but there was always enough to protect the trust. If every Republican in this body at that time had voted to strike off the one-eighth differential duty in favor of the trust, it was well understood that the Wilson bill could not pass.

SUGAR TRUST CONTROLS THE SENATE.

It was well understood that unless the sugar trust had one-eighth of a cent differential duty in their favor on refined sugar they could beat the Wilson bill. And yet so potential was the trust, so all-powerful was their combination, that of the Republicans most interested in the defeat of the Wilson bill and in the perpetuation of the protective-tariff measure as framed by Republicans, enough were found to vote with the sugar trust to prevent striking off the eighth. In other words, the interest was so much greater in the sugar trust than in the general policy of protection that they flew to the rescue of the trust and abandoned the principle of protection.

When we come to a test vote now, it is very close, as it was the other day, but enough votes are secured always to protect the interests of the trust. It seems to me that unless the Republican party wants to go into the next campaign hampered by this issue, unless it wants to have put upon it as a party, in a way it can not avoid, the issue that it exists simply that the gold standard may be perpetuated and that trusts may thrive, it must vote for the amendment offered by the Senator from Kentucky [Mr. LINDSAY] striking off all differential duties whatever.

I should like to ask the Republicans from the Western States, who have no interest in sugar refiners and have no sugar refineries in their States, what they get out of being used for the purpose of perpetuating the interests of this monopoly? Do they want in the next campaign to confront their constituents upon this issue? Perhaps they can afford to sacrifice their political lives, but I doubt it. They certainly can not afford to sacrifice their consciences and their opinions.

There is no doubt that the price of refined sugar is less now than it was when the trust was formed. At that time the duty on raw sugar was specific, based upon the saccharine strength, and averaged about 2 cents a pound. This duty was taken off by the McKinley tariff in 1890. Sugar remained free of duty until August 28, 1894, but the difference between the price of raw and of refined was greater in 1892 and 1893 than at any time since 1886, except during the two years 1888 and 1889, immediately following the organization of the trust. Since the imposition of the Wilson tariff duty of 40 per cent ad valorem, the apparent difference between the cost of raw sugar, duty paid, and that of refined is less than in the years referred to, but nearly 16 per cent greater than it was in 1886.

So the reduction in the price of sugar to the consumer is not due to the operation of the trust, but to changes in tariff duties and a fall in the price of raw sugar, which has lowered the price of refined sugar all over the world, and makes it possible now for foreign refined sugar to be sold in New York, duty paid, at a slightly lower cost than the net cash price of the product of the trust.

All dealers in sugar have a feeling of dread in their dealings with this corporation that grates upon their American instincts. They know that they are but slaves of an iron-handed and steel-willed despotism, which has the power of commercial life and death, and is subject to no restraint but the will of its managers. They dare not openly complain of the conditions under which they are forced to do business for fear that they may be deprived of the opportunity of doing business at all.

Since the sugar trust does not sell its product for general consumption, but appoints its own factors to sell its goods upon commission, it may dismiss a factor at its own discretion, and that means simply ruin to a merchant who has grown up in the sugar trade from boyhood and knows no other business in which to make a living for himself and his family.

MUST REWRITE OUR POLITICAL ECONOMY.

Mr. President, the old treatises upon political economy must all be destroyed and new text-books written for the instruction of the coming generation, no matter whether they are engaged in selling manufactured sugar or any other manufactures, if the rule of trusts is to be perpetuated through the neglect of Congress to enact the legislation necessary for their suppression. We have been taught that the successful merchant buys in the cheapest market and sells in the dearest, that prices are at all times subject to supply and demand, and that the wise man in business foresees the demand and provides the supply.

But I have shown conclusively that these laws of trade are absolutely overthrown in the cases of the sugar trust, and it is so with every trust. I have taken the sugar trust, and have largely exposed its methods, as an illustration of the entire business policy when conducted under trust methods.

Not only the merchants in the sugar trade and in every other trade controlled by a trust, but also the entire American people who are not participants in the profits of such illicit combinations are very impatient of trust domination. They do not listen with respect to the apostles of the new political economy who assure them that greater benefits accrue to the poor man under the modern system of trusts than under the old free competition in business which used to be called the life of trade.

ANTHRACITE COAL TRUST.

But, Mr. President, there are many other trusts. I intend to give briefly the history of some of the other trusts which exist in this country. One of the greatest, most oppressive, and most heartless trusts is the anthracite-coal trust, and as it is a fair sample of many others, I will give a brief sketch of its methods.

Here, again, it is asserted that no trust exists. It will be fair, therefore, to examine somewhat the methods of this organization. This trust has existed for years. Fifty years ago the courts of Pennsylvania declared that the anthracite coal producers could not combine lawfully; but to-day they are combined, and the rise in the price of coal in every hamlet in the United States upon a single day last year proves conclusively that a combination exists.

This trust has existed for years, but was reorganized at a meeting of the officers of the railroad companies engaged in the anthracite coal traffic held in New York City January 23, 1896. The various companies were represented as follows: Philadelphia and Reading, by Joseph S. Harris, president and receiver, and C. E. Henderson, general manager; Delaware, Lackawanna and Western, by Sam Sloan, president, and E. R. Holden, vice-president; Lehigh Valley, by E. P. Wilbur, president, W. H. Sayre, second vice-president, and H. S. Drinker, general counsel; Central of New Jersey, by J. Rogers Maxwell, president; Delaware and Hudson, by Robert M. Olyphant, president; Pennsylvania Railroad, by George B. Roberts, president, and W. H. Joyce, general freight agent; Pennsylvania Coal Company, by Samuel Thorne, president, and Thomas Hodgson, sales agent; Erie, by E. B. Thomas, president, and H. B. Crandall, coal freight agent; New York, Ontario

and Western, by Thomas P. Fowler, president, and J. E. Childs, general manager; New York, Susquehanna and Western, by Amos Lawrence Hopkins, president, and F. P. Moore, coal agent; Delaware, Susquehanna and Schuylkill Railroad, by Alfred Walter, president.

The trust is created by a combination of the railroads who handle the anthracite coal. In fact, the coal mines are controlled by the roads.

At this meeting the claims of the Reading Company were admitted to produce 21 per cent of the total output, and the percentage which should be produced and brought to market by each of the other companies was agreed upon. The fact that Reading was undergoing reorganization at the hands of Mr. J. Pierpont Morgan, who was the manager of the notorious bond deals with President Cleveland in 1895 and 1896, by which it is proper incidentally to remark that as a sort of compliment to the Cleveland Administration somebody got about $30,000,000, had much to do with inducing the other companies to accede to the demands of the Reading.

It was said at the time that "the chief difficulty hitherto in handling the coal trade as a whole to advantage has been the attitude taken by the Reading Company, which has claimed that it was entitled to a greater proportion of the tonnage than it was securing, and in the last two years had been enforcing this claim by increased activity at its mines." The Reading Company owns 33 per cent of the anthracite in the ground, and in the last six months of 1895 it produced more than 23 per cent of the total output.

With Reading reorganized and its stock held in a voting trust named by Mr. J. P. Morgan, the other coal companies felt compelled to accede to whatever terms Mr. Morgan authorized Reading to propose, for they knew the power which he possessed and had seen some evidences of the relentless manner in which he exercised this power when his wishes were disregarded. So the matter was settled by giving the Reading Company the tonnage which it demanded, while the distribution among the other companies of the remainder of the anthracite production was made upon the basis recommended by the Reading Company—that is, by J. Pierpont Morgan & Co. So Mr. Morgan decided finally exactly how much coal should be produced by each one of the companies, and then decided just what price the American people should pay for the coal.

The anthracite-coal trust is not incorporated, and the distribution of the business is fixed by the percentage arrangement of January 23, 1896. The quantity of coal to be produced each month is agreed upon by the parties to the arrangement, and the prices of the different grades of coal are fixed by a circular issued every month to the trade. The control of the anthracite trade by the trust is absolute, but that trade is subject to competition by soft coal, gas, and electricity, so that the trust is under some restraint as to prices. Nevertheless, the statistics of the trade gathered by Mr. Rothwell, of the Mining Journal, show that the value of anthracite produced in 1896 was an increase of $7,855,000, although the number of tons mined in 1896 was considerably less than in 1895. The division of the business is substantially as follows:

	Per cent.
Philadelphia and Reading Railroad	21.36
Lehigh Valley Railroad	16.72
Delaware, Lackawanna and Western Railroad	13.22
Central Railroad of New Jersey	11.97
Pennsylvania Railroad	9.77
Delaware and Hudson Canal Company	9.29
Pennsylvania Coal Company	4.44
Delaware, Susquehanna and Schuylkill Railroad	3.79
Erie Railroad	3.65
New York, Ontario and Western Railway	2.97
New York, Susquehanna and Western Railroad	2.82

It is estimated by the managers of the trust that the production for the current year will be about 40,000,000 tons, which is 6,545,000 tons less than in 1895, the year before the trust was reorganized. It is also positively assumed that there will be no reduction in prices, but rather an advance,* if the people will stand it.

It appears from the evidence taken before the Lexow committee last winter that the price of anthracite coal was increased $1 per ton in 1896, and as the production was 40,000,000 tons, the profits must have been $40,000,000.

I will give an extract of the testimony taken before the Lexow committee which covers this point and shows that these people met together and agreed to raise the price of coal first 25 cents a ton. That worked so well that shortly afterwards they raised it 25 cents more, and then raised it more, in each case on the same day throughout the United States. It applied even to coal in the hands of retail dealers.

President D'E. B. Thomas, of the Erie Railroad, was sworn. He said he was present at the conference held by the presidents of the various coal carriers and that the Erie Railroad received a 4 per cent allotment of the coal to be carried.

Then Senator Lexow read the following allotments: Philadelphia and Reading, 20.50 per cent; Lehigh Valley, 15.65; New Jersey Central, 11.70; Delaware, Lackawanna and Western, 13.35; Delaware and Hudson, 9.60; Pennsylvania, 11.40; Pennsylvania Coal Company, 4; Erie Railroad, 4; New York, Ontario and Western, 3.10; Delaware, Susquehanna and Schuylkill, 3.50, and New York, Susquehanna and Western, 3.20 per cent. Mr. Roberts said he thought these figures were correct.

Q. Did your company live up to the agreement?

A. Not entirely.

Q. Is it not a fact that the coal sales agents hold meetings at No. 1 Broadway to fix the price of coal?

A. I don't know.

Mr. Roberts admitted that the restriction of output naturally increased the demand for coal, but said that the amount of coal to be produced was never discussed at any meeting he had attended.

TO RAISE PRICES AND RESTRICT OUTPUT.

Q. Was not the object of the conference to get a fair price for coal?

A. That was one of its objects. In 1895 the output exceeded the demand and there was a glut of coal on the market. We wanted to get a fair price in 1896.

Q. Can you give us the prices that ruled from February, 1896, until now?

A. The agents can.

Q. Do you remember that a month after the conference the price went up 25 cents a ton, and that the next month it went up another 25 cents?

A. I don't know.

Q. Is it not a fact that the price of coal has increased a dollar a ton since the conference.

A. I don't know; the agents can give you the figures.

Q. Was it not a fact that the output was limited to 40,000,000?

A. No agreement was made to limit the output. I will give you the figures since 1891. In that year the output was 40,000,000 tons; in 1892 it was 42,000,000; in 1893 it was 43,000,000; in 1894 it was 41,000,000; in 1895 it was 46,000,000, and in 1896 it was 43,000,000.

The price of anthracite coal, Mr. Roberts said, had fallen somewhat, owing to the use of oils and gas. Now, he said that the conference agreement terminated February 1 of this year. The witness created some surprise by announcing that he did not know the price of coal now.

F. H. Gibbons, treasurer of the Delaware, Lackawanna and Western Railroad Company, was then called and gave it as his impression that the price of coal was increased 30 or 40 cents a ton in 1896.

R. H. Williams, sales agent for the Erie Railroad Company, was then called. He admitted it was customary for the agents to hold "informal talks" monthly about coal. He also said that it was customary to discuss the possible output for each month, and the allotments were based on those estimates.

Q. Why was it that the price of coal was increased after the presidents' conference?

A. Because the price was so low in 1895 that there was no money in the mining business.

Q. You believe you had the right to meet and agree upon a fair price for your property?

A. Yes, sir.

KITING THE PRICES.

Q. You fix the price for coal?

A. We try to do it, but we can not do it. The price of bituminous coal regulates the price of anthracite coal in New York.

Q. Was the first advance in coal in 1896 the result of the conference?

A. Yes, sir.

Q. When was the second increase?

A. About May or June.

Q. That was an increase also of 25 cents per ton?

A. Yes, sir.

Q. And there was another increase of 25 cents on July 1?

A. Yes, sir.

Q. And on September 1 the price was still raised 25 cents?

A. Yes, sir.

Q. So that between February 1 and September 1, 1896, the price of coal was increased $1 per ton?

A. That is so.

Q. And that $1 a ton increase was the result of the conference?

A. Yes, sir.

Q. What does it cost to mine coal?

A. From $1.60 to $1.80 a ton.

Edwin R. Holton, vice-president of the Delaware, Lackawanna and Western Railroad Company, was then called. He said he had entire charge of the fixing of prices and sale of coal in his company. He denied that there had been any conferences of sales agents, but there were occasional informal "talks."

Charles W. Wisner, of Walden, N. Y., vice-president of the Stevens Coal Company, was next called. He testified that his company sold coal to the Lehigh Valley Railroad Company and that they got 60 per cent of what the product brought at "tide water." The other 40 per cent goes to the railroad company.

Q. What does it cost to produce a ton of coal at the mines?

A. About $1.80 for anthracite coal.

Q. What does that sell for at tide-water prices?

A. I think the tide-water prices are $3.87 a ton for stove coal.

COAL CARRIERS' BIG PROFITS.

Q. So that you would receive $2.32 for a ton and the carrying company $1.55?

A. Yes, sir.

The witness said when all expenses were cleared, the mine only made 12 cents a ton profit.

Q. Does your company fix the price to the consumer?

A. No, sir.

Q. That price is fixed by the carrying company?

A. Yes, sir: after we sign a contract with them.

Q. If you don't sign the contract, what happens?

A. We would have to market our coal direct to the consumer.

Q. Would that be feasible?

A. No, sir.

CONTRIBUTION TO THE REPUBLICAN CORRUPTION FUND.

It was a fine thing to have a combination like this as a contributor to the committee in the campaign, was it not? A raise of $1 a ton on 40,000,000 tons of anthracite coal would be $40,000,000. A raise of 25 cents a ton would be $10,000,000. So they made a raise in September. The campaign was in full blast. They made another raise a little later. Four raises were made, or a raise of $1 a ton during 1896.

*Coal Trade Journal, New York, June 2, 1897.

This combination must have been formed, I judge, in anticipation of the campaign which was coming on. Who do you suppose was the recipient of these great contributions, if any were made? Certainly it was not those who supported Mr. Bryan. Twenty-five cents a ton would buy a great many marching capes in a campaign; it would pay the expenses for speakers and railroad fare and all legitimate items in a contest of great magnitude, and get all the voters out. Was this for the benefit of the candidate who was nominated by the reform Democracy at Chicago? I hardly think so.

I have here a document which will prove conclusively, I think, that if any contribution was made, it was not made to the parties who supported William J. Bryan in the last contest, for Mr. Bryan, in one of his speeches (and the question of trusts was one of the issues of the campaign), said:

I have been called an anarchist because I have opposed the trusts and syndicates which would manage this country. I am glad to have the opposition of these men. I am glad that if I am elected there is not a trust or syndicate that can come to me and say, "We put you there, now pay us back."

Again he said in another speech:

Mr. Harrison was to debate the question of the survival of our institutions. I will tell him that the great trusts which are supporting the Republican ticket are a greater menace to our Government than anything else we have ever had. The various trusts of this country, by their representatives, are collecting tribute from the public, and when we protest against it they call us disturbers of the peace and anarchists. I am opposed to the trusts. As an Executive I shall use what power I have to drive every trust out of existence.

ANSWERED BRYAN BY RAISING PRICE OF COAL.

I am glad to have supported that sort of a candidate, the man who had the indomitable courage in that heated campaign to make that immortal declaration. It was followed by a 25-cent raise in coal. That was a very convenient thing. It is no wonder they had a surplus after the contest was over. It is no wonder that they had a surplus in the treasury to go out and manipulate legislatures in order to make sure of this body. We heard it talked and whispered about this Chamber—no, not whispered, but talked on the streets, talked everywhere. It was a convenient thing.

The argument that trusts reduce prices is thoroughly overthrown (and I have taken some pains to go into this question because it has been so earnestly urged) by the experience of the Standard Oil Company. I will publish as part of my remarks a statement showing the cost of the crude oil and the cost of refined oil, and the difference between the cost of crude and refined, from 1870 to 1893.

Year.	Price crude oil.	Price refined oil.	Difference.	Year.	Price crude oil.	Price refined oil.	Difference.
	Cents.	*Cents.*	*Cents.*		*Cents.*	*Cents.*	*Cents.*
1870	9.19	26.35	17.16	1882	1.87	7.39	5.52
1871	10.52	14.14	13.72	1883	2.52	8.02	5.50
1872	9.43	23.59	14.16	1884	1.99	8.15	6.16
1873	4.12	17.87	13.75	1885	2.11	7.93	5.82
1874	2.81	12.98	10.17	1886	1.09	7.07	5.38
1875	2.96	13.00	10.04	1887	1.59	6.72	5.13
1876	5.99	19.16	13.17	1888	2.08	7.49	5.41
1877	5.68	15.44	9.76	1889	2.24	7.11	4.87
1878	2.76	10.76	8.00	1890	2.06	7.30	5.24
1879	2.04	8.08	6.04	1891	1.67	6.85	5.18
1880	2.24	9.05	6.81	1892	1.32	6.07	4.75
1881	2.30	8.01	5.71	1893	1.50	5.22	4.72

Bearing in mind that the Standard Oil trust was formally organized in 1882, although in process of formation several years before that time, we observe that the average difference in price between crude and refined oil during the four years 1870–1873 was 14.697 cents per gallon, and during 1880–1883 was 5.885 cents, and during 1890–1893 was 4.97 cents.

The average difference during 1881, 1882, and 1883 was 5.577 cents, and during 1891, 1892, and 1893 it was 5.55 cents.

This establishes the fact that the fall in the charge for refining, which had been very rapid prior to the formation of the trust, has almost disappeared since then. The Standard Oil Company, although more farsighted in forestalling public attack by some concessions in price than the sugar and some other trusts, has evidently intercepted many of the benefits which the progress in arts would inevitably have conferred upon the public under free competition.

Before the Lexow trust committee, according to press reports, President Henry O. Havemeyer thus testified:

It goes without saying that a man who can control 80 per cent of the output can control the price if he chooses to exercise that power.

Q. Then by controlling 80 per cent of the output you really do control the price?

A. Without a doubt.

Q. The trust fixes the price for itself, and when you fix it for yourselves you practically fix it for your competitors, don't you?

A. That is undoubtedly and substantially the way it works.

Mr. Arbuckle said that his competitors in coffee "usually adopt the scale of prices as fixed by us."

Thanks to these methods, the Standard Oil Company in 1896 made over 30 per cent on its capital of a little over $60,000,000.

In the formation of the sugar trust in 1887 it was stated that $6 of stock was issued for every dollar actually invested. However, I think this statement is excessive. But that more than $3 of stock was issued for every dollar of value that was put into the combination there can be no possible doubt.

OVERCAPITALIZATION BY TRUSTS.

One of the great evils of the trust is overcapitalization. This deceives investors and the public as to the amount of its exorbitant charges and its rational basis for expecting a continuance of these profits.

I think this overcapitalization was designed in their case for the purpose of deceiving the public as to the amount of their profit. Take, for instance, the sugar trust. Half of its profit was sufficient to pay 12 per cent on $37,500,000 common stock and 7 per cent on a like amount of preferred stock, and the interest on $10,000,000.

But if stock had been issued only for the amount actually invested, say $20,000,000, which will cover every cent—$25,000,000 at the outside—these dividends would have been more than three times as large, and would have attracted such attention that the Senate of the United States would not dare longer to continue to be the champion of this organization.

On the question of overcapitalization I propose to read a portion of the report of the Lexow senate committee on trusts in New York last winter, as follows:

Sufficient appears upon the record to justify the conclusion that of at least coordinate importance with the plan of industrial concentration was the scheme of the issue of stock certificates of greatly inflated nominal values. That this was a purpose definitely formed and not merely incident to industrial development was substantially admitted by the spokesmen for at least two of the principal combinations of the five which were examined.

In one case corporate assets acquired by an officer of the combination for the sum of $350,000 were capitalized over night in the new combination by the issue of certificates of a nominal value of twice that amount, less 15 per cent.

Other corporations, organized for the distinct purpose of absorption by the combination on the basis of a stock issue of a nominal value of $60,000, were simultaneously recapitalized in the combination by an issue of a nominal share value of about $14,000,000. Corporations representing in the aggregate share issues of less than $7,000,000 were recapitalized in the combination by a nominal share issue of $50,000,000, less a rebate of 15 per cent. In another case live assets were valued at about $5,000,000 and made the basis of an issue of about $25,000,000 of stock, the difference being made up in the assumed value of "good will," "brands," "trade-marks," etc. In another instance the live assets were capitalized in so-called debenture stock, while the common stock was issued upon the basis of computing the average percentage of profits over a period of years and multiplying these by 16.

The trusts, then, have adopted 16 to 1; that is, sixteen shares at $1 each for every dollar they invest. Perhaps that is what they were contending against in the last campaign. I heard some of them talking, and I did not believe they understood the issue much better than to have taken that position.

In another instance both common and preferred stock were issued in bulk for the several properties acquired, studious care being exercised to conceal the details of payments for particular properties and to avoid the disclosure of the processes whereby values represented by stock issues were computed.

The net result of each of these methods of capitalization was that large overissue of capital stock was the important, if not the main, purpose of consolidation. One of the witnesses, whose experience and intelligence were especially marked, when interrogated upon this question, stated that the stock issued represented the prospective earning capacity of the combination; that is to say, its earning capacity considered from the view-point of all those advantages attributable to a perfected consolidation, the control of product, the ability to fix its price, and the economy, so eloquently described by all the witnesses, flowing from concentration of production, management, and distribution.

It is worthy of note that while these properties were separately competing with each other their stock issues were small and in a few hands, and that as soon as the combination was effected and the nominal values were inflated, the shares were listed on the Stock Exchange and distributed among the public.

Of course they would have distributed them among the public if they could get rid of them. They would be willing to take a part of the money acquired from their inflated capital to pay dividends for a while if they could get the public to take the stocks which were issued, three or four for one. It is no wonder that they were desirous of getting rid of them. It is no wonder that they might justly fear that legislation would affect their value when they were pursuing such a course of wholesale robbery of the people of the United States.

In one case properties controlled by not to exceed 100 owners and stockholders became at once speculatively active, and their shares were distributed in a short time among upward of 9,000 distinct stockholders; in another, the holdings of not to exceed 35 people became subdivided among about 6,000 stockholders, while in a third the properties of a few men were finally represented by share certificates held by upward of 2,000 people.

This has been pointed to as one of the beneficent results of large combinations, viz, the diffusion of ownership, whereby the control of a few has been subdivided among many. This argument would have some force were it not for the methods adopted in the capitalization of the properties before indicated. The diffusion of shares does not necessarily carry with it the control by many of the properties thus represented. Stockholders, satisfied with the profits they receive, are willing to leave the original management in permanent control. Realization of dividends is the father of contentment, and

the supreme effort of management must be directed toward maintaining earnings proportionate to the stock issued, whether for live assets or for properties closed, abandoned, or dismantled.

All this tends to indicate that the net profits of a corporation thus organized must be held at an abnormally high figure in order to justify the payment of dividends upon live, dead, and inflated capital; and that, correspondingly, labor on the one hand and the consumer on the other must relatively bear their proportion. And this without reference to the fact that the change from a strictly industrial pursuit to one intimately coupled with speculation in the certificates representing that industry must naturally have some effect; and volume of product, price, and all the incidents of a purely industrial management must be affected by the requirements of fluctuating values on the exchange. What shall be purely industrial becomes the tender of speculation, and the law of supply and demand, instead of remaining the constant regulator of output and price, finds itself determined and disturbed by the exigencies of speculation.

So it is, Mr. President, that instead of pursuing the even tenor of our way as a people and as producers of wealth, the tendency is to organize for inordinate, unusual speculative profits, and we therefore change our business men from the plodding, honest, industrious pursuit of a trade or calling to gamblers and speculators. This certainly must have an effect upon our industrial life, upon our character as a people, which is well worthy of consideration in this connection.

I believe that one of the most important duties this Government has to solve to-day is the question whether we shall drift until we become absolutely a nation of gamblers or speculators, or whether we shall make an effort to return to that industrial life which characterized the better and more vigorous days of the Republic.

STATEMENTS OF TRUSTS.

Mr. President, I propose to give a list of many of the trusts, of the amount of their capital, and the amount which the properties were worth which were incorporated into the trust, showing the vast amount of pretended capital upon which the people of this country are compelled to pay interest. I have summarized it. First is the sugar trust.

American Sugar Refining Company: Incorporated January 10, 1891, under the laws of New Jersey, to take overestimated assets and business of the companies represented by the certificates of the Sugar Refining Company, which was reorganized in June, 1890:

Capital stock, common	$37,500,000
Capital stock, preferred	37,500,000
Total	75,000,000
First-mortgage bonds, bearing interest at 6 per cent	10,000,000

In January, 1892, an increase of $25,000,000 was voted, half to be common and half to be preferred, the proceeds to be used for buying up other refineries or for buildings. Accordingly a controlling interest was purchased in March, 1892, in the stock of the E. C. Knight Company, of Philadelphia, $800,000; of the Franklin Sugar Company, of Pennsylvania, $5,000,000; of the Spreckels Sugar Refining Company, of Pennsylvania, $5,000,000, and of the Delaware Sugar House, $96,000.

The $25,000,000 of additional stock is included in the $75,000,000. Dividends of 7 per cent per annum have always been paid on the preferred, and 12 per cent per annum on the common stock. Sixty million dollars of that $75,000,000 of stock is water, and so is the $10,000,000 of bonds. The officers of the company have always refused to make a statement of their earnings. Since 1890 the company has paid in dividends $43,000,000.

Directors—H. O. Havemeyer, T. A. Havemeyer, F. O. Mathiessen, John E. Parsons (their attorney), J. E. Searles, William Dick, W. B. Thomas.

Officers—H. O. Havemeyer, president; John E. Searles, secretary and treasurer.

General office—117 Wall street, New York.

TOBACCO TRUST.

Then the American Tobacco Company, which was incorporated under the laws of New Jersey for fifty years on January 21, 1890, for the purpose of curing leaf tobacco, to buy, manufacture, and sell tobacco in all its forms, and to establish factories, agencies, and depots for the sale and distribution thereof, and to do all things incidental to the business of trading and manufacturing, with power to carry on its business in all other States and Territories of the United States, and in Canada, Great Britain, and all other foreign countries.

The company pays 8 per cent on the preferred stock, and has paid 12 per cent on the common. The last three dividends on the common have been at the rate of 8 per cent. About one year ago 20 per cent in scrip was declared on both classes of stock. The officers are now talking of redeeming it in cash.

	Issued.
Capital stock, common, par $50	$17,900,000
Capital stock, preferred, par $100	11,935,000
Total	29,835,000
Authorized issue	35,000,000

	Amount not issued.
Capital stock, preferred	$2,065,000
Capital stock, common	3,100,000
Total	5,165,000

The company has paid in dividends since 1890 a little over $19,000,000.

The water in this company's stock is $20,000,000.

Directors—Lewis Ginter, Richmond, Va.; John Pope, Richmond, Va.; George Arents, William H. Butler, Charles G. Emery, New York; James B. Duke, Somerville, N. J.; Benjamin N. Duke, George W. Watts, Durham, N. C.; William A. Marburg, George W. Gail, Baltimore, Md.; Josiah Browne, Plainfield, N. J.; John Doerhoefer, Louisville, Ky.

Officers—James B. Duke, president; William H. Butler, first vice-president; John Pope, second vice-president; William Marburg, third vice-president; George Arents, treasurer; Josiah Brown, secretary; W. R. Harris, auditor.

Principal office—Newark, N. J.

New York office—507 to 529 West Twenty-second street.

NATIONAL LINSEED OIL COMPANY.

National Linseed Oil Company: Incorporated in June, 1887, under the laws of Illinois. The different properties now owned by this company were brought together in an association called the National Linseed Oil Trust. During 1890 the trust was dissolved and the properties were acquired by purchase. It appears that this trust organized just as the sugar trust did in the first place, by the combination of a large number of producers, and after the New York court declared that that form of organization was illegal under her industrial laws, they dissolved the trust and the properties were acquired by purchase by the National Linseed Oil Company, in April, 1890. They have 52 oil works, located in 42 cities of the United States, besides real estate, machinery, patents, etc. Capital stock, par value $100, $18,000,000.

It is estimated that the entire property in this trust was worth about $8,000,000, and that they added $10,000,000 at the time of forming the combination.

Directors—Alex Eustow, St. Louis, Mo.; R. D. Hubbard, Mankato, Minn.; W. P. Orr, Piqua, Ohio; Samuel Thomas, New York City; A. C. Abbott, Buffalo, N. Y.; Marcus Simpson, Burlington, Iowa; A. S. Hall, Chicago, Ill.; J. A. Willard, Mankato, Minn.; I. P. Keiser, St. Louis, Mo.

Officers—Alex Eustow, president; A. O. Hall, first vice-president; Marcus Simpson, second vice-president; A. C. Abbott, third vice-president; T. G. McCulloh, secretary and treasurer.

General office—Old Colony Building, Chicago, Ill.

New York office—Nos. 93, 95, and 97 John street.

NATIONAL LEAD COMPANY.

National Lead Company: This company was organized December 8, 1891, under the laws of New Jersey. It has plants in New York, Massachusetts, Maryland, Pennsylvania, Ohio, Kentucky, Illinois, and Missouri, manufacturing white lead and like products.

Capital stock, common	$15,000,000
Capital stock, preferred	15,000,000
Total	30,000,000

A regular 7 per cent dividend is paid on the preferred, and occasionally a dividend on the common is declared.

This is a gambling stock, and there is no doubt that the preferred represents more than the entire investment.

Directors—E. F. Beale, Philadelphia; G. O. Carpenter, jr., St. Louis; L. A. Cole, East Orange, N. J.; R. R. Colgate, New York City; A. T. Gosharn, Cincinnati, Ohio; J. L. McBirney, New York City; J. H. McKelvy, Pittsburg, Pa.; F. W. Rockwell, Chicago, Ill.; R. P. Rowe, Brooklyn, N. Y.; A. P. Thompson, Buffalo, N. Y.; D. B. Shipman, Chicago, Ill.; J. A. Stevens, Brooklyn, N. Y.; W. P. Thompson, Red Bank, N. J.

Officers—W. P. Thompson, president; L. A. Cole, first vice-president; R. R. Colgate, second vice-president; J. L. McBirney, treasurer; F. R. Fortmeyer, assistant treasurer; Charles Davison, secretary.

General office—No. 1 Broadway, New York.

UNITED STATES LEATHER COMPANY.

United States Leather Company: This company was incorporated in New Jersey February 25, 1893, and commenced the business of tanning and selling sole and belt leather on May 2, 1893. At the time of the organization this company acquired many properties connected with the business, and since then many properties engaged in the manufacture of leather have been purchased, and to pay for the same the issue of preferred stock has been increased from time to time, and in addition to every share so issued one share of common stock has been paid for the good will of the company.

In the State of Pennsylvania property was acquired by companies organized under the laws of said State. These separate companies are known as the Elk, the Penn, and the Union Trimming companies, their capital stock, $10,000,000 each, being mostly owned by the United States Leather Company.

Capital stock, common	$61,509,900
Capital stock, preferred	60,909,900
Total	122,419,800

Bonds, debentures, 6 per cent, $5,700,000.

Officers—Mark Hoyt, president, Boston, Mass.; James Horton, first vice-president, Buffalo, N. Y.; Edward R. Ladew, second vice-president, New York; Lewis H. Lapham, third vice-president, New York; Josiah T. Tubby, secretary, Brooklyn; James R. Plum, treasurer, New York City.

Corporate office—Jersey City, N. J.

General office—26 and 28 Ferry street, New York City.

Directors—Mark Hoyt, George A. Vail, Edward R. Ladew, Patrick C. Costello, Lewis C. Lapham, Joseph H. Ladew, Henry B. Vaughn, Gurdow B. Horton, Walter G. Garritt, A. Augustus Healy, Daniel F. Stevens, Frank H. Goodyear, James H. Proctor, Josiah T. Tubby, James Horton, Norman Schultz, James R. Plum, Jerry Crary, Nemiah W. Rice, Loring R. Gale, Lyman F. Rhoades, Samuel P. Davage, William H. Humphrey, Charles H. Lee, Charles M. Vail, Edward C. Hoyt, Edson G. Davage.

The total amount of common stock, $61,509,900, is water pure and simple—that is, there was no consideration for it whatever—and more than $20,000,000 of the preferred stock, making, out of this $122,000,000, $81,500,000 of stock issued for which there is no consideration whatever.

The preferred stock is entitled to 8 per cent, and is cumulative. It is now behind in its dividends on the preferred stock 20 per cent. The last four dividends were 1 per cent quarterly. The last 1 per cent was paid March 15, 1897. So it is not behind in its dividends, except it pays only about one-half what it was supposed that the stock would pay.

UNITED STATES RUBBER COMPANY.

The United States Rubber Company is an interesting example. This company was incorporated in New Jersey in 1892, for the manufacture of rubber boots, shoes, etc. The organization includes the following:

American Rubber Company, Boston.
Boston Rubber Company, Boston.
Para Rubber Company, Boston.
L. Candee & Co., New Haven, Conn.
Goodyear Metallic Rubber Shoe Company, Naugatuck, Conn.
Lycoming Rubber Company, Williamsport, Pa.
Meyer Rubber Company, New Brunswick, N. J.
New Brunswick Rubber Company, New Brunswick, N. J.
New Jersey Rubber Shoe Company, New Brunswick, N. J.
National India Rubber Company, Bristol, R. I.
Woonsocket Rubber Company.
Mervel Rubber Company.
Lawrence Felting Company.
Colchester Rubber Company.
Rubber Manufacturers' Selling Company.

Capital stock, common	$20,166,000
Capital stock, preferred	10,400,500
Total	30,566,500

Officers—Joseph Banigom, president, Providence, R. I.; Robert D. Evans, first vice-president, Boston, Mass.; James D. Ford, second vice-president; Charles R. Flint, treasurer, New York City; M. C. Martin, assistant treasurer, New Brunswick, N. J.; Charles L. Johnson, secretary, New Haven, Conn.

Bankers and transfer agents in New York—H. B. Hollins & Co.

Directors—Charles A. Coffin, Robert D. Evans, William H. Hill, George H. Hood, Boston; Samuel P. Colt, Joseph Bannigan, W. S. Ballou, John J. Bannigan, George Watkinson, Providence, R. I.; James B. Ford, Charles R. Flint, J. Howard Ford, Robert M. Galloway, H. B. Hollins, Herman Burr, William L. Trenholm, New York City; Henry L. Hotchkiss, Charles L. Johnson, New Haven, Conn.; James P. Langdon, M. C. Martin, New Brunswick, N. J.; George A. Lewis, Naugatuck, Conn.; Edwin A. Lewis, Brooklyn, N. Y.; Frederick M. Shepard, Orange, N. J.; George M. Allerton, Waterbury, Conn.; Samuel N. Williams, Williamsport, Pa.

The common stock, $20,166,000, is all water. The preferred pays 8 per cent, and very frequently the common gets a dividend. The company claim it is earning 7 per cent on the common.

The capital stock—the common stock—was issued for what is called good will, brands, trade-marks, etc. It was issued and divided among the men who organized, intending in advance to compel the people of this country to pay the interest or the dividends on this which was nothing.

Mr. President, wealth can only be created by toil. To issue stock is not to create wealth. No dividends can be paid upon any of this watered stock unless somebody has toiled to pay them, and toil must be plundered if such dividends are paid. There is no possible chance to avoid that conclusion.

The rubber trust has decided to shut down indefinitely the greater part of its immense plant at Bristol, R. I., and henceforth to manufacture there only tennis shoes. This means that more than 500 residents of Bristol who have depended upon the factory for their livelihood will be deprived of their only means of subsistence in Bristol. About 1,700 others were thrown out of work when the trust acquired the plant and have never been taken back. This is in perfect harmony with the methods of the rubber trust. After it was organized it acquired possession of about 15 rubber factories which had been competing with one another for nearly all the business in the country.

Having paid a fee of $200,000 to Charles R. Flint, another of $100,000 to H. B. Hollins & Co., and another of $100,000 to Joseph P. Earle for their services in promoting the trust, the trust shut down about half its factories. Then it made factors' agreements with the trade under which dealers received a rebate of 7 per cent if they did not sell under the prices fixed by the trust. Though times have been hard and the prices of other commodities have declined, the trust's products have risen in price from 20 per cent to 40 per cent. The net annual profits were $2,239,791.50, the gross expenses being only $293,148. This was during the year ended May, 1896. The trust made a profit of $7 on every dollar of expenses. December 23, 1896, the trust declared a dividend of 2 per cent on the common stock. This, after paying 8 per cent on the preferred, left $1,921,712.38, to which must be added the surplus earnings for the year ended April 1, 1897. As these will probably amount to fully $3,000,000, the net surplus of the trust to-day can not be less than $5,000,000.

DECREASED PRODUCTION—HIGHER PRICES.

In Bristol 2,200 persons were thrown upon the world. In Woonsocket and Millerville, R. I., 2,500 people are in distress—1,200 out of work. Since the trust acquired the plants in these places, the Millerville operatives have averaged only one-third time, on reduced wages. In Woonsocket the factory has been shut down nearly half the time, and wages have also been reduced. August 13, 1896, the two big factories closed, ostensibly on account of the agitation for bimetallism, and several thousand persons were left destitute.

They gave that excuse last summer. Whenever a factory shut down they would say if people would quit talking about silver the factories would all open, and the very moment that it was defeated they would start up. Now we are hunting for prosperity and the factories continue closed, and will continue closed. If talking about silver will close the factories, we will have them all shut up by the next campaign, for we intend to agitate the question.

An industrial structure that will not stand talking about, that falls before the breath of discussion, had better be destroyed, and we had better build another one. The fundamental principle of American institutions is free discussion, a full review of methods, men, and measures, and then let the people decide. Yet the formers of this rubber trust closed this factory, and said it was because we talked about bimetallism.

August 21, 1896, for the same ostensible reason, the factory in New Haven was closed and 1,200 persons were thrown out of work. In February of this year, 1897, 500 persons were deprived of employment by the closing of the factory at Setauket, Long Island. At other times three factories, employing 3,000 persons, at New Brunswick, N. J., have been shut down; also one employing 700 persons at Colchester, Conn., one employing 500 persons at Franklin, Mass., and one employing 500 persons at Millertown, N. J. In all cases wages had been reduced by the trust, so that the average earnings of the employees were not over 75 cents a day. Rubber shoes that before the trust's formation cost the jobber 35 cents, now cost 65 cents a pair, an increase of nearly 100 per cent.

In addition to all this, the trust has accumulated $5,000,000 in the treasury after paying dividends on watered stock. Yet the Senate is afraid it will interfere with some of these so-called industries!

SOME ONE MUST TOIL TO PAY DIVIDENDS ON OVERISSUES OF STOCK.

I desire to print in the RECORD a table of these eleven trusts. It shows that they are capitalized for $432,000,000, bonded for $43,000,000, and that the total actual investment was $171,000,000. In other words, the people of the United States are called upon to pay dividends and interest on $300,000,000 more than the investment.

Somebody has got to toil to earn that interest. Not one dollar of it can be earned except by the toil of somebody, and yet we are asked to legislate in favor of these combinations, these modern pirates of the world!

Statement showing the capitalization, estimated actual investment, estimated value of products, and duties on imports under the laws of 1890 and 1894, and the proposed law of 1897, of principal products of certain industrial trusts.

Trusts.	Capitalization (stock outstanding).			Bonded debt.	Estimated actual investment (a).	Estimated value of products (annual) (b).	Duties on imports of principal products.		
	Common stock.	Preferred stock.	Total.				Law of 1890.	Law of 1894.	Proposed law of 1897.
1. American Cotton Oil Co	$20,237,100	$10,198,800	$30,435,700	$3,068,800	$15,000,000	$19,000,000	10 cts. per gallon	Free	7 cts. per gallon.

6. National Lead Co	14,905,400	14,904,600	29,809,400	----------	15,000,000	6,500,000	2 to 2$\frac{1}{2}$ cts. per lb.	1 to 1$\frac{1}{2}$ cts. per lb.	2 to 2$\frac{1}{2}$ cts. per lb.
7. National Linseed Oil Co	18,000,000	----------	18,000,000	108,000	10,000,000	13,000,000	32 cts. per gallon	20 cts. per gallon	32 cts. per gallon.
8. National Starch Co	4,450,700	4,066,200	8,516,900	3,837,000	4,500,000	5,000,000	2 cts. per pound	1$\frac{1}{4}$ cts. per pound.	2 cts. per pound.
9. Standard Rope and Twine Co.	12,000,000	----------	12,000,000	10,500,000	7,000,000	20,000,000	$\frac{1}{10}$ to 3 cts. per lb.	10 per ct. ad val. *e*	1 to 2 cts. per lb. *f*
10. United States Leather Co	61,509,000	60,909,900	122,418,900	5,520,000	40,000,000	60,000,000	10 per ct. ad val	10 per ct. ad val	10 per ct. ad val.
11. United States Rubber Co	29,166,000	19,400,500	39,566,500	----------	15,000,000	20,000,000	30 per ct. ad val	25 per ct. ad val	30 per ct. ad val.
Total	263,360,400	169,479,000	422,839,400	43,783,800	171,500,000	373,500,000			

a These estimates are believed to be liberal, and it is thought that, could the facts be definitely ascertained, the figures here given would be found to be largely in excess of the real investments or values of the properties of the trusts named.
b These estimates are based upon the best obtainable data.
c Also, one-tenth cent per pound additional when produced by or exported from a country paying an export bounty.
d Also, when exported from a country paying an export bounty, a duty equal to such bounty or so much thereof as is in excess of any tax collected by such country.
e Except binding twine, placed on free list.
f Except binding twine, placed on free list, but subject to duty of one-half cent per pound if imported from a country levying a duty on binding twine imported from the United States.

I will also publish a table showing 5 other trusts, making 16 in all, who are capitalized in about the same proportion but are smaller in size. I found it very difficult to secure information with regard to the organization of these trusts. I found it very difficult to get the details with regard to the amount invested. They are very secretive people. They do not care to talk very much, and nobody is responsible, because they are a trust. I found that the committees in New York had difficulty in securing information. Books were lost; officers say they do not know or that somebody else was responsible. So it is hard to get evidence with regard to these organizations.

Trusts.	Capital stock.	Bonds.	
		Size, or par value.	Amount outstanding.
American Strawboard	----------	$1,000	$889,994
American Type Founders	$4,000,000	----------	196,000
Diamond Match	(*)	100	11,000,000
Debenture	8,000,000	----------	----------
National Wall Paper Co	30,000,000	100	7,500,000
New York Biscuit Co	10,000,000	100	9,000,000

* Listed in Chicago.

It has been urged that this tariff bill will produce no revenue if my amendment is adopted. If that is true, then we are certainly in the possession of the trusts. If the object of this bill can not be accomplished, which is supposed to be the raising of revenue, if my amendment is adopted, then that argument is predicated upon the proposition that the trusts will not dissolve; that they will continue; that they will be perpetuated and share the market of this country with the foreign manufacturer.
